COÖPERATIVE MARKETING. The keen competition which has sprung up in recent years between the various fruit and truck districts in the United States has led to the rapid extension of local marketing associations. The movement to combine such associations into strong central

organizations was active in 1912. California growers, for example, practically completed the centralized management of their big fruit industries by launching the California Associated Raisin Company and the California Cured Fruit Exchange. By a special act of the Dominion Parliament, Nova Scotia fruit growers formed a strong central organization, known as the "United Fruit Companies of Nova Scotia." A combination of Smyrna fig shippers, incorporated in London and known as "The Smyrna Fig Packers (Ltd.)," was started early in the year, with the avowed object of introducing a uniform rate of sale, economies in marketing, and more hygienic methods of packing.

CALIFORNIA FIG INDUSTRY. The United States consumes about 13,000 tons, or more than half of Smyrna's fig crop. Recent developments in California indicate that fig imports will be materially reduced in the next few years. Improved varieties have been developed and it has been demonstrated that the fig wasps, so necessary to the pollination of the Smyrna variety, can be successfully carried over severe winters by cellar storage within the caprifigs in which they make their home and breed. Several growers have recently made the discovery that the White Adriatic and other types of figs are greatly improved by pollination in the same manner as the Smyrna fig. Recent experiments by the United States Department of Agriculture have shown that fresh ripe figs of the Smyrna type, when carefully handled and quickly cooled, can be shipped successfully across the continent in refrigerator cars. California now produces about 1000 tons of the Smyrna variety and 4000 tons of other varieties.

NEW METHOD OF EXTRACTING OLIVE OIL. A new method of extracting olive oil from fresh olive pulp was recently tested in Italy with good results. Instead of using a press as in the ordinary methods of extracting olive oil, the extractor consists of 2 concentric cylinders separated by a narrow space. The outer cylinder is of sheet metal and the inner one is a metallic screen. The olive pulp is placed in the inner cylinder and kept in motion by a revolving axle furnished with aluminum pallets. By means of a suction fan attached to the lower half of the outer cylinder a slight difference of pressure is produced between the inside and the outside of the inner cylinder. The oil and water are thus extracted from the pulp. Contrary to the results secured in the ordinary press, the oil comes out more easily than the water and a greater proportion of water remains in the pulp. It is claimed that about 10 per cent. more oil is obtained from the new system and the quality of the oil is uniform and equal to, or better than, the first run from ordinary presses. The olives can be worked while fresh and the troubles and defects due to drying, molding, and rotting are avoided.

TOMATO-SEED OIL. A recent development in Italy is the production of oil from tomato seed. Dry seeds yield about 16 per cent. of an oil valued for soap manufacture. Over 300,000 pounds of tomato-seed oil, worth about seven cents a pound, are now extracted yearly in the province of Como. See **CHEMISTRY, INDUSTRIAL.**

PROCESSING UNRIPE PERSIMMONS. In view of recent results secured with the carbon dioxide process for removing the astringency from the large Japanese persimmons before the fruit has softened (see **YEAR BOOK, 1911**), the

United States Department of Agriculture now recommends this method for producing firm, tannin-free fruit for local consumption. Treated fruit can not be successfully shipped to distant markets, but unripe fruit may be treated after shipment.

BANANA FOOD PRODUCTS. The manufacture of banana food products in Jamaica (see *YEAR BOOK*, 1911), was greatly increased during the year, to meet a growing demand in Europe and in the United States. In order to have a continuous supply of fruit several companies were making arrangements to grow bananas for their own use. All of the products consist of evaporated fruit prepared in different forms and sold as banana figs, cooking bananas, banana chips, flour, and meal. The present output is from 12 to 15 long tons a week.

A successful sun-drying process for strawberries, developed by a berry grower of the State of Washington, was announced during the year.

PLANT BREEDING. Investigations of the improvement of citrus fruits through bud selection have been conducted by the United States Department of Agriculture through three seasons. Careful observations on the bearing of Washington navel oranges and Marsh grapefruit show very marked difference in the yields of individual trees of the same age growing under the same conditions. The large-yielding trees have produced maximum crops and the small bearers have been consistently shy in bearing properties throughout the three seasons. This work has received wide recognition from citrus growers and is serving as a basis for the selection of propagating material, both in the establishment of new plantations and in rebudding operations. Similar investigations are being gradually extended to deciduous fruits. In connection with experiments to establish the Dutch bulb industry in the United States, the Department of Agriculture recently tested mature tulip and narcissus bulbs grown in the States of Washington and Virginia in comparison with Holland-grown bulbs. In every instance the American-grown bulbs gave stronger plants, larger and better flowers, and were a week to ten days earlier than imported bulbs of the same varieties. The tests are being continued on a broader scale. Investigations covering the improvement of the more hardy varieties of the Persian or English walnut by selection and cross-pollination are in progress at the department's experimental farm, Arlington, Va. Methods of propagation by budding and grafting and the stocks suitable for propagation in the several districts in which this nut appears to be hardy will also receive consideration. The New York State Experiment Station made an extensive study of the effect of cross-pollinating related tomato varieties on the yield of the hybrid plants. They found that the first generation seedlings gave so much higher yields than the parent forms as to warrant the production of such seed by growers and seedsmen.

TARRED ROADS INJURIOUS TO VEGETATION. As the result of an extended series of observations and experiments, a French commission appointed to investigate the subject found that many trees, shrubs, garden plants, and flowers suffer injury from the fumes given off by the tar and also from the dust arising from treated roads. The injury seems to be proportional to the distance from the road, the amount of

travel, percentage of phenol in the compound, and the insolation of the plants. The effect on the plants is shown in the fading of the leaves, which are spotted and blackened.

RECENT LEGISLATION. By an act of the United States government, approved August 3, 1912, a standard apple barrel, containing 7056 cubic inches, and standard grades for apples packed in barrels were established. The act will take effect on July 1, 1913, and all sales in violation of its provisions are subject to a penalty of one dollar and costs for each such barrel sold, or offered for sale. Another measure, known as the Plant Quarantine act, August 20, 1912, provides for a system of inspection and quarantine against the importation of serious plant diseases and insect pests on nursery stock and other plants and plant products. A decision of vast importance to the orange consumers in the United States was made by Federal Judge Landis late in December. Judge Landis upheld the government authorities in the seizure of eight cars of California navel oranges which had been artificially colored by the sweating process to conceal immaturity.

An international horticultural exposition is to be held in St. Petersburg, Russia, in April, 1913. The exposition is being arranged to commemorate the three hundredth anniversary of the reign of the Romanoff dynasty.

At the Congress of Electricity in Relation to Horticulture, held at Rheims during the latter part of the year, it was decided to establish prizes for research in electro-culture, and to found an international association to be devoted to the interests of this subject. A second congress will be held in Paris in 1914.

Late in the year the governors of the South-Eastern Agricultural College, Wye, decided to establish a fruit research plantation in the southeastern district of England.

LITERATURE. The following contributions to horticultural literature appeared during the year: H. P. Hedrick et al., *The Plums of New York* (New York State Station Rpt., 1910, pt. 2), although having a special significance for New York State, is considered sufficiently broad in its scope to be offered as a record of our present knowledge of cultivated plums; P. Hubert, *Fruits des Pays Chauds, I, Etude Générale des Fruits* (Paris, 1912), is the first volume of a two-volume work dealing with the principal fruits of tropical and subtropical regions; H. N. Ridley, *Spices* (London, 1912), a handbook of information relative to the history, cultural requirements, exploitation, and uses of spices and condiments; H. C. Graham, *Coffee* (United States Dept. Agr., Bur. Statistics Bul. 79), a statistical study, by countries, of the world-production, consumption, and trade in coffee for a period of years; C. A. Reed, *The Pecan* (United States Dept. Agr., Bur. Plant Indus. Bul. 251), a practical treatise on the pecan; S. W. Moore, *Practical Orchardng on Rough Lands* (Akron, O., 1911) deals with apple orcharding on the rough hill and mountain lands in the eastern United States; L. Pichenaud, *Le Jardin Potager* (Paris, 1912), a practical treatise on amateur and market gardening; R. L. Watts, *Vegetable Gardening* (New York and London, 1912), a similar work, based largely upon commercial practices in the United States and Canada; L. H. Bailey, *Farm and Garden Rule-Book* (New York, 1911), the

author's *Horticulturists' Rule-Book* is here revised to cover a much wider field; J. Kidkegaard, *A Practical Handbook of Trees, Shrubs, Vines, and Herbaceous Perennials*, (Boston, 1912), a guide to the identification, culture, and use of hardy ornamental trees and plants; W. C. McCollom, *Vines and How to Grow Them* (Garden City, N. Y., 1911), a manual of outdoor and greenhouse climbing plants for flower, foliage, and fruit effects; E. E. Rexford, *Amateur Gardencraft* (Philadelphia and London, 1912), a popular treatise on ornamental gardening; E. Holmes, *Commercial Rose Culture* (New York, 1911), a practical guide to the modern methods of growing roses, both under glass and outdoors; A. A. Houghton, *Molding Concrete Fountains and Lawn Ornaments, and Molding Concrete Flower Pots, Bozes, Jardinières, etc.* (New York, 1912).

HOSPITALS. Among the many large gifts to hospitals during the year 1912 the following may be mentioned: The Women's Hospital of Pittsburgh received \$2,000,000 by the will of Thomas N. Miller; the New York Polyclinic Medical School and Hospital, \$50,000 from the estate of David J. Garth; the New York Eye and Ear Infirmary, \$25,000 bequeathed by John S. Lyde; Johns Hopkins Hospital, Baltimore, a donation of \$220,000 from James Brady, of New York City; St. Luke's Hospital, New York City, \$10,000 for the endowment of beds for actors, given by the late Mrs. Catherine E. Daly; German Hospital, Chicago, \$20,000 by will of William C. Seipp; Mt. Sinai Hospital, New York City, \$10,000 from Ernest Tahlman and \$100,000 from Mrs. Caroline Neustadler. The latter also bequeathed \$100,000 to be used for establishing the Neustadler Home for Convalescents and \$20,000 to the Jewish Children's Sanatorium at Rockaway, N. Y. The Nassau Hospital, L. I., received \$100,000 from Mrs. Alice A. Hicks, and the Ithaca (N. Y.) City Hospital about \$100,000 from the estate of Edward M. Marshall. The endowment fund of the General Memorial Hospital, New York City, was increased by a gift of \$100,000 by an unnamed donor for the maintenance of twenty beds for cancer patients. The Montefiore Home received \$200,000 from four donors for the erection of a private hospital for patients having chronic diseases.

In New York City the Italian Hospital was completed at a cost of \$120,000, half of which was contributed by the Italian government; the institution will accommodate 100 patients and occupies an entire block on the river front. The new Polyclinic Hospital was opened to patients on April 22 and formally dedicated June 8. The new building of the German Deaconess Hospital, Buffalo, costing about \$200,000, was opened on September 1; the new \$150,000 home of the Tuberculosis Preventorium for Children at Farmingdale, N. J., was opened on April 25. This institution will accommodate 700 children. The Johnson Memorial Hospital, Stafford Springs, was dedicated. The hospital cost \$75,000 and will harbor thirty-five patients. It has an endowment fund of \$200,000. The Collis P. Huntington Memorial Hospital, connected with the Harvard Medical School, was opened March 26. The hospital is devoted solely to the care of cancer patients and is under the charge of the cancer commission of Harvard University. To the medical buildings

was added the Peter Bent Brigham Hospital, completed about November 1. The first underground emergency hospital in Illinois was opened on New Year's day in one of the mines in the Collinsville district. The hospital is built in the heart of the mine; its concrete walls are guaranteed against cave-ins and small explosions. The new St. Vincent's Hospital at Indianapolis, containing 152 rooms for patients and costing \$800,000, was completed. Henry Phipps, of Pittsburgh, conveyed to the trustees of the University of Pennsylvania the Phipps Institution for the Study of Treatment of Tuberculosis. The hospital building occupies a lot with a frontage of 143 feet and a depth of 153 feet. The cost of the building is about \$300,000. It is endowed in addition by the donor, the whole project representing about \$1,000,000. The Babies' Hospital, organized by physicians for the free care of infants under three years of age afflicted with enteritis, opened at Wynnefield, in Fairmount Park, Pa., June 17. The Mid-Valley Hospital, Blakely, Pa., was opened May 30 to receive patients. This hospital supplies the mining district lying between Scranton and Carbondale, which has heretofore been without accommodation. It cost about \$60,000. Other hospitals in Pennsylvania were opened at Rittersville and Wilkes-Barre, and the new State Hospital for the Criminal Insane at Fairview. The City Hospital of Fayetteville, Ark., erected at a cost of nearly \$50,000, and with accommodations for thirty patients, was dedicated.

In foreign countries: In Guayaquil, Ecuador, often called "the pesthole of the Pacific," sanitary methods are being planned and pushed. A late number of the *Boletín de Medicina y Cirugía* of Guayaquil contains an illustrated description of the isolation hospitals for bubonic plague, yellow fever, and smallpox, in charge of W. Pareja. The buildings are constructed according to modern principles. The smallpox hospital has been closed for two years, as there has been no case of smallpox during this period. The bubonic plague boarding pavilion (*pabellón de pensionistas*) contains twenty-eight apartments, fourteen for the sick and the others for their families who may wish to accompany them. The plague pavilion proper has eighty beds. The Research Hospital was opened at Cambridge, England, as the outcome of the labors of some of the leaders of the profession, Sir Clifford Allbutt, Sir William Osler, Sir Jonathan Hutchinson, Sir Victor Horsley, and others, designed to investigate maladies which, although not immediately fatal to life, incapacitate the sufferer from active work and which in consequence of their chronicity cannot be treated for long periods and sufficiently investigated in general hospitals. The first disease taken up was rheumatoid arthritis, of which 4000 cases have been carefully recorded, observed, photographed, and chemically analyzed. A psychopathic institution for children, the first of its kind in Germany, was erected by the province of Hannover. The new institution will admit abnormal children who come under the notice of the juvenile courts and those who are not suitable for treatment in insane asylums or other existing shelters.

HOTCHKIN, SAMUEL FITCH. An American Protestant Episcopal clergyman and writer, died August 1, 1912. He was born in Sau-

quoit, N. Y., in 1833 and graduated from Trinity College in 1856. In 1861 he became priest in the Protestant Episcopal Church. He served as rector in several churches in Delaware and became in 1877 rector of the Church of St. Luke, the Beloved Physician, in Philadelphia. He was the author of *The Mornings of the Bible* (1893); *The Unseen Christ* (1896); *The Living Saviour* (1898); *A Splendid Inheritance* (1898). He also published *Memoirs of Bishops Stevens and Otey* (1898).

HOWARD UNIVERSITY. An institution of higher learning at Washington, D. C., under the direct auspices of the national government. The number of students enrolled in all departments in 1911-12 was 1409. The faculty numbered 118. Among the notable changes during the year were the opening of courses in engineering and allied subjects and the enlargement of the faculty for this purpose. The productive funds of the institution amount to \$284,000 and its annual income to about \$185,000. There are about 27,000 bound volumes and 19,000 pamphlets in the library. President, S. M. Newman, A. M., D. D.

HOWARD, WALTER EUGENE. An American educator, died April 12, 1912. He was born at Tunbridge, Vt., in 1849 and graduated from Middlebury College in 1871. He studied law and was admitted to the bar in Wisconsin in 1873 and in Vermont in 1878. From 1871 to 1881 he taught school. He practiced law in Fairhaven, Vt., until 1888, when he was appointed professor of political science and history in Middlebury College. In 1892 he took postgraduate courses at Oxford University. He was appointed dean of the Middlebury College in 1909. He took an interest in politics and in 1882 was a member of the State Senate. From 1883 to 1885 he was United States consul at Toronto, Canada, and at Cardiff, Wales, from 1892 to 1893. He delivered the centennial oration at the celebration of the hundredth anniversary of the founding of the Middlebury College, 1900.

HOYT, JOHN WESLEY. An American public official, formerly territorial governor of Wyoming, died May 23, 1912. He was born near Worthington, O., in 1821 and graduated from the Ohio Wesleyan University in 1849. He studied law at the Cincinnati Law School and medicine at the Eclectic Medical Institute in 1853. In the same year he was appointed professor of chemistry and medical jurisprudence at the latter institute. From 1855 to 1857 he was professor of chemistry at Antioch College. He took an active part in politics and was one of the organizers of the Republican Party. He also engaged in publishing, and for ten years edited an agricultural journal in Madison, Wis. He was a member of the United States Commission to the Paris Exposition in 1877 and of the Commission to the Vienna Exposition in 1873. From 1878 to 1888 he was governor of Wyoming. In 1890 he acted as

chairman of the Russian Famine Relief Commission of the United States and was special representative of foreign affairs at the World's Columbian Exposition. He was the commissioner plenipotentiary of Korea to the Universal Postal Union. He took an active part in the development of Wyoming, especially in the construction of railroads. Among his published writings are: *Resources of Wisconsin* (1866); *University Progress* (1869); *Studies in Civil Service* (1878); *Agricultural Resources of Wyoming* (1892); *Histories of the Universities of Bologna, Paris, Oxford, and Cambridge during the Middle Ages* (1893-5); *Outline History of the World's Universities,—Ancient, Mediæval and Modern.* He also was the author of many reports and addresses on various subjects.

HUBBARD, ELBERT HAMILTON. An American public official, representative in Congress from Iowa, died June 4, 1912. He was born in Rushville, Ind., in 1849 and graduated from Yale College in 1872. He was admitted to the bar and took an active interest in politics, serving as a member of the House of Representatives in the 19th General Assembly of Iowa, and of the Senate in the 27th and 28th General Assemblies. He was elected to the 59th and 60th and 61st Congresses and was reelected to the 62d Congress in 1911.

HUFF, GEORGE FRANKLIN. Former member of Congress from Pennsylvania, died April 18, 1912. He was born in Norristown, Pa., in 1842 and was educated in the public schools of Middletown and Altoona. He engaged in banking and became an officer and director in many important financial institutions. He was also an officer in several railroad and coal companies. From 1884 to 1888 he was a member of the State Senate. In 1891 he was elected to the 52d Congress and was elected to the 54th Congress in 1895. He afterwards served in the 58th and 61st Congresses, 1903-1911.

HUNGARY. See AUSTRIA-HUNGARY.

HUNTINGTON, DEWITT CLINTON. An American Methodist Episcopal clergyman and educator, died February 8, 1912. He was born at Townsend, Vt., in 1830 and graduated from Syracuse University. In 1853 he entered the Methodist Episcopal ministry and was pastor at Rochester, N. Y., from 1861 to 1871. From 1871 to 1873 he was presiding elder and from 1873 to 1876 was pastor at Syracuse. He was again pastor in Rochester from 1876 to 1879 and was for a second time presiding elder from 1879 to 1882. He occupied other pastorates at Bradford, Pa., Olean, N. Y., and Lincoln, Neb. In 1898 he was elected chancellor of the Nebraska Wesleyan University. He held this position until 1908 when he retired. He continued, however, to fill the professorship of the English Bible at that institution. He was one of the best known American clergymen in the United States. He was several times mentioned as a possible bishop. Among his published writings are: *The Cotton King, and the Rum King* (1879); *The Puritans* (1896); *Sin and Holiness* (1898); and *Half Century Messages* (1906).

HUTCHINS, STILSON. An American capitalist and newspaper proprietor, died April 22, 1912. He was born in Whitfield, N. H., in 1838 and was educated at Harvard University. In 1855 he removed to Iowa where he later

founded the *Dubuque Herald*. In 1866 he founded the *St. Louis Times* and in 1877 founded the *Washington Post*. This paper became very successful under his management, but he sold it in 1889. He was one of the original promoters of the Mergenthaler Linotype and was one of the principal founders of the company which manufactures it.

HUTTON, ARTHUR WOLLASTON. An English clergyman and writer, died March 24, 1912. He was born in Spridlington in 1848 and was educated at Cheltenham College and at Exeter College, Oxford. He was rector of Spridlington from 1873 to 1876, but in the latter year was received into the Roman Catholic Church by Cardinal Newman, and in 1883 was a member of Newman's Oratorian community at Edgbaston. Following this he was appointed librarian at the National Liberal Club, holding this post from its formation in 1887 until 1899. In 1898 he returned again to the Anglican Church and served as rector and curate in several parishes. In 1907-8 he visited Canada and the United States. He wrote much on subjects relating to religion. Among his published works are: *Our Position as Catholics in the Church of England* (1872); *Cardinal Manning in the series of "English Leaders of Religion"* (1892); *Letters to Mr. Asquith and Mr. Balfour* (1894-5); *Newman's Lives of the English Saints* (1900); and *Ecclesia Discens* (1904). He also wrote encyclopædia and magazine articles.

HYGIENE. The Fifteenth International Congress on Hygiene and Demography was held at Washington, D. C., September 23 to 28, 1912. Delegates were present from 32 foreign countries and from all the 48 States. The President of the United States was the honorary president, while the president was Dr. Henry P. Walcott, of Boston, and the secretary was Dr. John S. Fulton, of Maryland. An exhibition, lasting from September 16 to October 4, was a special feature of the gathering, and contained twelve groups, covering vital statistics, food, the hygiene of infancy and childhood, as well as of exercise, industrial and occupational, State and municipal, traffic and transportation, military, naval, and tropical and sex hygiene, as well as communicable diseases. The scientific work of the congress was divided into sections corresponding to the departments of the exhibition mentioned, and eminent men addressed the delegates upon many special topics. There were also general sections, in which medical and related topics were considered in papers and addresses. Full reports of the proceedings may be obtained in *Medical Record*, New York, September 28, to October 12, 1912; *New York Medical Journal*, same dates; *Journal of the American Medical Association*, July 13, and September 28 to October 19, 1912.

HYGIENE, INDUSTRIAL. See OCCUPATIONAL DISEASES.

ICEBERGS. See METEOROLOGY.

ICELAND. A Danish crown colony. Area about 40,456 square miles, of which 16,245 square miles inhabited; population (1911),

85,089. H. Hafstein (1912), residing at Reikjavik, is the responsible executive. The trade in 1911 amounted to 5,693,000 kroner imports and 4,901,000 kroner exports, the latter consisting of wool, dried fish, mutton, ponies, and sheep. The legislature (Althing) has 40 members, 36 elective by universal suffrage. Voting rights are exercised by men and women over 25 years of age.

IDAHO. POPULATION. According to the Census Bureau statistics issued in 1912, out of a total population in 1910 of 325,594, the foreign-born whites numbered 40,427, compared with 21,890 in 1900. The largest number, 5042, came from Germany; from Sweden, 4955; from Canada, 4496; from Norway, 2566; from Italy, 2067; and from Denmark, 2254. Other European countries were represented by smaller numbers. The negroes in the State in 1910 numbered 651 and the mulattoes, 226. The negroes in 1890 numbered 201 and the mulattoes, 101.

AGRICULTURE. The acreage, value and production of the principal crops in 1911 and 1912 are shown in the following table:

		Acreage	Prod. Bu.	Value
Corn1912	12,000	394,000	\$ 276,000
1911	11,000	330,000	280,000
Wheat1912	510,000	14,566,000	9,613,000
1911	517,000	15,860,000	10,468,000
Oats1912	348,000	17,017,000	5,956,000
1911	331,000	14,564,000	5,826,000
Rye1912	3,000	66,000	40,000
1911	3,000	68,000	46,000
Potatoes1912	35,000	6,475,000	1,878,000
1911	29,000	5,220,000	3,393,000
Hay1912	692,000	1,938,000	12,209,000
1911	525,000	1,628,000	12,373,000

a Tons.

MINERAL PRODUCTION. During 1911 there were produced in the State 4,513,116 pounds of blister copper, compared with 6,877,515 pounds in 1910. The production since 1884 has been steady and important. At the close of 1911 it had amounted to 59,071,800 pounds. Most of the copper produced in the State comes from the Cœur d'Alène district.

The gold production of the State in 1911 was valued at \$1,372,387, against \$1,096,842 in 1910. Siliceous ores supplied 57.31 per cent. of the gold output; placer mines, 29.46 per cent.; copper ores, 6.76 per cent.; and lead ores, 5.78 per cent. The output of silver increased from 7,369,742 fine ounces in 1910 to 8,196,136 fine ounces in 1911. Over 86 per cent. of the silver output of the State is from the lead mines, especially from the Cœur d'Alène in Shoshone county.

MANUFACTURES. The Thirteenth Census, taken in 1910, included statistics of manufactures in the State for the calendar year 1909. The results will be found summarized in the table below. It will be seen from this that while the manufacturing interests of Idaho are not much in actual volume, they showed a remarkable increase in the five years from 1904 to 1909. The industries in which are the largest number of establishments, and the greatest capital invested, are those producing lumber and timber products. The value of these products in 1909 was \$22,400,000. Flourmill and gristmill products ranked next, with a value of \$10,689,000. Following are cars and general shop construction and repairs by steam railway companies, printing and publishing, manufactures

of butter, cheese, and condensed milk, liquors, brick and tile. The total number engaged in manufactures in 1909 was 9909, of whom 9646 were males and 263 females. For the majority of the wage earners, the prevailing hours of labor were 60 hours a week. The following table gives a summary of the results of the censuses for the calendar years 1904 and 1909:

	Number or Amount 1909	1904
Number of establishments..	725	364
Persons engaged in industry	9,909	3,791
Proprietors and firm members	831	371
Salaried employees.....	858	359
Wage earners (average number)	8,220	3,061
Primary horsepower.....	42,804	16,987
Capital	\$32,477,000	\$9,689,000
Expenses	18,981,000	7,619,000
Services	6,482,000	2,438,000
Salaries	984,000	379,000
Wages	5,498,000	2,059,000
Materials	9,920,000	4,069,000
Miscellaneous	2,489,000	1,112,000
Value of products.....	22,400,000	8,769,000
Value added by manufacture (value of products less cost of materials) ..	12,480,000	4,700,000

EDUCATION. The total number of children between the ages of 6 and 21 in the State on June 30, 1912, was 104,735. The average number of children attending school was 84,902 and the average daily attendance was 66,359. The number of teachers employed was 2710, of whom 2021 were women and 689 were men. The average monthly salary of men teachers was \$87.21, and of women, \$68.88. The total amount paid to teachers during the year was \$1,649,648. The value of all school property in the State on June 30, 1912, was \$7,090,806. The total receipts for educational purposes during the fiscal year were \$3,705,792. On October 1, 1912, there was a balance on hand of \$811,876.

FINANCE. The receipts from all sources from January 1, 1911, to January 30, 1912, were \$6,023,947. and the expenditures, \$5,596,998. The balance on October 1, 1912, was \$1,280,654, which includes the balance remaining at the beginning of the fiscal year. The chief sources of income are from taxation and the chief expenditures are for the maintenance of State departments and schools. The State indebtedness on October 1, 1912, was \$2,364,250.

CHARITIES AND CORRECTIONS. The only correctional institutions in the State are the Idaho State Penitentiary at Boise, and the Industrial Training School at St. Anthony. The State maintains no charitable institutions entirely, but coöperates with the Children's Home Finding Society of Boise.

POLITICS AND GOVERNMENT. The legislature did not meet in 1912, as the sessions are biennial and the last was held in 1911. The date of the next session is January 6, 1913. Senator Weldon C. Heyburn (q. v.) died October 17, 1912, and it was necessary for the governor to appoint a successor until the legislature should meet. He appointed Judge Kirtland*1. Perky. Senator Heyburn's term expired in 1915.

The political campaign in the State was of unusual interest. The Progressives were strong and Senator Borah took a conspicuous part in the deliberations of the national committee preceding the national convention. He was a strong supporter of Mr. Roosevelt and bitterly

arraigned the committee for its action in refusing to seat certain of the Roosevelt delegates. Senator Borah, however, did not join the third party movement following the Chicago convention. The Republicans nominated John M. Haines for governor and the Democrats renominated James H. Hawley. On July 30 an organization of electors of the State held a convention at which delegates from a number of counties formed an organization which they designated as the Progressive party of the State of Idaho and elected delegates to attend the convention of the Progressive party in Chicago. At the same time they nominated three candidates for electors for President and Vice-President. On August 12 a committee representing this party elected a chairman and agreed upon certain persons for the nomination for State offices. The chairman caused a certificate of nomination to be prepared and circulated, nominating the persons so agreed upon for those State offices. This petition was signed by about 600 electors of the State. It asked to have the candidates mentioned in the petition appear on the final ballot under the name of the Electors' Progressive party. Action was taken by the regular Republican leaders to have this petition declared void as they alleged that the convention in which electors were nominated was contrary to the primary law of the State. The supreme court of the State decided on August 8, that the primary election law of the State forbade the recognition of such a convention and that therefore the electors nominated at that convention could not properly appear upon the ballot. As a result of this decision, the voters who wished to cast their vote for Mr. Roosevelt were obliged to write in his name on the ballot. This decision was widely criticised, both within and without the State. Mr. Roosevelt was especially bitter against the action of the supreme court and the publication of his criticisms in certain papers in Idaho resulted in the arrest of the editors of those papers for contempt of court.

The election on November 5 resulted as follows: Wilson, 33,921 votes; Taft, 32,810, and Roosevelt, 25,530. For governor, Haines, Rep., received 35,134 votes; Holly, Dem., 33,992, and Martin, Prog., 24,375. A number of amendments to the constitution were submitted at this election. Among them were those providing for the initiative, referendum, and recall. These were all carried by large majorities. In addition, the statutes relating to the bonded indebtedness of the State and taxation were also submitted and carried. Another amendment, which was carried, provided for increased membership of the legislature. The Republicans elected representatives to Congress.

STATE GOVERNMENT. Governor, John M. Haines; Lieutenant-Governor, H. H. Taylor; Secretary of State, W. L. Gifford; Treasurer, O. V. Allen; Auditor, R. Huston; Attorney-General, J. H. Peterson; Superintendent of Education, Grace Shepard—all Republicans.

JUDICIARY. Supreme Court: Chief Justice, George H. Stewart, Rep.; Associate Justices, James F. Ailshie, Rep.; Isaac N. Sullivan, Rep.; Clerk, I. W. Hart.

STATE LEGISLATURE, 1913. Senate, Republicans 20; Democrats, 4; House, Republicans, 57; Democrats, 4; joint ballot, Republicans, 77; Democrats, 8; Republican majority, Senate, 16; House, 53; joint ballot, 69.

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

IDAHO, UNIVERSITY OF. A State university for higher education at Moscow, Ida., founded in 1889, and first opened in 1892. The students enrolled in the several departments of the university in 1911-12 numbered 733. The faculty, including the members of the agricultural experiment station, numbered 79. During the year a new auditorium was completed. A summer school was inaugurated in 1912, and had an attendance of 202. The members of the Lumbermen's Association of Idaho have subscribed about \$60,000 for a forestry building, the first gift of any size which the university has received outside the legislative appropriations. The university comprises the following divisions: College of letters and sciences; college of agriculture; the agricultural experiment station; college of engineering; college of law; and the summer session. The endowment of the university in 1911-12 amounted to \$631,388 and the total receipts for the year to about \$246,000, all of which was derived from legislative appropriations, from interest on endowment, and from the federal government. President, James Alexander MacLean, Ph. D., LL. D.

IDEALISM. See PHILOSOPHY.

IDO. See LANGUAGE, INTERNATIONAL.

IJICHI, H. A vice-admiral of the Japanese navy, died January 4, 1912. He was born in 1860 and entered the Japanese naval college in 1874. During the Chino-Japanese war he was naval attaché in Rome. In 1900 he was promoted to be captain and occupied important positions in the navy department. He was appointed captain of the *Nikasa* in 1903 and just previous to the war between Japan and Russia was made flag-captain to Admiral Togo. He was promoted to rear-admiral in 1906 and vice-admiral in 1910. Between 1906 and 1909 he was twice commander-in-chief of the Japanese training squadron and with this squadron visited Australia and the west coast of the United States. His last position was that of commander-in-chief of the naval station of the Pescadores. He was also a member of the admiralty board.

ILLINOIS. POPULATION. According to the Census Bureau statistics issued in 1912, out of a total population in 1910 of 5,638,591, 1,202,560 were foreign-born whites, compared with 964,635 in 1900. The largest proportion of these came from Germany, 318,634; from Austria, 164,966; from Russia, 149,366; from Sweden, 115,416; from Ireland, 93,381; from Italy, 72,100; from England, 60,333; from Norway, 32,896; from Canada, 37,868; from Hungary, 37,494; and from Scotland, 20,752. Other European countries were represented by smaller numbers. In the city of Chicago, with a total population in 1910 of 2,185,283, there were 781,217 foreign-born whites. Of these 181,987 came from Germany; 133,301 from Austria; 122,035 from Russia; 65,922 from Ireland; 45,111 from Italy; 63,035 from Sweden; 24,170 from Norway. There were in the State in 1910 109,049 negroes and 36,828 mulattoes. In 1890 the negroes numbered 57,028 and the mulattoes, 16,682.

AGRICULTURE. The acreage, value and production of the principal crops in 1911 and 1912 are shown in the following table:

		Acreage	Prod. Bu.	Value
Corn	1912	10,658,000	426,320,000	\$174,791,000
	1911	10,150,000	334,950,000	184,222,000
Wheat ...	1912	1,183,000	9,819,000	8,641,000
	1911	2,026,000	42,000,000	37,380,000
Oats	1912	4,220,000	182,726,000	54,818,000
	1911	4,220,000	121,536,000	51,045,000
Rye	1912	48,000	768,000	538,000
	1911	52,000	874,000	708,000
Potatoes	1912	137,000	13,837,000	8,302,000
	1911	138,000	6,900,000	6,210,000
Hay	1912	2,512,000	a 3,266,000	41,152,000
	1911	2,376,000	a 1,948,000	38,116,000
Tobacco	1912	900	684,000	62,000
	1911	1,000	750,000	58,500

a Tons.

MINERAL PRODUCTION. Petroleum. The production of petroleum in Illinois in 1911 was 31,317,038 barrels, compared with 33,143,362 barrels in 1910. The production in the Illinois field has remained comparatively constant since 1907, when it was 24,281,933 barrels. There were 1365 wells completed in the State in 1911.

The coal produced in the State in 1911 amounted to 53,679,118 short tons with a value of \$59,503,278. This is an increase of 7,778,872 tons in quantity and \$7,097,381 in value over 1910. Much of the gain is due to the abnormally low production of 1910 on account of the prevailing strike. There were no labor troubles of importance in the State during 1911. The number of persons employed in the mines of the State in 1911 was 76,000.

The production of lead in the State in 1911 was 964 short tons, valued at 6760. The zinc produced amounted to 4219 short tons, valued at \$480,966. The production of lead in 1910 was 373 tons, and of zinc, 3549 tons.

MANUFACTURES. The Thirteenth Census statistics are for the calendar year 1909 and were compiled in 1912. A summary of the results of the census is given in the table below:

	Number or Amount 1909	1904	P. C. of Inc. 1904-'09
Number of establishments	18,026	14,921	20.8
Persons engaged in manufactures	561,044	447,947	25.2
Proprietors and firm members	17,357	13,990	24.1
Salar'd employees	77,923	54,521	42.9
Wage earners (average number)	465,764	379,436	22.8
Pr'i'ry horsepower	1,013,071	741,555	36.6
Capital	\$1,548,171,000	\$975,845,000	58.6
Expenses	1,733,327,000	1,281,208,000	35.3
Services	364,768,000	268,965,000	35.6
Salaries	91,449,000	60,560,000	51.0
Wages	273,319,000	208,405,000	31.1
Materials	1,160,927,000	840,067,000	38.2
Miscellaneous	207,632,000	172,186,000	20.6
Value of products	1,919,277,000	1,410,342,000	36.1
Value of products less cost of materials	785,350,000	570,285,000	33.0

Illinois is the most important manufacturing State west of the Allegheny Mountains. As will be seen from the table in 1909, there were 18,026 manufacturing establishments giving employment to an average of 561,044 persons. Of these establishments, those devoted to printing and publishing ranked first in number, 2608. Those devoted to bread and other bakery products numbered 2099; tobacco manufactures, 1944; foundry and machine-shop products, 1178. The value of products was greatest in slaughtering and meat-packing manufactories, which numbered 109. The value of the product of

these establishment was \$389,595,000; foundry and machine-shop products were valued at \$138,579,000; clothing establishments, \$89,473,000; printing and publishing, \$87,247,000; iron and steel works and rolling mills, \$86,608,000. The total number of persons engaged in manufactures in 1909 was 56,104. Of these 465,139 were male and 95,905 were female. The number of persons employed under 16 years of age was 6917. The prevailing hours of labor were, for the greater proportion of those engaged in the industries, from 54 to 60 hours a week; only 8.1 per cent. worked in establishments where the prevailing hours exceeded 60 a week, and only 22.7 per cent. in establishments where they were less than 54 a week. All of the wage earners in the blast furnace industry and nearly all those in the cement and gas industries worked in establishments where the prevailing hours exceeded 72 a week, while nearly three-fifths of those in the steel works and rolling mills worked at least 72 hours a week. In Chicago were found 293,977 wage earners; in Rockford, 9309; in Joliet, 6383, and in Elgin, 6094.

FINANCE. The receipts from all sources into the State treasury during the fiscal year ending September 30, 1912, were \$14,822,466, and the expenditures for the same period were \$13,953,687, leaving a balance on hand at the end of the year, including the balance at the beginning of the fiscal year, of \$5,499,210. The chief sources of income are from State taxes, inheritance taxes, from the Illinois Central Railway Company, and from fees from the several departments. The chief expenditures are for the support of State institutions, for education, and for the support of government offices. The State has no bonded indebtedness except such as has been called for payment.

EDUCATION. The total enrollment in the public schools of the State on June 30, 1912, was 987,379. The teachers employed numbered 30,366. The average annual salary of teachers was \$634.76. The total amount expended for education during the year was \$34,869,457, of which \$27,324,901 was for current expenses, \$6,284,242 for capital outlay, and \$1,260,313 for bonds and interest. The average annual tuition per pupil enrolled for all expenses was \$35.38.

CHARITIES AND CORRECTIONS. The charitable institutions under the control of the State, with their populations in 1912, include the following: Elgin State Hospital at Elgin, 1550; the Kankakee State Hospital at Kankakee, 2950; the Jacksonville State Hospital at Jacksonville, 1650; the Anna State Hospital at Anna, 1400; the Watertown State Hospital at Watertown, 1400; the Peoria State Hospital at Peoria, 2300; the Chicago State Hospital 2500; the Chester State Hospital at Chester, 280; Lincoln State School and Colony at Lincoln, 1500; the Industrial Colony for Improvable Epileptics; the Illinois School for the Deaf at Jacksonville, 411; Illinois School for the Blind at Jacksonville, 209; the Illinois Industrial Home for the Blind in Chicago, 88; the Illinois Soldiers' and Sailors' Home, Quincy, 1400; Soldiers' Widows' Home of Illinois at Wilmington, 80; Illinois Soldiers' Orphans' Home at Normal, 300; the Illinois Charitable Eye and Ear Infirmary at Chicago; the State Training School for Girls at Geneva, 450; the St. Charles School for Boys at St. Charles, 550; the Alton State Hospital,

not located; Surgical Institute for Crippled Children, not located. These institutions are under the control of the State Charities Commission. The only legislation of importance relating to charities during the year was the passage of an amendment creating a State bureau of criminal statistics, making it a division of the State charities commission. The duties of this commission are to collect annual statistics of crime in Illinois. The correctional institutions of the State include the State prisons at Joliet and Chester and the reformatory at Pontiac.

POLITICS AND GOVERNMENT

There was no regular meeting of the legislature in 1912, but two special sessions were called by Governor Deneen, the more important having the primary object of passing a measure to provide for a presidential primary law. This measure was passed.

The term of Senator Cullom expiring in 1913, it was necessary to elect his successor. Although Senator Cullom was over 84 years old, and had served in the United States Senate since 1883, he announced on January 31 that he was a candidate for reelection, and his name was placed on the primary ballot. His opponent was Lawrence Y. Sherman. On February 5 Governor Deneen announced his candidacy for the Republican renomination. The measure referred to above providing for presidential preference primary elections became a law on March 30, when it was signed by Governor Deneen. The election was appointed for April 9, and the results were awaited with greatest interest throughout the country. It was well known that the Progressive element in Illinois was strong and there was a pronounced opposition to President Taft, which had been added to by speeches made by Mr. Roosevelt and other Progressive leaders throughout the State prior to the election. In spite of this, however, the overwhelming defeat of the President was a surprise. Mr. Roosevelt received 266,917 votes, President Taft, 127,481 and Senator La Follette, 42,692. The total vote cast in the primary for these three candidates was 437,090, which may be compared with the Republican vote at the election of 1908, which was 629,932. Governor Deneen was renominated as Republican candidate for governor, and Edward F. Dunne won the Democratic nomination. In the Democratic presidential primary vote, Champ Clark defeated Governor Wilson by 142,956. Senator Cullom was defeated for renomination by Mr. Sherman, and in Chicago the voters decided by a vote of nearly two to one, against woman suffrage, on a public policy vote.

The Republican State convention for the nomination of delegates to the Republican national convention was held on April 19. Resolutions favoring initiative and referendum were emphatically rejected. The platform adopted approved the administrations of President Taft and Mr. Roosevelt, endorsed Lawrence Sherman for United States Senator and pledged the Republicans to vote solidly for him in joint assembly. The delegates at large were pledged to vote for Mr. Roosevelt. In view of the fact that Mr. Roosevelt carried the primaries for presidential candidate, Governor Deneen and the other State leaders supported him in the national convention where Governor Deneen took a leading part as a Roosevelt representa-

tive. (See **PRESIDENTIAL CAMPAIGN.**) After the nomination of President Taft, however, Governor Deneen refused to affiliate himself with the third party or to identify himself with the Progressive party movement. As a result of this decision the Progressive party met on August 3 and nominated Senator Frank H. Funk for governor.

The Democrats in party convention had ratified the nomination of Edward F. Dunne for governor. In the election on November 5, Governor Wilson received 405,048 votes, Mr. Roosevelt, 386,478, President Taft, 253,593, Debs, Socialist, 81,278, and Chafin, Prohibition, 15,710. For governor, Dunne received 443,120 votes, Deneen, 318,469, and Funk, 303,401. The Democrats elected 19 of the 25 representatives in Congress and among the notable defeats was that of Joseph G. Cannon, former speaker of the House. William B. McKinley, the leader of President Taft's campaign, was also defeated for reelection.

The election of United States senators became doubtful, the newly elected State senate having 24 Democratic, 25 Republican, and 1 Progressive members, and the House 73 Democrats, 51 Republicans, 25 Progressives, and 4 Socialists.

OTHER EVENTS. Senator Lorimer was finally deprived of his seat in the Senate on July 14. (See **CONGRESS.**) Governor Deneen did not appoint a successor on the ground that he had no authority to do so as a result of the conditions under which the seat was vacant, and as a result Illinois had only one representative in the Senate during the remainder of the year.

Municipal elections were held in the State on April 2. Among the interesting results was the election of Socialist aldermen in Belleville, Peoria, and Quincy.

The trial of ten accused officers of the so-called Beef Trust was concluded on March 26 by the acquittal of the defendants. They included J. Ogden Armour, of Armour and Company, Louis F., Edward F., and Charles H. Swift, of Swift and Company, Edward Morris, president of Morris and Company, and Edward Tilden, president of the National Packing Company. For a discussion of this trial and its causes, see the article **TRUSTS**.

The Chicago city council received a report recommending the building of a subway system, with four main lines at a cost of \$131,000,000. At the end of the year public opinion was divided as to subway policy. As an alternative to the "comprehensive" subway plan, a subway for the downtown district only found support, the financing of the "comprehensive" scheme being doubtful. See **SUBWAYS**.

In Chicago an agreement was made between the city, the South Park commissioners, and the Illinois Central Railroad Company for the improvement of the lake shore, south of Grant Park, which is expected to result in the addition of valuable water-front land to the park system, and to give a permanent home to the Field Columbian Museum. At the election of November 5, the voters of the city approved a bond issue of \$1,750,000 for the widening of Twelfth Street from South Ashland Avenue to Michigan Boulevard, an important step toward carrying out the "city beautiful" plan. The city council, August 14, passed an ordinance after a fiercely contested campaign, requiring all milk sold in the city and not coming from

dairies approved by the health department to be pasteurized. Early in November, Edward W. Bemis, the city's expert, reported that a reduction in the gross income of the Chicago Telephone Company should be made of \$700,000 a year, under the city's right to regulate the telephone rates, and steps were taken by the city council to make the reduction effective. Because of the large number of unemployed men in the city a commission on the unemployed was created by the city, to study ways and means of lessening the number and providing work for as many as possible. The commission had not reported by the end of the year. The movement for vocational education received an impetus through a report to the Commercial Club of Chicago, by Edwin G. Cooley, former superintendent of schools, advocating an extensive system based on German experience. A bill for the establishment of such a system throughout Illinois, drafted by Mr. Cooley, for consideration by the legislature, received the endorsement of several strong organizations, including the Chicago Association of Commerce, the Hamilton Club, and the Civic Federation of Chicago. An ordinance for the reorganization of the police force, to provide for many needed reforms, was passed by the city council in November, and the reorganization under it was begun. The most important feature of this ordinance is the creation of a civilian deputy superintendent, whose division is to be a check on the regular staff administration.

LEGISLATION. There were three special sessions of the legislature in 1912. The first of these merely passed appropriations to pay the expenses of the special session. At the second session the only measures of general importance passed were as follows: An act amending the primary law so as to provide for the appointment by each candidate of challengers in each precinct; an act providing for presidential primaries (see **POLITICS AND GOVERNMENT**, above); an act regulating fraternal benefit societies; an act providing for mutual insurance against liability in consequence of accident or casualty of employees or other persons. At the third special session an act was passed revising the laws of the State relating to charities, and an act was passed amending the act as to sanitary districts.

STATE GOVERNMENT. Governor, E. F. Dunne; Lieutenant-Governor, B. O'Hara; Secretary of State, Harry Woods; Treasurer, W. Ryan, Jr.; Auditor, James J. Brady; Attorney-General, P. J. Lucey; Adjutant-General, to be appointed by governor; Superintendent of Public Instruction, Francis G. Blair; Superintendent of Insurance, to be appointed by governor—all Democrats.

JUDICIARY. Supreme Court: Chief Justice, F. K. Dunn, Rep.; Associate Justices, Alonzo K. Vickers, Rep.; Wm. M. Farmer, Dem.; George A. Cooke, Dem.; John P. Hand, Rep.; James H. Cartwright, Rep.; O. N. Carter, Rep.; Clerk of the Court, J. McCan Davis, Rep.

LEGISLATURE, 1913. Republicans, Senate, 25; House, 51; joint ballot, 76; Democrats, Senate, 24; House 73; joint ballot, 97; Progressives, Senate, 2; House, 25; joint ballot, 27; Socialists, Senate, 0; House 4; joint ballot, 4.

The representatives in Congress will be found in the section *Congress*, article **UNITED STATES**.

ILLINOIS, UNIVERSITY OF. A State institution for higher education at Urbana-Champaign, Ill. The total number of students en-

rolled in all departments of the university in 1912 was 4225. The faculty numbered 543, of whom 496 were men and 47 women. There were no noteworthy benefactions received during the year and no important additions to the faculty. The university is maintained chiefly by the State. The total receipts for 1911-12 amounted to \$2,305,211. In the library there were 212,700 volumes. President, E. J. James, Ph. D., LL. D.

ILLITERACY. The Thirteenth Census included investigation into illiteracy in the United States, and many interesting facts were revealed as a result. The Census Bureau treated as illiterate any persons unable to write, regardless of ability to read. The total number of persons coming under this classification in Continental United States in the census of 1910 was 5,516,693, compared with 6,180,069 in 1900, a decrease in ten years of more than 600,000 in number and a decline from 10.7 per cent. to 7.7 per cent. in the proportion of population ten years of age and over which reported.

The proportion of illiterates was less in 1910 than in 1909 in each of the nine geographic divisions into which the country is divided by the census in all but two States, Connecticut and New York. In these two States, in which the percentages were substantially the same in both censuses, the number of illiterates was larger in 1910 than in 1900, chiefly as a result of the heavy immigration into these States in the ten-year period. Owing to the same cause the number of illiterates increased in a considerable number of other States, although the proportion of illiterates in each case has decreased during the decade. The number of illiterates in each of the geographic divisions in 1909-10 was as follows: In the New England division, including Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut, with a total population of 5,330,914, the illiterates numbered 280,806, or 5.3 per cent., compared with 272,402, or 6 per cent. in 1900. In the Middle Atlantic States, including New York, New Jersey, and Pennsylvania, with a total population of 15,446,515 in 1900, the illiterates numbered 874,012, or 5.7 per cent., compared with 704,134, or 5.8 per cent. in 1900. In the East North Central Division, including Ohio, Indiana, Illinois, Michigan, and Wisconsin, with a total population in 1910 of 14,568,949, the illiterates numbered 401,798, or 3.4 per cent., compared with 534,299, or 4.3 per cent. in 1900. In the West North Central Division, including Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, and Kansas, with a total population of 9,097,311 in 1910, the illiterates numbered 263,628, or 2.9 per cent., compared with 324,023, or 4.1 per cent. in 1900. In the South Atlantic Division, including Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, and Florida, with a total population in 1910 of 9,012,825, the illiterates numbered 1,444,294, or 16 per cent., compared with 1,821,346, or 23.9 per cent. in 1900. In the East South Central Division, including Kentucky, Tennessee, Alabama, and Mississippi, with a total population in 1910 of 6,178,578, the illiterates numbered 1,072,100, or 17.4 per cent., compared with 1,364,935, or 24.9 per cent. in 1900. In the West South Central Division, comprising Arkansas, Louisiana, Oklahoma, and Texas, with a total population in

1910 of 6,394,043 the illiterates numbered 845,606, or 13.2 per cent., compared with 953,644, or 20.5 per cent. in 1900. In the Mountain Division including Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, and Nevada, with a total population in 1910 of 2,054,249, the illiterates numbered 140,618, or 6.8 per cent., compared with 122,901, or 9.6 per cent. in 1900. In the Pacific Division, including Washington, Oregon, and California, with a total population in 1910 of 3,496,885, the illiterates numbered 103,821, or 3 per cent., compared with 82,385, or 4.2 per cent. in 1900. It will be noted that the largest percentages of illiteracy in these divisions are: East South Central, 17.4; South Atlantic, 16; and the West South Central, 13.2. These percentages are accounted for largely by the proportion of negroes in the States of these divisions. Percentages for individual States are: Louisiana, 29; South Carolina, 25.7; Alabama, 22.9; Mississippi, 22.4; Georgia, 20.7; New Mexico, 20.2; Arizona, 20.9; North Carolina, 18.5; and Virginia, 15.2. The smallest percentage in any of the divisions is found in the West North Central Division, 2.9, and in this division is also found the smallest proportion in any of the individual States, Iowa, 1.7. Nebraska had 1.9 per cent. of illiterates; Oregon, 1.9 per cent.; Washington, 2 per cent.; Kansas, 2.2 per cent.; Idaho, 2.2 per cent.; Utah, 2.5 per cent.; South Dakota, 2.9 per cent.; and California, 3.7 per cent.

The percentage of illiteracy in which a large proportion of the inhabitants are colored may be shown by figures taken from statistics dealing with those States. In the South Atlantic Division, with a total white population in 1910 of 6,018,022, the total number of illiterates among the whites was 471,743, or 7.8 per cent. The negro population in this division in 1910 was 2,986,936 and the illiterates among the negroes numbered 960,432, or 32.5 per cent. In the East South Central Division, with a total white population of 4,215,494, the white illiterates numbered 389,445, or 9.2 per cent. In this division there was a negro population of 1,960,898, and among these the illiterates numbered 681,507, or 34.8 per cent. In the West South Central Division, with a total white population of 4,881,331, the white illiterates numbered 349,218, or 7.2 per cent. This division had a negro population of 1,460,705. Of these, 483,022, or 33.1 per cent., were illiterates. Of the whole colored population in the United States, 7,318,502 in 1910, 2,228,087, or 30.4 per cent., were illiterates. There was in the decade however, a gratifying decrease in the number of illiterates among the negroes. With a total negro population in 1900 of 6,415,581, the illiterates numbered 2,853,194, or 44.5 per cent., which shows a decrease of illiteracy of 14.1 per cent. in the decade. The highest percentages of illiteracy among the colored population were: Louisiana, 48.4; Alabama, 40.1; North Carolina, 38.7; Georgia, 36.5; Mississippi, 35.6; Virginia, 30; Kentucky, 27.6; Washington, 27.3; Arkansas, 26.4; Delaware, 25.6. The highest percentage of literacy among the negroes in these States was found in Oklahoma, the percentage of illiterates being 17.7.

ILLITERACY AMONG CHILDREN. While illiteracy among the entire population declined from 10.7 per cent. in 1900 to 7.7 per cent. in 1910, among children 10 to 14 years of age the decline in the ten-year period was from 7.2 to

4.1 per cent. In 1910 the whole number of children of the ages of 10 to 14 years who were unable to read or write was 370,120, of whom 144,659 were whites and 218,355 negroes, leaving 7106 Indians, Chinese, and Japanese. Illiteracy among the native white children fell to 1.7 per cent., and among those of foreign or mixed parentage who, for the most part, live in cities, the proportion is as low as 0.6 per cent. On the other hand as many as 18.9 per cent. of negro children were illiterate in 1910. In the northern part of the country illiteracy among children has almost entirely disappeared. In this section the proportion is considerably less than 1 per cent. of the whole number of children. See also EDUCATION.

IMMEDIATE RESERVE. See NAVAL PROGRESS.

IMMIGRATION AND EMIGRATION. The total immigration into the United States in the fiscal year 1912 was 838,172, which was considerably less than the corresponding figures for 1911, 878,587. The largest number of immigrants came from Austria-Hungary, 178,882. In 1911 the largest number came from Italy. From Italy in 1912 came 157,134; from the Russian Empire and Finland, 162,395; from Germany, 27,788; from Greece, 21,449; from England, 40,408; from Ireland, 25,879; and from Scotland, 578. The total immigration from Europe in 1912 was 718,875. From China came 1765 immigrants; from Japan, 6114, and from Turkey in Asia, 12,788. The total immigration from Asia was 21,449. From British North America the immigration in 1912 was 55,990, compared with 56,830 in 1911. There were debarred for various reasons from the United States in 1912, 16,057 immigrants, and 2456 were deported.

EMIGRATION. For the fiscal year ending June 30, 1912, the emigrant aliens numbered 333,263, and the non-emigrant aliens, 282,630, or a total of 615,292. The non-emigrant aliens are those who have returned temporarily to their native countries with the intention of returning again to the United States.

DESTINATION OF IMMIGRANTS. Of the immigrants arriving in 1912, 239,275 had New York as their destination, 67,118 Illinois, 70,171 Massachusetts, 109,625 Pennsylvania, 33,559 Michigan, 28,905 California, and 23,227 Connecticut.

RECENT IMMIGRANTS AND THEIR DISTRIBUTION. The Thirteenth Census taken in 1910 included investigations into the destination of recent immigrants.

The census enumerated in the United States 13,345,545 white persons of foreign birth, of whom almost exactly 5,000,000 were new arrivals who had reached this country between January 1, 1901, and the taking of the census. These figures are preliminary and subject to revision. They represent results of the inquiry made of all foreign-born residents concerning the year of their immigration to this country. For some 10 per cent. of all foreign-born whites the enumerators failed to ascertain the year of immigration, but in the figures here given these unknown cases are distributed in the same proportions as were ascertained where the facts were available.

Of these recent arrivals coming after January 1, 1901, there were 2,155,772, or 43.1 per

cent. in the Middle Atlantic States (New York, Pennsylvania, and New Jersey); 1,012,417, or 20.2 per cent. in the East North Central division (Ohio, Indiana, Illinois, Michigan, and Wisconsin); and 684,473, or 13.7 per cent. in the New England States. These three divisions, comprising the States lying north of the Ohio and east of the Mississippi, contained 3,852,662, or 77.1 per cent., of the immigrants who had come to this country since the year 1900. There were only 1,147,436, or 22.9 per cent. located in the sections of the country south of the Ohio and west of the Mississippi.

The older immigrants who came to this country prior to 1901 are more widely dispersed. Of these earlier immigrants the Middle Atlantic division contained in 1910 2,670,407, or 32 per cent., as compared with 43.1 per cent. of the recent arrivals. The East North Central division had 2,054,803, or 24.6 per cent. of the earlier immigrants, but only 20.2 per cent. of the more recent ones. New England, with 1,120,913, or 13.5 per cent. of the older immigrants, has about the same share in the older as in the newer immigration. The whole region north of the Ohio and east of the Mississippi, which contained 5,855,123 persons who came to this country before 1901, or 70.2 per cent. of the entire number, has, as previously stated, 77.1 per cent. of the newcomers.

The proportion of newcomers among the foreign whites in 1910 (37.5 per cent.) is much larger than was the case ten years before. The census of 1900 enumerated 10,341,276 foreign-born persons, of whom 2,609,173, or 25.2 per cent., had arrived in the United States after 1890. The reason for this larger proportion of newcomers in 1910 lies in the greater immigration of the decade which preceded the last census enumeration.

During the period from January 1, 1901, to April 1, 1910, the Bureau of Immigration recorded the arrival in the United States of 8,248,890 immigrants. Of these, 5,000,098, or 60.6 per cent., were accounted for as present in the United States at the census enumeration of April 15, 1910. In the period preceding the census of 1900 from January 1, 1891, to June 1, 1900, the number of immigrants reported was 3,421,184, of whom 2,609,173, or 76.3 per cent. were counted by the census enumeration of June 1, 1900. The comparison of the two periods indicates that the immigration to the United States contains a larger proportion than formerly of persons who go back instead of remaining here permanently.

RESTRICTION OF IMMIGRATION. Two bills, the Burnett bill in the House and the Dillingham bill in the Senate, which were the result of investigations carried on by a committee of Congress and concluded in 1907, were under consideration in Congress in 1912. These bills provided many restrictions, the most important of which was the literacy test, under the provisions of which immigrants were required to be able to read in some language. This provision applied to all aliens over 16 years of age. Exempt from the operation of this test were those persons who could prove that they sought admission solely to escape from religious persecution, aliens in transit through the United States, and aliens who have been lawfully admitted to the United States and who later pass from one part of the United States to another through foreign contiguous territory.

The bill passed the House of Representatives on December 12, 1912, but no action had been taken by the Senate at the end of the year.

INDETERMINATE SENTENCE. See PENOLOGY.

INDIA, BRITISH. British India is that part of East India governed by the British sovereign (as emperor of India) through the governor-general of India or the latter's subordinates. India, as defined by the British parliament, includes British India and those Native States under the suzerainty of the British government. The capital of British India (formally Calcutta) is Delhi (since 1912). See ARCHITECTURE.

AREA AND POPULATION. The area of India is stated at 1,773,168 square miles. Interprovincial transfers are not uncommon, nor transfers from Native to British territory and vice versa. The table below shows in detail the area of British India and of the Native States and the population according to the censuses of March 15, 1901, and March 10, 1911. The 1901 population is corrected, as far as possible, in order to allow for subsequent interprovincial transfers. The largest changes are those necessitated by the partition of Bengal. (In 1905 Bengal was divided, the eastern part being united to Assam to form the province of Eastern Bengal and Assam. See end of this section.) The population of Manipur State (284,465), which was included under the head British territory in the 1901 census, is included under the head Native States in the 1911 census. Also the tribal areas in the North-West Frontier Province are now shown under Native States. Sikkim, which in 1901 was classed under Bengal States, is now shown separately. Areas newly included within the scope of the 1911 enumeration are as follows (the figures are estimates except for Baluchistan); in Burma: Kokang, 25,604; West Manglun, 18,562; unadministered area in Pakokku Hill tracts, 9123;—in Baluchistan: Makran (native), 71,942; Western Singrani (British), 1620;—in the North-West Frontier Province: agencies and tribal areas, 1,604,265;—total, 1,731,116. It should be noted that the decrease in the Baluchistan States, as shown in the table, is only apparent, as figures for 1901 were based on an estimate which now appears to be excessive.

The population of the French and Portuguese settlements is not included in the table. A French census in 1911 was carried out synchronously with the British, the provisional results being: Pondicherry, 184,840; Karikal, 56,577; Yanaon, 5033; Mahé, 10,636; Chandernagore, 25,293; total, 282,379 against 273,185 in 1901. A census of the Portuguese settlements was taken December 31, 1910, showing a provisional total of 604,930. The independent states of Nepal and Bhutan are geographically a part of India; their population is not known with certainty, but may be estimated at 3,000,000 for the former and 250,000 for the latter. Adding these totals to the 315,132,537, returned as the population of British India and Native States, we find that the inhabitants

of India number about 319,270,000; or, if we exclude Burma (12,115,217), and Aden (46,165) as not being geographically a part of India, the total is about 307,109,000. Even the approximate accuracy of these totals is in considerable doubt on account of the widely varying estimates for Nepal.

Area and population (March 15, 1901, and March 10, 1911) of British India and the Native States and agencies:

	Sq. m.	Pop. 1901	Pop. 1911
Provinces:

Native States...	687,809	62,755,116	70,864,995
Total India.....	1,773,168	294,361,056	315,132,537

Of the population, about 78 per cent. were in British India, and about 22 per cent. in the Native States. Males numbered 161,326,110, and females 153,806,427. The 1911 census showed the population according to the civil condition in the case of 312,643,693 persons; of these, the unmarried numbered 78,384,886 males and 52,516,947 females; married, 72,906,881 and 73,704,162; widowed (including divorced), 8,709,755 and 26,421,262.

The larger cities, with population according to the 1911 census: Calcutta (Bengal), 896,067 (including Howrah and other suburbs, 1,222,313); Bombay (Bombay), Madras (Madras), 518,660; Hyderabad (Hyderabad), including Secunderabad, Bolaram, and the Residency Bazaars, 500,623; Rangoon (Burma), 293,316; Lucknow (United Provinces), 259,798; Delhi (Punjab in 1911, but now Delhi), 232,837; Lahore (Punjab), 228,687; Ahmedabad (Bombay), 215,835; Benares (United Provinces), 203,804; Bangalore (Mysore), including civil and military station, 189,486; Cawnpore

(United Provinces), 178,557; Allahabad (United Provinces), 171,697; Poona (Bombay), 158,856; Amritsar (Punjab), 152,756; Karachi (Sind, Bombay), 151,903; Mandalay (Burma), 138,299; Jaipur (Rajputana), 137,098; Patna (Bengal, now in Bihar, and Orissa), 136,153; Madras (Madras), 134,130. At the time of the census, plague was prevalent in Cawnpore, and many of the inhabitants were absent. A new census taken after the epidemic had subsided showed an increase of about 17,000, the provisional total being 195,498.

The province of Eastern Bengal and Assam, formed in 1905, and the province of Bengal were reconstituted pursuant to an order of November, 1911, and three provinces were erected April 1, 1912. These provinces, the area and population of which, as newly constituted, cannot yet be given accurately, are Bihar and Orissa, Bengal, and Assam. Bengal, like Madras and Bombay, has the style "presidency." Still another new province, Delhi, was constituted October 1, 1912, out of the Punjab division of Delhi; its area is stated at 557 square miles, and population about 392,000.

RELIGION. In the census of March 10, 1911, classification by religion was made in the case of 313,523,981 persons, as shown in the following table (religion was not recorded in the case of 1,608,556 persons in the North-West Frontier Province):

	Br. India	Native States	Total
Hindus	163,621,454	53,965,466	217,586,920
Sikhs	2,171,908	842,558	3,014,466
Jains	458,578	789,604	1,248,182
Buddhists	10,644,409	77,040	*10,721,449
Parsis	86,155	13,945	100,100
Mohammedans	57,423,866	9,199,546	66,623,412
Christians	2,492,277	1,383,919	3,876,196
Jews	18,524	2,456	20,980
Animists	7,348,024	2,947,144	10,295,168
Others and unspecified	2,347	34,761	37,108
Total	244,267,542	69,256,439	313,523,981

* Of whom, 10,384,544 in Burma.

The nine classes specified above included 313,486,873 persons recorded by religion in 1911, out of a total of 315,132,537; the same classes in 1901 included 294,231,156, out of 294,361,056. The recorded increase during the decade was as follows: Hindus, 10,439,894; Sikhs, 809,136; Jains, a decrease of 5,966; Buddhists, 1,244,690; Parsis, 5910; Mohammedans, 4,165,335; Christians, 952,955; Jews, 2760; Animists, 1,661,020. Of the 3,876,196 Christians recorded in 1911, there were 1,490,864 Roman Catholics, 492,317 Anglicans, 413,142 Romo-Syrians, 336,596 Baptists, 225,190 Jacobite Syrians, 218,499 Lutherans, 181,128 Presbyterians, 171,754 Methodists, 135,264 Congregationalists, 75,848 Reformed Syrians, and 52,407 Salvationists.

EDUCATION. Literacy, as recorded by the 1911 census for 313,415,389 persons, is shown in the table in the next column.

The following comparative figures for March 31, 1901, and March 31, 1910, respectively, relate to British India (except British Baluchistan) and the Native States. Total public educational institutions, 104,884 and 130,917; scholars, 3,809,463 and 5,595,774 (of whom, females 385,284 and 764,248). Private institutions, 42,460 and 39,555; scholars, 607,959 and 616,144 (females 44,206 and 67,229). Total public and private, 147,344 and 170,469;

	Total	Literate Total	Females
Hindus	217,586,445	12,037,944	814,810
Sikhs	3,014,440	201,443	17,280
Jains	1,248,182	342,705	24,120
Buddhists	10,721,228	2,451,719	317,338
Parsis	100,096	71,213	31,218
Mohammedans	66,593,177	2,527,573	137,807
Christians	3,876,196	840,865	252,295
Animistic	10,217,544	56,820	2,987
Others and unspecified	58,081	9,296	2,908
Total, 1911	313,415,389	18,539,578	1,600,763
Total, 1901	293,414,906	15,686,421	996,341

scholars, 4,417,422 and 6,211,918 (females, 429,490 and 831,477). Public primary schools, 98,256 and 119,270; pupils, 3,164,269 and 4,559,119 (females, 337,873 and 668,969). Public secondary schools, 5477 and 6443; scholars, 589,427 and 863,993 (females 44,373 and 77,004). Public arts colleges, 142 and 137; students 16,969 and 23,184 (females 135 and 217). Expenditure on education in India (excluding British Baluchistan) in 1900-1, £2,661,529; in 1909-10, £4,588,082.

AGRICULTURE. Reported figures of production in India are not complete, as returns from some of the Native States are not available; but they cover about the same territory from year to year, and therefore have a comparative value. Some of the more important yields for 1908-9 and 1909-10 are officially estimated as follows: Rice (cleaned), 390,979,900 and 558,489,000 cwts.; wheat, 7,616,800 and 9,587,700 tons; tea (calendar years), 247,364,750 and 258,029,232 lbs.; cotton, 4,776,000 and 5,135,000 bales (of 400 lbs.); jute, 6,310,800 and 7,206,600 bales; linseed, 297,700 and 427,600 tons; rape and mustard, 987,500 and 1,218,400 tons; sesamum, 464,300 and 516,000 tons; groundnuts, 484,700 and 413,700 tons; indigo, 38,800 and 39,600 cwts.; cane sugar, 1,872,900 and 2,125,300 tons.

Approximate yield of rice in 1911 265,182,000 metric quintals; in 1911 and 1912, wheat, 102,016,199 and 99,862,179 quintals (figures for about 99.8 per cent. of total reported area under wheat in India); linseed, 5,726,441 and 6,514,893 quintals (figures for 96.6 per cent. of total reported area under linseed in British India and for certain Native States).

MINERALS. The value in 1909 and 1910, and the quantity in 1910, of the chief minerals produced in British India and the Native States are shown below:

	1909	1910	1910
Coal	£2,779,868	£2,445,453	12,046,189 tons
Gold	2,092,605	2,105,944	547,746 oz.
Manganese ore	603,908	849,455	800,907 tons
Petroleum	910,172	835,927	214,829,647 gals.
Salt	424,828	539,600	1,485,613 tons
Mica*	154,978	188,983	42,593 cwts.
Jadestone*	91,401	99,601	6,165 cwts.
Rubies	64,826	58,849	262,019 kts.

* Exports.

Of the coal produced in 1910, the value of £2,009,446 is credited to Bengal; of the gold, £2,105,944 to Mysore; of the petroleum, £824,962 to Burma, as well as all the jadestone and rubies; of the manganese ore, £621,127 to the Central Provinces; of the mica, £164,428 to Bengal.

COMMERCE. The foreign trade of India, for years ended March 31, has been valued as follows, in thousands of pounds sterling:

Sea-borne Trade	1909	1910	1911	1912
Imports:				
Private mdse.....	80,844	78,038	86,236	92,383

Net imps. treas...	10,949	20,750	21,763	28,732
Excess exports...	5,294	22,691	29,212	27,158

The foreign trade is largely with Afghanistan and Nepal. As registration is difficult, the statistics are of doubtful accuracy. The reported figures are as follows, for imports and exports respectively (including treasure): 1908-9, £5,525,845 and £4,640,294; 1909-10, £5,637,912 and £4,544,697; 1910-11, £6,127,000 and £4,952,000; 1911-12, £6,920,000 and £5,885,000.

Import and export values in the year 1911-12 were the largest on record. There was a notable increase in imports of cotton good, apparel, vehicles, railway materials, raw cotton, iron and steel, provisions, hardware and cutlery, petroleum, and woolen goods; but sugar, glass, machinery, and silk goods declined. In the export trade, there were large increases in rice, raw jute, seeds, hides and skins, millet, and pulse; raw cotton declined. Values of the leading sea-borne imports of private merchandise were as follows in 1911-12, in thousands of pounds sterling: Cotton goods, 30,519; cotton yarn, 2527; metals, 9540; sugar, 7955; railway materials, 2958; machinery, etc., 2838; mineral oil, 2828; hardware, etc., 2379; apparel, 2355; woolen goods, 2272; provisions, 2127; silk goods, 1769; raw cotton, 1391; liquors, 1293; carriages and carts, 1056; glass, 1029; spices, 1029; instruments, etc., 919; jewelry and plate, 844; dyes and tans, 841; paper, etc., 785; raw silk, 706; drugs, etc., 693; chemicals, 643; matches, 584; salt, 561. Principal sea-borne domestic exports in 1911-12, in thousands of pounds sterling: Raw cotton, 19,626; rice, 19,372; seeds, 17,960; raw jute, 15,038; jute manufactures, 10,671; wheat and flour, 9430; hides and skins, 9286; opium, 8726; tea, 8631; cotton yarn and cloth, 6519; pulse, millet, etc., 5509; raw wool, 1724; lac, 1343; fodder, etc., 1140; oils, 1061; coffee, 897; manures, 770; provisions, 723; wood, etc., 634; spices, 619; coal, etc., 514; raw silk, 306.

About 65 per cent. of the trade is with Europe and about 24 per cent. with Asia. Percentages shared by the leading countries in the imports and exports of private merchandise in 1911-12: United Kingdom, 62.4 and 26.0; Germany, 6.5 and 9.8; United States, 3.8 and 7.0; China (including Hongkong), 1.8 and 8.2; Japan, 2.5 and 7.5; France, 1.5 and 6.2; Belgium, 1.7 and 6.0; Java, 6.8 and 0.8; Straits Settlements, 2.1 and 3.9; Austria-Hungary, 1.9 and 3.3; Ceylon, 0.5 and 3.7; Italy, 0.9 and 2.8; Mauritius, 1.4 and 0.3; other countries, 6.2 and 14.5.

SHIPPING. Vessels entered and cleared at the ports in the foreign trade in 1910-11, 8042, of 14,984,528 tons; in 1911-12, 8868, of 16,616,435 tons. Of the latter tonnage about 55 per cent. was from or to the United Kingdom and British possessions; and 79 per cent. of the total trade was under the British flag. The chief ports are Calcutta, Bombay, Rangoon, Karachi, Madras, and Chittagong.

COMMUNICATIONS. Nearly all the railways in India are owned by the state and administered by a railway board, though many are leased to and operated by companies. The mileage open to traffic increased from 25,305 at the end of 1900 to 32,099 at the end of 1910 and 32,839 at the end of 1911. Under construction or sanctioned, on the latter date, 2674 miles. Of the mileage in operation, about 53 per cent. is standard gauge (5 ft. 6 in.) and about 42 per cent. meter gauge. Up to December 31, 1911, the capital outlay on the lines open to traffic amounted to £338,130,000 net earnings in 1911, £14,770,000, or about 4.37 per cent. on the capital outlay (against 5.46 in 1910, 4.81 in 1909, and 5.27 in 1901). After charging to expenditure interest on capital outlay of lines under construction or provided for, the net gain to the state from the working of the railways was £2,713,000 in 1911, against £1,992,000 in 1910 and £114,000 in 1909.

Reported length of government telegraph wires, March 31, 1911, 287,040 miles; capital cost to that date, £7,412,000. Post offices March 31, 1910, numbered 18,642. The post office in 1910-10 was operated at a net loss to the government of £353; in 1910-11, at a net profit of about £42,000.

FINANCES. The standard coin is the British sovereign, par value \$4.86656, but the current coin is the rupee, par value 32.444 cents (15 rupees to the pound sterling). For British India, the gross revenue and the expenditure charged to revenue, in thousands of pounds sterling, were as follows in years ended March 31 (revised estimates for 1912):

	1901	1906	1909	1910	1911	1912
Rev...	64,724	70,842	69,762	74,593	80,682	82,039
Exp...	63,054	68,750	78,499	73,987	76,746	78,946

In addition to expenditure charged to revenue, there is an expenditure on railways and irrigation charged against capital. This has been as follows for fiscal years, in thousands of pounds sterling: 1901, railways 9325, irrigation 626; 1906, 22,463 and 869; 1909, 9519 and 1463; 1910, 6335 and 1497; 1911, 8915 and 1204.

Classified receipts (revised estimates for the fiscal year 1912), in thousands of pounds sterling:

* Direct demands on the revenue—refunds and drawback, assignments and compensations, and collection charges, including production costs in the salt and opium monopolies. † The working expenses of railways are treated, not as expenditure, but as a deduction from revenue.

Total net revenue and total net expenditure charged against revenue (in which specific receipts that are properly offsets are deducted) have been as follows, in thousands of pounds (revised estimate for fiscal year 1912):

	1901	1909	1910	1911	1912
Net revenue.....	41,474	45,700	49,620	55,147	56,209
Net expend.....	39,804	49,438	49,013	51,211	53,116
Surplus	1,670	—3,738	607	3,936	3,093

Interest-bearing debt chargeable on the revenues and outstanding March 31, 1911: Sterling debt (raised in England), £182,981,751; rupee debt (raised in India), Rs. 1,24,84,19,400 (£91,940,347; total, £274,931,098. The total on March 31, 1912, was about £276,282,000 (sterling £182,970,000, rupee £93,312,000). Interest on debt, 1909-10, £8,752,399.

GOVERNMENT. The king of Great Britain and Ireland is emperor of India. In England, the administration of Indian affairs is intrusted to the secretary of state for India (a member of the British cabinet), who is assisted by a coun-

cil. The expenditure of Indian revenues is determined by the secretary of state in council. The secretary of state for India in 1912 was the Marquis of Crewe (from November, 1910). In India the executive power resides in the "government of India," that is, the governor-general in council. In 1912 the governor-general, who is appointed by the crown for five years, was Baron Hardinge of Penshurst, who succeeded the Earl of Minto in 1910. The council consists of six members, appointed by the crown, and of the commander-in-chief of the army in India. The governor-general's legislative council, in addition to ex-officio members, consists of 28 official and 32 non-official members (including 25 elected). There are similar legislative councils in Madras, Bombay, Bengal Bihar and Orissa, the United Provinces, the Punjab, and Burma. British India is divided into fifteen local governments and administrations: Under governors, the presidencies of Madras, Bombay, and Bengal; under lieutenant-governors, the provinces of Bihar and Orissa, the Punjab, the United Provinces of Agra and Oudh, and Burma; under chief commissioners, the Central Provinces and Berar, Assam, Ajmer-Merwara, Coorg, British Baluchistan, the North-West Frontier Province, Delhi, and the Andamans and Nicobars.

The Native States are governed by their princes, ministers, or councils, but the government of India, through British residents or agents, exercises control in varying degrees and does not permit the states to maintain external relations.

ARMY. The army in India includes British regular forces, Indian regular forces, various local corps, British volunteers, Indian army reserves, imperial service troops, and military police. The regular forces, both British and Indian, form the first line, while the others serve as a second line or reserve. In 1912-13 the establishment of the British regiments serving in India amounted to 75,886 and included 9 regiments of cavalry, 11 horse artillery batteries, 42 field batteries, 3 howitzer batteries, 8 mountain batteries, 21 garrison artillery companies, 6 heavy batteries, 21 ammunition columns, 52 battalions of infantry, details of the Royal Engineers, Royal Army Medical Corps, and other special branches. The Indian army consisted of 3 regiments of body guards, 39 regiments of cavalry, and the Aden troops, a corps of guides, 12 mountain batteries, 1 frontier garrison company, 26 companies of sappers and miners, 117 infantry battalions, and 20 battalions of gurkhas. The auxiliary forces forming the second line consist of 66 volunteer corps, about 35,400 in strength, 33 imperial service corps, each under the supervision of British officers and trained for service by Indian princes to the number of about 21,000 men. These militia corps aggregating about 5000, and 21 corps of military police, aggregating about 28,500, are under civil control. The total strength of the military forces available in India was approximated at 352,784. The organization of the Indian army is on the basis of 9 infantry divisions and 8 cavalry brigades, each complete with staff and supply and transport facilities. The staff officers were being trained at the staff college at Quetta and during 1912 this work was in full operation. The tendency in the Indian army was to concentrate the forces in larger garrisons along

lines of railway and to improve the material especially for the field artillery. The army was divided into two great commands, the Northern army, under Lieut.-Gen. Sir James Willcocks, K.C.M.G., with divisions at Peshawur, Rawal Pindi, Lahore, Meerut, and Lucknow, and brigades at Kohat, Derajat, and Bannu, and the Southern army, under Lieut.-Gen. Sir John Nixon, G.C.B., with divisions at Quetta, Mhow, Poona, Secunderabad, and Burma, and a brigade at Aden.

HISTORY

THE REMOVAL OF THE CAPITAL. The change of the capital from Calcutta to Delhi and the administrative reorganization that grew out of it was much discussed during the early part of the year. In the British Parliament the subject came up soon after its meeting. The opposition criticised the course of the government in this matter as arbitrary. Lord Curzon declared that it was setting up an autocracy and that it broke with the precedent which required that all great changes of this nature should receive, before they went into effect, full discussion in both houses. He complained of the radical course in turning the government out of Calcutta and feared that the result would be more serious than the government supposed. The government replied that the scheme had not been rashly adopted, but had been the subject of long consideration; that the main point was the opinion of India, and there the change had been hailed with great enthusiasm. The government of India bill providing for the change of the capital received the royal assent on June 25. In September it was provided that after October 1 Delhi, with its suburbs, should constitute a small chief commissionership to be administered by an official in the civil service under the government of India.

EDUCATIONAL EXPANSION. The royal grant of £333,300 for popular education, announced at the Coronation Durbar, was afterwards increased to £400,000. It was announced in February that a teaching university would be established in Dacca, and it was proposed that universities should be established in several other important centres. Progress was made in the plan for a Hindu university at Benares and for raising the college at Aligarh to the rank of a university. A bill according the local authorities the right to adopt compulsory education was defeated.

DACCA CONSPIRACY CASE. The famous Dacca conspiracy case at its first trial in 1911 resulted in a sentence of transportation for life upon three prisoners, transportation for ten years upon seventeen, and imprisonment for seven years upon fourteen. The case was appealed and judgment on the appeal was rendered on April 2, 1912. By this decision the sentences imposed on fourteen out of the thirty-four who appealed against conviction were upheld, though the terms were reduced. The rest of the prisoners were acquitted.

OTHER EVENTS. Fourteen persons were charged in February with complicity in conspiracy and murder and the court found nine of them guilty, imposing sentences of terms varying from one to seven years. In the latter part of May a European sub-inspector and three native police officers, who had been arrested on the charge of torturing accused per-

sons, were convicted and punished for the crime. In July a royal commission was appointed to inquire into the condition of the Indian public services. There was much agitation among the Moslems over the reverses of Turkey in the Tripolitan and Balkan wars. Mass meetings were held at Delhi and Bombay and the Pan-Islam propaganda was carried on more actively. In March the Abor expeditionary force which was dispatched in October, 1911, for the purpose of punishing the murderers of Mr. Noel Williamson returned after successfully effecting this object. The cost of the expedition and political missions sent out at the same time was placed at £124,000. See **EXPLORATION**, and **OMAN**.

INDIA, DREDGING IN. See **DRAINAGE**.

INDIANA. POPULATION. The Census Bureau compiled during 1912 figures giving certain characteristics of the population of the State. These include statistics of white and colored population. Of a total population of 2,700,876 in 1910, 159,322 were foreign-born whites, compared with 141,861 in 1900. Of these, 62,177 came from Germany, 11,830 from Austria, 11,266 from Ireland, 9599 from Russia, 9780 from England, and 5081 from Sweden. Other countries of Europe were represented by smaller numbers. The negroes in the State in 1910 numbered 60,320 and the mulattoes, 14,553, compared with 45,215 negroes and 13,658 mulattoes in 1890.

AGRICULTURE. The acreage, value, and production of the principal crops in 1911 and 1912 are shown in the following table:

		Acreage	Prod. Bu.	Value
Corn1912	4,947,000	199,364,000	\$83,733,000
1911	4,850,000	174,600,000	94,284,000
Wheat1912	1,260,000	10,080,000	9,374,000
1911	2,337,000	34,354,000	30,575,000

1911	22,000	b 20,020,000	1,561,000

a Tons. b Pounds.

MINERAL PRODUCTION. In 1911 there were produced in the State 14,201,355 short tons of coal, valued at \$15,326,808. This was a decrease from the figures of 1910 of 4,188,460 short tons in quantity and \$5,486,841 in value. The production in 1910 was abnormally large, owing to the strike in most of the Mississippi Valley States. The figures for 1911, however, show a decrease of 632,904 tons, compared with the output of 1909, which was not affected by strikes. During the year 21,182 men were employed in the coal mines of the State.

The production of petroleum in Indiana in 1911 was 1,695,289 barrels, compared with 2,159,725 barrels in 1910. The production in the State, which is a part of the Lima-Indiana oil field, has decreased steadily for several years. In 1907 it was 5,128,038 barrels.

MANUFACTURES. The Thirteenth Census statistics are for the calendar year 1909 and were compiled in 1912. It will be seen from the following table that in 1909 there were in the State 7968 manufacturing establishments,

which gave employment to an average of 218,263 persons:

	Number or Amount 1909	1904	P. C. of Inc. 1904-'09
Number of establishments	7,969	7,044	13.1
Persons engaged in manufactures...	218,263	176,227	23.9
Proprietors and firm members..	7,674	7,191	6.7

Wage earners (average number)	186,984	154,174	21.3
Prim'y horsepower	633,377	380,758	66.3
Capital	\$508,717,000	\$312,071,000	63.0
Expenses	525,061,000	354,277,000	48.2
Services	121,816,000	87,087,000	39.9
Salaries	26,305,000	15,029,000	75.0
Wages	95,511,000	72,058,000	32.5
Materials	334,375,000	220,507,000	51.6
Miscellaneous	68,870,000	46,688,000	47.5
Value of products	579,075,000	393,954,000	47.0
Value of products less cost of materials	244,700,000	173,447,000	41.1

In numerical importance the manufactures of lumber and timber ranked first, with 1277 establishments. Then followed printing and publishing, 892; flour-mill and grist-mill products, 563; bread and other bakery products, 754; foundry and machine-shop products, 415. In the value of products, the slaughtering and meat-packing industry ranked first. These numbered 61, with a product valued at \$47,289,000. The flour and grist-mill products were valued at \$40,541,000; foundry and machine shops, \$39,884,000; iron and steel works and rolling mills, \$38,652,000; liquors, \$31,610,000. The total number of persons engaged in the manufactures of the State in 1909 was 218,263, of whom 190,684 were males and 27,579 females. The number of persons under 16 years of age employed in these industries was 3612. The prevailing hours of labor in the State for the majority of the employees was 54 to 60 hours a week; only 13.1 per cent. of the total being employed in establishments where they were less than 54 hours a week and only 7.7 per cent. in establishments where they were more than 60 hours a week. Indianapolis ranked first among the cities of the State as regards the number of wage earners. There were in that city 33,815; in South Bend, 11,789; Fort Wayne, 10,298; Evansville, 8997.

EDUCATION. The pupils of school age in the State, in 1912, numbered 761,494. The pupils enrolled in the schools numbered 532,821. The average daily attendance was about 431,000. The number of teachers employed was 17,504. The total expenditures for public schools amounted to \$18,784,425. Of this amount, \$9,209,226 was expended for teaching. The State is engaged in educational work in special schools, such as schools for the blind, etc. An attempt is being made to bring the educational work of such schools in closer contact with the regular school system. Recommendation will be made to the legislature of 1913 that the superintendent of public instruction be made *ex-officio* a member of the boards of those special schools and thus place the educational work of such institutions under the direct supervision of the State Board of Education.

FINANCE. The report of the treasurer for the fiscal year ending September 30, 1912, shows a balance in the treasury on September

30, 1911, of \$272,969. The receipts for the fiscal year amounted to \$11,101,456 and the expenditures to \$11,035,021, leaving a balance in the treasury September 30, 1912, of \$339,404. The chief source of revenue is taxation and the chief expenditures are for education and the support of State institutions. The total debt of the State at the end of the fiscal year amounted to \$260,153.

POLITICS AND GOVERNMENT

The legislature did not meet in 1912, as the sessions are biennial and the last was held in 1911. The next session will convene January 9, 1913.

ELECTIONS AND CONVENTIONS. There was much political excitement in the State during the year. The prominent mention of Governor Marshall as a presidential candidate and his final selection as candidate for vice-president on the Democratic ticket added political interest in a State where political campaigns are always aggressively carried on. The Republican State convention was held at Indianapolis on March 26. It was in control of friends of President Taft, and Charles W. Fairbanks, Harry S. New, James E. Watson, and Joseph D. Oliver were elected delegates-at-large. The convention was dominated by the Taft organization. A report of the committee on credentials recommended the seating of 172 delegates who held credentials from other district chairmen, all of them Taft men. The minority report denounced the action of the majority and asked that the 172 delegates be unseated and the Roosevelt contestants seated. A test vote was taken on the minority report and 772 votes were cast in favor of the majority report and 677 against. After the convention had adjourned, a small proportion of the Progressive delegates met in one corner of the same hall, without call or pre-announcement, and elected Progressive delegates to the Republican national convention. On August 1 the Progressive party met in convention and nominated Albert J. Beveridge, former United States senator, for governor. On August 6 the regular Republican State convention met for the nomination of State officers. The principal candidates for the nomination were Winfield T. Durbin, a former governor, and Lewis Shank, mayor of Indianapolis. Mr. Durbin was finally nominated. The convention declared for county local option. The Democratic State convention for the nomination of delegates to the national convention pledged the delegates to vote first for Governor Marshall for President, with delegates split between Governor Harmon and Governor Wilson for second choice. Samuel M. Ralston was nominated for governor.

The contest for delegates in the fifth congressional district was one of the most important cases decided by the Republican national committee. It will be found discussed in the article **PRESIDENTIAL CAMPAIGN**. The elections on November 5 resulted as follows: Wilson, 281,890 votes; Roosevelt, 162,007; Taft, 151,267; Debs, 36,931; Chafin, 19,248, and Reimi, Socialist Labor, 3130. For governor, Ralston, Democrat, received 275,357; Durbin, Republican, 142,850; Beveridge, Progressive, 166,124. The Democrats elected a majority of the legislature and their entire State ticket.

OTHER EVENTS. On February 6 more than 46 indictments were returned by the Federal

grand jury of Indianapolis, which investigated the alleged nation-wide dynamite conspiracy by labor leaders. On March 12 the labor union officials pleaded "Not guilty." An account of the trial which followed will be found in the article **TRADE UNIONS**.

On July 5 the method proposed by the last legislature for submitting to popular vote the proposed new State constitution (known as the Tom Marshall constitution), as drafted and adopted by the State legislature, was declared unconstitutional by the State Supreme Court.

The year was marked by notable developments toward consolidation, from Michigan City to the Ohio River, in electrical, water, and other public service corporations throughout the State. This led to an insistent demand for a State utilities commission and a bill has been prepared for presentation in the legislature.

There was also a marked activity in the State Railroad Commission in ordering block systems and other safety devices, in the effort to reduce the number of railroad and electric line wrecks.

Industrially the year showed little disturbance, notwithstanding the elections. There were few strikes of general importance. And the crops, particularly corn and oats, were exceptionally fine. The State also found itself again in the matter of apple-raising and a larger acreage has gone into fruit than in any other recent year in the State's history.

STATE GOVERNMENT. Governor, Samuel M. Ralston; lieutenant-governor, William P. O'Neil; secretary of state, L. G. Ellingham; treasurer, William H. Vollmer; auditor, William H. O'Brien; attorney-general, Thomas Honan; superintendent of education, Charles A. Great-house—all Democrats.

JUDICIARY. Supreme Court: Chief justice, L. J. Monks, Rep.; justices, Charles E. Cox, Dem.; Quincy A. Myers, Rep.; J. W. Spencer, Dem.; Douglas Morris, Dem.; R. K. Erwin, Dem.; clerk of the court, J. Fred France, Dem.

STATE LEGISLATURE. Republicans, Senate, 10; House, 4; joint ballot, 14. Democrats, Senate, 40; House, 95; joint ballot, 135. Progressives, House, 1; joint ballot, 1. Democratic majority, Senate, 30; House, 90; joint ballot, 120.

The representatives in Congress will be found in the section *Congress*, article **UNITED STATES**.

INDIANA UNIVERSITY. A State institution for higher education at Bloomington, Ind., founded in 1820. The number of students enrolled in all departments of the university in the autumn of 1912 was about 1437. The faculty numbered 90. An important change in the faculty was the resignation of Dean Jessup of the School of Education, who went to Iowa University. He was succeeded by W. F. Book, of the University of Montana. The university is supported almost entirely by the State. The total income in 1911-12 was \$316,473. The library contains 87,253 volumes. President, William L. Bryan, Ph. D., LL. D.

INDIANS. The chief problems relating to Indians which at the present time concern the government include an effort to induce the Indians to become agriculturally and industrially self-supporting, the administration of funds

belonging to individual Indians, which amounts to over \$10,000,000, and the enforcement of sanitary laws. The principal work of the Indian schools is concerned with an attempt to bring about the self-support of the Indians now remaining. On June 30, 1912, the enrollment in the government schools was 26,966, an increase of 3000 pupils. The total monetary value of the schools was estimated at \$12,000,000 and the annual expenditure for education of Indian children was a little over \$4,000,000. Instruction of both minors and adults in practical agriculture is given especial attention. This work has been greatly stimulated through the encouragement of Indian fairs, by the establishment of Indian agricultural societies, and the holding of farmers' institutes on Indian reserves. Agricultural progress of the Indians in Oklahoma, the Dakotas, and Nebraska has been noteworthy. This has been accompanied by an increase of prosperity, a rise in the scale of civilization, and a marked decrease in drunkenness. On some of the reservations, however, the old tribal and communal habits of the Indian and his consequent frequent repugnance toward industrial physical labor have retarded progress of this kind.

FIVE CIVILIZED TRIBES. By act of Congress passed in 1911 the property of the five civilized tribes, including the Seminoles, Creeks, Cherokees, Choctaws, and Chickasaws, is being allotted to the individual members of these tribes, who number about 101,000. The work was practically completed during 1912.

GOVERNMENT INDIAN SCHOOLS. In September President Taft made an important decision in regard to the wearing of religious insignia or ecclesiastical dress in government Indian schools. This question resulted in a great deal of controversy and is, in essentials, as follows: The government in recent years has taken over a number of Indian mission schools which were formerly under the auspices of various religious bodies. These schools were made government or public schools as a result of harmonious arrangements with the different churches concerned. Complaints were made by the Indian commissioner, at that time Robert G. Valentine, that sectarian practices were still permitted in some of these government schools. As a consequence, in January, 1912, the commissioner issued the following order: "In government schools all insignia of any denomination must be removed from all public rooms, and members of any denomination wearing distinctive garb should leave such garb off while engaged at lay duties as government employees. If any case exists where such employee cannot conscientiously do this he will be given a reasonable time, not to extend, however, beyond the opening of the next school year after the date of this order, to make arrangements for employment other than in federal schools." This decision was severely criticised by Roman Catholics, and on complaint of the Bureau of Catholic Indian Missions President Taft revoked the order issued by Mr. Valentine and referred the matter to Mr. Fisher, Secretary of the Interior, who made the revocation permanent and his action was approved by the President. The argument of the President and Secretary Fisher was substantially that there is nothing in the federal Constitution or federal stat-

utes to compel the President to exclude sectarian garb from Indian schools, and therefore if he permits such action he is violating no law. Furthermore, there are only 51 teachers wearing such garb in the Indian schools and this number ought not to be allowed to increase. While it is true that the Indian schools are public schools and ought not to be sectarianized, the situation in this particular case is a difficult and delicate one. The simplest solution would seem to be to allow the teachers now wearing ecclesiastical garb to remain and let the practice die out of its own accord, even if it is not altogether in harmony with American institutions.

SICKNESS AMONG INDIANS. The eightieth annual report of the commissioner of Indian affairs, comprising the fiscal year 1911, gives an interesting survey of the health conditions among the American Indians and the method used to educate them in matters of health and sanitation. The Office of Indian Affairs has a medical supervisor, 100 regular and 60 contract physicians, 54 nurses and 88 field matrons. The number of Indians receiving medical care is 310,926. Most of these are in Oklahoma, California, Arizona, New Mexico, and South Dakota. Emphasis is laid on the prevention of disease, although all possible care is given to actual sickness. Physicians secure detailed information about the living arrangements of each individual by going from house to house and from camp to camp, inquiring into sanitary conditions. This quickly awakens the Indians to the dangers of contagious disease and the suggestions and instruction which are given help them toward an improvement in living conditions and in improving insanitary surroundings. The trained physician is acquiring influence and prestige at the expense of the Indian medicine men, and in some cases the medicine man has become the ally and chief assistant of the physician. Stereopticon lectures and motion pictures are employed, and simple practical talks given on outdoor exercise; ventilation, disposal of garbage, clean milk and water, tuberculosis, and trachoma. Vaccination is becoming common among the Indians, and smallpox, formerly one of their worst scourges, has decreased amazingly.

TUBERCULOSIS AND TRACHOMA. Tuberculosis offers the most serious problem. The lack of hereditary immunity, the overcrowded and unventilated houses and the insanitary habits of the Indians all contribute to a high mortality rate. In the Fort Lapwai Reservation, Idaho, practically every family in the population of over 1400 has one or more tuberculous members. The Indian Office is enlarging its four tuberculous sanatoriums; the one at Phoenix, Ariz., now accommodates 65 patients; the one at Laguna, N. M., 25; at Fort Lapwai, Id., 120. Trachoma stands next in importance to tuberculosis. In some sections of the Southwest from 65 to 95 per cent. of the Indians are affected. The trachoma specialists of the service have visited nearly every point in the Southwest, treating existing cases and instructing the local physicians in its prevention and treatment. At the trachoma hospital in Phoenix, Ariz., over 800 patients have been operated on and treated.

Dr. I. J. Murphy investigated health conditions on the Minnesota Indian reservations, inspecting every Indian settlement on the White

Earth Reservation, and reports that a large proportion of the Indians are afflicted with tuberculosis of the lungs and glands. At the Pine Point Boarding School 74 per cent. of the pupils were afflicted with trachoma; 21 per cent. had corneal scars; 17 per cent. had tuberculous glands; 2 per cent. were suffering with tuberculosis of the spine, and 10 per cent. had suspicious lungs. Of the 16 families at Twin Lake settlement, numbering 65 persons, 5 were found to have pulmonary tuberculosis; 5, tuberculous glands, and 13, trachoma. At Elbow Lake settlement, with 54 inhabitants, 4 had pulmonary tuberculosis; 4, glandular tuberculosis, and 13 were afflicted with trachoma. At the Wild Rice River settlement 76 were inspected. Of these, 8 had tuberculosis of the lungs; 9, tuberculosis of the glands, and 24, trachoma. At the White Earth Boarding School, with an enrollment of 140 pupils, about 25 were found to have active tuberculous processes, and about the same number were suffering from trachoma.

Statistics gathered in the fiscal year 1912 show that out of 61,500 Indians examined, 8394, or 13.6 per cent., were suffering from tuberculosis, while 9254, or 15 per cent., were suffering from trachoma. The death rate among the Indians from all causes is estimated to be 30.24 per thousand, while the average death rate in the same area among white persons is 15 per thousand. A hospital was completed during the year at the White Earth Reservation and others are in progress of construction at Wahpeton, N. D., and Zuni, N. M. The government attempts to suppress the illegal sale of liquor to Indians, but constant difficulties are encountered. An order was issued during the year providing for absolute prohibition of the use of liquor on Indian reservations. Although this prohibition has been theoretically in force for many years, it has not hitherto been enforced. See ANTHROPOLOGY.

INDUSTRIAL WORKERS OF THE WORLD. This is the name of the most conspicuous labor organization in the United States based on the principle of industrial unionism rather than on trade or craft unionism. The idea of organization by the industry rather than by the craft was made noteworthy in the United States by the American Railway Union, which conducted the Pullman strike of 1894. During the past decade the Western Federation of Miners, another industrial union, has been conspicuous in Colorado and other Western States. The Industrial Workers of the World was formed at Chicago in 1905 by delegates from the Western Federation of Miners, the United Metal Workers, the American Labor Union, other radical indus-

trial unions, and the Socialist Trade and Labor Alliance.

They adopted a preamble containing the following: "The working class and the employing class have nothing in common. Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system. We find that the centring of the management of industries into fewer and fewer hands makes the trades unions unable to cope with the ever-growing power of the employing class. The trades unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trades unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers. These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries, if necessary, cease work whenever a strike or lock-out is on in any department thereof, thus making an injury to one an injury to all. Instead of the conservative motto, 'A fair day's wages for a fair day's work,' we must inscribe on our banner the revolutionary watchword, 'Abolition of the wage system.' It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old." Their plan called for the forming of thirteen large unions, each to include all the workers of a group of related industries, as food products, transportation, etc.

The next year the Western Federation of Miners and some other representatives of the Socialist party withdrew. In 1908 a further split occurred whereby members of the Socialist Labor party were ejected. The organization thus came under the control of the revolutionary wing of the American Socialists. They now have headquarters at Chicago. They claim about 160 local unions, with a total membership of 70,000. They also claim national organizations in Hawaii, Australia, New Zealand, and South Africa. Being antagonistic to the closed shop and the exclusive trade union, its dues are only one dollar per month. It makes no distinction of sex, creed, or color; and it refused all alliance, direct or indirect, with political parties. Those ejected in 1908 held a convention at Paterson, N. J., and formed a second organization, which now has headquarters at Detroit. They retained the preamble adopted in 1905. The Chicago branch, however, eliminated from that preamble all reference to political action, placing their complete confidence in the principle of direct action. For this reason they were branded as anarchists by the conservative Detroit I. W. W.

While both of these organizations showed unusual energy and grew rapidly in 1912, the Chicago group was much more conspicuous. It had charge of the Lawrence and Little Falls strikes (see STRIKES AND LOCKOUTS) and of

numerous disturbances on the Pacific coast, notably the free-speech controversy at San Diego, Cal. The Detroit group was in charge of the strike in the Paterson silk mills.

It is the radical branch of this organization whose social theory is most like that of syndicalism (q. v.). They favor direct action; they express bitter hostility to the methods of orthodox trade unionism, such as arbitration, profit-sharing, trade agreements, and the ballot. They denounce typical unionists as tools of the capitalists. They preach discontent and the expropriation of capital goods. They differ from the socialists in placing no confidence whatever in the election of representatives to legislative bodies or to executive positions or any other form of political action. They do not fear revolution, for they claim to have nothing to lose but wage slavery. They believe the policy of direct action to be superior both in efficiency and in educative value. The strike is their favorite weapon, but they also use sabotage and the boycott. Probably all of the Detroit Industrial Workers of the World oppose violence, as do most of the Chicago Industrial Workers of the World. Their theory is that direct action will extend and intensify the spirit of class consciousness and prepare for the final act of the present capitalist system, the general strike. Thus the Industrial Workers of the World would place an industry in the hands of its workers, as would socialism; it would organize society without any government, as would anarchism; and it would bring about a social revolution by direct action of the workers, as would syndicalism. Nevertheless, it claims to be distinct from all three.

INNES, ALEXANDER TAYLOR. A Scotch theologian, died February, 1912. He was born in Tain, Scotland, in 1833 and received his education at Edinburgh University. After studying law he was admitted to the bar in 1870. In 1881 he was advocate-depute in Scotland under Gladstone and was reappointed in several following Liberal administrations. His chief interest, however, was in theology. He wrote *Law of Creeds in Scotland* (1867); *Church and State*, a historical handbook (1890); *Studies in Scottish History* (1892); *John Knox* (1896); *Trial of Jesus Christ* (1899), and *Scottish Churches and the Crisis of 1907*.

INORGANIC ISOMERISM. See CHEMICAL PROGRESS.

INSANITY. It is asserted that the number of insane persons is increasing out of proportion to the population, especially in the more populous cities and States, and probably the assertion is true, though the increased confidence in modern public provision for the mentally diseased and the willingness of the public to avail itself of hospital facilities may account for the figures. The New York State hospital commission (formerly the State commission in lunacy) reports on September 30, 1912, the num-

ber of committed insane and voluntary cases in State hospitals and committed insane in licensed private retreats as 33,972, including 16,271 men and 17,701 women. Of this number, 1272 were inmates of Dannemora and Matteawan, the hospitals for insane criminals, and 1076 were in private retreats. There were 813 on parole from civil hospitals. The net increase for the year in these hospitals was 573, as against 653 for the previous year, and 1119 for two years ago. During the year, 1753 were deported to other States and countries, as against about 1100 the previous year. The total number admitted in the fiscal year was 7336, of which number 5742 were first admissions, and 1694 were readmissions. From the 14 civil hospitals, 1610 were discharged as recovered, 1632 as improved, and 2690 died during the year. The recoveries reached 21.96 per cent., calculated on the admissions. The amount disbursed for maintenance was \$6,240,882. Upon new buildings, extraordinary repairs, or equipment, or emergencies was expended the sum of \$955,887. The annual per capita for maintenance was \$203.45, omitting the cost of lodging, as against \$187 the previous year. The ratio of insane to population was 1 to 282 of the estimated population of the State. The chief contributing cause is alcohol, next to heredity. Syphilis is the determining cause in a large percentage of cases and stress and strain in a somewhat smaller number.

The Massachusetts State board of insanity reported on September 30, 1911, a total of 12,287 patients, including 6158 males, and 6129 females; besides 14 men and 284 women under family care, total, 208; as well as 113 men and 216 women, total 320, in private institutions; making a grand total of 12,914, comprising 6285 men and 6629 women. These totals show an increase of 340 for the year, as compared with 522 the previous year, and with 508, the average increase for the past five years. Of the 340 increase, 9 represents the advance in the total for licensed private houses. Court commitments numbered 2970, and there were 206 voluntary admissions, compared with 162 the previous year. Of the 3207 admissions, 2565 were first cases, and of these, 44.65 per cent. were of foreign birth, and 66.81 per cent. were born of foreign fathers. Alcohol was found to be the causative factor in 19.06 per cent. and syphilis in 6.27 per cent. of first cases. The recovery rate was 13.47 per cent., based on the admissions. The ratio to the whole population of the State was 1 to 266.

The superintendent of the sole New Hampshire State Hospital reported on September 1, 1912, a population of 499 men and 458 women, making a total of 957, an increase of 32 patients over the previous year. The death rate was 11 per cent. The recovery rate was 30 per cent., based on the admissions. Of the 301 admitted during the year, 242 were first admissions, and of these 30 per cent. are of foreign birth. Heredity operated as the cause in 25.3 per cent., alcohol in 20.5 per cent., old age in 7.3 per cent. A State care act is to go into effect on January 1, 1913, under the provision of which all insane in public care will be placed in hospitals.

On September 30, 1911, the board of State charities of Indiana reported 5629 insane in the jails, representing an increase of 136 for the five State hospitals, county poor asylums and year. There were 80 fewer in jails and poor

houses than a year ago. The ratio of insane is 1 to 480 of the inhabitants of the State. The State was redistricted for insane hospital purposes in June, 1911.

The State board of charities of Connecticut, in its biennial report for September 30, 1910, enumerated 3943 patients in the institutions for the insane, of which number 370 are in private asylums, and 300 mingled with town poor. This shows an increase of 340 in two years. The ratio to population is 1 insane person to every 282.5 inhabitants.

The figures for the fiscal year ending September 30, 1910, of the board of public charities and committee on lunacy of Pennsylvania are as follows: Total number of insane patients, 16,624, showing an increase of 53,280 in 2 years. Of the whole number, 481 are insane criminals. The Adolf Meyer (New York State) classification was adopted in 1910.

The report of the commissioners in lunacy for England and Wales for January 1, 1912, states that 135,661 insane patients were under care, an increase of 2504 over last year. Of this number 4816 men and 6320 women were called "private patients," including those in county and borough asylums, in registered establishments (including idiots), in licensed houses (including idiots), in naval military hospitals, and "private single patients." Of the total stated, 123,400 (57,455 men and 65,945 women) were "paupers"; and 1125 (857 men and 268 women) were insane criminals, 899 of these being sheltered in Broadmoor and Parkhurst. The proportion of insane to the estimated population is 1 to 269, against 1 to 275 a year previous, and 1 to 293 in 1902, showing a tendency to an increase in the proportion of the whole class of the pauper insane. Comparison of increases in urban and suburban districts is rendered futile by changes in the boundaries of county boroughs. The number of discharged recovered in 1911 totaled 7326; as not recovered, 2428; as died, 10,050, exclusive of idiots and of 74 recertified as transfers. The recovery rate reckoned on the admissions was 33.14 per cent., or 37.59 for females and 28.92 for males.

The commissioners for Scotland reported on January 1, 1912, an aggregation of 9401 men and 9633 women, a total of 19,034 insane, including imbeciles in training schools. The increase during the year was 398 souls. In private dwellings, specially licensed for 2, 3, or 4 patients, there were 1305 men and 1712 women, total, 3017. In the criminal institution at Perth, there were 47 men and 8 women, or 55 in all, of whom 10 are new admissions this year. The recoveries reached 39 per cent. of the private patients, and 38.4 per cent. of the paupers. There are 13 poorhouses in which "lunatic wards" are maintained.

The inspectors for lunatics for Ireland report on January 1, 1912, 12,868 men and 11,787 women, or in all 24,655 insane under care, representing an increase of 261 during the year. Of the total, 606 are in private licensed houses, 168 are in Dundrum (the criminal institution), and 144 are single chancery cases and other patients in unlicensed houses. Of the total, 1583 men and 1362 women, in all 2945, represent first admissions. Alcohol is rated as the cause in 10.3 per cent. of the cases, or in 21.5 per cent. of the patients from Dublin, Louth, and Wicklow. The percentage of recoveries

based on the admissions was 40.7, or 4.2 per cent. higher than the previous year. The deaths reached 1487 during the year, 759 of these being men. The ratio to population is 1 insane person to 177 inhabitants.

INSCRIPTIONS. See **PHILOLOGY, CLASSICAL.**

INSECTS AND THE PROPAGATION OF DISEASE. As a result of a somewhat careful study of the common cockroach, Morrell believes that this insect is able by contamination with its feces (1) to bring about the souring of milk, (2) to infect food and milk with intestinal bacilli, (3) to transmit the tubercle bacillus, (4) to disseminate pathogenic staphylococci and destructive molds. These facts, taken in conjunction with the life-habits of the insect, lead to the conclusion that the cockroach is able to, and may possibly, play a small part in the dissemination of tuberculosis and in the transmission of pyogenic organisms; that the insect is in all probability an active agent in the souring of milk kept in kitchens and larders, and that it is undoubtedly a very important factor in the distribution of molds to food and to numerous other articles, especially when they are kept in dark cupboards and cellars where cockroaches abound.

The year 1912 was marked by a country-wide, and in places almost hysterical, crusade against the house fly, which has been charged by various observers with the dissemination of a long list of diseases, including cholera and various forms of dysentery, diphtheria, erysipelas, contagious ophthalmia, cerebrospinal meningitis, anthrax, and possibly smallpox, in addition to typhoid fever. Some of these charges require further investigation. In the case of typhoid fever, at least, the evidence seems conclusive, but Torrey issued a warning against centring popular attention on one source of contagion to the exclusion of other well-proven means of dissemination, such as direct contact and water pollution. "It is probable," says Chapin, "that under certain conditions, as in military and civil camps, and in filthy communities without sewerage, insects, especially flies, may be an important factor in the spread of fecal-borne disease, but there is no evidence that in the average city the house fly is a factor of great moment in the dissemination of disease." Torrey attempted to throw some light on the question by examining the bacterial flora of the flies caught in the densely populated parts of New York City during a series of months and over a range of weather conditions which might be expected to give suggestive data. Both the bacteria occurring in the intestine and those from the surface of the insects were investigated. Flies examined in April and early in June were free from fecal bacteria and carried a homogeneous flora of coccal forms. As the summer advanced, high bacterial counts began to appear, and also an abrupt change in the character of the bacteria, the cocci giving place largely to the bacilli characteristic of fecal matter. The record counts came at the end of the two weeks of excessive heat in July. The immense number of organisms that a single insect may carry is indicated by the figures 570 to 4,400,000 for the surface contamination, and 16,000 to 28,000,000 for the intestinal bacterial content. Further facts of interest given by Torrey regarding the prevailing types of bacteria indicate that or-

ganisms such as the *Streptococcus equinus*, *fecalis*, and *salivarius* group are found in the breeding and feeding places of the house fly. There were none of the pyogenes types. The most important isolations were three cultures of *B. paratyphosus*. Since this is pathogenic for man, the findings cannot be looked upon with indifference.

See Chapin, *The Sources and Modes of Infection*, New York; and J. C. Torrey, "Numbers and Types of Bacteria Carried by Flies," *Jour. Infect. Dis.*, 1912, No. 10.

INSURANCE. STATISTICS. The 1912 report of the superintendent of insurance of New York State showed that there were engaged in insurance in that State 192 fire, 21 marine, 34 life, and 60 casualty insurance companies. These 307 companies had, on December 31, 1911, total assets of \$4,715,000,000 and total risks in force of \$68,358,000,000. If to these figures had been added those of title, livestock, coöperative fire, Lloyds, and fraternal insurance the total of risks would have approximated \$80,000,000,000. The 34 life insurance companies had assets, \$3,942,000,000; total income during 1911, \$754,000,000; claims paid \$232,000,000, besides dividends of \$80,000,000 and payments for surrendered policies of \$75,700,000; expenses, \$135,000,000; total disbursements, \$526,742,000; and 6,621,000 policies in force, representing \$12,803,000,000 of insurance. These figures did not include the policies and risks represented by industrial insurance. The 11 New York State companies were credited with slightly more than one-half of the total number of policies and slightly less than one-half of the total amount of insurance in force. Industrial insurance companies doing business in New York State included the Metropolitan, the Prudential, the John Hancock, and the Colonial. They had a total of 22,926,000 policies in force December 31, 1911, representing total insurance of \$3,199,000,000. Nearly 50 per cent. of this business was credited to the Metropolitan and about 40 per cent. to the Prudential. Stock fire insurance companies authorized in New York numbered 192, with a premium income amounting to \$286,000,000; assets, \$594,000,000; liabilities, including capital, \$421,000,000; and insurance in force, \$47,390,000,000. There were in addition 174 coöperative fire insurance companies in the State, with a premium income of \$2,184,000 and total insurance of \$495,000,000. Marine insurance companies numbered 21, of which 18 were foreign companies. These 21 had a total premium income of \$14,645,000 and a total insurance in force of \$656,000,000. Casualty, fidelity, surety, and credit companies numbered 60, with a total premium income, \$93,972,000; assets, \$145,000,000; liabilities, including capital, \$109,000,000; claims paid, \$37,000,000; expenses, \$53,598,000. There were also 29 assessment, life, and casualty insurance companies doing business in New York State, with a premium income of \$2,658,000 and total insurance of \$460,980,000. The field of Lloyds and interinsurance was represented by 15 domestic companies, with premium income amounting to \$3,416,000 and total insurance of \$334,000,000. Ten title and mortgage guarantee companies reported an aggregate income of \$6,429,000 and assets of \$50,893,000. Fraternal societies authorized to do business in New York State included 75, having a total

premium income, \$79,000,000; total assets, \$108,600,000; total liabilities, \$14,600,000; and insurance in force, \$6,379,000,000.

CURRENT PROBLEMS. State insurance departments, as represented in the national convention of insurance commissioners, have united in a crusade against holding and promoting companies. Investigations have shown that numerous concerns for the promotion of life insurance companies have been organized, the object being the profits of promotion rather than the establishment of new and stable insurance undertakings. Thus thousands of investors have been induced to invest in such speculations under the prospect of great immediate profits, only to find that the insiders made away with the proceeds of stock sales. The widespread interest aroused a few years ago as to the expenses and methods of industrial insurance companies still continued. An examination made by the New York superintendent of insurance into the Metropolitan Life Insurance Company, which issues about 50 per cent. of all industrial insurance, led to the conclusion that such insurance is still expensive, although the ratio of expenses to premium income fell from 43.7 per cent. in 1905 to 36.6 per cent. in 1911; that, although lapses are very numerous, due to the weekly payment system and the classes of persons insured, nevertheless a substantial improvement in the persistence of the business had been made; that the salaries of agents and clerks were only commensurate with ability and service demanded; and that, although the company makes enormous profits, these do not go to the stockholders, except for a 7 per cent. dividend, but are distributed among the persistent policyholders. The statistics noted above showed that nearly one-fourth of the whole population of the United States holds industrial insurance in the four leading companies. Weekly premiums are usually five cents or multiples thereof; the average premium is said to be ten cents; and the average policy slightly more than \$140. The fact that this is insurance for the working population makes its regulation of the greatest importance. The examiner's report declared such insurance to be a necessity, but held that the government was not yet ready in this country to assume the administration of it. On December 24 the Metropolitan declared extra bonuses to policyholders of \$6,281,000 over and above dividends.

Health and accident insurance have also been given unusual attention during the last two years. Investigation by a special committee of the national convention of insurance commissioners showed that, by means of "hyper-technical construction of so-called protection clauses in the contract," policyholders were frequently exploited. Their report said: "The policyholder public of the country—particularly those who through ignorance or poverty are unable to protect themselves, and therefore are peculiarly the wards of government—has too frequently been the victim of unconscionable practices in the claim departments of the companies criticised in this report." That report was given wide publicity and companies involved were compelled to make radical changes in their claim departments. There has resulted a nation-wide movement for increased statutory regulation of such companies. Another subject receiving current attention is the supervision

of salesmen. The subject of insurance rates, particularly of industrial, fire, and casualty companies, was also under discussion. In general, it was said that insurance rates must be made acceptable to the public as representing compensation received or the movement for government insurance will become irresistible. In this connection there was demand that the expenses, which in some fields amount to more than 50 per cent. of the premium, should be reduced to the lowest level consistent with efficiency; otherwise insurance through government would be introduced. An analysis of the New York report for 1912 showed that the agents' commissions of the 102 companies there summarized amounted to over 23 per cent. of the total premium income. This was believed to be excessive. Some attention was given to the investments of insurance companies, it being pointed out that even the New York law is a mass of confusion. As to the standardization of policy contracts, it was pointed out that this has been achieved in fire and ordinary life insurance, but that chaos still reigns in industrial, health, and accident insurance, as also in liability, fidelity, credit, automobile, steel boiler, sprinkler leakage, burglary, fraternal and assessment life, and marine insurance. Other matters advocated by insurance commissioners were a campaign of popular education in the various branches of insurance and the development of means to reduce the lapsation of insurance in different fields. The Association of Life Insurance Presidents began in 1906 a policy of public education and publicity. This policy was adopted in 1912 by the National Board of Fire Underwriters, by the International Association of Casualty and Surety Underwriters, by the Detroit Conference (comprising companies writing industrial accident insurance), and by the National Fraternal Congress. All these have formed bureaus for educating the public. A movement has been started for the calculation of a new mortality table through the coöperation of the National Convention of Insurance Commissioners and the Actuarial Society of America.

MASSACHUSETTS SAVINGS BANK INSURANCE. The abstract of the combined reports of the insurance departments of the savings banks of Whitman, Brockton, Berkshire County, and Pittsfield for the year ending October 31, 1912, showed that 2590 policies, representing 924,505 insurances, were issued during the year. There were in force in all four banks 6652 policies aggregating \$2,528,809 besides 82 deferred annuities representing annual payments of \$11,026. The assets of the four insurance departments amounted to \$331,794. The Berkshire County Savings Bank began the issue of policies in August, 1911, and the City Savings Bank of Pittsfield in July, 1912. Although the rates established by the State law under which this insurance is sold are lower than those of the industrial insurance companies with which the savings banks compete, the dividends declared by the latter in 1912 were substantial, ranging from 8½ per cent. of the premium on policies in force one year to 20 per cent. on policies in force five years. It was stated officially that the net cost ranged from 17 per cent. to 34 per cent. less than in the private companies. This mainly represents differences in cost, as the savings banks have no solicitors, but banks, stores, Y. M. C. A.'s, high schools,

act as agencies, as do also some two hundred mills and factories.

WISCONSIN. The readiness of Wisconsin to follow the lead of European countries in social and industrial reform movements was manifest in the enactment of a law authorizing the establishment of a State insurance system. By November 1 the organization necessary to commencing the issuance of life insurance was completed. The State was to engage in competition with commercial companies. It was not, however, to employ solicitors. It was the belief of the promoters of the idea that by eliminating the expenses of this agency the State would be able to sell insurance so cheaply that great numbers of citizens would be induced to insure through the State system. Others, however, pointed to several old English companies which have avoided all solicitors' expenses but which have grown very slowly. The reason for this is that the average person does not usually seek life insurance, but is induced to buy it. There were not shown to be an actuarial difficulties which would prevent a State bureau from organizing an insurance business. It was pointed out, however, that some danger in the future might result from the possibilities of political control.

FRATERNAL INSURANCE. The principal problem of fraternal insurance in recent years has been the placing of assessments on a sound actuarial basis. It has been repeatedly shown that scores of fraternal societies have developed and disappeared during the last 50 or 60 years. In nearly every case the reason was that, although the rate of assessment was high enough to cover losses while the organization was growing rapidly and while the average age of membership was low, it was not large enough in later years. At their convention in 1910 at Mobile, Ala., the national insurance commissioners formulated what is known as the Mobile bill and recommended its adoption by all the States. Adherence to the provisions of this bill would place all fraternal societies on a sound financial basis. This law has been enacted in more than a dozen States; although more than 25 States provide at least some regulation of fraternal insurance. The managers of the fraternal organizations uniformly desire to bring about such assessment or premium rates as will guarantee the permanency of the organization. It seems certain, therefore, that practically all of the better known societies that have not yet reached a sound mathematical system will do so in the near future; but in some cases this will be done only after much internal strife. Moreover, effective means have not yet been provided to prevent the frequent launching of new organizations with rates so low as to quickly attract great numbers of members. The great increase of public information in insurance matters, however, is likely to put the public on its guard against unsafe ventures.

The table in the next column gives the date of founding in America, American membership, and total disbursements since founding, except where year is indicated, of leading orders.

INTERNAL COMBUSTION MOTORS.

The Diesel patents in the United States expired during 1912, but comparatively little was done in the way of manufacturing these machines. A number of semi-Diesel engines in smaller types were put out, but the aggregate was insignificant as compared with Europe. Here this

type of machine using crude oil fuel was meeting with great favor for central station work, as the units are very compact and easily operated. In Denmark it was reported that Diesel engines were employed at most of the small central stations. Experiments with various fuels, such as tar combined with paraffin oil, were carried on and a successful trial was made of a 100 h. p. engine built by the Körting Company, which led to the construction of two new engines of 600 h. p. In Russia the Diesel engine was also making for itself a place, and one of 120 h. p. driven at high speed with outside air compression was successfully tried, while another Russian plant was supplied with an 800 h. p. unit built by the Augsburg-Nürnberg Company. This firm, which had supplied many turbines, installed a 400 h. p. machine in an Italian electric plant at Parma.

The increasing cost of natural fuel oils in Europe was thought by many to be a stumbling block in the more extended application of the Diesel motor, and this was leaving tar oil as the most economical fuel for such engines. It was believed that the Diesel engine would find greater use in countries where coal was expensive and this was one reason for the extensive installations in France and Russia. The cost of such engines in 1912 was given as \$30 to \$32.50 per horsepower, as against \$35 per horsepower for the steam plant; but the repairs and maintenance costs were thought to be higher on account of the high pressures and temperature and the need of great cleanliness in maintaining the engine.

A horizontal double-acting four-cycle Diesel engine with twin tandem arrangement of 1600-2000 horsepower was built during the year in Germany for use with tar oil, with a small addition of ignition oil, and operated very satisfactorily. From 600 horsepower units to those of smaller size with from four to one cylinder, the Diesel engine in 1912 was finding increased application on the continent, due in part to the falling off in the sale of gas-producer plants and small steam engines. Such engines could be installed in the basement of buildings below occupied dwellings, where in Europe boilers were not permitted, and were available for use at an instant's notice without standby losses or the attendance required for a steam or gas producer plant. The fuel economy was also urged in favor of the Diesel engine and this economy could be obtained with a less degree of skill on the part of the operator than was required for satisfactory maintenance with a steam or gas producer plant. The horizontal type of Diesel engine continued to be developed during the year 1912, and while it shows but little if any increase in fuel consumption over the vertical engine and the original Diesel construction, yet the initial cost is lower and it is simpler and more accessible.

MARINE DIESEL ENGINES. The internal combustion engine to secure universal adoption for ship propulsion must be simple, reliable, and cheaper in the beginning than a steam engine, yet show the same fuel economy as a stationary engine. The cost of the marine engines built during the year was considerably greater than for corresponding steam engines, and while this is due in part to the necessary experimentation in the designs before successful types are developed, yet there were many obsta-

cles in the way of the immediate supplanting of the present steam plants. See SHIP-BUILDING.

The use of the Diesel oil engine at sea in large up-to-date freight steamers had a practical test in the case of the *Selandia* and the *Jutlandia* of the Danish East Indian Steamship Co. Reversing four-cycle high-speed Diesel oil engines were used for the main engines and the Diesel engines also drive the air compressors and the electric generators. The machinery placed in these ships had considerable less weight, while less space was required for the fuel. Contrasted with the four-cycle engines of the *Selandia* and the *Jutlandia*, the *Monte Penedo*, built in Germany, with engines by Sultzter Bros. of Winterthur, Switzerland, had two-cycle four-cylinder single-acting engines capable of developing 850 horsepower each. This latter vessel was 350 feet in length, 50 feet wide, and 27 feet deep, with a capacity of 4000 tons and a speed of 10½ knots per hour.

The Junkers oil engine was attracting much attention in Europe. It had reciprocal pistons, a three-throw crank shaft, and a superior form of combustion chamber. A few of these engines for marine propulsion of the two- or three-cylinder vertical type have been built. The units so far constructed have been for marine propulsion, but two experimental machines of the horizontal type had been constructed in Professor Junkers's laboratory and there was considerable speculation among continental mechanical engineers as to the future of the stationary horizontal tandem engine.

In a recent discussion of gas power development in Europe, H. J. Freyn, retiring chairman of the gas power section of the American Society of Mechanical Engineers, stated that he believed that conditions were even less favorable for the development of the large Diesel engine in the United States than in Europe, on account of the small relative difference between the cost of coal and oil fuel in most parts of the United States. On the Pacific coast, for example, where oil fuel is cheap and coal expensive, there would appear to be considerable opportunity for the use of this engine, but elsewhere the cost of coal is so moderate and the conditions of maintenance and repairs would be so large that there would appear to be less opportunity for such machines than in Europe. Again, in Europe, especially on the continent, where there is a high import duty on natural oil in many States, the development of the coal tar industry has brought about the production of a large annual supply of tar oil, and one factory at Meiderich, in Germany, was able to produce over 80,000 tons of tar oil per year, which was being sold at a price of approximately \$12.50 per ton, or five cents per gallon. This one plant alone was being increased in capacity until it was expected that an annual output of 300,000 tons of tar oil would be reached. The total world production of this fuel was estimated at 1,000,000 tons per annum, and with improved methods of using coal and by-product coke ovens and by-product gas producer plants the total production of tar oil was bound to increase not only in Europe but also in the United States. The tar oil consumption in the Diesel engine is not very much greater than natural oil and in the medium-sized units shows a satisfactory economy, while for the smaller engines

the addition of a so-called ignition oil was necessary.

GAS TURBINES. German engineers were paying greater attention to the gas turbine during 1912, as was natural in the large high-speed rotative machinery, and the opinion was advanced that where fuel oils were abandoned this machine would revolutionize power production, especially in large steel centres. An experimental gas engine of large size operated in Germany was showing good mechanical results, although much remained to be done to secure satisfactory thermal efficiency.

UTILIZATION OF INDUSTRIAL WASTE GASES. The utilization of blast-furnace gas engines in blast-furnace and steel works was being rapidly extended in Europe and the use of coke-oven gas in gas engines to generate electric power was also taking place. Various problems connected with the latter class of machinery were being solved, especially the presence of sulphur in the coke-oven gases.

German builders of gas engines were improving their machines greatly in 1912, the valve gear was being simplified and the cranking of the gas cylinders was being reduced by better design and location of materials. While in operation the gas cylinders require cleaning at regular intervals and such care adds to their life and efficiency. By building them of cast iron instead of cast steel better results were being secured. Improvements were being made also in other features of the design and in the use of better grades of steel. The cost of producing electric power in electric blast-furnace and steel plants was estimated at about \$2.70 per thousand kilowatt hours, comprising \$1.25 value of the raw blast-furnace gas and includes cost of gas cleaning, cost of labor, repairs and supplies of all kinds, but does not involve interest and depreciation.

INTERNATIONAL METRIC CARAT. The international metric carat for weighing precious stones and gems was adopted unanimously by representatives of the largest firms in the American jewelry trade at a meeting held in New York on October 29. The resolutions adopted provided for the use of the international carat after July 1, 1913, and requested the Secretary of the Treasury to employ this standard in levying the duty on imported diamonds and other gems. The international carat is 200 milligrams, or one-fifth of a gram (3.086 grains), and in 1912 was in use in France, Germany, and practically all countries except the United States, Great Britain, Belgium, and Holland, where various carats corresponding approximately to 205 milligrams

were employed, while elsewhere in Europe and Asia at the beginning of the twentieth century 20 different carats, ranging from the Bologna carat of 188.5 milligrams to the Arabian carat of 254.6 milligrams, were in use. The international carat was established at the suggestion of dealers in precious stones in Germany in 1905, and was straightway adopted by similar interests in France and other European countries. Hitherto American jewelers had used a carat corresponding to 205.2 milligrams, or approximately that of the British Board of Trade and of the jewelry trade of Antwerp, and dealing as they did with merchants in many foreign centres of trade the diversity had often proved most annoying. With the international carat not only would this lack of uniformity be done away with, but it would be possible to employ decimal subdivisions instead of sixty-fourths, and the actual weights for the balances could be made uniform and of the highest accuracy.

IOWA. POPULATION. According to the Census Bureau statistics issued in 1912, out of a total population in 1910 of 2,224,771, the foreign-born whites numbered 273,379, compared with 305,782 in 1900. The largest number of these, 98,620, came from Germany; from Sweden, 28,750; from Norway, 21,890; from Ireland, 17,754; from Denmark, 17,937; from England, 16,783; from Austria, 15,962; from Holland, 11,336, and from Canada, 10,548. Other European countries were represented by smaller numbers. In 1910 there were 14,973 negroes and 3644 mulattoes in the State. In 1890 the negroes numbered 10,685 and the mulattoes 3182.

AGRICULTURE. The acreage, value, and production of the principal crops in 1911 and 1912 are given in the following table:

		Acreage	Prod. Bu.	Value
Corn1911	9,850,000	305,350,000	\$161,836,000
Wheat	...1911	847,000	10,622,000	9,348,000
Oats1911	4,950,000	126,225,000	51,752,000
Rye1911	30,000	540,000	416,000
Potatoes1911	174,000	12,876,000	9,399,000
Hay1912	3,537,000	a4,952,000	47,044,000
1911	3,240,000	a2,592,000	32,400,000

a TONS.

COAL. The total production of coal in the State in 1911 was 7,331,648 short tons, valued at \$12,663,507. This was a decrease from the production of 1910 by 596,472 short tons. The number of men employed in the coal mines of the State in 1911 was 16,599.

MANUFACTURES. The Thirteenth Census included statistics of manufactures in the State. These are for the calendar year 1909 and were compiled in 1912. The most important and interesting results of the census will be found in the table below. The industry in which the largest capital was invested was slaughtering and meat packing. The value of this product was \$50,045,000, and the wage earners employed numbered 4144. In the manufacture of butter, cheese, and condensed milk the value of the product was \$25,850,000 and the wage earners

employed numbered 1231. The foundry and machine shop products were valued at \$14,064,000 and gave employment to 5103 wage earners. The largest number of persons were employed in industries relating to cars and general shop construction, 6969. The value of the product of this branch of industry was \$10,269,000. Other industries in which the product was valued at over \$10,000,000 were flour-mill and grist-mill products, \$12,871,000; lumber and timber products, \$12,659,000; printing and publishing, \$12,129,000. The total number of wage earners in the industries of the State was 81,635, of whom 51,770 were male and 9865 female. The wage earners under 16 years of age numbered 1047, of whom 405 were females. The prevailing hours of labor ranged from 54 to 60 a week for three-fourths of the wage earners employed, 14 per cent. of the total being employed in establishments operating less than 54 hours a week and only 9.5 per cent. in establishments operating more than 60 hours a week. The cities having the largest number of wage earners were Des Moines, 5383; Dubuque, 5168; Davenport, 4231; Burlington, 4190, and in Sioux City, 3750. The principal results of the census are shown in the following table, with corresponding figures for 1904 and the increase of per cent. between 1904 and 1900:

	Number or Amount 1909	1904	P. C. of Inc. 1904-'09
Number of establishments	5,528	4,785	15.5
Persons engaged in manufactures..	78,360	61,861	27.7
Proprietors and firm members.	5,323	4,758	11.9
Salad employees	11,402	7,122	60.1
Wage earners (average number)	61,635	49,481	24.6
Prim'y horsepower	155,384	118,065	31.6
Capital	\$171,219,000	\$111,427,000	53.7
Expenses	233,364,000	143,692,000	64.4
Services	43,514,000	28,945,000	50.3
Salaries	10,972,000	5,948,000	84.5
Wages	32,542,000	22,997,000	41.5
Materials	179,707,000	102,844,000	66.0
Miscellaneous ..	19,143,000	11,908,000	60.8
Value of products	259,238,000	160,572,000	61.4
Value added by manufacture (value of products less cost of materials)...	88,531,000	57,728,000	53.4

FINANCE. The receipts for the fiscal year ending June 30, 1912, amounted to \$4,983,448. The expenditures for the same period were \$5,224,501, leaving, together with the balance at the beginning of the fiscal year, a balance at the end of the year of \$1,041,486. The chief receipts are from county taxation, insurance taxes, and fees. The chief expenditures are for education, support of State institutions, and the State government. The State has no bonded debt.

CHARITIES AND CORRECTIONS. The charitable institutions under State control, with the enrollment of each in October, 1912, are as follows:

Cherokee State Hospital (for insane), Cherokee, 980; Clarinda State Hospital (for insane), Clarinda, 1146; Independence State Hospital (for insane), Independence, 1143; Mt. Pleasant State Hospital (for insane men and women and inebriate women), Mt. Pleasant, 1093; School for the Deaf, Council Bluffs, 216; Soldiers'

Orphans' Home, Davenport, 521; Institution for Feeble-minded Children, Glenwood, 1354; State Hospital for Inebriates, Knoxville, 152; Soldiers' Home, Marshalltown, 711; State Sanatorium for the Treatment of Tuberculosis, Oakdale, 110. In addition to these, 95 out of 99 counties in the State have county homes, and in these there are about 2450 insane and poor persons. There are also 27 institutions for friendless children, in which nearly 3000 children are cared for. The Mercy Hospital at Davenport, St. Bernard's Hospital at Council Bluffs, St. Joseph's Sanitarium at Dubuque, and The Retreat at Des Moines are private institutions at which insane persons are cared for. These institutions are inspected semi-annually by the board of control. The correctional institutions with their population in 1912 are as follows: Industrial School for Boys at Eldora, 363; Industrial School for Girls at Mitchellville, 168; the Reformatory at Anamosa, 649; State Penitentiary at Ft. Madison, 481.

POLITICS AND GOVERNMENT

Political interest was heightened in Iowa by the fact that Senator Cummins on January 20 announced his candidacy for the Republican presidential nomination. In the convention held on April 24 for the election of delegates-at-large to the Republican national convention, the four delegates-at-large were instructed to vote for President Taft. Senator Cummins was unable to secure the full number of district delegates. President Taft was given 12, while Senator Cummins received 10. By a vote of 764 to 720 resolutions were adopted at the State convention indorsing and praising the administration of President Taft. In spite of this failure to receive a unanimous indorsement, Senator Cummins remained a candidate until the session of the national convention. Following the convention he issued a statement in which he expressed his intention to vote for Mr. Roosevelt. This was due, he said, to a careful analysis made of the election contests before the convention, by which he arrived at the conclusion that many of the delegates had been wrongfully awarded to President Taft. Although he expressed his intention to vote for Mr. Roosevelt, he said that it must be understood that he would do so protesting against the organization of a third party and dissenting from some of the doctrines of the new platform. He said: "My vote for him will indicate that I believe he desires to promote the common welfare, but will not indicate that I look upon the new party as a wise or an enduring movement in public affairs." On May 16 the Democratic State convention instructed the 26 delegates from Iowa to vote for Clark.

On June 3 a senatorial primary was held. The term of Senator Kenyon, who was elected to fill the vacancy caused by the death of Senator Dolliver in 1911, expired in 1913. Opposed to Senator Kenyon, who was a candidate for reelection, was Senator Lafayette Young, one of the Taft leaders of the State. In this election Senator Kenyon won over Mr. Young by a plurality of about 75,000 votes. Following his defeat, Mr. Young issued a statement in which he declared that stand-patism was dead and might as well be buried. He abandoned his support of President Taft and declared that the State should support Senator Cummins.

Following the Republican national convention the Progressives in the State were for some time doubtful whether they would nominate candidates for State offices. It was finally decided to do so, and on September 4 Judge John L. Stevens was nominated for governor. The Republican nominee was Lieutenant-Governor Clark and the Democratic candidate Edward G. Dunn. The political situation was complicated by the fact that while Senator Cummins and his friends supported Mr. Roosevelt, Senator Kenyon, who was also a Progressive, declared himself for the whole Republican ticket, including President Taft, at the same time denouncing the methods by which the President secured his nomination. The election on November 5 resulted as follows: Wilson, 185,376; Roosevelt, 161,783; Taft, 119,811; Debs, 15,914. Chafin, 8437. For governor, Clark, Rep., received 184,148 votes; Dunn, Dem., 182,449, and Stevens, Progressive, 71,877. A Republican legislature was elected, making it certain that Senator Kenyon would be re-elected in 1913.

STATE GOVERNMENT. Governor, G. W. Clark; lieutenant-governor, W. L. Harding; secretary of State, W. S. Allen; treasurer, W. C. Brown; auditor, J. L. Bleakly; attorney-general, George Cosson; superintendent of education, A. M. Deyoe; adjutant-general, Guy E. Logan—all Republicans.

JUDICIARY. Supreme Court: Chief justice, S. M. Weaver; judges, Scott M. Ladd, E. R. Gaynor, William D. Evans, Horace E. Deemer, B. W. Preston; clerk, Burgess W. Garrett—all Republicans.

STATE LEGISLATURE, 1913. Republicans, Senate, 31; House, 71; joint ballot, 102. Democrats, Senate, 17; House, 33; joint ballot, 50. Republican majority, Senate, 14; House, 38; joint ballot, 52.

IOWA, STATE UNIVERSITY OF. An institution for higher education at Iowa City, Ia., founded in 1847. The total number of students enrolled in the various departments of the university in the autumn of 1912 was as follows: Liberal arts, 1020; law, 210; medicine, 95; homœopathic medicine, 13; dentistry, 174; pharmacy, 47; graduate school, 109; school of applied science, 168; fine arts, 67; nursing, 70; homœopathic nursing, 14. The faculty numbered 220, of whom 155 were actually engaged in teaching and 65 were assistants and executives. Among the noteworthy changes in the faculty was the appointment of Henry W. Dunn to succeed Austin W. Scott as dean of the College of Law; the appointment of W. A. Jessup to succeed F. E. Bolton as head of the Department of Education, and the appointment of J. A. Mars to succeed Captain M. C. Mumma. A gift of \$1000 was received from George E. MacLean, former president of the university, for a fund, to be known as the student revolving loan fund. The productive funds of the university amount to \$240,845, and the income from the productive funds \$11,167. The library contains 98,000 volumes. President, John G. Bowman, M. A.

IPSWICH SKELETON. See **ANTHROPOLOGY**.

IRELAND. See **GREAT BRITAIN**.

IRON AND STEEL. The production of iron and steel in 1911, as noted below, is general in its nature. The production of the several States may be found in the paragraph *Min-*

eral Production under those States. The figures are taken from the report of the United States Geological Survey.

In 1911 there was a decided decrease in the production of iron ore, pig iron, and steel in the United States as compared with the production in 1910. This was due primarily to the fact that there was a large overproduction in 1910, and, secondarily, to a lessening in the demand. Buying on the part of railroads and for new equipment of manufacturing plants was curtailed. These conditions were foreshadowed in the last four months of 1910 and lasted well into the second half of 1911. In the closing months of that year, however, recovery was rapid and by the end of the year there was a decidedly more hopeful tone. Iron was mined in twenty-seven States during 1911. Of these, four, Idaho, Montana, Nevada, and Utah, produced ores for fluxing only. Part of Colorado's production was for fluxing and part for pig iron. In Michigan was produced a very small quantity for fluxing and a small quantity was produced in Missouri for special fluxing use. The other States produced ores for blast-furnace use. The total production in 1911 was 40,989,808 long tons, valued at \$86,419,830, compared with 50,889,734 long tons, valued at \$140,735,607, in 1910. As in 1910, Minnesota ranked first, with 23,398,406 long tons. This was a considerable decrease from the production of 1910, which was 31,966,769 long tons. There were produced in Michigan 8,944,393 long tons, compared with 13,303,906 in 1910; in Alabama 3,955,582 long tons in 1911, compared with 4,801,275 in 1910; in New York, 1,057,984 long tons, compared with 1,287,209 in 1910. The table below gives the production by States and the value of the product in 1910-1911:

State	1910		1911	
	Quantity, in long tons	Value	Quantity, in long tons	Value
Alabama...	4,801,275	\$6,083,722	3,955,582	\$4,876,106
Georgia...	313,878	482,659	207,279	315,704
Kentucky and West Virginia...	64,347	86,085	71,979	92,575
Maryland and North Carolina...	79,340	143,342	92,382	161,929
Michigan...	13,303,906	41,393,585	8,944,393	23,808,935
Minnesota...	31,966,769	78,462,560	23,398,406	48,447,760
Missouri...	78,341	168,697	72,788	153,676
New Jersey	521,832	1,582,218	359,721	1,158,271
New York	1,287,209	3,848,682	1,057,984	2,959,009
Ohio.....	22,320	35,866	16,697	30,649
Penn'svania	739,799	911,847	514,929	539,553
Tennessee	732,247	1,048,323	469,728	632,339
Texas.....	29,535	34,003
Virginia...	903,377	1,845,144	610,871	1,146,188
Wisconsin	1,149,551	3,610,349	559,763	1,386,616
Other States....	896,008	998,529	657,306	710,620
Total....	56,889,734	140,735,607	40,989,808	86,419,830

During 1911, 374 ore mines reported sales or consumption of ore; 159 mines produced over 50,000 long tons of iron ore each, compared with 191 mines in 1910. The largest quantity produced from any single mine in 1911 was 1,553,510 long tons, from the Hill mine at Marble on the Mesabi range, Minnesota. These mines in Minnesota produced more than 1,000,000 tons each.

PIG IRON. The production of pig iron in 1911 in the United States amounted to 23,257,288 long tons, valued at the furnaces at \$327,234,624,

as compared with 26,674,123 long tons, valued at \$412,162,486, in 1910, a decrease in quantity of 3,416,835 tons and in value of \$84,827,862. The average value per ton in 1911 was \$14.07, as compared with \$15.45 in 1910.

The quantity and value of the production in 1910-11 are shown in the following table:

State	1910		1911	
	Quantity	Value	Quantity	Value
Alabama	1,969,770	\$24,127,616	1,617,150	\$17,379,171
Illinois	2,606,335	41,465,543	2,036,081	31,152,927
Kentucky	81,677	1,312,288	57,982	870,542
Michigan	307,975	5,119,074	304,654	4,672,799
N. Jersey	239,221	3,797,656	(a)	(a)
New York	1,895,018	31,693,623	1,537,201	23,924,194
Ohio	5,584,279	85,385,254	5,371,378	73,484,592
Penn.	11,014,652	174,486,833	9,581,109	136,328,507
Tennessee	400,269	5,199,099	297,594	3,439,644
Virginia	402,625	5,676,599	308,789	3,898,285
Wisconsin	278,221	4,386,859	245,152	3,803,049
Other States	1,894,070	29,612,042	1,900,198	28,380,914
Total	26,674,123	412,162,486	23,257,288	327,334,624

a Included in other States.

It will be seen from this table that the largest quantity was produced in Pennsylvania, followed by Ohio, Illinois, and Alabama.

The commercial capacity of the blast furnaces of the United States on December 31, 1911, was estimated at 33,402,000 tons a year. Four new blast furnaces with a total capacity of 565,000 tons were added during 1911, compared with 13 new blast furnaces with a capacity of 1,794,000 tons in 1910. The total number of furnaces on December 31, 1911, was 466, of which 231 were in blast and 235 were out.

STEEL. The total production of steel in 1911 in the United States was 23,675,501 long tons. Of this, 7,947,849 long tons were Bessemer, 15,598,650 open hearth, 97,653 crucible, and 63,349 other steel. In the production of steel Pennsylvania occupied first place, with 9,504,014 long tons of open hearth, steel ingots and castings, and 2,338,613 tons of Bessemer ingots and castings.

IMPORTS AND EXPORTS. The quantity of iron ore imported into the United States in 1911 was 1,811,732 long tons, valued at \$5,412,636, compared with 2,591,033 long tons, valued at \$7,832,225 in 1910. The largest quantity was imported from Cuba, 1,147,879 long tons. Considerable quantities were brought from Sweden, Spain, Newfoundland, and Canada. The quantity of iron ore exported from the United States in 1911 was 768,386 long tons valued at \$2,653,458, or \$3.45 per ton. This was a slight increase over the amount exported in 1910.

IRON ORE. The production of iron ore in the United States in 1912 was much greater than in the preceding year. The year was memorable in the iron and steel industries for the rapid recovery from depression, accompanied by an increased production which carried the total outputs of nearly all forms to a higher level than had ever before been recorded. The production in 1912, as given by the *Engineering and Mining Journal*, was as follows:

Lake Superior, 48,410,477 tons; Southern States, 7,590,000 tons; other States, 3,485,000 tons.

PIG IRON. The production of pig iron in

the United States in 1912 was considerably in excess of that of 1911. The output in 1912 was 29,647,274 short tons, according to the *Engineering and Mining Journal*.

STEEL. Figures for the year's production of steel were not available at the end of 1912. Statistics were made up, however, for the first half of the year. The production for that period was 14,373,701 tons. The production for the second half of the year was undoubtedly greater than that of the first half, according to the estimates of the *Engineering and Mining Journal*. That authority estimates the finished rolled product of 1912 as probably exceeding 29,500,000 tons. The most notable gain was in structural steel in plates, bars, and rails. See **METALLURGY**.

IRON AND STEEL TARIFF. See **TARIFF**.

IRRIGATION. Throughout the world generally the year 1912 was one of considerable activity in the extensions of irrigation to new areas, but in the United States few new enterprises were undertaken, the extension being principally in increasing the areas irrigated under works already built. The progress of the year in different parts of the world is given in detail below:

UNITED STATES. As stated, the activity in the undertaking of new irrigation enterprises, and in the construction of new works, which has been so noticeable for a few years past, has almost ceased. The reports of the census of 1910 showed clearly that irrigation construction had far outrun settlement, and it seems likely that the next few years will be a period of adjustment in which the land under existing works will be gradually brought under cultivation. The census of 1910 showed the total acreage irrigated in the arid region of the United States in 1909 to be 13,738,458 acres, which was an increase of 82.7 per cent. over the acreage irrigated in 1899. Assuming that the same rate of increase continued, the acreage irrigated in 1912 would have been slightly more than 17,000,000 acres. In view of the decreased activity in construction, it is probable that the acreage actually irrigated in 1912 is considerably less than the figures just given. The greater part of this acreage, probably 90 per cent., is supplied with water by works controlled by the water users, either individually, or in some organized form of coöperation. The report of the United States Reclamation Service, which is building irrigation works under the law of June 17, 1902, setting aside the receipts from the sale of public lands for that purpose, for the fiscal year ended June 30, 1912, showed that this fund amounted in 1912 to \$75,059,201.14, to which should be added a loan from the treasury of \$20,000,000, making the total fund slightly over \$95,000,000. Of this there has been expended to June 30, 1912, \$74,364,767. The total acreage in reclamation projects was 3,020,689 acres, to 1,168,530 acres of which the service was ready to supply water in 1912. The acreage covered by water-right applications and rental agreements for the season of 1912 was 825,704 acres, leaving 432,826 acres to which water could be supplied in excess of the acreage covered by applications and agreements.

The decreasing activity in the undertaking of new enterprises is shown further by the limited operations under the Carey act (August

18, 1894, granting desert lands to the States on condition that they provide for their irrigation) during the year 1912. During the year ending June 30, 1912, there were applied for under this law 184,697 acres, while during the last preceding year the area applied for was 975,529 acres, and the area segregated during the year ending June 30, 1912, was but 97,917 acres, against 328,795 acres in the preceding year. The area patented in the last year was 85,596 acres, and in the preceding year 60,540 acres. The total area applied for under this law to June 30, 1912, was 7,301,037 acres, the area segregated 3,291,231 acres, and the area patented 474,000 acres.

The Philippine government is undertaking the construction of a number of irrigation enterprises and has created an "Irrigation Council," composed of the secretary of commerce and police, the chairman of the committee on agriculture of the Philippine assembly, the director of public works, and the chairman of the committee on public works of the Philippine assembly. In addition to the projects being carried out by the government, individual farmers are developing small projects.

FOREIGN COUNTRIES. In the Northwest provinces of Canada, construction of new works is much less active than it was a few years ago. The province of British Columbia is giving much attention to a revision of its laws and a general study of the organization of irrigation enterprises, with a view to providing for more successful reclamation of its arid lands. Irrigation extension in Mexico, which was receiving considerable attention from the government, which enacted laws providing for loans in aid of irrigation construction, has been halted to some extent by the unsettled conditions in that country. Notwithstanding this, some large concessions have been granted, and projects are under way. A large project taking water from the Conchos River in Chihuahua, is under construction, to provide water for about 1,000,000 acres, to be used for the growing of cotton, corn, beans, and alfalfa.

Of the South American countries, Argentina shows the greatest activity in irrigation development. A few years ago the Argentine government adopted a policy of government aid in the construction of irrigation works, and still maintains this policy. During 1912 a new project in the province of San Luis, to cost \$5,000,000, was authorized, as was a new project in the province of Cordoba, to cost \$1,500,000. Other projects already authorized have been delayed because bids for their construction have run far above the government estimates of cost. The Argentine government is investigating the possibilities of irrigation in Patagonia. The Chilean government is making plans for the irrigation of 172,970 acres in the central valley of Chile, at a cost of \$924,000, and for another project farther north which will include 50,000 acres. The Republic of Brazil is giving considerable attention to irrigation, but without much result. Schemes for federal and state aid are proposed and bills have been introduced in the federal congress embodying these schemes, but have not become laws.

The enlargement of the Assuan Dam on the Nile, is to be completed in 1912, and should provide a largely increased supply of water

for perennial irrigation in 1913. Much of this water is to be used on the Delta lands, which require drainage as well as irrigation. The Egyptian government has undertaken the drainage of these lands and has authorized the expenditure of \$13,000,000 in this work. It is necessary to dike the land and pump the drainage water from the drains. The land is to be devoted to cotton. At Cairo, experiments in the use of sun-power engines for pumping water for irrigation are being conducted. The Turkish government is continuing its efforts toward the reestablishing of irrigation in Asiatic Turkey. During the year 1912, preliminary contracts have been let for the irrigation of 1,000,000 acres in the Meander Valley, and for 1,200,000 acres in the Adana Plain. In India, the British government is increasing its expenditures for irrigation works from year to year, the amounts allotted for this purpose for the year 1911-12 being \$9,310,280 for major works, and \$4,152,320 for minor works. Up to March 31, 1911, the British government had spent on irrigation works in India \$155,712,000, and built 58,251 miles of main and branch canals, commanding 48,000,000 acres, about 20,000,000 acres of which is cultivated. There are now under construction, awaiting sanction or under examination, fifty-five government projects, the estimated cost of which is \$181,600,000. The "productive" government irrigation enterprises in India have yielded a return of 7.66 per cent. on the capital invested in them. The government of Siam is undertaking extensive irrigation works and has employed an American irrigation engineer to take charge of this work.

The first meeting of the South African Irrigation Association was held in Bloemfontein November 16, 1911. The time of this meeting was taken up principally with the discussion of a proposed law regulating the use of water from streams throughout the union. It was claimed that irrigation development was being retarded by existing laws, and the new law was designed to remove these hindrances. The South African governments are encouraging irrigation development by giving advice to farmers and by making surveys, etc., but have not yet done construction work on any large scale.

IRWIN, JOHN ARTHUR. An American physician, died June 1, 1912. He was born in Ireland in 1853 and was educated in Dublin University. He studied medicine at the College of Physicians. For a number of years he acted as surgeon in several hospitals in England. In 1882 he removed to the United States and was for ten years physician to the St. George's Society in New York City. He was president of the British Schools and Universities Club, and a member of several European and American medical societies. Among his professional writings are: *Hydrotherapy at Saratoga*; *Pathology of Seasickness*, etc. He was an editorial writer for the *British Medical Journal*, the *London Lancet*, the *New York Medical Record*, and the *Philadelphia Medical News*.

ISHOMOTO, SHIROKU. A Japanese statesman, died April 2, 1912. He was born in 1854. He entered the military service and rose through successive promotions to be major-general in 1898, and lieutenant-general in 1904. In 1903 he was made vice-minister of war. For many years he was director of the Tokyo

arsenal, from which he was transferred to his position in the war department.

ISOMERISM. See CHEMISTRY.

ITALIAN SOMALILAND. An Italian colony and protectorate. Area 365,400 square kilometers (141,081 square miles); population, about 300,000. Mogadisho is the seat of the civil governor (1912, Signor de Martino). Imports (1908-9), 2,788,285 lire; exports (butter, hides, timber, durrha), 1,567,760.

ITALY. A southern European constitutional monarchy, composed of the Apennine Peninsula and the islands of Sicily and Sardinia. Rome is the capital.

AREA AND POPULATION. The area, in square kilometers (according to the calculations of the Military Geographical Institute), the number of provinces in each compartimento, the population as taken at the census of June 10, 1911, and the gain or loss over the population of February 10, 1901, are given, by compartimenti, in the following table:

	Sq. kms.	P.	1911 Pop.	Increase
Piedmont	29,367	4	3,424,638	107,137
Liguria	5,278	2	1,196,853	119,380
Lombardy	24,085	8	4,786,907	504,179
Venetia	24,547	8	3,526,655	392,188
Emilia	20,701	8	2,667,510	222,475
Tuscany	24,105	8	2,694,453	145,311
The Marches	9,712	4	1,088,875	28,120
Umbria	9,709	1	685,042	17,832
Rome	12,081	1	1,298,142	101,233
Abruzzi e Molise	16,529	4	1,427,642	-13,909
Campania	16,295	5	3,347,925	187,477
Apulia	19,109	3	2,128,632	168,964
Basilicata	9,962	1	473,119	-17,586
Calabria	15,075	3	1,404,076	38,868
Sicily	26,739	7	3,683,380	153,581
Sardinia	24,109	2	852,934	61,180
Total	286,682*	69	34,686,683	2,211,430

* 110,688 square miles.

The population given above is the population actually present at the date of the census, the total legal (*de jure*) population on that day was 35,959,077. All the 1911 census figures here given are subject to slight revision. Rome had a communal population of 538,634; Naples, 723,208; Milan, 599,200; Turin, 427,733; Palermo, 341,656; Genoa, 272,077; Florence, 232,860; Catania, 211,899; Bologna, 172,639; Venice, 160,727; Messina, 126,172; Ferrara, 95,196; Ravenna, 71,690; Modena, 70,267. Infant, primary, normal, and secondary schools are maintained.

AGRICULTURE. In the table below are given the area in hectares sown to principal crops and the yield, in quintals (1911 and 1912), with the yield per hectare in 1911 (wheat, rye, barley, oats, corn late crop, rice, flax, sugar beets, vines, tobacco, olives):

	Hectares		Quintals		Qs. ha.
	1911	1912	1911	1912	
W.	4,751,600	4,755,400	52,362,000	45,102,000	11.0

* With Ceylon.

In 1910, 142,487 Italian and 13,788 foreign vessels, with an aggregate tonnage of 51,213,901, entered, and 142,846 Italian and 13,768 foreign vessels (51,177,007 tons) cleared at Italian ports. The merchant marine (1911) consisted of 450 steamers (987,559 tons) and 630 sailing vessels (333,094).

Open for traffic in 1911 were 10,705 miles of railway; miles of telegraph line, 33,775. Towards the end of the year work was started on the Ronco-Arquata cut on the Genoa-Milan and Genoa-Turin line. This undertaking was estimated to cost almost \$1,930,000, and consisted mostly of digging two tunnels, the Galleria Borlasca, 10,875 feet long, and the Galleria Giacoboni, 2625 feet long. Besides this, there was to be a three-arch bridge across the Scrivia River at Ronco 197 feet long, and two smaller bridges. The station at Ronco was to be enlarged and, with the Scrivia bridge, was to cost \$96,500, while the two tunnels were to cost \$1,186,950. The line was to be double-tracked, with an expense for track work of \$193,000. Work in connection with the crossing of the village of Pietra Bissara was to cost over \$57,900, and masonry along the Scrivia River and other similar work, \$135,100. Progress was being made with the Rome-Naples direct railway.

FINANCE. The revenue for the year 1911-12 amounted to 2,682,640,373 lire, and the expenditure to 2,623,425,632. The budget for 1912-13 estimated the revenue at 2,645,994,671 (262,692,637 extraordinary) and the expendi-

ture at 2,630,172,684 (498,181,504 extraordinary.) The appropriation for war was 351,172,573 lire ordinary, and 80,350,000 extraordinary; for marine, 201,428,609 ordinary, and 15,457,560 extraordinary. The capital of the public debt in 1910 totaled 14,088,876,495 lire.

ARMY. The reorganization of the Italian army which had been in progress since 1906, was continued during 1912, and the minister of war in May asked for increased appropriations to provide for more men and material. The army consisted of the active militia, the mobile militia, and the territorial militia, the latter being almost untrained, but adding to the aggregate which would produce a total war strength of about 3,500,000 men, divided as follows:

With the colors, officers and men.....	248,111
On unlimited leave, officers and men....	486,290
Mobile militia, officers and men.....	320,170
Territorial militia, officers and men.....	2,275,631
Total on a war footing officers and men.....	3,380,202

The above figures are normal and do not take into consideration the changes due to the war with Turkey, which involved an addition to the peace strength of some 500 officers and 10,000 men, so that the main peace effective of 13,600 officers and 236,000 men was considerably exceeded by the large number recalled to the colors for the war. On December 15, 1912, the effective strength of the Italian army with the colors amounted to 383,000 men. The plan of organization, 12 army corps, each having 2 infantry divisions, except in the district of Rome, which had 3. The organization of the permanent army was to comprise 96 regiments of light infantry, 12 regiments of bersaglieri, making in all 318 battalions and 8 Alpine regiments, aggregating 26 battalions, 145 squadrons of cavalry formed into 29 regiments, and 24 regiments of field artillery, with 186 6-gun batteries, maintained on a peace basis of 4 guns each. There were also 1 regiment of horse artillery of 6 batteries, 2 regiments of mountain artillery with 24 batteries, 3 regiments of coast artillery, and a brigade in Sardinia, 2 regiments of fortress artillery and 5 of engineers, comprising 60 companies of technical troops. The strength of the various forces under the terms of the reorganization law varied considerably and it was found necessary to increase the annual contingent of recruits by diminishing the previous exemptions. Two years' service in the infantry was introduced, as a result of the war in North Africa. By the law of June 27, 1912, 24 infantry regiments formed four battalions, and 3 bersaglieri regiments were also given additional battalions. New formations were made in the artillery and engineers, and an aviation battalion was formed which had practical experience during the year. The army estimates for the year amounting to 425,000,000 l. were voted on March 8, and subsequent legislation occurred during the year.

NAVY. On December 1, 1912, the number and displacement of warships, built and building, of 1500 or more tons, and of torpedo craft of 50 tons and over, were as follows: 1 battleship (dreadnought type) having a main battery of all big guns (11 inches or more in cali-

bre), of 18,600 tons, built, and 7 of 173,268 aggregate tons, building; 8 battleships (predreadnought type) with main batteries of more than one calibre of 96,100 tons, built; 9 armored cruisers (74,020 tons), built; 5 cruisers (13,090) built and 2 (7040) building; 24 torpedo-boat destroyers (8667) built and 11 (7-910) building; 48 torpedo boats (9305) built and 21 (2415) building; 18 submarines (5-055) built and 2 (840) building. Total vessels built, 113, of 224,837 tons; building, 43, of 191,473—in all, 156, of 416,310 tons. Excluded from the foregoing are ships over twenty years old, unless reconstructed and rearmed within five years; torpedo craft over fifteen years old; transports, colliers, repair ships, torpedo depot ships, or other auxiliaries. Personnel voted for 1912-13, 32,000 officers and men.

The *Dante Alighieri* (19,400 tons) was completed in August, 1912, and is the first Italian dreadnought; if her speed (24 knots) is reported correctly, she is the fastest vessel of that type afloat. The *Conte di Cavour*, the *Leonardo da Vinci*, and the *Giulio Cesare* (all dreadnoughts) are expected to be completed in 1913. Two others of the same type, the *Andrea Doria* and the *Duilio*, were laid down, one in March, the other in April, 1911. Authorized are two more, the *Morosini* and the *Dandolo*. The cruiser *Quarto* was completed in 1912 and the *Nino Bizio* and the *Marsala* were launched. The new destroyers will have a speed of 30 knots; the new torpedo boats, 26 knots. See **BATTLESHIPS, and NAVAL PROGRESS.**

GOVERNMENT. The king (1912, Victor Emmanuel) is the executive, acting through a responsible council of eleven ministers. The legislative authority is vested conjointly in the king and a parliament composed of a senate (318 members) and a chamber of deputies (508 members). The king is required to convoke parliament annually, but may dissolve it at will. Heir-apparent, Prince Humbert. The ministry in 1912 (constituted March 30, 1911) was as follows: G. Giolitti, premier and minister of the interior; A. (Marchese) di San Giuliano, foreign affairs; C. Finocchiaro-Aprile, justice; Gen. P. Spingardi, war; Rear-Admiral P. Leonardi-Cattolica, marine; L. Credaro, instruction; F. Tedesco, treasury; F. Facta, finance; F. S. Nitti, agriculture, etc.; E. Sacchi, public works; T. Calissano, posts and telegraphs; S. Bertolini, colonies.

HISTORY

PARLIAMENT. Parliament was reconvened on February 22. Grants were promptly made for carrying on the war with Turkey. The government at once introduced a bill for the purpose of carrying into law the decree of November 5, 1911, asserting Italian sovereignty over Tripoli and Cyrenaica. The plan was accepted with great enthusiasm and a special commission to discuss the details of such a measure was nominated. Other government measures were passed with little opposition. The chief of these were the Electoral Reform bill and an old-age pension bill providing for a state monopoly in life insurance. The Electoral Reform bill provided for almost universal manhood suffrage, rendering eligible all males over 21 years of age, save those under 30 who cannot read or write or who have not performed military service. It was estimated that the

number of voters would be increased from 3,000,000 to 8,000,000. The bill also provided for the payment of deputies. It passed the Chamber on May 25 by a vote of 281 to 62. The state insurance measure passed both houses and was signed by the king in August. It placed the government in control of business in the hands of British, American, German, French, and Austrian companies, estimated at about \$200,000,000, and thereby occasioned some protests from foreign governments. The new project was to be carried out by a national insurance institute organized by the government.

THE CAMORRA VERDICT. On July 9, the jury in the famous Camorra trial returned its verdict which found all the prisoners guilty on every count. The crime charged was the murder of one Cuocolo and his wife in Naples on June 5, 1906. The prosecution sought to prove the complicity of the secret criminal association known as the Camorra. Forty-one persons were implicated and the mass of evidence was enormous. The Assize Court of Viterbo which tried the case, held 300 sittings and examined 650 witnesses. The decision was as follows: Four of the accused were found guilty of the murder of Cuocolo, and two of the murder of his wife; and five were found guilty of planning and directing the murders. The rest were found guilty of membership in a criminal society. The six who executed the murders were sentenced to thirty years and the same sentence was imposed on two of the plotters of the murders, Alfano and de Marinis. The rest were sentenced to terms varying from four to twenty years.

OTHER EVENTS. On March 14, an unsuccessful attempt was made to assassinate the king by an anarchist named d'Alba, who fired two shots at the royal carriage while the king and queen were on their way to the Quirinal to attend high mass in the annual commemoration of King Humbert. The assailant was tried in October and sentenced to thirty years' imprisonment. The king received a visit from the German emperor in Venice in March. The completion of the restoration of the campanile was celebrated in April. The outstanding events of the year were in connection with the war with Turkey and the final terms of peace. See **TURCO-ITALIAN WAR; ARCHITECTURE, and ARGENTINA.**

IVORY COAST. THE A French West African colony. Capital, Bingerville, with (1909) 78 European and 780 native inhabitants; other centres are: Grand Bassam, 115 and 1002; Abidjan, 110 and 613; Lahou, 63 and 6622; Aboisso, 38 and 1241; Assinie, 38 and 1135; Tabou, Tiassalé, Toumodi, etc. The railway under construction is destined to put into communication with the coast, by way of the equatorial forests, the regions of Bouaké, Kong, and Koroko. It starts at Abidjan, on the Ebré lagoon, and is in operation as far as Dimbokro on the N'Zi, an affluent of the Bandama—a distance of 181 kilometers. There are good caravan routes, transportation by porters. Products and exports are mahogany, palm kernels and oil, rubber, dried fish, etc. G. Angoulvant was governor in 1912. See **FRENCH WEST AFRICA.**

JACKSON, SAMUEL MACAULEY. An American editor and educator, died August 1, 1912. He was born in New York City in 1851 and

graduated from the College of the City of New York in 1870. In the following year he studied at the Princeton Theological Seminary and graduated from the Union Theological Seminary in 1873. For the next two years he studied abroad. He was ordained to the Presbyterian ministry in 1876 and from 1876 to 1880 was pastor at Norwood, N. J. In 1895 he was appointed professor of church history in New York University and held that position until the time of his death. He acted as editor and associate editor in many important undertakings. Among these were *Schaff's Bible Dictionary* (1880); *Schaff-Herzog Encyclopedia of Religious Knowledge* (1884); *Johnson's Universal Cyclopædia* (1893-95); *Cyclopædia of Living Divines* (1887); *Concise Dictionary of Religious Knowledge* (1891); *Heroes of the Reformation* (1898-1906); *New Schaff-Herzog Encyclopedia of Religious Knowledge* (1907-1912). He was one of the editors of the department of religion in the *New International Encyclopedia* (1902-4). He was also the author of *Huldreich Zwingli* ("Heroes of the Reformation Series," 1901-1903).

JAGGAR, THOMAS AUGUSTUS. An American Protestant Episcopal bishop, died December 13, 1912. He was born in New York City in 1839 and was educated in the public schools of the city and by private tutors. He began business life as a bank clerk and later prepared for the ministry and was ordained priest in the Protestant Episcopal Church in 1863. He served as rector in various parishes in New Jersey and New York and from 1870 to 1875 was rector of Holy Trinity Church in Philadelphia. In the latter year he was consecrated bishop of southern Ohio. He retired from the charge of this diocese in 1905, but retained a seat and vote in the House of Bishops. Until 1908 he was morning preacher in St. Paul's Church, Boston. From the same year until the time of his death he was bishop-in-charge of the American Protestant Episcopal Churches in Europe. He was author of the *Bohlen Lectures* for 1900, and various essays, printed sermons and addresses.

JAMAICA. The largest of the British West Indies; a crown colony with dependencies as follows: **TURKS AND CAICOS ISLANDS, CAYMAN ISLANDS** (qq. v.), **MORANT CAYS**, and **PEDRO CAYS**. Area of Jamaica, 4207 1-6 square miles; of the dependencies, 89. Population, 831,383 (15,605 white, 163,201 colored, 630,181 black, 22,396 E. Indian). Kingston (57,379 inhabitants in 1911) is the capital and has a fine harbor. Available for cultivation, 2,612,480 acres; returned as under crops in 1910-11, 926,797 (tilled lands, 273,047 acres; guinea grass, 142,794; commons, 510,956). Area under sugar cane, 31,659 acres; coffee, 24,706; under bananas, 79,283. Imports (1910), £2,614,943; exports, £2,568,221 (bananas, £1,141,710; sugar, £261,150; coffee, £167,408; rum, £134,659; dye-woods, £77,347; pimento, £73,659; cacao, £63,017; ginger, £44,986; oranges, £52,902). Railway lines, 184 miles. Revenue (1910-11), £1,169,543; expenditure, £1,169,991. Debt (March 31, 1911), £3,909,593. Sir Sydney Olivier was captain-general and governor-in-chief in 1912.

During the serious street railway strike in February and March, there was rioting, and on one occasion the governor was stoned.

JAMES, OLLIE. See **PRESIDENTIAL CAMPAIGN.**

JAPAN. A Far Eastern island empire, a constitutional monarchy. Capital, Tokyo.

AREA AND POPULATION. The area of Japan proper is 24,794.36 square ri (147,657 square miles). The population, as estimated in 1912, was reported at 52,200,685. The area with dependencies is 43,458.38 square ri (258,806 square miles), and the population, as estimated in 1912, 69,148,936. If the leasehold of Kwantung (Kwanto) be added, the total area becomes 260,027 square miles, and total estimated population 69,437,025.

The 1912 estimates for the dependencies are as follows: Taiwan (Formosa), 3,443,679; Karafuto (Sakhalin), 43,273; Chosen (Korea), 13,461,299; Kwantung (area 1221 square miles), 488,089; total, 17,436,340.

The table below, derived from the official 1912 *Résumé statistique de l'Empire au Japon*, shows area in square miles and legal population December 31, 1908 (the figures for Chosen indicate resident population May 10, 1910, exclusive of Japanese and foreigners). The first column shows the area of principal islands; the second, the area of these together with adjacent small islands; and the third, total legal population:

Prin. Islands	Sq. miles Prin. Isls.	Total Sq. miles	Total Pop.
Honshu	86,305	86,775	37,041,187
Shikoku	6,856	7,031	3,288,310
Kiushu	13,768	15,588	7,167,148
Hokkaido	30,114	30,276	1,134,002
Chishima (31 isls.)..	6,024	6,024	3,453
Sado	335	335	120,510
OkI	130	130	38,349

Hokoto (Pescadores) ..	23	48	52,265
Karafuto	13,155	13,155	2,052
Grand total.....	258,806	258,806	65,561,993

During the hundred and fifty years prior to the overthrow of the shogunate, the population of Japan proper was almost stationary; but the average annual increase since 1872 when the periodical census was resumed, is reported at 1.35 per cent. This change is attributed to the removal of checks and regulations imposed by the feudal system and to the establishment of free intercommunication and trade, the lack of which had often prevented famine relief. Unfortunately the urban population is increasing much more rapidly than the rural; from 1903 to 1908 the average increase in cities of over 20,000 was 20.5 per cent., while the increase for the whole country was 6.1 per cent. For 1899 the increase of population is stated at 506,640; 1903, 691,108; 1908, 769,174; 1909, 665,667. In 1909, of the legal population, there were 438,771 marriages, 59,118 divorces, 1,705,877 living births and 1,099,797 deaths (not including 161,576 still-births). The foreign population at the end of 1910 numbered 15,154 (17,537 in 1909), of whom 8462 were Chinese, 2471 British, 1665 American, 809 German, and 547 French. Resident population of the larger cities December 31, 1908: Tokyo, 2,186,079; Osaka, 1,226,647; Kyoto, 442,462; Yokohama, 394,303; Nagoya, 378,231; Kobe, 378,197; Na-

gasaki, 176,480; Hiroshima, 142,763; Kanazawa, 110,994; Kure, 100,679; Sendai, 97,944; Okayama, 93,421; Saseho, 93,051; Otaru, 91,281; Hakodate, 87,875.

EDUCATION AND RELIGION. The government has established a thorough educational system, and primary instruction is compulsory. The following statistics relate to March 31, 1910: Elementary schools, 26,084, with 144,506 teachers, of whom 106,184 men, and 6,473,592 pupils; 303 middle schools (5844 teachers and 117,434 pupils); 5682 special and technical schools (7619 and 305,938); superior schools for girls, 177 (2722 and 51,440); 2348 "various" schools (7854 and 149,339); 78 normal schools (1406 and 23,422). In addition there are various special institutions, including the schools for military and naval instruction, and the three imperial universities. On March 31, 1911, the University of Tokyo had 363 teachers and 5098 students, University of Kyoto, 191 and 1375; Northeast University, 86 and 793. Expenditure on education in the year 1909-10, 76,650,922 yen, of which 57,076,003 yen was for elementary schools.

The chief religious forms are Shintoism and Buddhism. On December 31, 1909, Shintoism had 13 administrative heads of sects, 76,149 preaching priests, 14,821 monks, 171 state temples, 52,031 district temples and temples of inferior rank, and 95,239 other (non-distinguished) temples. Buddhism had 56 administrative heads of sects, 50,505 high priests, 939 high priestesses, 72,379 preaching priests, 49,118 monks, 71,976 regular temples, and 36,980 other temples. The Buddhist priesthood shows a slight increase in number, the Shinto a slight decline. The Christian priesthood, December 31, 1909, comprised 1966 ministers (1286 Japanese, 680 foreign), against 1567 in 1904; churches and chapels numbered 1219, against 1135 in 1904. In 1909 Roman Catholic churches numbered 174; Orthodox, 123; Presbyterian, 211; Congregationalist, 124; Episcopal of Japan, 199; Baptist 63.

AGRICULTURE. Of the taxed land owned by private persons and local corporations, 14,538,528 cho on January 1, 1911, 5,253,363 cho were under cultivation, 7,577,470 under forest, and 1,301,044 open field (one cho=2.4507204 acres). For cereal crops, the following table shows, in metric measure, the area harvested, the production in 1911, the estimated production in 1912, and the yield per hectare in 1911:

	Hectares		Quintals		Qs. ha.
	1911	1912	1911	1912	
Rice	2,948,516	2,961,000	73,665,208	75,044,000	25.0
Wheat	495,079	505,000	6,763,284	6,655,000	13.7
Barl.	1,255,344	1,264,000	20,691,890	20,812,000	16.6
Oats	44,602	45,700	640,862	702,000	14.4
Corn	55,000	55,000	884,000	899,000	16.1

Production in 1909 and 1910 respectively, in kwan (one kwan=8.2673297 pounds): Tea, 7,990,425 and 8,342,446; sugar cane, 183,364,834 and 187,491,859 (sugar produce, 89,990,523 and 98,024,518 kin); sweet potatoes, in 1909, 907,487,064 kwan; potatoes, in 1909, 159,637,502 kwan; peas, in 1909, 3,766,962. In 1912 about 6300 hectares of flax were harvested, 28,800 tobacco (yield about 413,000 quintals), and 2400 cotton (yield about 18,000 quintals), of cleaned cotton in 1910, 4,147,810. Livestock, December 31, 1909: Cattle, 1,350,404; horses, 1,551,156; sheep, 3411; goats, 87,338; swine,

287,107. In 1908 about 60 per cent. of the inhabitants were dependent on agriculture.

MINING. Some of the more important mineral products have been as follows:

	1904	1908	1909
Gold, ounces.....	88,752	107,482	126,485
Silver, ounces.....	1,968,573	3,866,589	4,114,740
Copper, kwan.....	8,566,139	10,840,782	12,224,343
Iron, kwan.....	10,171,500	12,105,526	14,450,984
Pyrites, kwan.....	6,636,138	9,031,153	5,735,683
Lead, kwan.....	480,701	776,080	914,336
Mang'se ore, kwan.....	1,153,234	2,968,092	2,359,280
Sulphur, kwan.....	6,823,210	8,911,856	9,839,876
Coal, tons.....	10,363,554	14,672,828	14,908,008
Petroleum, kokuf.....	1,073,640	1,841,563	1,657,036

* One kwan = 3.75 kilos, or 8.26733 pounds.

† One koku = 1.8039 hectoliters, or 39.7033 gallons.

The output of salt in the year 1908-9 was 1,038,048,628 kin, against 1,008,273,045 in 1908-9 (one kin=6 hectograms, or 1.3227727 lbs).

FISHERIES. Value of the take in 1909: Fresh fish and marine plants, 68,334,351 yen; dried fish, 18,537,155; salted, 2,198,361; fish oil, 388,391; manure, 5,709,532; other products, 8,682,027; total, 104,201,855 yen, as compared with 100,826,093 in 1908 and 75,619,443 in 1904.

MANUFACTURES. One phase of the adoption of western methods by Japan is seen in the rapid development of her manufacturing industries, especially in textiles and in iron and steel. At the end of 1909, 33,219 men and 752,919 women were employed in the textile industry. Cotton-spinning mills on that date numbered 88, with a capital of 54,377,926 yen, 89,325 employees, 1,830,755 spindles, and a yarn output for the year of 50,034,190 kwan, against 42,321,544 kwan in 1908 and 33,981,193 in 1904. Value of tissues produced in 1909: Silk, 97,780,308 yen; silk and cotton mixed, 21,207,747; cotton, 113,999,285; hemp and linen, 3,834,376; other, 4,285,450; total, 241,107,166 yen, against 221,780,654 in 1908 and 116,908,104 in 1904. In addition sash tissues were produced to a value of 5,987,909 yen. Other products in 1909: Paper, 32,377,877 yen (of which European paper 14,159,329); matches, 14,058,903; matting, etc., 10,342,219; lacquer ware, 7,520,962; porcelain and pottery, 12,357,677; vegetable oils, 11,771,565; vegetable wax, 4,235,945.

COMMERCE. The value of imports in 1911 exceeded that of any previous year, while exports showed a slight decline from the record figure of 1910. Imports of merchandise for home consumption, of total merchandise, of coin and bullion, and total imports, in yen:

	Mdse. Home Consump.	Total Mdse.	Coin and Bullion	Total Imports
1901	252,882,610	255,816,645		
1906	414,214,093	418,784,108	47,211,197	465,995,305
1909	391,059,652	394,198,843	79,587,502	473,786,345
1910	460,896,672	464,233,808	17,671,797	481,905,605
1911		513,805,705	6,168,268	519,973,973

Exports of merchandise, domestic and total, of coin and bullion, and total exports, in yen:

	Dom. Mdse.	Total Mdse.	Coin and Bullion	Total Exports
1901	249,415,508	252,349,543		
1906	419,184,877	423,754,892	25,784,436	449,549,328
1909	409,973,320	413,112,511	6,584,327	419,696,838
1910	456,091,860	451,428,996	25,175,091	483,604,087
1911		447,433,888	24,398,286	471,832,174

Leading imports in 1910 and 1911 respectively, in thousands of yen: Cotton, ginned, 157,824 and 145,455; iron and steel, 19,302 and 31,042; manures and fertilizers, 21,523 and 30,744; machinery, 15,739 and 20,070; rice, 8644 and 17,721; cotton tissues, 13,491 and 13,984; woolen tissues, 12,463 and 13,860; kerosene, 14,303 and 13,065; vehicles and vessels, 4999 and 12,276; beans, peas, and pulse, 10,830 and 11,482; dyes, pigments, and paints, 9949 and 11,460; ammonium sulphate, 9066 and 11,460; sugar, 13,140 and 9157; metal manufactures, 6764 and 8561; paper and manufactures, 8848 and 7828; phosphorite, 3838 and 6306; woolen yarn, 5951 and 4783; scientific instruments, 2881 and 4787; rubber and gutta percha, 3678 and 4044; wheat, 3338 and 3729; paraffine, 1727 and 3441.

Principal exports, in thousands of yen: Raw silk, 130,833 and 128,875 in 1910 and 1911 respectively; cotton yarn, 45,347 and 40,213; silk tissues, 32,797 and 34,335; coal and coke, 16,325 and 28,004; copper ingots and slabs, 20,806 and 20,003; cotton tissues, 20,463 and 10,080; clothing and accessories, 14,043 and 15,830; tea, 14,542 and 14,379; matches, 10,390 and 10,073; silk waste, 8417 and 7786; earthenware, porcelain and glass, 7555 and 7745; timber, lumber, etc., 7080 and 7347; sugar, 6260 and 6926; braids, 9096 and 6395; oils and waxes, 5110 and 4368; paper and manufactures, 5025 and 3977; rice, 5900 and 3940; mats and matting, 3937 and 3746; machinery, 3512 and 3640; vegetables, 3070 and 3140; metal manufactures, 3358 and 2609; dried fish, 2480 and 2576.

Imports and exports of merchandise by countries in thousands of yen:

	Imports		Exports	
	1910	1911	1910	1911
United Kingdom.....	94,701	111,157	25,781	23,824

Chosen	8,592	11,450
Other	16,405	18,630	8,249	7,705
Total	464,234	513,806	458,429	447,434

SHIPPING. Entered at the ports in the foreign trade in 1911: Japanese, 5599 vessels, of 9,393,351 tons; British, 1939, of 6,157,930 tons; German, 384, of 1,337,871 tons; American, 179, of 1,309,917 tons; other, 908, of 1,854,500 tons; total, 9009 vessels, of 20,053,569 tons. Merchant marine January 1, 1912: Vessels of European construction, 2789 steamers, of 1,386,047 tons, and 7978 sail, of 447,307 tons; vessels of Japanese construction, 21,735 sail, of 300,931 tons.

COMMUNICATIONS. State railways March 31, 1911: In operation, 4,869.56 miles; capital invested therein, 553,154,892 yen; under construction, 652.45 miles. Private railways on the

same date: In operation, 511.21 miles; capital invested therein, 32,109,409 yen; under construction, 183.06 miles. Total mileage in operation, 5380.77; under construction, 835.51. The foregoing figures are for Japan proper. Japanese railways in South Manchuria are all "private"; they aggregated, March 31, 1911, 707.02 miles in operation and 3.06 under construction; total capital invested, 66,536,631 yen. At the end of March, 1910, there were in operation in Taiwan 271.24 miles (all state), with capital invested, 28,009,115 yen; in Karafuto, 25.24 miles, 425,028 yen; in Chosen, 640.71 miles and under construction, 156.39 miles, total capital invested, 83,004,990 yen. As some of these figures are for March 31, 1911, and some for March 31, 1910, their addition shows only approximations: Total mileage in operation, 7025.38; under construction, 995.16; capital invested (exclusive of mileage under construction in Japan proper), 763,330,065 yen.

Late in 1912 it was reported that the entire track of the Kiushu division of the imperial government railways of Japan was to be relaid with 60-lb. rails except on steep gradients, where 75-lb. rails were to be used. The rails taken up were all 50-lb., and were to be used in most cases for building switches or sold to builders of light steam railways. Rapid progress was made in this work, and towards the end of the year about 200 miles of track remained to be relaid out of a total of 660 miles.

Telegraphs (1911), 4268 offices, with 41,700 kilometers of line and 169,265 of wire. Post offices, 7717.

FINANCE. The standard of value is gold, and the monetary unit the yen; its par value is that of the Mexican dollar, or 49.846 cents. Revenue and expenditure in fiscal years have been as follows, in yen:

	Ordinary	Extraordinary	Total
	Revenue	Revenue	
1905	299,142,128	28,324,808	327,466,936
1909	509,862,986	285,074,274	794,937,260
1910	483,241,168	194,304,109	677,545,277
1911	491,278,823	181,542,080	672,820,903
	Expenditure		
1905	126,963,789	150,091,893	277,055,682
1909	409,245,922	227,115,171	636,361,093
1910	394,193,120	138,700,615	532,893,635
1911	412,009,179	157,144,848	569,154,027

For the fiscal year 1911, total revenue and expenditure are reported at 672,820,903 and 569,154,028 yen respectively; for 1912, 603,311,668 and 576,201,102

The budget for the fiscal year 1913 balanced at 575,976,995 yen; estimated revenue ordinary 502,597,196 and extraordinary 73,379,799, and estimated expenditure ordinary 412,073,863 and extraordinary 163,903,132. The estimated ordinary revenue included: Excise, 127,548,636 yen; land tax, 75,407,994; monopolies, 62,132,412; posts and telegraphs, 54,161,441; customs, 49,892,207; income tax, 32,725,282; stamps, 27,173,962; patents, 24,595,365; forests, 10,783,188. Estimated expenditures: Finance, 185,674,487 yen ordinary and 41,502,664 extraordinary (including 153,526,308 yen for the public debt); war, 76,790,438 and 17,720,252; navy, 40,815,710 and 52,578,548; communications, 58,141,658 and 20,066,160; interior, 12,407,066 and 20,888,121; justice, 12,350,337 and 778,859; agriculture and commerce, 7,626,158 and 8,412,309;

public instruction, 9,485,468 and 1,019,579; foreign affairs, 4,282,541 and 936,640; civil list, 4,500,000; total, 575,976,996.

Public debt, March 31, 1912: Internal, 1,116,255,770 yen; external, 1,437,449,203; total, 2,553,704,973, as compared with 2,770,381,215 in 1911 and 566,434,110 in 1904.

ARMY. During the year 1912 the Japanese army was maintained at its usual effective condition and the most notable events were the increases in the cavalry, which hitherto was considered a weak feature of the Japanese establishment, and the armament of the artillery with a Krupp pattern 12-pounder field gun which was being manufactured at Osaka. New light and mountain guns were also being introduced. Field Marshal Nodzu was succeeded as minister of war in April by General Jusako Ouehara, director-general of military training, but little change was made in the general scheme of organization. Japan maintained an active army with a first and second reserve, a national army with its reserve, some special forces and a militia in some of the islands. The plan was that the active army should be used for foreign service, the national army for home defense, and the militia for auxiliary operations. Military service begins at the age of 20, though 3 years earlier every Japanese is liable and is enrolled. For such as are required for the active army, or Geneki, there is 2 years' service with the colors in the case of the infantry and 3 years in the case of the cavalry, then 7½ years is spent with the first reserve, or Yobi, or in the case of certain classes in the Hoju or recruiting service. Ten years is then spent in the second reserve, or Kobi, and finally a period of liability to service is ended in the national army, or Kokumin. It was estimated that Japan could put into the field 1,500,000 men fully equipped and maintain them there, so complete was the system of organization and control. The army was organized with 19 divisions, and during the year an attempt was being made to increase the army by the addition of two new divisions. See below, *History*. A new .44 calibre carbine was under manufacture for the Japanese cavalry at the imperial arsenal and was to be supplied to all the cavalry regiments. It had a bayonet folded to the barrel for convenience in carrying and to be used in a mounted charge.

Much attention was being paid to the question of army transport, especially as Japan was deficient in animals, and large motor vehicles were being tested at Osaka. It was proposed to follow the example of certain European countries and subsidize large motor trucks that could be called upon for service in time of war.

NAVY. Number and displacement of warships of 1500 or more tons, and of torpedo craft of 50 or more tons, built and building, December 1, 1912: Dreadnoughts (battleships having a main battery of all big guns, that is, 11 or more inches in calibre): built, 2 of 41,600 tons; building, one of 30,000 tons. Predreadnoughts (battleships of about 10,000 tons or more whose main batteries are of more than one calibre): built, 13, of 191,380 tons; building, none. Coast-defense vessels: built, 2 of 9086 tons; building, none. Battle cruisers (armored cruisers having guns of largest calibre in main battery): built, none; building, 4 of 110,000 tons. Armored cruisers: built, 13 of 138,483 tons; building, none. Cruisers (unarmored warships of 1500 or more tons): built, 14 of 60,330 tons; build-

ing, none. Torpedo-boat destroyers: built, 58 of 22,983 tons; building, none. Torpedo boats: built, 54 of 5428 tons; building, none. Submarines: built, 11 of 2268 tons; building, 5 of 2166 tons. Total tonnage: built, 471,558; building, 142,166. Excluded from the foregoing: Ships over 20 years old unless reconstructed and rearmed within five years; torpedo craft over 15 years old; transports, colliers, repair ships, torpedo depot ships, and other auxiliaries.

In the above list the *Satsuma* and *Aki*, completed in 1910, are classified as predreadnoughts, though in some classifications they are placed with the dreadnoughts. The two dreadnoughts built are the *Kawachi*, launched in October, 1910, and the *Settsu*, launched in April, 1911, both of which were completed in 1912. The dreadnought under construction is the *Fuso*, which was begun at Kure in 1911 and will probably be completed in 1914. The four battle cruisers, of 27,500 tons each, are building at Barrow (England), Yokosuka, Nagasaki, and Kobe; they were laid down in 1911 and have received the names of *Kongo*, *Hiei*, *Kirishima*, and *Haruna* respectively. The *Kongo* was launched May 18, 1912. See also **BATTLESHIPS** and **NAVAL PROGRESS**. Officers and men, 47,289, including one admiral of the fleet, 7 admirals, 17 vice-admirals, 45 rear-admirals, and 292 captains and commanders.

GOVERNMENT. The executive authority is vested in the emperor, who acts through a cabinet of ministers, appointed by and responsible to himself. The legislative body consists of a parliament, or imperial diet, of two chambers, the House of Peers (366 members) and the House of Representatives (379). Representatives are elected by male subjects having attained the age of twenty-five and possessing certain property qualifications. The emperor Mutsuhito died at Tokyo July 30, 1912. He was born at Kyoto November 3, 1852, and succeeded his father Komei Tenno, who died January 31, 1867. Mutsuhito was succeeded by his son Yoshihito, who was born at Tokyo August 31, 1879, and married May 10, 1900, Sadako, fourth daughter of the late Prince Kujo Michitaka. The heir-apparent is their son Hirohito, born at Tokyo April 29, 1901. The ministry of Marquis Saionji, formed August 30, 1911, was in power until December, 1912. Its composition in 1912 was as follows: Premier, Marquis Saionji Kinmochi; navy, Vice-Admiral Baron Saito Minoru; communications, Count Hayashi Tadasu; justice, Matsuda Masahisa; interior, Viscount Hara Takashi; foreign affairs, Viscount Uchida Yasuya; agriculture and commerce, Baron Makino Nobuaki; war, Lt.-Gen. Baron Uyebara Yusaku; public instruction, Haseba Sumitaka; finance, Yamamoto Tatsuo. A new ministry was formed on December 17 under Prince Katsura. See below.

HISTORY

FOREIGN AFFAIRS. Viscount Uchida, foreign minister, in a speech on foreign affairs before the Diet on January 23, announced the increasing strength of Japan's friendship and alliances with foreign powers. He referred to the good effects of the revision of the treaty between Great Britain and Japan in 1911 and to the cordial relations between Russia and Japan following the arrangements of 1907 and 1910, for the settlement of outstanding claims. As to the United States, he said that the friend-

JAPAN

1921

ship between the two countries was too strong to be shaken by the anti-Japanese demonstrations in certain portions of the United States. With Germany and France he reported that relations were growing more friendly and that the trade with the former country had been placed on a solid basis. As to China, Japan had coöperated with the powers to secure an early restoration of peace and order. A sharp debate arose in the Diet on January 26 over the alleged efforts of the Japanese government to prevent the abdication of the Chinese emperor. M. Uchida denied that his government had taken any part in the matter, and said that the Japanese minister at Peking in discussing the subject with Yuan Shih-kai had merely expressed his personal views. Early in July, Prince Katsura started on a tour of Europe and America, reaching St. Petersburg on July 21, but was recalled a week later by the emperor's illness. Meanwhile a supplementary agreement was made with Russia regulating their spheres of influence in Inner Mongolia and providing for their joint defense in the event of attack by other powers. Another question that appeared to have been settled by Prince Katsura was that of Russia's jurisdiction in the Sea of Okhotsk. In 1911 the Russian government attempted to extend the boundary of its territorial waters in the Sea of Okhotsk. This aroused a protest from Japan and the difference became so sharp in the following spring that Japanese cruisers were sent to the north. It was proposed by the Japanese government that the question should be submitted to the court of arbitration at The Hague at an early date, but after Prince Katsura's visit a settlement seems to have been reached by diplomatic negotiations, Japan admitting the Russian claim and Russia recognizing in return Japan's claims in Manchuria.

INTERNAL POLITICS. In the general elections of May for the lower house the Constitutional Unionists (Seiyukai) obtained 217 seats; the Nationalists (Kokumin-To) 96; the Independents, 37; and the Central Club, 32. As was noted in the preceding **YEAR BOOK** the Saionji ministry, which came into power at the end of August, 1911, were confronted with a difficult financial situation. The policy pursued was one of economy and retrenchment, but this brought them into conflict with the demands of the war office. For some time past it had been proposed that the Korean garrison should be increased by two divisions of Japanese troops. After the death of Baron Ishimoto (q. v.) in April, General Uyebara, his successor, urgently insisted upon this plan in spite of the cost, which was estimated at 26,000,000 yen. It was opposed, both on the grounds of economy and because Russia might regard it as a sign of unfriendly intentions. It was also argued that Japan could not maintain a policy involving both military and naval expansion. Dissensions in the cabinet arose, and though the war minister was supported by Count Terauchi and insisted that the measure was absolutely necessary and not in conflict with the government's policy of retrenchment, the premier opposed it. General Uyebara resigned on December 2, and the premier, finding it impossible to fill the place, resigned on December 5. A new cabinet was formed under Prince Katsura on December 17.

NAVAL PROGRESS. On February 3, Baron Saito, minister of marine, announced the ir-

reducible minimum of naval construction to be eight battleships and eight armored cruisers of the super-dreadnought class, to be begun in 1913 and completed in 1920, at an estimated cost of about \$175,000,000. Later it was announced that the programme involved the laying down of two keels a year and the building in 1920 of seven super-dreadnoughts and six very powerful cruisers.

KOREAN CONSPIRACY CASE. It was reported in February that a far-spread conspiracy had been formed in northern Korea against the governor-general, Count Terauchi, involving many of the native Christians. One hundred and twenty-three persons were accused of complicity, including Baron In-chi-ko, president of the Korean Young Men's Christian Association, and against fifty of them, all but three of whom were native Christians, evidence was secured for their prosecution. The foreign missionaries protested against the arrest of so many Christians and in certain quarters it was attributed to religious intolerance. A formal protest was presented to the governor-general by the foreign missionaries in Seoul. Count Terauchi emphatically denied that the government had any other purpose in detaining the prisoners than to make a careful examination of them. Many of them confessed to the crime, but subsequently retracted their confession, alleging that it was extorted by the fear of torture. In the examination of the prisoners early in July the judge made frequent mention of the American and English missionaries at the chief school at Syen Chyun, implying that they had incited the pupils to action. The demand of the missionaries to be heard and to offer witnesses in their own behalf was refused. Appeal was made to the supreme court for a new trial, but it refused the application. When the trial was resumed the prosecution denied emphatically that torture had been applied, and declared that the prisoners had confessed in the hope of escaping punishment. The defense did not press the matter of the alleged tortures, but argued that the confessions were untrustworthy and the prisoners deserving of leniency. Sentences were passed on 106 of the prisoners at the beginning of October, ranging from 5 to 10 years' imprisonment, and 17 were acquitted.

DEATH OF THE MIKADO. The Mikado, Mutsuhito (q. v.), died on July 29. The evidence of genuine grief among the people was remarkable. The court was ordered to go into mourning for a year. The loss was especially lamented in England where he was highly valued as a loyal ally. The crown prince, Yoshihito Harunomiya, was born in 1879, succeeded him on the throne. The funeral services of the late emperor were held on September 13 and 14. A great procession, including the military guard of honor, about 25,000 men in line, escorted the coffin through the streets which were thronged with mourners. The body was interred at Kyoto. At the moment the gun was fired to start the funeral procession on the morning of September 13, General Count Nogi, the hero of the Japanese-Russian War, and his wife committed suicide with short swords at their dwelling. In his will Count Nogi declared that he had followed the emperor into death because his services were no longer needed, that he had long wished to die, and now took the occasion of a great national calamity to end his life.

OTHER EVENTS. A serious catastrophe occurred at Osaka on January 16, when a fire, breaking out in a private house, spread rapidly to the crowded workmen's quarters and destroyed over 5000 houses, rendering some 30,000 people homeless. Asaka, Nagoya, Gifu, and Naia suffered heavily in September from a typhoon, which destroyed many million dollars worth of property and several hundred lives. A serious strike of seamen broke out in the latter part of April, interrupting the service with Europe and South America.

JAPANESE IMMIGRATION. See HAWAII.

JARROLD, ERNEST. An American writer, died March 19, 1912. He was born in Brentwood, England, in 1850 and was brought to the United States when but a year old. He was apprenticed as a typesetter in a newspaper office and in that capacity worked as compositor on the *New York Evening Post*. At the same time he wrote for newspapers and his stories attracted the attention of Garrett P. Serviss, who advised him to adopt writing as a livelihood. Before he was 18 years old he wrote a series entitled *The Mickey Finn Stories* which appeared in the *New York Sun* and became widely popular. He became known as a reciter, especially of his own stories, and in this work he found his greatest success. He was one of the best known figures in New York literary life for many years.

JEX-BLAKE, SOPHIA. An English physician, died January 7, 1912. She was born in 1840 at Brighton. From 1858 to 1861 she was a mathematical tutor at Queen's College, London. Following a trip to the United States she became greatly interested in the movement which had been successfully started by the late Dr. Elizabeth Blackwell for the admission of women to medical degrees. Resolving to devote herself to medicine she began, in 1866, a regular course of study in Boston under Dr. Lucy Sewall. In 1868 she returned to England for the purpose of qualifying in the study of medicine in that country. She met with opposition, but finally with several other women secured the passage of regulations for the education of women in medicine at the University of London in separate classes. Here she pursued her studies for six months, but difficulties were thrown in her way and when she and her companions applied for admission to study in the wards of the Edinburgh Royal Infirmary, there was serious opposition and the lecturers finally passed a resolution which amounted to a total prohibition of the attendance of women at the classes. Attempts were made by legal proceedings to compel the lecturers to rescind this action, but this failed, and in 1874 Miss Jex-Blake returned to London. Here she took a leading part in establishing the London School of Medicine for Women. This was opened in 1874. In 1877 she became associated with the Royal Free Hospital, so that women students were at last enabled to secure both medical education and hospital experience. In the meantime she had obtained the degree of M. D. from the University of Bern in 1877, while in 1876 Parliament

passed measures compelling the British examining bodies to extend their examinations and qualifications to women. Dr. Jex-Blake began to practice in Edinburgh in 1878. In 1886 she founded the Edinburgh School of Medicine for Women. She herself became dean. She continued her medical work in Edinburgh until 1899 when she retired. Among her publications are: *American Schools and Colleges* (1866); *Medical Women* (1872); *Care of Infants* (1884), and various articles contributed to magazines.

JOHN, GRIFFITH. An English missionary, died July 25, 1912. He was born in Swansea, Wales, in 1831 and was educated at Brecon College, Bedford. He began to preach in Welsh at the age of fourteen years. In 1873 he offered his services to the London Missionary Society for work in foreign countries. After spending a short time at the Missionary Academy at Bedford, he was sent to China, where he arrived in 1855. He remained in that country as a missionary for 55 years, terminating his services in 1911. The first five years in China were spent in evangelistic work in and around Shanghai. In 1861 he went to Hankow and traveled extensively in several provinces of central China, where he was the first Christian missionary. With his colleagues he established more than 100 missionary stations in the provinces of Hu-peh and Hu-nan. He acquired an intimate knowledge of Chinese literature and became the author of a number of tracts in that language. His most important work, however, was a remarkable translation of the Scriptures into Chinese. He translated the whole of the New Testament and a greater part of the Old into what is known as the *Wen-li Version*. He also rendered this translation into the Mandarin colloquial language. He was the pioneer and founder of the Protestant missions in the Yangtse valley. Here he founded the theological college for native preachers which bears his name. During his 55 years of service Dr. John returned to England only three times. In 1889 he was elected to the position of chairman of the Congregational Union of England and Wales, but he declined to serve on the ground that it was his duty to remain in China. In January, 1912, he arrived in England seriously ill and with no hope of recovery. At the time of his death he was still working on his translation of the Old Testament into Chinese. In addition to these translations he wrote a number of books and tracts for circulation among the Chinese.

JOHNS HOPKINS UNIVERSITY. An institution for higher education at Baltimore, Md., founded in 1876. The students enrolled in the various departments of the university in the autumn of 1912 were 771, of whom 403 were in the departments included in the College of Arts and Sciences and 368 in the medical school. The faculty numbered 222, of whom 202 are resident and 20 are non-resident lecturers. There were no noteworthy changes in the faculty during the year. Among the important benefactions was one of \$6000 from the Peabody Education Fund for a Peabody scholarship in the Department of Education. The productive funds of the university in 1911-12 amounted to \$5,270,000 and the income to \$373,789. The library contained about 165,000 volumes. President, Ira Remsen, LL. D., Ph. D.

JOHNSON, HIRAM W. See PRESIDENTIAL CAMPAIGN.

JOHORE. A native state in the Malay Peninsula, under British control. Estimated area, 9000 square miles; population estimated at 200,000, mostly Chinese. Johore Bharu, the capital, has about 20,000 inhabitants. A railway connects Kuala Gemas on the Negri Sembilan border with Johore Bharu (120½ miles); constructed by the Federated Malay States Railways. Sultan (1912), Ibrahim; British adviser, D. G. Campbell.

JOLINE, ADRIAN HOFFMAN. An American lawyer and writer, died October 15, 1912. He was born in Ossining, N. Y., in 1850 and graduated from Princeton University in 1870. He studied law at the Columbia Law School and on being admitted to the bar became associated with the law firms of Butler, Hall & Vanderpoel, and Butler, Stillman & Hubbard. He was afterwards a member of the firm of Joline, Larkin & Rathbone. He early devoted his efforts as a lawyer to railway litigation and to questions pertaining to trusts, mortgages and reorganizations. He was generally recognized as a leader in these branches of legal practice. He was general counsel and chairman of the board of directors of many important railroads and financial institutions. When the Metropolitan Street Railway Company of New York City became insolvent, Mr. Joline was appointed receiver for the company. He was a notable collector of autographs and rare books, and his collection of autograph letters is believed to be among the most valuable in existence. He wrote several books, chiefly relating to autographs. These included *Meditations of an Autograph Collector* (1902); *Diversions of a Booklover* (1903); *At the Library Table* (1909), and *Edgehill Essays* (1910). Mr. Joline came into prominence at the beginning of the presidential campaign in 1912 by the publication of a letter addressed to him by Woodrow Wilson. In this letter Mr. Wilson expressed the wish that Mr. Bryan might be got rid of as a political figure (see **POLITICAL CAMPAIGN**).

JONES, JOHN PERCIVAL. Former United States senator from Nevada, died November 27, 1912. He was born in Herefordshire, England, in 1829 and came with his parents to the United States in his infancy. He was educated in the public schools of Cleveland, O. He went to California during the first gold discoveries in that State and engaged in mining. From 1863 to 1867 he was a member of the California State Senate. In the latter year he went to Nevada and from that time until his death he was engaged in the development of mines in that State. In 1873 he was elected to the United States Senate and served five successive terms until 1903. In that year he left the Republican party when the money question became the leading issue between the parties. He was a strong advocate of free silver. When that question ceased to be a political issue he reaffiliated himself with the Republican party.

JOURNALISM, SCHOOL OF. See **UNIVERSITIES AND COLLEGES**.

JUDAISM. There are no recent statistics of the number of Jews in the world or in the United States. Various estimates, however, have been made. The latest is that made in 1910 by the *American Jewish Year Book*. According to this authority, the total number of Jews was, in that year, 12,867,856. Of these, there were in the United States 2,044,762; in

Austria-Hungary, 2,086,228; in Russia, 6,243,712. These were the only countries in which the Jews numbered over 1,000,000. There were in the British Empire 433,220; in Germany, 607,862; in Turkey, 463,686, of whom 78,000 were in Palestine.

JEWISH IMMIGRATION TO THE UNITED STATES. The total Jewish immigration to the United States at the end of the fiscal year 1912, was 74,854 compared with 73,187 in 1910-11. Of these, 60,038 came through the port of New York and these were divided by nationality as follows: Russians, 41,612; Austrians, 10,386; Rumanians, 1277; others, 6763.

EVENTS IN JUDAISM. The Jews continued in troubled condition in Russia during the year. Expulsions took place from many cities throughout the year, including St. Petersburg, from which many Jews were expelled in February. On February 23 the Duma agreed to the clause in the Military Service bill imposing a heavy fine upon families of Jews who evaded military service, and on the same day declined to exempt Jewish ecclesiastical authorities from military service, a privilege extended to Christian and Mussulman priests. According to the official statistics, 19,809 young Jewish recruits enrolled in the army in the early part of 1912. On May 10 the governor of Grodno ordered the expulsion of 1100 Jewish families. There were many accusations of ritual murders in the cities of the empire which led to great disorders. On June 28, the Duma adopted a motion prohibiting the Jews from accepting scholarships as medical students. See **RUSSIA**.

In Palestine the immigration of Jews continued during the year. The erection of a Jewish Technical Institute at Haifa was permitted by the Sultan. A conference of Judean agricultural laborers was held in January and a general organization was founded. Nathan Straus of New York, gave to the communal leaders of Jerusalem, 1000 francs a day for two months to provide food for the destitute. He also gave a large sum to the agricultural experiment station for the eradication of malaria.

In Rumania, early in January, a deputation of Jews complained to King Charles of discriminatory laws against Jews and especially against the proposed industries bill intended to drive Jews out of all industries. Appeal was made for the abolition of the oath *more Judaico*, which is still enforced in some of the law courts of the country of Rumania.

JEWISH COLONIZATION. The Ica, or Jewish Colonization Society, which is the trustee of the large fund left by Baron de Hirsch for the promotion of Jewish colonization, continued its work during 1912. The largest colony is in Argentina where nearly 4000 families are engaged in agricultural pursuits. There is also a colony in Brazil. In the United States the society loaned large amounts to Jewish farmers.

ZIONISM. There were no unusual developments in the Zionist movement in 1912, but the Zionists continued in their work of colonizing in Palestine. Several organizations are engaged in promoting agricultural developments, including the growing of olives. For a mention of the abrogation of the treaty with Russia by the United States government as a result of the discrimination against Jewish citizens of the United States, see **UNITED STATES, Foreign Relations**.

KAMERUN. A protectorate of Germany between Nigeria and French Equatorial Africa. The area is officially estimated at 495,000 square kilometers (191,351 square miles). Colored population, 2,719,000; whites (January 1, 1911), 1455, of whom 1311 German. These figures for area and population do not take into account the rectification of the boundary pursuant to the Franco-German convention of November 4, 1911. Under this convention Germany ceded to France a portion of northwestern Kamerun, unofficially stated at 6450 square miles; and, in return for German recognition of the French protectorate in Morocco France ceded to Germany certain parts of French Equatorial Africa, greatly extending the territorial extent of Kamerun and affording German egress on the Ubangi, on the Congo, and on the Atlantic south of the Spanish colony of Rfo Muni. The territory thus ceded to Germany is unofficially estimated at 107,270 square miles, with a population of perhaps a million.

Imports and exports in 1909, 17,723,000 and 15,448,000 marks; in 1910, 25,481,000 and 19,924,000. Chief exports in the two years: Rubber, 7552 and 11,071 thousand marks; palm kernels, 2611 and 3553; cacao, 2854 and 3055; palm oil, 1097 and 1260; ivory, 879 and 625. In 1909 and 1910, imports from Germany, 13,774,000 and 19,991,000 marks; exports thereto, 12,874,000 and 17,248,000. Tonnage entered, 1,034,654 in 1909 and 1,290,829 in 1910. Railway in operation December 31, 1911, 160 kms.; under construction, 360 kms.; total, 520 kms. (323 miles). Fifty miles of railway were opened to traffic in 1912. The budget for 1911-12 balanced at 21,573,013 marks (including 2,313,566 marks imperial subvention and, for extraordinary expenditures, 12,300,000 marks from loan); for 1912-13, 17,634,680 marks (2,344,645 subvention, 8,050,000 loan). Governor (1912), Herr Ebermaier; seat of government, Buëa. See ANTHROPOLOGY.

KANSAS. POPULATION. According to the Census Bureau statistics issued in 1912, out of the total population, 1,690,949 in 1910, 134,716 were foreign-born whites, compared with 126,577 in 1900. The largest number came from Germany, 34,476; from Russia, 15,264; from Sweden, 13,303; from Austria, 12,122; from England, 11,256; and from Ireland, 8100. Other European countries contributed in smaller numbers. The negroes in the State in 1910 numbered 54,030 and the mulattoes, 16,131. In 1890 the negroes numbered 49,170 and the mulattoes, 13,180.

AGRICULTURE. The acreage, value and production of the principal crops in 1911 and 1912 are shown in the following table:

		Acreage	Prod. Bu.	Value
Corn1912	7,575,000	174,225,000	\$69,680,000
1911	8,700,000	126,150,000	79,474,000
Wheat1912	5,956,000	92,290,000	68,295,000
1911	4,810,000	51,387,000	46,762,000
Oats1912	1,720,000	55,040,000	19,264,000
1911	2,000,000	30,000,000	13,500,000
Rye1912	30,000	477,000	324,000
1911	18,000	198,000	160,000
Potatoes1912	70,000	5,740,000	4,190,000
1911	80,000	1,760,000	1,866,000
Hay1912	1,627,000	a 2,440,000	18,544,000
1911	1,649,000	a 1,402,000	13,880,000

a Tons.

MINERAL PRODUCTION. The production of coal in the State in 1911 was 6,254,228 short tons valued at \$9,645,572. This was an increase over the production of 1910 of 1,322,777 short tons. This, however, did not bring the total production up to the normal, for it is nearly 50,000 tons less than the average production of the preceding five years. This State suffered more than any other in the Mississippi Valley region from labor troubles in 1910. There were employed 11,695 men in the coal mines of the State.

The lead produced in the State in 1911 amounted to 2000 short tons, valued at \$257,310, compared with 2412 tons valued at \$212,256 in 1910. The zinc produced amounted to 10,272 tons valued at \$1,171,008, compared with 13,229 tons in 1910 valued at \$1,428,732.

Petroleum. The decline in the production of oil in the State, which had been marked for several years, was checked in 1911 by better prices, which stimulated new drilling. There were produced in 1911, 1,278,819 barrels, compared with 1,128,668 barrels in 1910. The oil wells drilled numbered 172 against 85 in 1910.

MANUFACTURES. The Thirteenth Census statistics are for the calendar year 1909, and were compiled in 1912. Kansas is not preëminently a manufacturing State. Its manufactures have been largely the outgrowth of its extensive agricultural resources, while in recent years they have been further stimulated by the development of rich zinc and coal mines and by the discovery of oil and gas. The table herewith shows that there were in 1909, 3435 manufacturing establishments giving employment to an average of 54,649 persons:

	Number or Amount 1909	P. C. 1904 '09
Number of establishments	3,435	2,475 38.8
Persons engaged in manufactures	54,649	42,057 29.9
Proprietors and firm members..	3,571	2,766 29.1
Salaried employees	6,863	3,721 24.4
Wage earners (average No.)....	44,215	35,570 24.3
Primary horsepower.....	213,141	99,441 114.3
Capital	\$156,090,000	\$88,680,000 76.0
Expenses	305,711,000	187,955,000 62.7
Services	33,255,000	22,575,000 47.3
Salaries	7,351,000	3,692,000 99.1
Wages	25,904,000	18,883,000 37.2
Materials	258,884,000	156,510,000 65.4
Miscellaneous	13,572,000	8,870,000 53.0
Value of products....	325,104,000	198,245,000 64.0
Value of products less cost of material	66,220,000	41,735,000 58.7

In the slaughtering and meat-packing indus-

POLITICS AND GOVERNMENT

tries there were employed 10,591 wage-earners; in industries connected with railways, 7886; in printing and publishing, 3232; flour and grist-mill products, 2350. The slaughtering and meat-packing industry stands first as to value of product. This amounted in 1909 to \$165,361,000. The flour-mill and gristmill products were valued at \$68,467,000; railway industries \$11,193,000; smelting and refining zinc, \$10,857,000. The number of persons engaged in the manufacturing industries of the State in 1909 was 54,849. Of these 50,156 were male, and 4493 female. The wage-earners under 16 years of age numbered 235. The prevailing hours of labor among the majority of wage-earners in the State was 60 a week, and in the larger number of industries, employment was confined mainly to hours ranging from 54 to 60 a week; only 17.5 per cent. of the total being employed in establishments where the prevailing hours were less than 54 a week, and 14.8 per cent. in establishments where they were more than 60 a week. The largest number of wage-earners was in Kansas City, 12,294; in Topeka, 4244; in Wichita, 2783, and in Leavenworth, 1311.

EDUCATION. The total school population of the State at the end of the fiscal year 1912 was 510,273. Of these, 258,700 were males and 252,003 females. The enrollment in the public schools was 395,064. Of these 198,505 were male and 196,559 females. The average daily attendance was 298,128. The teachers employed numbered 14,103, of whom 2639 were males and 11,464 females. The average monthly salary paid to high school teachers was \$82.94, and to teachers in graded schools, \$60.20. The total average attendance in the high schools of the State during the year was 29,716. During the year 105 normal institutes were held at which 10,234 teachers were in attendance. The disbursements for all school purposes during the year amounted to \$11,158,255.

FINANCE. There was a balance on hand at the beginning of the fiscal year 1912 of 1,423,283. The total receipts for the year were \$7,758,025, and the disbursements \$7,891,099, leaving a balance at the end of the fiscal year 1912 of \$1,289,209. The chief receipts were from the general revenue fund and from the Topeka Fiscal Agency. The chief expenditures were for education, for the maintenance of State institutions, and for the expenses of the State government. The outstanding bonded indebtedness of the State at the end of the fiscal year 1912 was \$370,000.

CHARITIES AND CORRECTIONS. The penal institutions of the State are under the full management, control, and supervision of a board of penal institutions. The State charitable institutions are under the control and supervision of the board of control. The charitable institutions of the State, with their populations in 1911, were as follows: Topeka State Hospital, 1417; Osawatomie State Hospital, 1339; State Hospital for Epileptics at Parsons, 420; State Home for Feeble-minded at Winfield, 476; School for the Deaf at Olathe, 233; School for the Blind at Kansas City, 76; State Orphans' Home at Atchison, 114; Boys' Industrial School at Topeka, 247; Girls' Industrial School at Beloit, 181. The penal institutions include the State Penitentiary at Lansing and the Industrial Reformatory for Young Men at Hutchinson.

1912—23

There was no meeting of the legislature in 1912 as the sessions are biennial and the last was held in 1911.

CONVENTIONS AND ELECTIONS. As in the other Middle Western States, the political campaign was the chief interest in 1912. The campaign in Kansas included the nomination of United States senator to succeed Charles Curtis, whose term expired March 4, 1913. Governor Stubbs was a candidate for the Republican nomination, against Senator Curtis.

In the middle of March the Kansas Republican State committee decided against presidential primaries, indorsed President Taft, and called a State convention to nominate delegates-at-large. The convention in May elected delegates-at-large and instructed them for Roosevelt. The district conventions and primaries instructed their delegates for Roosevelt except in the first congressional district, where they were instructed for Taft. At the Chicago national convention the Kansas delegates therefore stood 18 for Roosevelt and 2 for Taft. The Democratic State convention for the election of delegates to the national convention instructed the delegates to vote for Champ Clark, with Governor Wilson as second choice. Primaries of all parties for the nomination of presidential electors, State and county officers, and United States senator were held on August 6. In this election Governor Stubbs (Rep.) carried 93 districts in the State, or 10 more than a majority in joint ballot in the legislature. Senator Curtis, however, had the popular vote by 1216. A Taft elector ticket and a Roosevelt ticket were opposed in the Republican party. The Roosevelt electors were chosen by majorities ranging from 34,000 to 36,000. Arthur Clapper of Topeka was nominated by the Republicans, and George H. Hodges of Olathe, by the Democrats for governor. The Democratic nominee for United States senator was Judge William H. Thompson of Garden City in the western part of the State, who defeated ex-State Senator Hugh Farrelly by legislative districts, though Mr. Farrelly received the plurality of popular votes cast.

Prior to the August primary a dispute as to the status of the Republican candidates for nomination as presidential electors of the State resulted in an argument before two Supreme Court Justices in New York City the first of August. The questions at issue were as follows: The Roosevelt Republicans in the State disputed the nomination of Taft and had submitted a ticket of Roosevelt electors for the Republican primary. The Taft men objected to these names on the primary ticket on the ground that the President was the regular nominee of the Republican party, and that electors pledged to Roosevelt could not legally run in the Republican column on the primary ballot. They therefore brought suit in the Kansas Supreme Court to prevent the names of Roosevelt electors from being printed on the Republican ticket at the primaries on the ground that this would be a wrong on the voters. The Kansas court refused to interfere, alleging that if it were a wrong it was not a wrong which the law could remedy. The remedy must not be through the court, but by political action. This decision was appealed, under the Fourteenth Amendment, to the Supreme Court

of the United States and a stay was obtained, hearing to be had on October 1. Governor Stubbs thereupon telegraphed to Justice Pitney that this stay would necessarily prevent them from carrying on the Kansas primary, as the question must be decided by August 6. A hearing was therefore held in New York before Justice Pitney and Justice Vandever in order that a prompt decision might be reached. The justices refused to interfere, though they left the question open for future consideration. By this decision the candidates for Roosevelt electors were allowed to remain on the Republican primary ticket, but whether, if nominated, they would be permitted to go on the ticket as the regular Republican nominees at the November presidential election was left for a later decision.

On September 16 the United States Court of Appeals, sitting at Denver, handed down an opinion in the case, which directed that the order refusing an injunction against the Roosevelt candidates be affirmed and the case be remanded to the Kansas courts with instructions to dismiss the appeal. This was a victory for the Roosevelt faction. The leaders of that faction decided on September 19, however, in order to harmonize the State ticket, that the Roosevelt electors should go on the November ballot in the independent column, permitting the Taft electors to head the Republican column. Suits filed by the two factions to keep each other off the Republican ticket were thereupon dropped.

The election of November 5 resulted as follows: For president, Wilson, 143,670, Taft, 74,844, Roosevelt, 120,123, and Debs, 26,807. For governor, Hodges, Dem., 167,540, Capper, Rep., 167,511. The Socialist candidate for governor received 24,804 votes. The Democrats obtained a majority in each branch of the State legislature, insuring the election of W. H. Thompson senator to succeed Senator Curtis. The election for governor was the closest in the history of the State. An official count was necessary before a determination could be reached. All Republican nominees for State offices were elected except governor and United States senator. On January 9, George A. Neely, Democrat, was elected to Congress from the Seventh District, succeeding the late Representative Madison.

STATE GOVERNMENT. Governor, G. H. Hodges, Dem.; Lieutenant-Governor, S. Ingalls; Secretary of State, Charles H. Sessions; Treasurer, Earl Akers; Auditor, W. E. Davis; Attorney-General, John S. Dawson; Adjutant-General, —; Superintendent of Education, W. D. Ross; Superintendent of Insurance, Ike S. Lewis; Commissioner of Agriculture, F. D. Coburn—all Republicans, except Governor.

JUDICIARY. Supreme Court: Chief Justice, William A. Johnston; Associate Justices, Judson S. West, Silas Porter, Clark A. Smith, Rousseau A. Burch, Henry F. Mason and Alfred W. Bensen, all Republicans; Clerk, D. A. Valentine.

STATE LEGISLATURE, 1913. Republicans, Senate, 18; House, 50; joint ballot, 68. Democrats, Senate, 21; House, 73; joint ballot, 94. Socialists, Senate, 1; House, 2; joint ballot, 3. Democratic majority, Senate, 2; House, 21; joint ballot, 23.

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

KANSAS, UNIVERSITY OF. A State institution for higher education at Lawrence, Kan., founded in 1866. The total number of students enrolled in the various departments in 1912 was 2100. This does not include the summer school. The faculty numbered 175. There were no important changes in the faculty during the year, and as the university is supported almost entirely by the State, no noteworthy benefactions were received. The amount of productive funds was about \$150,000 and the income in 1911-12 was \$451,950. There were 80,000 volumes in the library. President, F. Strong, LL. D.

KANSAS-OKLAHOMA OIL FIELDS. See PETROLEUM.

KEANE, ARGUSTUS HENRY. An English etymologist and anthropologist, died February, 1912. He was born in Cork, Ireland, in 1833 and was educated privately. He traveled much and wrote extensively on many subjects. Among his writings are: *Man Past and Present*; *Ethnology*; *the Gold of Ophir*; *the Boer States*; *The World's Peoples*, and other anthropological works. He also contributed to the *Encyclopædia Britannica* and many learned publications. He received in 1897 a civil list pension of £50 for his labors in the field of ethnology. At the time of his death he was emeritus professor of Hindustani at University College, London. He received the degree of LL. D. from St. Andrews University.

KEDAH. A native state on the west coast of the Malay Peninsula, under British protection. Area, with the Langkawi group of islands, 3150 square miles; estimated population, 220,000, chiefly Malays, though there is a considerable Siamese population. Capital, Alo Star. The soil is fertile, and rice, coconuts, and rubber are planted. Estimated revenue for the year A. H. 1329 (January 2 to December 21, 1911), 1,444,955 Straits Settlements dollars; expenditure, 1,613,820. Native affairs are administered by the sultan (Abdul Hamid Halimshah ibni Ahmad Tajudin); British adviser (1912), W. G. Maxwell—Meadows Frost, acting. The loan (2,400,000 S. S. dollars) negotiated with the Siamese government in 1905 was taken over by the federated Malay states government upon the transfer in 1909 of the suzerainty of the state from Siam to Great Britain.

KELANTAN. A protected native state on the eastern side of the Malay Peninsula; administered by the hereditary rajah (Tuan Long Snik bin Almerhum Sultan Mohammed) under the direction of a resident British adviser (1912, J. S. Mason; J. E. Bishop, acting). The area is estimated at 5500 square miles and the population (1911) at 286,752 (268,707 Malays, 9844 Chinese, 5355 Siamese, 108 Europeans). Numbers of Chinese laborers are being brought in to work on the rubber plantations. Kota Bharu, the capital, has about 12,000 inhabitants and contains the palace of the rajah and the British residency. Other towns are Tumpat (4000 inhabitants), Bachak (2000), Tabal (2000) Pasir Puteh (2000). Rubber cultivation, cattle-raising, and fishing are principal industries; rice and paddy are exported. Gold is mined and tin is present. Roads are building, and the route is being surveyed for the railway which is to connect Kelantan with Singapore and Bangkok. The 1909-10 imports amounted to 1,175,158 Straits Settlements dol-

lars; the exports to 1,473,413; the revenue was 370,959, and the expenditure 377,062. Kelantan was formally ceded by Siam to the protection of Great Britain, July 15, 1909.

KELP. See FERTILIZERS.

KENSICO DAM. See AQUEDUCTS.

KENTUCKY. POPULATION. According to the Census Bureau statistics issued in 1912 out of a total population of 2,289,905 in 1910, the foreign-born whites numbered 40,053, compared with 50,133 in 1900. The largest number of these, 19,346, came from Germany; from Ireland, 5913; from Russia, 3223; and from England, 2617. Other European countries are represented by smaller numbers. The city of Louisville, with a population in 1910 of 223,928, had a foreign-born white population of 17,436. In 1910 there were 261,656 negroes and 65,943 mulattoes in the State. The negroes in 1890 numbered 268,071 and the mulattoes, 51,986. It will be noted that Kentucky is the only southern State in which the number of negroes has decreased from 1890 to 1910.

AGRICULTURE. The acreage, value, and production of the principal crops in 1911 and 1912 are shown in the following table:

	Acreage	Prod. Bu.	Value
Corn1912	3,600,000	109,440,000	\$60,192,000
1911	3,600,000	93,600,000	59,968,000
Wheat1912	686,000	6,860,000	6,791,000
1911	780,000	9,906,000	9,114,000
Oats1912	150,000	4,035,000	1,775,000
1911	170,000	3,128,000	1,564,000
Rye1912	21,000	273,000	240,000
1911	22,000	204,000	243,000
Potatoes ..1912	51,000	5,151,000	3,451,000
1911	52,000	2,028,000	2,170,000
Hay1912	815,000	a 1,002,000	13,727,000
1911	450,000	a 428,000	7,404,000
Tobacco ...1912	441,000	b343,980,000	22,926,000
1911	345,000	b303,600,000	23,377,200

a Tons. b Pounds.

MINERAL PRODUCTION. The coal production of the State in 1911 amounted to 13,706,839 short tons, valued at \$13,617,217. This was a decrease from the production of 1910 of 916,480 short tons, which is accounted for largely by the abnormal figures in 1910 due to the strikes in other coal-producing States. The number of men employed in the coal mines of the State in 1911 was 21,821.

Petroleum. There were produced in the State in 1911 472,458 barrels of petroleum, compared with 468,774 barrels in 1910. The production has shown a steady decrease for several years. In 1907 it was 820,844 barrels.

MANUFACTURES. The thirteenth Census statistics are for the calendar year 1909 and were compiled in 1912. While Kentucky is not one of the most important States in manufacturing, its manufacturing products have steadily increased at each census. From the table in the next column it will be seen that there were in 1909 4776 manufacturing establishments in the State, which gave employment to an average of 79,060 persons during the year.

The largest number of persons was employed in the lumbering and timber industries, 13,042. In industries connected with railways, employees numbered 5605; foundry and machine shop products, 4479; tobacco manufactures, 3973. The largest value of products was in the industries connected with the distillation of liquors, \$44,360,000. This was followed by flour mill and grist mill products, \$22,365,000; lumber and timber products, \$21,381,000; tobacco

	Number or Amount Inc. 1909	1904	P. C. '04-'09
Number of establishments	4,776	3,734	27.9
Persons engaged in manufactures	79,060	69,755	13.3
Proprietors and firm members..	5,050	4,108	22.9
Salaried employees	8,610	5,853	41.1
Wage earners (average number)	65,400	59,794	47.1
Primary horsepower..	230,224	174,625	9.4
Capital	\$172,779,000	\$147,282,000	17.3
Expenses	201,163,000	137,385,000	46.4
Services	37,481,000	30,310,000	23.7
Salaries	9,603,000	5,871,000	63.6
Wages	27,888,000	24,439,000	14.1
Materials	111,779,000	86,545,000	29.2
Miscellaneous	51,893,000	20,531,000	152.3
Value of products...	223,754,000	159,764,000	40.1
Value of products less cost of material	111,975,000	73,209,000	53.0

manufactures, \$18,598,000; foundry and machine shop products, \$9,627,000. The persons engaged in the manufacturing industries of the State in 1909 numbered 79,060. Of these 67,860 were male and 11,200 female. The number of wage earners under 16 years of age was 833. The prevailing hours of labor for the majority of those employed averaged from 54 to 60 a week; 19.5 per cent. of the total being employed in establishments where less than 54 hours a week prevailed, and 6.5 per cent. in establishments where more than 60 hours a week prevailed. The largest number of wage earners was in Louisville, 27,023. In Covington there were 3942; and in Newport 2632.

EDUCATION. The legislature of 1912 passed many important laws relating to education in the State. Among these was a compulsory attendance law, which requires children between the ages of 7 to 13 to attend school; a law creating an inspection department for inspecting all the schools and school funds of the State; a law giving the counties the right where they so desire to consolidate schools and to employ a rural supervisor and to bond itself for the purpose of building schools and extending terms.

FINANCE. The latest figures for the financial condition of the State are for the fiscal year ending June 30, 1911. The report of the treasurer showed a balance in the treasury on July 1, 1910, of \$420,931. This, with the receipts for the year, left available funds amounting to \$7,676,588. The disbursements for the fiscal year amounted to \$7,013,330. In the general expenditure fund there was a deficit at the end of the year 1911 of \$110,244. The bonded indebtedness of the State amounted at the end of the fiscal year 1911 to \$2,315,627.

POLITICS AND GOVERNMENT

The legislature met in 1912 and the most important measures enacted are noted in the paragraph *Legislation* below. On January 10 the legislature elected Ollie M. James United States senator to succeed Thomas H. Paynter, whose term expired in 1913. The State Republican convention met on April 10. There was a contest between Roosevelt and Taft factions, but the Progressive delegates did not bolt the convention. President Taft was given 23 instructed votes, and one delegate from the fifth Congress district and two from the eleventh supported Mr. Roosevelt. Mass conventions throughout the State, held prior to the convention, gave the great majority of the delegates to the convention.

The hottest fights were in Louisville, Frankfort, Lexington, and Shelbyville, where conventions were split up and separate delegations were elected. The Democratic delegates were instructed to vote for Champ Clark at the Democratic State convention. In county conventions held prior to the State convention an almost unanimous sentiment for Mr. Clark had been shown. In the election held on November 5, Governor Wilson received 219,584 votes, President Taft, 115,512, Mr. Roosevelt, 102,766, Debs, 11,647, and Chafin, 3323.

LEGISLATION. At the legislative session in 1912 an unusual number of important measures were passed. Among these were the following: A measure amending the laws of the State as to intoxicating liquors; an act creating a department of banking, providing for the appointment of a commissioner, etc.; an act providing for the nomination of candidates at primary elections and for placing names of candidates on the ballots to be voted for at general elections. This act provides for the nomination of party candidates for the office of United States senator, but it does not apply to certain candidates for school offices or to candidates for presidential electors. An act was passed creating and establishing a department of public roads. The school law of the State was amended in important details. An act was passed proposing to amend the constitution by allowing the employment of convict labor upon public roads and buildings. Enactments were passed providing for the protection of game and fish. A measure was enacted permitting women to vote for the election of school trustees and some other school officers, and upon school questions, and to hold common school offices such as women are disqualified from holding under the constitution. A measure was passed regulating the employment of females in order to safeguard their health. This provides, among other things, that no female under 21 years of age shall be employed or permitted to work at any gainful occupation, except domestic service and nursing, more than 60 hours in any one week or ten hours in any one day. The sale of opium was regulated. An act was passed securing compulsory education in the common schools and graded common schools. A measure was enacted providing for the creation of a commission known as the board of tuberculosis commissioners. This contemplates the establishment of sanitariums or hospitals for the treatment of tuberculosis under public authority or control. An act was passed providing for an annuity for aged, infirm, retired or disabled teachers in cities of the first class. A State board of forestry was established and other laws relating to conservation were passed. Boards of education for cities of the second class were created, and an act was passed providing for the organization of the militia.

STATE GOVERNMENT. Governor, James B. McCreary; Lieutenant-Governor, Edward J. McDermott; Secretary of State, C. F. Crecelius; Treasurer, Thomas S. Rhea; Auditor, Henry M. Bosworth; Attorney-General, James Garnett; Superintendent of Public Instruction, Barksdale Hamlett; Commissioner of Agriculture, John W. Newman; Commissioner of Insurance, M. C. Clay—all Democrats.

JUDICIARY. Court of Appeals: Chief Justice, J. P. Hobson; Justices, W. E. Settle, C. C. Turner, John M. Lassing, John D. Carroll, T. J. Nunn, Shackelford Miller; Commissioner of

Appeals, William R. Clay; Commissioner of Agriculture, J. W. Newman; Clerk, Robert L. Green—all Democrats.

STATE LEGISLATURE. 1913. Democrats, Senate, 33; House, 76; joint ballot, 109. Republicans, Senate, 5; House, 24; joint ballot, 29. Democratic majority, Senate, 28; House, 52; joint ballot, 80.

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

KIAOCHOW. A German dependency on the east coast of the Chinese province of Shantung, consisting of a harbor, town, and district leased in March, 1898, for 99 years. In April, 1898, the district was declared a German protectorate. Area (exclusive of the bay), 552 square kilometers (213 square miles); population, about 165,000, exclusive of whites, who numbered (January 1, 1911) 3896, of whom 3806 German. Imports and exports at Tsingtau (the port of Kiaochow) in 1909-10, 65,464,000 and 54,732,000 marks; in 1910-11, 69,375,000 and 60,561,000. Tonnage entered (1910), 832,245. The Shantung Railway, which goes as far as Tsinan has a length of 434.4 kilometers (271 miles). The budget for 1911-12 balanced at 13,538,614 marks (including 7,703,240 marks imperial subvention); for 1912-13, 14,639,725 (8,297,565 subvention). A governor (1912, Captain Meyer-Waldeck) administers the dependency under the navy department.

KIDERLEN-WÄCHTER, ALFRED VON. A German statesman, died December 30, 1912. He was born in Stuttgart in 1852. While still a young man he entered the diplomatic service and was attached to the German embassies in St. Petersburg, Paris, and Constantinople. Through his intimacy with von Holstein, under-secretary of the foreign department, he became very influential with high government officials and he, with von Holstein and Prince Philip Eulenberg, was said to have had a remarkable influence in the councils of the emperor. In the scandals which resulted in the downfall of Prince Eulenberg, Kiderlen-Wächter was not involved. His friendship with the kaiser resulted in his appointment as minister at Copenhagen. Between 1895 and 1900 he constantly accompanied the emperor on his journeys. In this capacity it was his duty to report to the foreign office. It is said that certain of these reports found their way into the emperor's hands and their contents were such that he was for a time in disgrace and was sent to Rumania. During his stay in that country he acquired a wide knowledge of Balkan affairs and was able to supplement it by taking charge upon several occasions of the embassy at Constantinople during the absence of the ambassador. During the spring of 1908 at the time of the famous interview with the emperor published in the *London Daily Telegraph*, the foreign secretary, Baron von Schoen, was taken ill and Kiderlen-Wächter was summoned from Bucharest. His main work during his service in this office was to deal with the Casablanca incident and to prepare the Franco-German treaty of February, 1909. These negotiations were carried on with the French ambassador, Jules Cambon. Two years later Kiderlen-Wächter was appointed foreign secretary under Herr von Bethmann-Hollweg. He was largely blamed in Germany for the Agadir *coup* which greatly humiliated

the German people. In their irritation many declared that he had been outplayed in the diplomatic negotiations with M. Cambon. As a result of this experience he was for a time in popular disfavor in Germany, but before his death, he succeeded in rebuilding his general reputation to a great degree and among those who had especial means of measuring his abilities he was regarded as a man of great energy and remarkable attainments.

KING, HAMILTON. An American writer and diplomat, died September 2, 1912. He was born in St. John's, Newfoundland, in 1852, and graduated from Olivet College in 1878. In the following year he studied at the Chicago Theological Seminary and pursued studies abroad at Leipzig, and Athens in 1883 and 1884. From 1879 to 1898 he was principal of the preparatory department of Olivet College. He was well known as a lecturer, preacher, and political speaker. In 1898 he was appointed minister resident and consul-general to Siam. This position he held until 1903, when he was made minister to Siam. This position he continued to hold until he died. He was the author of *Greek Reader*, and *Outlines of United States History*.

KING EDWARD VII. LAND. See POLAR EXPLORATION.

KING HAAKON VII. PLATEAU. See POLAR EXPLORATION.

KIRKUP, THOMAS. An English economist, died May 3, 1912. He was born in 1844 and was educated in the village schools and at Edinburgh University. He studied also at the Universities of Göttingen, Berlin, Tübingen, Geneva and Paris. He contributed extensively on historical and economic subjects to the *Encyclopædia Britannica* and to *Chambers' Encyclopædia*. He wrote also articles for other encyclopædias and wrote and edited a large number of educational works. Among his published writings are: *An Inquiry into Socialism* (1887); *History of Socialism* (1892); *South Africa, Old and New* (1903); *Progress and the Fiscal Problem* (1905); *Primer of Socialism* (1908).

KITCHENER, SIR FREDERICK WALTER. A British administrator and lieutenant-general, died March 13, 1912. He was born in 1858, a younger brother of Field-Marshal Lord Kitchener of Khartum. After attending school at Bradfield, he obtained a commission in the 14th Foot. A year or two later he saw service in Afghanistan. He took part in the Dongola Expedition of 1896 as director of transport, and two years later participated in his brother's final advance on Khartum. In the South African War he commanded a battalion of the West Yorkshire Regiment. At the conclusion of that war he proceeded to India to take up a command. In 1908 he was appointed governor and commander-in-chief of Bermuda. General Kitchener received several medals for distinction in action. He was promoted to be major-general in 1900 and lieutenant-general in 1906.

KNOWLEDGE, THEORY OF. See PHILOSOPHY.

KNOX, GEORGE WILLIAMS. An American theologian and educator, died April 25, 1912. He was born in Rome, N. Y., in 1853 and graduated from Hamilton College in 1874. He studied at the Auburn Theological Seminary, graduating in 1877. In the same year he was ordained to the Presbyterian ministry. He engaged in missionary work in Japan and was for a time professor of homiletics at the Union Theological Seminary in Tokyo, and later professor of philosophy and ethics at the Imperial University of Japan. On his return to the United States he was for several years pastor at Rye, N. Y. From 1897 to 1899 he was lecturer on apologetics at the Union Theological Seminary, New York City, and from 1899 until the time of his death was professor of philosophy and the history of religion in that institution. He was Nathaniel Taylor lecturer at Yale University in 1903 and lecturer on the history of religion in 1905-6. Among his published writings are: *A Brief System of Theology*, *Outlines of Homiletics*, *The Basis of Ethics*, *The Mystery of Life*, all in Japanese; *A Japanese Philosopher* (1893); *The Christian Point of View* (with Professors Brown and McGiffert, 1902); *The Direct and Fundamental Proofs of the Christian Religion* (1903); *Japanese Life in Town and Country* (1904); *The Spirit of the Orient* (1906); *The Development of Religion in Japan* (1907); *The Religion of Jesus* (1909).

KOREA, or officially **CHOSEN**. The peninsula between the Yellow Sea and the Sea of Japan; formerly an independent monarchy, it was annexed to Japan August 29, 1910. Capital, Seoul.

AREA, POPULATION, ETC. Estimated area, 14,123 square ri (84,106 square miles). According to the census made public in 1912 the population of Korea on December 31, 1911, was 14,055,869, of whom the Japanese numbered 210,689, the Chinese 11,837, and other foreigners 967. The population of Seoul has been recently estimated at 278,958. Published estimates of the urban populations are most divergent. The following figures are officially stated for resident population December 31, 1909: Seoul, 217,391; Kyong-Syeng, 76,700; Yongsan, 50,191; Fusan, 41,081; Ping-Yang, 40,864; Hai-Syöng, 27,640; Tai-Kou, 27,592; Chemulpo, 25,167; Jen-Ju, 17,571; Wonsan, 17,138; Ham-Heung, 17,023; Ching-Nam-Po, 15,708; Wi-Ju, 13,215; Thong-Yöng, 12,024.

In general, the Koreans are ancestor-worshippers. Among the upper classes Confucianism prevails, and there is a considerable number of Buddhist monasteries in the country. The number of native Christians was reported at about 250,000 in 1910. The Japanese have undertaken the reorganization of the primary school system and the establishment of industrial and technical schools. In the summer of 1912 unfavorable reports were current on the general condition of the people under Japanese administration. Charges were made against the Japanese of forced labor and oppression, especially in the government salt mines, and of various outrages upon both personal and property rights.

PRODUCTION, COMMERCE, ETC. The important crops include rice and other cereals, beans, tobacco, hemp, ginseng, and cotton. Various minerals occur, including gold, copper, iron, silver, graphite, and coal, but, excepting gold, they are little worked.

Imports and exports of merchandise have been valued as follows, in thousands of yen:

	1907	1908	1909	1910	1911
Imports	40,050	41,026	36,649	39,783	54,088
Exports	17,002	14,113	16,249	18,914	18,857

Leading exports in 1910 and 1911, in thousands of yen: Rice, 6278 and 5281; beans, 5726 and 4630; cattle hides, 1005 and 1069; animals, 634 and 704; iron, 340 and 279; wheat, 361 in 1910; fish, 283 in 1911. Imports and exports by countries in 1911, in thousands of yen: Japan, 34,068 and 13,341; China, 5442 and 3009; United States, 4261 and 963; United Kingdom, 7924 and 1; Germany 1311 and 20; Russia in Asia, 49 and 1510; other countries, 1033 and 13; total, 54,088 and 18,857.

Railway in operation at the end of 1911, 1234 kilometers (767 miles); telegraphs, 6421 kms. of line and 12,457 kms. of wire; telephones, 1770 kms. of line and 18,838 kms. of wire; post offices, 465.

The branch lines of railway, the Seoul-Wusan, 140 miles in length, and the Tai-ku-Mok-pho, 175 miles in length, were under construction. The Antung-Mukden connection between Manchuria and Korea, which had been under reconstruction for some time, involving the conversion of the line of 4 ft. 8½ in. gauge, was being pushed forward and a bridge over the Yalu River at the frontier was reaching completion.

FINANCE. The monetary unit is the Japanese yen, par value 49.846 cents. For the fiscal year 1912 the budget balanced at 48,741,782 yen (including Japanese subvention 12,350,000 yen); for 1913, 52,892,209 (subvention 12,350,000 yen). Estimated ordinary revenue for the fiscal year 1912, 24,067,583 yen (including taxes 10,871,517, proceeds of government enterprises, etc., 10,962,022; extraordinary revenue, 24,674,199 (subvention 12,350,000, loans 12,324,199). Estimated ordinary expenditure for the same year, 27,891,437 yen; extraordinary, 20,850,345. Public debt (which has been taken over by the Japanese treasury) at the end of 1911, 29,255,335 yen.

GOVERNMENT. Formerly independent, Korea became a Japanese protectorate March 2, 1906, and was annexed to Japan August 29, 1910. The country was placed under the administration of a governor-general, Gen. Viscount (later Count) Terauchi Masakata. Civil governor-general, Yamagata Isaburo. For history in 1912, see *JAPAN, History*.

KEYPTON. See **PHYSICS**.

KURIA MURIA ISLANDS. Attached to Aден (q. v.).

KWANGCHOW-WAN. A territory on the Chinese coast leased to France. See *French Indo-China*.

KWANTUNG, or KWANTO. A Japanese leasehold in the southern part of the Liaotung Peninsula (Manchuria). Area, 1221 square miles. Resident population at the end of 1909 (exclusive of 114 foreigners), 446,482 (251,140 male, 195,342 female); Chinese (or Manchurians) were reported to number 414,380 (232,618 male, 181,762 female) and Japanese 32,102 (18,522 and 13,580). Estimated population in 1912, 488,089. Dairen, the capital and chief port, had (1909) 41,333 inhabitants; Ryojun (Port Arthur), 15,195. Agricultural products include corn, millet, beans, wheat, rice, tobacco, and hemp.

Salt is produced, and the fisheries are of some importance. The trade is chiefly with Japan. Imports and exports in 1910, 28,732,797 and 38,797,925 yen; in 1911, 42,274,722 and 47,416,047 yen. About eighty miles of the South Manchurian Railway are in Kwantung. Estimated revenue and expenditure for the fiscal year 1912 balanced at 5,250,216 yen (including Japanese subvention 3,283,090 yen); for 1913, 5,246,887 (subvention 3,122,500). Governor-general in 1912, Gen. Viscount Oshima Yoshimara.

LABOR. The year 1912 was one of especial interest to students of the labor problem. The world-wide unrest which has been conspicuous for several years continued unabated. Throughout the western nations there was increasing evidence of the growth of class consciousness among the workers, accompanied by increasing confidence in their own strength and the justice of their demands. These features are illustrated by the record of strikes (see **STRIKES AND LOCKOUTS**), by the success of the British miners in securing a legal minimum wage (see **MINIMUM WAGE**), by the spread of theories and policies which have come to bear the name of Syndicalism (q. v.), in Great Britain and the United States, and the increasing prominence given by the trade unions of these countries to political action. (See **TRADE UNIONS**). At the same time the general public showed evidence of increasing concern for the welfare of children, youth, and women of the laboring classes. See **CHILD LABOR, SWEATING, MINIMUM WAGE, and WOMEN IN INDUSTRY**.

Other phases of the labor problem will be found under: **LABOR LEGISLATION, ARBITRATION AND CONCILIATION, INDUSTRIAL; BOYCOTT; EMPLOYERS' LIABILITY, and WORKMEN'S COMPENSATION; INDUSTRIAL WORKERS OF THE WORLD; LABOR, AMERICAN FEDERATION OF; LABOR LEGISLATION; OCCUPATIONAL DISEASES; OLD-AGE PENSIONS; SOCIAL INSURANCE; SYNDICALISM; UNEMPLOYMENT; and WELFARE WORK**. Other cross references will be found under these articles. Labor conditions in the United States Steel Corporation are treated under that heading.

BIBLIOGRAPHY. New books of the year included the following: F. Challaye, *Syndicalisme reformiste et syndicalisme révolutionnaire*; Ghile, *Le syndicalisme professionnel et son évolution nécessaire*; J. Goldmark, *Fatigue and efficiency: a study in industry*; G. Guy-Grand, *La philosophie syndicaliste. La philosophie nationaliste*; F. Heim, *Recherches sur l'hygiène du travail industriel*; L. Levine, *The labor movement in France; a study in revolutionary syndicalism*; Jeremiah W. Jenks and W. Jett Lauck, *The Immigration Problem*; W. Paine, *Shop Slavery and emancipation. A revolutionary appeal to the educated young men of the middle class*; W. Sombart, *Socialism and the social movement*; G. Sorel, *Réflexions sur la violence. Les illusions du progrès. Lichtenfelt, *Über die Ernährung und deren Kosten bei deutschen Arbeitern*; A. D. Lewis, *Syndicalism and the general strike: an explanation*; J. R. MacDonald, *Syndicalism*; C. Watney and J. A. Little, *The labour unrest: its aims and methods explained*; H. G. Wells and others, *What the worker wants*; E. George Payne, *An Experiment in Alien Labor*.

LABOR, AMERICAN FEDERATION OF. The most important and comprehensive body in the trade union movement in the United States is the American Federation of Labor, founded in 1881. Its fundamental principles are organization along trade lines and the greatest degree of individual trade union autonomy possible. It thus stands in direct opposition as regards the form of labor organization to the Industrial Workers of the World (q. v.). The Federation on September 30, 1912, consisted of 112 national and international unions comprising about 21,000 local unions. Its central administration included five departments: the building trades, the metal trades, railroad employees, union label trades, and mining. There were 41 State branches, 560 city central unions, 434 local trade unions, and 156 federal labor unions. The aggregate membership was 1,841,268. Unions affiliated in this organization published about 540 weekly and monthly periodicals. The official publication is the *American Federationist*, edited by the president, Samuel Gompers, and published at the Federation's headquarters in Washington, D. C.

Among the principal activities of the Federation in 1912 was the furtherance of the idea of federation not only among unions of the United States, as among the various groups of railroad employees, but also the perfection of relations between American and Canadian unions as represented in the international organizations. It carried on activities also in Porto Rico. It began a "Labor Forward Movement," designed to stimulate the organization of workers. It carried on an active campaign among the employees in the steel industry, designed to educate, uplift, and Americanize them, and enable them by concerted action to secure better labor contracts. It was active in securing eight-hour legislation. It continued to seek the enactment by Congress of a law limiting the use of injunctions in labor disputes. It continued the issue of a weekly news letter begun in 1911 as a means of furnishing accurate information to the daily press and to the labor periodicals.

LABOR EXCHANGES. See UNEMPLOYMENT.

LABOR FORWARD MOVEMENT. See LABOR, AMERICAN FEDERATION OF.

LABOR LEGISLATION. ACCIDENTS AND DISEASES. During the year 1912 fourteen States held regular legislative sessions and seven States held special sessions each of which resulted in some labor legislation. In connection with the world-wide movement for the compensation of industrial accidents (see EMPLOYERS' LIABILITY) has gone an equally extensive movement for the prevention of accidents in industry and for the reduction or elimination of diseases to which different occupations render the worker especially sus-

ceptible. In order to increase knowledge, and supply the information necessary to intelligent legislation, there have been during the last few years numerous laws for the compulsory reporting of industrial accidents and diseases. In 1912 seven States enacted legislation on the reporting of accidents. In Massachusetts and New Jersey new laws required all employers to report serious industrial accidents; in California all employers, except farmers and housekeepers, are required to report such accidents; in Rhode Island public service corporations must report any serious accidents either to employees or to the public; in Virginia accidents in coal mines must be reported; in Arizona accidents in mines and on public utilities must be reported; and in New Mexico fatal accidents in mines must be immediately reported by telegraph or telephone. Maryland and New Jersey enacted laws requiring physicians to report cases of the following occupational diseases: Anthrax, compressed-air illness, and lead, phosphorus, arsenic, or mercury poisoning. Altogether eight States, six in 1911, now require the reporting of certain occupational diseases, in all but two cases the same as those here listed. In Maryland the law especially provides that physicians must report all diseases resulting from employment. Moreover, the New York Department of Labor, under a provision of a 1911 law, requested physicians to report all occupational diseases. These reports will assist in the classification of trade diseases and open the way for effective preventive legislation.

With reference to the prevention of accidents and diseases, Massachusetts, New Jersey, New York, and Virginia passed laws relating to factories and workshops; Arizona, New Mexico, and Virginia laws relating to mines; and Arizona, Mississippi, and Congress laws relating to railroads and street cars. In addition, Congress passed a law placing a tax of 2 cents per hundred on the manufacture of poisonous white or yellow phosphorus matches. This congressional enactment included detailed rules for the manufacture and sale of such matches and for the stamping of same; imposed heavy penalties, amounting to \$5000 or three years' imprisonment or both as the maximum, for failure to observe the details of the law; provided that a manufacturer defrauding or attempting to defraud the government out of the tax shall forfeit his entire business. The enforcement of this act is placed in the hands of the Commissioner of Internal Revenue, the law to become effective July 1, 1913. Certain clauses forbid the importation of white phosphorus matches after January 1, 1913, or their exportation after January 1, 1914. Provisions relating to the sale of white phosphorus matches become effective January 1, 1915.

ADMINISTRATION. Following the lead of Wisconsin, which created an industrial commission in 1911, Massachusetts in 1912 made provision for a State board of labor and industries. This was probably the most important labor legislation administrative act of the year. This board will consist of five persons and will have complete responsibility for the enforcement of nearly all labor laws of the State, including those heretofore in charge of the district police and the State board of health. This board must include one employer, one wage-earner, one physician or sanitary engineer, and one

woman. Members are appointed by the governor for five years, one member retiring annually. The chairman receives \$1500 and others \$1000 per year. It may investigate conditions in any industry, receive complaints, employ experts, make necessary rules, and direct prosecutions. It is authorized to appoint and remove the commissioner of labor and fix his term with salary at not less than \$5000 or more than \$7500. Two deputy commissioners, one of whom must be a health expert, 24 inspectors and clerical assistants, at least four of whom must be women, are also provided. Arizona created a State mine inspector to be elected annually and to have power to appoint three deputies. Their powers and duties were defined in detail. Illinois, Kentucky, and Maryland provided for women factory inspectors and investigators. The latter State also increased the number of inspectors to enforce the child-labor law. New Jersey authorized the appointment of two additional factory inspectors, one to be a skilled baker, the other a skilled metal polisher and buffer. It also placed the assistant commissioner of labor and all inspectors in the competitive class of the classified civil service. New Mexico created the office of State inspector of mines to be filled by the governor. New York increased the number of factory inspectors from 85 to 125, these 40 additional inspectors being of the second grade, with salaries of \$1200 each. The maximum number of women inspectors was increased from 15 to 20. The powers of the commissioner of labor were increased; the registration of factories with the labor department was required; and various provisions for the prevention of fire were laid down. The term of the factory investigating commission created in 1911 was extended for another year and \$60,000 was appropriated for its use. It must report by January 15, 1913. South Carolina made certain minor changes and Virginia created the department of mines within the Bureau of Labor and Industrial Statistics, with a State mine inspector.

HOURS. With reference to the hours of employment the most important legislation was the act of Congress establishing an eight-hour day for contract work done for the United States, with minor exceptions, and for letter carriers and post-office clerks in larger cities. This new legislation requires that the eight-hour provision be inserted in all contracts made by or on behalf of the United States, any Territory, or the District of Columbia. Laborers and mechanics employed by any contractor or subcontractor may not be required or permitted to work more than eight hours in any one day. A penalty of \$5 for each worker for every day is imposed. Exception is made, however, of contracts for transportation by land or water, for the transmission of intelligence, for the purchase of supplies, for articles that may be bought in the open market (except armor and armor plate), for levee or other work for protection against floods. For military purposes the President may waive the provisions of the act; and he may set them aside also for any Panama Canal contract prior to January 1, 1915. Congress also provided an eight-hour day for letter carriers in the city delivery service and for clerks in first and second-class post offices. In cases of emergency overtime is allowed, but must be paid for in proportion to salaries. These eight-hour provisions become

effective March 4, 1913. On August 24, 1912, a clause closing post offices of the first and second class on Sunday for public delivery of mail became effective.

The five States of Arizona, New Jersey, New Mexico, Massachusetts, and Mississippi regulated the hours of employment in private undertakings. Arizona passed an eight-hour law for mines, smelters, and similar establishments. New Jersey limited the hours of all employees in bakeries to ten a day and sixty a week, with a provision that if any part of the act be overthrown by the courts the other parts shall be unaffected. Massachusetts extended the laws regulating the hours of work of conductors and motormen to include trainmen and otherwise made minor changes in the hours of employees of street and steam railways. New Mexico regulated the hours of railway employees. Mississippi passed a most comprehensive ten-hour law making it illegal for any employer engaged in manufacturing or repairing to work his employees more than ten hours a day except in cases of emergency or where public necessity requires.

WAGES. The Following States passed laws relating to wages: Arizona, Kentucky, Maryland, Massachusetts, Mississippi, New Jersey, and Virginia. Most of these related to the assignment of wages or mechanics' liens. Mississippi required payments in lawful money at least once a month, and Arizona and Virginia at least twice a month in most employments.

MISCELLANEOUS. Arizona and Massachusetts passed laws to protect members of the militia or naval reserve from being deprived of employment on account of such membership. The Massachusetts law even imposed a penalty for dissuading any person from enlisting in militia or naval reserve by a threat of injury to him in his employment. Arizona also prohibited managers, agents, foremen, and others who hire laborers from demanding or receiving directly or indirectly any fee or gratuity as a condition of employment or continuation in employment. In Minnesota the corrupt practices act was made to prohibit employers from exercising any political influence over their employees by any threat to discharge or reduce wages. A similar law was enacted in New Mexico, which also provided that employees may have two hours off on election day. Congress made provision for cash rewards for suggestions for improvements or economies in processes or organization in the ordnance department; and also authorized the Postmaster-General to reward employees whose inventions are adopted by the postal service.

COMMISSION ON INDUSTRIAL RELATIONS. As a result of the extraordinary number of strikes in 1911, the revelations attending the Lawrence strike in 1912, and other evidences of widespread labor unrest, Congress was induced by the activities of a large and influential group of social workers and public-spirited citizens to establish a commission on industrial relations. This consists of nine persons, including three employers and three trade unionists. They are appointed by the President and receive expenses and \$10 per day while actually engaged in this work. The commission has extensive powers to hold hearings and compel the giving of testimony. Its term was fixed at three years with the provision that it shall submit at least one report each year. An appropriation of \$100,000 for the first year was made. The subjects

into which the commission must inquire include the following: The general condition of labor in all leading industries; existing relations between employers and employees; the effect of industrial conditions on public welfare; the sanitary and safety conditions of employees; the development of associations of employers and employees, and their effects; the extent and results of collective bargaining; methods for maintaining mutually satisfactory relations between employers and employees; methods of peacefully adjusting labor disputes; existing bureaus of labor; the smuggling of Asiatics into the United States and its insular possessions. The law provides that "the commission shall seek to discover the underlying causes of dissatisfaction in the industrial situation and report its conclusions thereon." The personnel of the commission as named by the President in December was as follows: Senator George Sutherland of Utah; George B. Chandler of Connecticut, New England representative of the American Book Company; Charles S. Barrett of Georgia, president of the Farmers' Union; Frederick A. Delano of Chicago, president of the Wabash Railroad; Adolph Lewisohn, capitalist, of New York City; Ferdinand C. Schwedtman, of St. Louis, vice-president of the National Association of Manufacturers; Austin B. Garretson of Iowa, president of the Order of Railway Conductors; and John B. Lennon and James O'Connell, important officers of the American Federation of Labor. These appointments had not been approved at the end of the year.

FRANCE. On March 30 the Chamber of Deputies passed a bill providing an eight-hour day for coal miners. This was done in response to widespread agitation among the miners and the danger of a general strike similar to that among the English miners. In July a law was passed providing a ten-hour day for employees in factories and business houses. Exceptions were made for minor and domestic industries, which were defined to include those where fewer than twenty were employed in case of hand work and fewer than ten in case machine power was used.

See **CHILD LABOR**; **CHILDREN'S BUREAU**; **WOMEN IN INDUSTRY**; **MINIMUM WAGE**; and other articles referred to under **LABOR**.

LABOR LEGISLATION, AMERICAN ASSOCIATION FOR. This association was formed a few years ago as the American branch of the International Association for Labor Legislation (q. v.). It has succeeded in establishing branches in New York, Massachusetts, Wisconsin, and other leading industrial States. It seeks to advance legislation designed to protect workers from exploitation, from accidents and diseases of industry, and from other abnormal economic conditions which undermine vitality and reduce the efficiency and the future prospects of the working class. One of the first subjects to which it gave extended attention was the workmen's compensation (q. v.). Largely as the result of the association's activities there has been a considerable volume of legislation replacing employers' liability by the more modern principle of fixed compensation. (See **EMPLOYERS' LIABILITY**.) It now seeks a federal compensation act of greatly enlarged scope. More recently it has given much attention to diseases specially incident to particular trades. (See **OCCUPATIONAL DISEASES**.) In connection with

the compensation movement it has centred attention on the importance of accurate reports of industrial accidents and occupational diseases and the perfection of means for their prevention. (See **LABOR LEGISLATION**.) During 1912 it directed much attention to the subject of minimum-wage legislation, especially for women and children. This was an important subject of discussion at its annual meeting in Boston in December in connection with the American Economic Association. (See **MINIMUM WAGE**.) Other subjects included in the association's programme are the establishment of one day's rest in seven for all workers, and a maximum ten-hour day, preferably an eight-hour day, for women. It seeks also more efficient machinery for the administration of labor laws.

LABOR LEGISLATION, INTERNATIONAL ASSOCIATION FOR. This body met at Zurich, Switzerland, in the middle of September. Representatives were present from twenty-two different countries, there being many delegates directly representing their governments. The conference was divided into five sections. The first section devoted to general business reported the success of the international campaign against the manufacture of white phosphorus matches and recommended the coöperation of all delegates on the subjects of unemployment and workmen's insurance. The second section was devoted to the subject of industrial diseases (q. v.). Special studies of lead poisoning, ferrosilicon, caisson disease, and anthrax were recommended, as also the collection and systematization of statistics of occupational diseases and mortality. A third section studied home work. It approved minimum wage boards and outlined plans for their organization. It condemned the truck system and the imposition of fines and particularly approved methods of protecting persons engaged in embroidery-making. The fourth section approved the eight-hour shift in continuous industries, particularly in iron and steel plants; recommended a 56-hour week for glass-works with uninterrupted weekly rest of twenty-four hours; and recommended the introduction of the three-shift plan into other continuous-process industries. It determined to prosecute inquiries into means of protecting railway employees against fatigue, sickness, and accidents and for the settlement of trade disputes, especially those on public utilities. The fifth section was devoted to workmen's insurance, child labor, and the administration of labor laws. The Saturday half-holiday was approved in principle, though the French delegates raised practical objections to it. Reports from Germany, Great Britain, and the United States on the administration of child-labor laws were uniform in showing very general lack of enforcement.

LABOR TROUBLES. See **STRIKES**.

LABOUCHERE, HENRY DU PRÉ. An English journalist and politician, died January 14, 1912. He was born in London in 1831 and was educated at Eton. He was the son of John Labouchere and a nephew of Lord Taunton. Following his studies at Eton he spent a short time at Cambridge, but did not take a degree. In 1854 he entered the diplomatic service, but ten years later abandoned diplomacy as a career. During this period he visited the United States, Mexico, and other foreign countries and was concerned in many adventures and escapades which made him a notable fig-

ure. These included, it is said, travel for a time with a circus and many experiences in the western part of the United States and elsewhere. He early showed ability in politics and in 1865 he was chosen to represent the borough of Windsor in the House of Commons. This seat, however, was vacated on petition in the ensuing spring. In the following year he was successful at a by-election in Middlesex. In 1868, however, he was defeated for reelection and he suffered defeat also in 1874 when he contested Nottingham as a Liberal of advanced type. In the meantime Mr. Labouchere had become greatly interested in journalism. Just before the outbreak of the Franco-German War the *Daily News* passed into the hands of new proprietors, chief of whom were Samuel Morley, Henry Oppenheim and Mr. Labouchere. During the siege of Paris by the German army Mr. Labouchere contributed to this paper a series of letters, afterwards published under the title *Letters of a Besieged Resident*. These he sent from Paris chiefly by balloon post. He contributed much to the success of the *Daily News*, but that paper was less radical than he wished to make it and in 1874, while still retaining a dominant influence in the *Daily News*, he became associated with Edmund Yates in founding the *World*. This paper was the first success in that type which came to be known as "society journalism."

After two years' association with Yates, Labouchere, as the result of difficulties, withdrew and established under the name of *Truth* a paper on somewhat similar lines. This paper became at once successful and continued to be so. Several features attracted wide attention. Among these was the exposure of organized frauds, especially those perpetrated under the mask of charity. His fearlessness in attacking supposed or real impostors resulted in many libel suits. The heaviest judgment awarded against him was one for \$5000, in the case of Dr. Dakhyl, who sued on account of allegations of quackery made in *Truth*. A new trial was ordered and *Truth* won. In ten years from 1897 to 1907, nine suits for libel were brought against Labouchere, five of which resulted in his favor. One good accomplished by the journal was its advocacy of open spaces and rights of way. In Parliament Mr. Labouchere made no great impression. He was not a powerful speaker, but in other ways had considerable influence. He is said to have been greatly disappointed that he was not invited by Gladstone to enter the cabinet after the victory of 1892, and to have considered himself largely responsible for the Liberal victory of that year.

Labouchere married in 1868 Henrietta Hodson, an actress. His interest in theatrical affairs was keen. In 1867 he managed the Queen's Theatre, at which Irving, Wyndham and Toole played.

Labouchere was perhaps best known as a conversationist and wit. As "Labby" his name was known throughout all English-speaking and -reading lands. Many anecdotes more or less authentic are related of his extemporaneous witticisms. He was perhaps more notable for his personality than for any positive accomplishment.

LABRADOR. A peninsula in the north-eastern part of British America, attached partly to Newfoundland (q. v.) and partly to Canada.

LABUAN. See STRAITS SETTLEMENTS.

LACROSSE. The Crescent Athletic Club, as in former years, was the only organization in the United States in 1912 to pay much attention to lacrosse. The Crescent team defeated Carlisle 4-3, Toronto University 3-1, Mount Washington 5-2, Shamrocks of West Toronto 5-2, and the Toronto Amateur Lacrosse Club 9-3, and played a tie game with Toronto University 5-5. The United States Naval Academy was the only team to vanquish the Crescents, the score being 6-4. The victors in the Intercollegiate League were Harvard in the northern division and Swarthmore in the southern division. In the game to decide the championship Harvard defeated Swarthmore by a score of 7 to 3. Canada, the home of lacrosse, was the scene of many matches, both in the amateur and professional ranks. The Vancouver A. A. A. captured the Mann cup, while the professional New Westminster L. C. is the Minto cup holder.

LADIES' GARMENT WORKERS' UNION. See ARBITRATION AND CONCILIATION.

LAFAYETTE COLLEGE. An institution of higher learning at Easton, Pa., founded in 1832. The total enrollment for 1912 was 577. Of these, 24 were graduate students, 91 civil engineering, 68 electrical engineering, 15 mining engineering, 24 mechanical engineering, and 67 chemical. The faculty numbers 57. During the year there was completed a mechanical engineering building, an extension to the library, with a capacity for 80,000 volumes, and a student fraternity house. The income for the year 1911-12 was \$125,709. The library contained about 40,000 volumes. President, E. D. Warfield, LL. D.

LA FOLLETTE, ROBERT. See PRESIDENTIAL CAMPAIGN.

LAKE MOHONK CONFERENCE. See ARBITRATION, INTERNATIONAL.

LAKE SUPERIOR REGION. See GEOLOGY.

LAMBERTON, BENJAMIN PEPPER. A rear-admiral, retired, of the United States navy, died June 9, 1912. He was born in Cumberland County, Pa., in 1844 and graduated from the United States Naval Academy in 1864. He at once saw service in the naval operations of the Civil War and after its close served in various offices. He was stationed at the Navy Yard in Boston from 1875 to 1877 and served in the Bureau of Equipment from 1879 to 1882. He was lighthouse inspector of the Sixth District from 1885 until 1888, and held the same position in the Fifth District from 1894 to 1898. In the latter year he was made chief of staff of Admiral Dewey and served in this position at the battle of Manila Bay, May 1, 1898. He was advanced seven numbers in rank for eminent and conspicuous conduct in this battle. In 1898-9 he commanded the *Olympia*, Admiral Dewey's flagship. He was a member of the Naval Examining and Retiring Board, 1900, and of the Lighthouse Board from 1900 to 1903. In 1903-4 he was commander-in-chief of the South Atlantic Squadron. He was president of the Naval War College in 1904 and in 1905-6 was chairman of the Lighthouse Board. In the latter year he retired from active service.

LANDS, PUBLIC. The question of the public lands in different phases will be found treated in the articles IRRIGATION, FORESTRY, ALASKA, HAWAII, and the PHILIPPINES. There were no developments of unusual interest in the admin-

istration of the public lands of the United States during 1912. Considerable progress was made by the field force of the general land office in the disposition of coal-land investigations in Alaska, and final disposition was made of the Cunningham coal claims (see ALASKA). There were submitted reports on 454 claims during the year, and out of 1129 coal locations before the general land office, there were only 199 which had not been investigated. Of this number 144 were either cancelled or held for cancellation for failure to submit applications for patent within the time required by law, leaving only 55 pending claims which still require some investigation. During the year adverse proceedings were directed against 188 claims. Another important work of the field force was the investigation of the California oil land. There are included in withdrawals in California over 1,500,000 acres containing valuable petroleum deposits. Of the lands withdrawn approximately 100,000 acres are covered by pending entries and selections. Much of the remainder is covered by mineral locations of oil, gypsum, and asphaltum. A number of special agents and mineral inspectors of the field service are devoting almost their entire time to the work of investigating these entries and selections, and in assisting the officials of the department of justice in suits which have been or will be instituted for the recovery of titles to a large part of these lands to which patents have issued under applications for the lands which alleged that they were non-mineral in character.

The number and acreage of applications for segregation filed under the Carey act during 1912 showed a marked decrease from 1911, due chiefly to the fact that the easiest and cheapest projects were naturally taken up first and that the field of operation was becoming more restrictive. During 1912 applications for 184,697 acres were filed, and applications aggregating 97,917 acres were approved. In applications under the act of March 15, 1910, 1,416,474 acres were applied for, applications involving 593,189 acres were rejected, 214,211 acres were withdrawn, and 1,064,572 acres were restored upon the expiration of the year granted by the act or upon relinquishment. During the fiscal year there were approved to the States and Territories an area of 181,280 acres, of which 147,988 acres were school-land selections.

An important measure was passed by Congress and approved June 6, 1912. This is known as the "three-year homestead bill." It reduces from five to three years the residence period on a homestead taken from the public domain, and otherwise improves conditions under which title to land is proven. This legislation is operative also in the Territory of Alaska.

The work of land classification was carried on during the year. The Geological Survey recommended more than one and one-fifth million acres of oil reserves and almost one and one-third million acres of phosphate reserves, based on geologic data, and more than one-third million acres of water-power sites and 60,000 acres of irrigation-reservoir sites, based upon hydrographic and topographic surveys, and 86,000 acres of public water reserves essential to the control of the public grazing lands. As regards the classification of coal lands the year was notable in that for the first time the acreage classified and restored has much exceeded that withdrawn for classification, so that at the end of

the year there was a substantial reduction in the area of outstanding land withdrawals. More than 800,000 acres were classified as coal land and valued at nearly \$15,000,000, while nearly 14,000,000 acres were classified as non-coal lands.

NATIONAL PARKS. There are twelve national parks under the control of the United States government, of which the Glacier National Park is the last. This was made a national reservation in 1910. The other national parks are: Yellowstone National Park, Yosemite National Park, Sequoia National Park, General Grant National Park, Crater Lake National Park, Mount Rainier National Park, Mesa Verde National Park, Wind Cave National Park, Platt National Park, Sully's Hill National Park, and Hot Springs Reservation. At the Hot Springs Reservation there were during the year 1912 135,000 visitors; at the Platt National Park in Oklahoma, 31,000; Yellowstone National Park, 22,970, and at the Yosemite Park, 10,884.

LANDSCHAFTEN SYSTEM. See AGRICULTURAL CREDIT.

LANG, ANDREW. An English man of letters, died July 20, 1912. He was born in Selkirk, Scotland, in 1844, and was educated at St. Andrews University and at Balliol College, Oxford. At Oxford he was distinguished for his knowledge of the classics. In 1868 he was made a Fellow of Merton College. Practically the whole of his life was given up to writing and he was perhaps the most prolific writer of his day, when the quality of his work is considered. His writings may be divided into three classes, although these by no means include the scope of his performance. Indeed the distinctive feature of his intellect was its extraordinary versatility. One set of his writings was concerned with the study of the literature of myths and the curious customs of primitive folk. The second of his favorite studies was that of Homer and the other Greek classics. The third was his interest in spiritualism, psychical research, and kindred subjects. He was in addition a journalist, critic, biographer, poet, scholar, historian, and parodist. His first published work was an edition of the *Ballads and Lyrics of Old France*, published in 1872. In 1880 followed a book of verse entitled *Ballads in Blue China*. This was followed in 1884 by his first serious work entitled *Custom and Myth*, an inquiry into the genesis of religions, totemism, and other savage customs. The same subjects were pursued in *Myth, Literature and Religion* (1887); *The Making of Religion; Social Origins* (1903), and *The Secret of the Totem* (1905). These, however, were but a small part of his literary output between 1894 and 1905. In addition to several volumes of verse he wrote a half dozen books of essays, edited a series of fairy tale books, and in 1893 published his first book relating to Homer entitled *Homer and the Epic*. He produced in the years following, among other works, *Life of John Gibson Lockhart* (1896); *Pickle, the Spy*, a novel (1897); *The Book of Dreams and Ghosts*; a translation of Homer's *Odyssey*, with Professor Butcher, and of the *Iliad* with Mr. Myers and Mr. Leaf; *The Homeric Hymns* (1899); *A History of Scotland from the Roman Occupation*, Vol. I.; *Prince Charles Edward* (1900); *Magic and Religion* (1901); *Alfred Tennyson* (1901); *The Mystery of Mary Stuart* (1901); *John Knox and the*

Reformation (1905); *Homer and His Age* (1906); *A Defense of Sir Walter Scott and the Border Minstrelsy* (1910).

As a translator of Homer, Mr. Lang's reputation will perhaps last longest. His translations are unmatched for fidelity and good writing. As a critic of Homer he was a steadfast upholder of the epic unity. As a critic of modern literature he did an almost unbelievable amount of work for newspapers and periodicals. He was for several years the chief reviewer of fiction for the *Times*, contributed to *Longman's Magazine*, and wrote regularly a column in the *Illustrated London News*. In addition to the three divisions of his interests mentioned above, there was a fourth, the historical, especially matters relating to Scottish history. His writings on the Stuarts in Scotland are of particular interest and value. Several years before his death he carried on an interesting controversy with Anatole France over Joan of Arc, and this was followed by a biography of Joan which was designed to counteract the somewhat derogatory biography written by M. France. Mr. Lang was, in addition to his literary activities, an ardent golfer and wrote much on the game. He was one of the most interesting figures in modern English literature and was an intimate friend of most of the writers of his generation. He received the honorary degree of Litt. D. from Oxford University. He was a Fellow of the British Academy.

LANGLOIS, HIPPOLYTE. A French soldier and writer, died February 12, 1912. He was born at Besançon in 1839 and was educated in that city. There also he received his first military training at the École Polytechnique. In 1858 he received a commission as sub-lieutenant of artillery and was promoted to be captain in 1866 in the Franco-German War. In 1878 he was made major and in 1887, lieutenant-colonel. He was for a time professor of artillery tactics at the École Supérieure de Guerre. To this institution he returned ten years later as director with the rank of general of division. In 1901 he was appointed to the command of the famous 20th Army Corps at Nancy and in the following year was made a member of the Army Council. He retired in 1904 upon attaining the age limit. In 1906 he was elected a member of the Senate and in 1907 was chosen a member of the French Academy. He was a grand officer of the Legion of Honor.

The writings of General Langlois on military subjects were of great value. His experience in the Franco-German War revealed to him the deficiencies in artillery and he was one of the influential officers whose researches resulted in the production of the 75mm. quick-firing gun. As director of the War School and as a member of the Army Council he was able to diffuse his ideas throughout the army and this resulted in great improvement in the character and equipment of the French troops.

LANGUAGE, INTERNATIONAL. In February, 1911, a society for the creation of an international language bureau (Verband für die Schaffung einer Weltsprache Amtes) had been founded with Bern, Switzerland, as its headquarters. It issued its *Ausruf* in 1912. It was due to the efforts of the Idists (see former **YEAR BOOKS**) and the Esperantists look askance on it, not quite sure whether the bureau is going to act in a truly impartial spirit. At any rate

Esperanto papers reflect not very amiably on the institution and wonder whether it is better policy to join, or to abstain. This is only one domain where it is plain that the fight between the two factions is going on. It makes not always very edifying reading for the layman. The quarrel may turn out for the real good of the cause of the International Language, forcing improvements on both sides. The Esperantists have now decided upon the creation of a "Representaro," or sort of language council, to consider, from the Esperanto point of view, what changes in the language might be acceptable while remaining true to the intangible "fundamento" adopted some years ago. Whatever it may mean ultimately, this is an admission in principle that changes are conceivable, the idea that the Idists have tried to impose all along.

The International Congress of the Esperantists took place in Cracow, Poland, August 11-18, a jubilee congress, which celebrated the twenty-fifth anniversary of the first publication by Dr. Zamenhof. The inventor of Esperanto announced his retirement from active work in the cause of the International Language. His speech was significant; he asked all to work in harmony, and said that he withdrew so as not to be considered a sort of Esperantist Pope, which as a matter of fact he had never desired to be. Promptly there followed the creation of the "Representaro" just mentioned.

A movement of conciliation between Idists and Esperantists was attempted by Dr. René de Saussure, of Geneva, who started a review for the purpose: *Linguo Kosmopolita*.

As interesting contributions to the literature of the year: Couturat, "La vérité sur l'Ido" (*La Revue*, July 1), reprinted as a pamphlet; and Dr. P. Haller, "Die Vorzüge des Ido gegenüber Esperanto, und 10 Antworten dazu" (*Germano Esperantista*, December, 1912), also reprinted as a pamphlet.

LANNING, WILLIAM MERSHON. An American jurist, died February 16, 1912. He was born on a farm in Mercer County, N. J., in 1849 and graduated from the Lawrenceville School in 1866. He taught school for several years and at the same time studied law and was admitted to the bar in 1880. From 1883 to 1887 he was city solicitor of Trenton and from 1887 to 1891 judge of the district court in the same city. He was a member of the special commission which framed the present township laws of New Jersey and was also a member of the constitutional commission in 1894. In 1903 he was elected to the 58th Congress and resigned in June, 1904, on his appointment as United States district judge of the District of New Jersey. He served in this position until 1909 when he was appointed United States circuit judge of the 3d Circuit. In addition to his services on the bench he held a number of public positions. He was a member of the Board of Trustees of the General Assembly of the Presbyterian Church and a director of Princeton Theological Seminary.

LAOS. The largest of the territories composing the French colony of Indo-China (q. v.). Capital, Vientiane. Luang Prabang, Bassac, and Muong Sing (three protected states) are included under Laos. Teak is cut in the forests, and agriculture and mining are carried on. Georges Mahé was resident-superior in 1912.

LATHROP, JULIA C. See **CHILDREN'S BUREAU**.

LAURIE, JOHN WIMBURN. An English lieutenant-general, died May 21, 1912. He was born in London in 1835 and was educated at Harrow and at Sandhurst. In 1853 he obtained his commission in the 2nd Foot. He volunteered for service in the Crimean War and took part in the siege of Sevastopol where he was twice wounded, and was mentioned in dispatches for gallant conduct. He later served in India during the Mutiny. In 1861, following the Trent affair, he was transferred to Canada, where for five years he was inspecting field officer of militia and subsequently adjutant-general of militia in Nova Scotia. He took an active part in resisting the Fenian invasions of 1861 and 1866 on the Niagara frontier. He served in the Transvaal expedition of 1881 and was a Red Cross commissioner in the Servo-Bulgarian War of 1885. During the rebellion in the Northwest Territories he was second in command under Sir Frederick Middleton. He was retired in 1887 with the rank of lieutenant-general. In the same year he was elected to represent Shelburn County in the Dominion Parliament, but was compelled to return to England in 1891, where he turned his attention to English politics. He was defeated for election to Parliament in 1892, but was elected in 1895 and continued to hold his seat until compelled to withdraw on account of ill health in 1905. He did notable service in improving the militia forces of Canada.

LAURIER, SIR WILFRID. See CANADA.

LAW, BONAR. See GREAT BRITAIN, *History*.

LAWN TENNIS. The retirement of William A. Larned, holder of the American tennis championship, who during his career had captured the title seven times, was much regretted by all tennis followers. Larned became ill during the Davis cup matches at Christchurch, New Zealand, in January, and his recovery was so delayed that he took part in no further tournaments. Aside from this unfortunate incident the tennis season of 1912 was a most notable one, and the popularity of the sport showed a remarkable increase. From the international standpoint the defeat of the Australians, holders of the Davis cup, by the British players, was the most important tennis happening of the year. In the United States the fact that the national championships in both singles and doubles were captured for the first time by players from the Pacific Coast also was noteworthy.

M. E. McLoughlin of California won the singles title after a spirited contest with Wallace F. Johnson, while McLoughlin and T. C. Bundy, also of California, defeated the doubles champions, R. D. Little and Gustave T. Touchard. McLoughlin added to his laurels by winning the New York State Championship, the Western Championship, the Pacific States title, and the Longwood cup contest. With the exception of the matches for the Davis cup McLoughlin went through the year without defeat. Another player to enter the limelight was R. Norris Williams, who won the national clay court championship. W. C. Grant captured the indoor singles title, while F. B. Alexander and T. R. Pell successfully defended the indoor doubles title. Miss Mary Browne of California was the winner of the women's national championship, and Miss Browne, paired with Miss Dorothy Green, won the women's doubles title. Princeton won the intercollegiate championships, G. M. Church capturing the singles title, and Church

and W. H. Mace the doubles event. This victory gave Princeton permanent possession of the intercollegiate trophy.

A summary of the principal championship and open tournaments held in 1912 follows:

Davis Cup Matches for world's championship, January, at Christchurch, N. Z.: Men's Singles—N. E. Brookes (Australia) defeated B. C. Wright (America) 6-3, 2-6, 6-3, 6-3; R. W. Heath (Australia) defeated W. A. Larned (America) 2-6, 6-1, 7-5, 6-2; N. E. Brookes (Australia) defeated M. E. McLoughlin (America) 6-4, 3-6, 4-6, 6-3, 6-4. Men's Doubles—N. E. Brookes and A. W. Dunlop (Australia) defeated B. C. Wright and M. E. McLoughlin (America) 6-4, 5-7, 7-5, 6-4.

Davis Cup Preliminaries, at Folkestone, England, June: Singles—C. P. Dixon (Great Britain) defeated Max Decougis (France) 6-3, 6-2, 6-4; A. H. Gobert (France) defeated A. W. Gore (Great Britain) 6-4, 4-6, 6-3, 6-3; C. P. Dixon (Great Britain) defeated A. H. Gobert (France) 4-6, 6-4, 6-2, 6-3; A. W. Gore (Great Britain) defeated Max Decougis (France) 6-3, 6-0 (defaulted). Doubles—H. Roper Barrett and C. P. Dixon (Great Britain) defeated A. H. Gobert and W. H. Laurentz (France) 3-6, 6-4, 6-1, 6-1.

Davis Cup Matches for world's championship, at Melbourne, Australia, November, 1912: Men's Singles—J. C. Parke (Great Britain) defeated N. E. Brookes (Australia) 8-6, 6-3, 5-7, 6-2; C. P. Dixon (Great Britain) defeated R. W. Heath (Australia) 5-7, 6-4, 6-4, 6-4; J. C. Parke (Great Britain) defeated R. W. Heath (Australia) 6-2, 6-4, 6-4; N. E. Brookes (Australia) defeated C. P. Dixon (Great Britain) 6-2, 6-4, 6-4. Men's Doubles—N. E. Brookes and A. W. Dunlop (Australia) defeated J. C. Parke and A. E. Beamish (Great Britain) 6-4, 6-1, 7-5.

National All-comers' Championship, at Newport, R. I.: Singles—M. E. McLoughlin defeated W. F. Johnson 3-6, 1-6, 6-3, 6-4, 6-1. Doubles (challenge match) M. E. McLoughlin and T. C. Bundy defeated R. D. Little and G. F. Touchard 3-6, 6-2, 6-1, 7-5.

Preliminary National Championship Doubles Ties, at Lake Forest, Ill.: W. T. Hayes and J. H. Winston (West) defeated W. J. Clothier and G. P. Gardner, Jr. (East), 6-4, 5-7, 8-10, 6-4, 6-4; M. E. McLoughlin and T. C. Bundy (Pacific Coast) defeated C. Y. Smith and Nat Thornton (South), 6-2, 6-1, 6-1. Final—McLoughlin and Bundy defeated Hayes and Winston, 6-0, 7-5, 6-3.

Women's National Championship, at Philadelphia, Pa.: Singles—Miss Mary Browne defeated Miss Eleanora Sears, 6-4, 6-2. Doubles—Miss Browne and Miss Green defeated Mrs. Wallach and Mrs. Schmitz, 6-2, 5-7, 6-0. Mixed Doubles—Miss Browne and R. N. Williams, Jr., defeated Miss Sears and W. J. Clothier, 6-2, 2-6, 11-9.

National Clay Court Championship, at Pittsburgh, Pa.: Men's Singles—R. N. Williams, Jr., defeated W. T. Hayes, 6-3, 6-1, 8-6. Men's Doubles—Hackett and Hall defeated Winston and Whitehead, 4-6, 6-1, 6-0, 6-1. Women's Singles—Miss Sutton defeated Miss Browne, 6-4, 6-2. Mixed Doubles—Miss Sutton and Harris defeated Miss Browne and Williams, 6-3, 2-6, 6-2.

National Indoor Championship, at New York: Men's Singles—W. C. Grant defeated W. B.

Cragin, Jr., 6-1, 6-3, 6-3. Men's Doubles—F. B. Alexander and T. R. Pell defeated W. C. Grant and L. M. Burt, 9-7, 6-4, 6-0.

English Championships at Wimbledon, London: Singles—A. F. Wilding defeated A. W. Gore, 6-4, 6-4, 4-6, 6-4. Doubles—R. Roper Barrett and C. P. Dixon defeated Max Decougis and A. H. Gobert (holders), 3-6, 6-3, 6-4, 7-5. Women's Singles—Mrs. Larcombe defeated Mrs. Sterry, 6-3, 6-1, winning championship by default.

French Championship, at Neuilly-sur-Seine: Singles—A. H. Gobert defeated W. H. Laurentz, 4-2, defaulted. Doubles—Gobert and Laurentz won by default.

Western States Championship, at Chicago, Ill.: Men's Singles—M. E. McLoughlin defeated T. C. Bundy, 8-10, 6-1, 6-4, 6-4. Men's Doubles—Hayes and Winston defeated Squair and Green, 6-1, 6-3, 6-2. Women's Singles—Miss Sutton defeated Miss Browne, 6-0, 6-3. Women's Doubles—Miss Sutton and Miss Neely defeated Miss Browne and Mrs. Seymoure, 6-1, 6-3.

Pacific States Championship, at Santa Cruz, Cal.: Men's Singles—M. E. McLoughlin defeated M. H. Long by default. Men's Doubles—Bundy and Dawson defeated Gardner and Johnston, 6-4, 11-9, 7-9, 6-4. Women's Singles—Miss Florence Sutton defeated Mrs. Bruce, 6-3, 6-3. Women's Doubles—Mrs. Neimeyer and Miss Baker defeated Miss Sutton and Miss Davis, 6-2, 6-2. Mixed Doubles—Miss Sutton and Browne defeated Miss Baker and Hunt, 6-0, 6-0.

New England Championship, at Hartford, Conn.: Men's Singles—F. H. Harris defeated F. C. Inman, 6-1, 6-4, 2-6, 6-4, and in challenge match R. A. Holden, Jr., by default. Men's Doubles—Man and Peaselee defeated Harris and Currier, 7-5, 5-7, 7-5, 3-6, 6-3.

Middle States Championship, at Orange, N. J.: Singles—W. F. Johnson defeated W. M. Hall, 10-12, 1-6, 7-5, 6-1, 6-3. Doubles—Hackett and Mahan defeated Ward and Miles, 6-1, 6-2, 6-1.

New York State Championship, at Brooklyn, N. Y.: Singles—M. E. McLoughlin defeated R. N. Williams, Jr., 6-2, 6-2, 5-7, 4-6, 6-4. Doubles—McLoughlin and Bundy defeated Inman and Behr, 6-4, 6-4, 2-6, 6-4.

Metropolitan Championship, at New York: Men's Singles—R. D. Little defeated A. S. Dabney, 6-4, 6-1, 6-3. Doubles—Hackett and Hall defeated Little and Touchard, 0-6, 2-6, 6-3, 7-5, 6-4. Women's Singles—Mrs. R. H. Williams defeated Miss Marcus, 7-5, 6-4. Women's Doubles—Mrs. Williams and Miss Bunce defeated Mrs. Pouch and Miss Handy by default. Mixed Doubles—Mrs. Barger Wallach and R. D. Little defeated Miss Fenno and G. L. Wrenn, Jr., 2-6, 8-6, 6-2.

Long Island Championship, at Brooklyn, N. Y.: Singles—G. F. Touchard defeated S. H. Voshell, three sets to two. Doubles—Voshell and Baggs defeated Dr. Rosenbaum and Phillips, 3-6, 9-7, 10-8, 1-6, 6-3.

Longwood Cup Tournament, at Boston, Mass.: Singles—Maurice E. McLoughlin defeated E. P. Larned, 6-4, 6-2, 6-4. Doubles—Clothier and Gardner defeated Biddle and Williams, 6-2, 11-13, 6-4.

Intercollegiate Championship, at Haverford, Pa.: Singles—George M. Church (Princeton)

defeated John G. Nelson (Dartmouth), 6-4, 5-7, 5-7, 8-6, 6-1. Doubles—George M. Church and W. H. Mace (Princeton) defeated E. H. Whitney and W. M. Washburn (Harvard), 8-10, 10-8, 6-2, 6-2.

New England Intercollegiate Championship, at Boston: Singles—C. L. Johnston, Jr., (Amherst) defeated C. E. Bacon (Wesleyan), 5-7, 4-6, 8-6, 6-3, 6-3. Doubles—C. L. Johnston, Jr., and J. A. Miller (Amherst) defeated A. Conger and H. Thurston (Williams), 4-6, 6-2, 5-7, 6-4, 6-4. See RACQUET AND COURT TENNIS.

LAWRENCE, AMORY APPLETON. An American merchant, died July 6, 1912. He was born in Boston in 1848 and graduated from Harvard College in 1870. He was a brother of William Lawrence, Episcopal bishop of Massachusetts. He engaged in the dry goods commission business and amassed a large fortune. He was director in many important financial institutions, and was noted for his philanthropic work in Boston and elsewhere.

LAWRENCE STRIKE. See STRIKES.

LAW SCHOOLS. See UNIVERSITIES AND COLLEGES.

LAWSON, THOMAS GOODWIN. An American jurist, former member of Congress from Georgia, died April 16, 1912. He was born in Putnam County, Ga., in 1835 and graduated from Mercer University in 1855. He studied law and in 1857 was admitted to the bar. For fifteen months he served as a private in the Confederate army. From 1861 to 1866 he was a member of the Georgia legislature and in 1877 was a member of the Constitutional Convention of the State. From 1879 to 1887 he was a judge in the superior courts in Georgia. He was elected to the 52d, 53d, and 54th Congresses, from 1891 to 1897.

LEA, HOMER. A soldier and writer, died November 1, 1912. He was born in Denver, Col., in 1876, and spent most of his early life in California where he was educated at Occidental College, University of the Pacific, and Leland Stanford University. While he was an undergraduate he showed an unusual interest in military affairs, especially those connected with China and was heard frequently to assert that he would become a general in the Chinese army. Shortly after the completion of his studies he went to China and came into public notice as a partisan of the Chinese in 1900 and 1901, when he undertook the relief of the Emperor, Kwang Hsu. In 1904 when the new army in China was established and put on a modern basis he raised and commanded the second army division with the rank of lieutenant-general. When the Chinese reformer, Kang Yu-wei came to New York in 1905 and spoke in behalf of the reform movement in China, General Lea accompanied him. It was said at that time that he was in command of the reform army, which was being organized by the reformers. He became an intimate friend of Dr. Sun Yat Sen, and accompanied the latter on his return to China in 1911, traveling by way of London and the Suez Canal. It was said during this journey that General Lea was to organize the military government which it was rumored was being planned by the revolutionary army. He arrived with Dr. Sun Yat Sen in Shanghai on December 24. Shortly afterwards the latter was proclaimed president of the new republic. Early in January, 1912, Gen. Lea declined to act as chief of staff of the

revolutionary army as he had been notified that there was a death penalty for any foreigner participating in an insurrection. He gained an international reputation by the publication of his book, *The Valor of Ignorance*, in which he attempted to show that a Japanese invading army could capture all the Pacific coast of the United States and force the government to agree to any terms which it might dictate. Among those who highly praised the book were Lord Roberts and the Emperor of Germany. General Lea returned to the United States from China in the spring of 1912 following a stroke of paralysis. His success was obtained in spite of a physical deformity of the spine which made him a hunchback. In addition to *The Valor of Ignorance* he wrote a novel entitled *The Vermilion Pencil*, and a drama, *The Crimson Spider*. At the time of his death he was engaged in the preparation of a history of the political development of China.

LEAD. The production of primary lead in United States in 1911 showed a marked increase over that of 1910. Primary lead is that smelted from ore. The total production of such lead in 1911 was 486,975 tons compared with 470,380 in 1910, an increase of 16,595 tons, or 3.5 per cent. The production of secondary lead, which includes pig lead and lead in alloys, was 52,500 tons in 1911, compared with 55,323 in 1910. From foreign ores and base bullion there were smelted in 1911, 94,134 tons compared with 108,553 tons in 1910. The primary lead smelted or refined from ores mined in the United States in 1911 was 406,148 tons, compared with 372,227 tons in 1910. The largest quantity mined in any single State was in Missouri, 182,207 tons. From Idaho came 117,159 tons; from Utah 55,198 tons, and from Colorado, 30,621 tons. These States are the only large producers of lead.

IMPORTS. The total quantity of lead imported into the United States in 1911 was 179,903,352 pounds. Of this, by far the largest quantity, 172,633,479 pounds, came from Mexico. From South America were imported 4,778,221 pounds; from Great Britain, 401,686 pounds.

The production of lead in the United States in 1912, according to the figures of the *Engineering and Mining Journal*, was 418,224 tons of 2000 pounds. There was a large increase in the production of desilverized lead. This was due to the inauguration of smelting and refining by the International Company, which put its smelter into operation the early part of the year and its refinery in the latter part. The production of desilverized lead was 239,264 tons. The production from southeastern Missouri was 146,038 tons and from southwestern Missouri, 22,681.

The world production of lead in 1911, according to statistics published by the *Metallgesellschaft* of Frankfurt am Main was 11,201,048 long tons. Of these, 392,842 long tons came from the United States, 189,155 from Spain, 177,801 from Germany, 132,276 from Mexico, 109,789 from Australia, and quantities varying from 2000 to 33,00 tons from Austria, Belgium, Canada, Great Britain, Greece, Italy, Japan, Sweden, and Turkey in Asia. The production in 1910, was 1,208,983 tons. The largest individual decrease was in the production in Spain, which fell off about one-sixth. The production of the United States, which was by far the largest output, more than doubled that of

its nearest competitor, Spain, and constituted 32.7 per cent. of the world's production.

For metallurgy of lead see METALLURGY.

LEATHER. The hide and leather industry in 1912 suffered from a lack of supply to meet a constantly growing demand. As a result, in November, the prices for hides reached the highest level ever recorded, which was over 100 per cent. greater than in 1907. The domestic hide supply had been falling behind the increase in population and was far from meeting the demand which various industries were making for leather materials. The accompanying tables show the cattle and sheep slaughtered at the

CATTLE AND SHEEP SLAUGHTERED IN THE UNITED STATES 1912-11

	Cattle		Sheep	
	1912	1911	1912	1911
Chicago	1,681,136	1,715,279	4,880,873	4,452,821
Kansas City.....	1,060,262	1,232,391	1,611,651	1,516,489
Omaha	577,138	706,415	1,572,177	1,877,578
St. Louis	884,487	758,012	933,924	881,832
St. Joseph....	297,877	312,242	561,089	550,676
Sioux City....	154,293	189,123	171,516	147,509
Fort Worth ...	356,987	347,188	182,281	121,807
St. Paul	136,508	132,272	195,412	169,594
Okla. City ...	180,903	114,859	9,161	9,635
Total	5,329,591	5,507,786	10,124,084	9,226,941
Loss under 1911	178,195
Gain over 1911	897,143

great markets of the United States. There was a loss in the number of cattle slaughtered but a gain in the number of sheep slaughtered in 1912 over 1911, as there had been in the previous year, but not as marked. The high prices for domestic hides were reflected in the increased value of the exports, and the South American product was held at high figures until the early part of December. Leather prices during the year corresponded to those of hides, but an active demand was manifested.

The total cattle slaughtered in the great markets of the United States by years were as follows:

1912	5,329,591
1911	5,507,786
1910	5,762,405
1909	5,715,739
1908	5,406,144

The deficiency in the supply of native hides in part was met by increased imports. The total imports of hides and skins, raw or uncured, in 1912 were 614,966,010 pounds, valued at \$121,169,395 as compared with 424,876,678 pounds valued at \$81,456,323 in 1911. During the year 1912 the imports of leather and tanned skins were valued at \$8,521,088 as compared with \$5,897,821 in 1911 and \$6,385,907 in 1910. The exports of leather in 1912 were valued at \$43,836,315, of which sole leather took \$10,134,457 and glazed kid, \$20,163,669. The total manufactures of leather exported in 1912 were valued at \$20,563,835, as compared with \$17,768,295 in 1911.

In connection with the revision of the tariff, the tanners were anxious to have the duties on tanning materials which were imported reduced, so that the industry would be put on more even terms with that of Canada, where no duties were required for tanning extracts.

Considerable success attended the shoe and leather class in the Boston Continuation School, and in 1912, 15 representative shoe and leather concerns were represented in the class by young employees. This movement for limited commercial and vocational training seemed to have been a pronounced success, and a greater enrollment was looked for in future classes.

gust 16, 1911, ten days after he entered Port-au-Prince at the head of the successful revolutionary forces, he was sworn in as president of the republic. See HAITI.

LEEWARD ISLANDS. See ANTIGUA.

LEEWARD ISLANDS. A British colony; the most northerly group of the (British) Lesser Antilles. The five presidencies, with

LEAVITT, MARY GREENLEAF (CLEMENT). An American temperance worker and lecturer, died February 5, 1912. She was born at Hopkinton, N. H., and was educated at the State Normal School in West Newton, Mass., graduating in 1851. In 1857 she married Thomas H. Leavitt. She taught school for some years prior to her marriage, and in 1867 established and conducted a private school for young women and children. She became interested in the women's temperance crusade and helped to organize the Boston Woman's Christian Temperance Union. She was a member of the State Executive Board of this organization and later became its national lecturer. From 1883 to 1891 she was secretary of the World's Woman's Christian Temperance Union. In this capacity she traveled abroad, organizing branches of the union in Europe, Australia, Asia, Africa, and many islands. Through the aid of interpreters she spoke to the people in 51 languages. From 1891 to the time of her death she was honorary life president of the World's Woman's Christian Temperance Union. She wrote many tracts, and contributions on temperance and purity topics, and also short stories and verses for magazines.

LE CONTE, JEAN JACQUES DESSALINES MICHEL CINCINNATUS. President of Haiti, killed by an explosion during a fire in the Palace at Port-au-Prince on August 8. He began his career in Haiti as school teacher in 1874. Entering politics he rose through the ranks of minor officialdom to be member of Congress. In 1880 he joined in the revolution against President Salomon and was later associated with the government of President Nord Alexis. In 1899 he became a member of the cabinet of President Simon-Sam. In February, 1911, on account of political agitation, he fled from Haiti and took refuge from political exile in St. Thomas. He remained there until July, 1911, when he returned and headed a rising and within a month had succeeded in overthrowing the government of President Simon. On Au-

their area and population in 1911, are as follows:

	Sq. Miles	Pop.	Capital
Antigua*	170 1-2	32,265	St. John
Montserrat	32 1-2	12,196	Plymouth
St. Kitts and Nevis	150 1-3	43,303	Basseterre
Dominica	304 2-3	33,863	Roseau
Virgin Islands	58	5,562	Road Town
Total	716	127,189	St. John†

* With its dependencies, Barbuda and Redonda (62 1-2 square miles, 991 inhabitants). † Including Anguilla (35 square miles, 4075 inhabitants). ‡ Capital of the colony.

Elementary education in the islands is denominational, excepting in Dominica, the denominations receiving grants-in-aid. Government saving banks have been established in all the presidencies. There are no railway nor internal telegraphs. Cable connection exists with the continents. Statistics of trade and finance for the colony are given below for four years:

	1907-8	1908-9	1909-10	1910-11
Imports	£517,424	£567,593	£485,393	£567,817
Exports	521,609	536,312	441,728	558,165
Revenue*	152,608	154,333	149,670	164,375
Expenditure*	138,047	146,216	149,906	159,263

* Not including government grants.

Sir Ernest Bickham Sweet-Escott, the governor in 1912, was transferred to be governor of Fiji and high commissioner for the western Pacific in February, and Sir H. Hesketh Bell was appointed governor of the Leeward Islands. See articles on the separate presidencies for further details.

LEEWARD ISLANDS (ILES SOUS LE VENT). See FRENCH ESTABLISHMENTS IN OCEANIA.

LEFEBVRE, JULES JOSEPH. A French artist, died February 23, 1912. He was born at Tournon in 1836. After studying under Leon Cogniet he won, in 1861, the Prix de Rome

with "The Death of Priam." He became notable as a painter of beautiful women. His works consist chiefly of single figures. They include "Caritas Romana" (1864); "Sleeping Maiden" (1865); "Reclining Woman" (1868); "Pandora" (1877); "Psyche" (1883), and "A Daughter of Eve" (1892). He also painted many portraits. In 1870 he was decorated with the Cross of the Legion of Honor and was made a member of the Académie des Beaux Arts in 1891.

LEGRAS, GUSTAVE. An American mathematician and educator, died July 23, 1912. He was born in New York in 1858, and graduated from the College of the City of New York in 1879. In 1883 he became tutor of mathematics in the College of the City of New York and successively served as assistant professor and associate professor of mathematics in that institution. The latter position he held from 1906 until the time of his death. He was a member of many scientific societies.

LEHIGH UNIVERSITY. An institution of higher learning at South Bethlehem, Pa., founded in 1866. The enrollment in all departments of the university in the autumn of 1912 was 619, divided as follows: Arts and science courses, 113; civil engineering, 134; mechanical engineering, 123; mining engineering, 83; metallurgical engineering, 15; electrometallurgy, 16; electrical engineering, 82; chemistry, 27; chemical engineering, 26. There were 68 members of the faculty. A new course in business administration was added in the arts and science department during the year. The productive funds of the university amount to \$1,200,000, and there were about 125,000 volumes in the library. President, Henry Sturgis Drinker, E. M., LL. D.

LEIGHTON, JOHN. An English artist, died October, 1912. He was born in 1822 and was educated privately. With Roger Fenton he founded the Photographic Society and was one of the original proprietors of the London *Graphic*. He lectured on many subjects and traveled extensively, and he illustrated a large number of books. He was the founder and the vice-president of the Ex Libris Society, for which he designed many bookplates. He published, in 1881, *Suggestions in Design* under the pen-name of Luke Limner.

LEIPZIG. See ARCHITECTURE.

LELAND STANFORD JUNIOR UNIVERSITY. An institution for higher education at Stanford University, Cal., founded in 1891. The enrollment in all departments of the university in 1912 was 1656. The faculty numbered 214. There were several important changes among the members of the faculty during the year. Professor Alvin S. Johnson, professor of economics, resigned to accept a similar chair at Cornell University. Professor Murray S. Wildman of Northwestern University, was chosen professor of economics to succeed Professor Johnson. The corporation of Cooper Medical College of San Francisco was dissolved during the year and all its property was placed in the hands of the trustees of Stanford University for the purposes of medical education. The university now offers a complete medical course embodying seven years of preparation and study for a degree in medicine. President, David Starr Jordan, LL. D.

LE MOINE, SIR JAMES MACPHERSON. A Canadian ornithologist and historian, died

February, 1912. He was born in 1856 and was educated at the Petit Seminaire de Quebec. He studied law and became a barrister in 1850. He wrote much on historical and ornithological subjects relating to Canada. Among his published writings are: *Ornithology of Canada* (1861); *Maple Leaves* (1863-1894, 6 vols.); *Quebec Past and Present* (1876); *The Scot in New France* (1879); *The Chronicles of the St. Lawrence* (1879); *Picturesque Quebec* (1882); *The Birds of Quebec* (1891); *Legends of the St. Lawrence* (1898).

LEPROSY. A survey of the prevalence of leprosy in the United States and its territorial possessions was recently made by the United States Public Health Service. Health officers of the several States, Porto Rico, Hawaii, and the Philippines were requested to submit a statement of the number of new cases reported in 1911, and of the total number on January 1, 1912. The results were incomplete, owing to the fact that in only eighteen States and in the District of Columbia is leprosy a reportable disease. A total of 146 cases was reported in the United States, of which forty were new cases first observed in 1911. In that year a commission of officers of the Public Health Service found 278 lepers in the United States. Of these, 145 were foreign-born, and 13 were of unknown nativity; 186 were believed to have contracted the disease in this country. Only 72 of the patients were isolated and cared for by local authorities. The 146 cases reported in the present survey do not indicate a decreased prevalence. California, Louisiana, and Massachusetts make provision for lepers in special hospitals. In other States varying degrees of care and isolation are provided. There are 28 known lepers in Porto Rico, while in Hawaii and the Philippines the disease constitutes an important public health problem. In the latter about 6000 lepers have been transferred to the Culion leper colony. Cebu, an island with one-tenth of the Philippine population, furnishes one-half of the cases. The Treasury Department recently amended the interstate quarantine regulations to the effect that common carriers may not transport a leper except under specified restrictions and under a special permit from the surgeon-general of the Public Health and Marine Hospital Service. A leper who violates this regulation is to be returned to the original State or to a designated federal quarantine station.

LEROY-BEAULIEU, ANATOLE. A French historical writer, died June 10, 1912. He was born at Lisieux in 1842, a brother of Paul Leroy Beaulieu, economist. His life was practically devoted to the study of government and politics. He is perhaps best known as the author of an elaborate work on Russia, translated into English under the title, *The Empire of the Czars*. Other well-known works are, *Papacy, Socialism, Democracy* (English trans., 1892), and *Israel Among the Nations*. The latter is the subject of an essay by Mr. W. E. H. Lecky, who characterized the author as "one of the greatest living political writers." (See the posthumous volume of Lecky's *Historical and Political Essays*, 1908.) In 1887 he was elected a member of the Academy of Political and Moral Science. He took no active part in political life beyond occupying the seat of Conseil Général of Haute Marne from 1883 to 1891.

LETTER CARRIERS AND EIGHT-HOUR DAY. See *LABOR LEGISLATION, Hours.*

LEWIS, GRACE ANNA. An American naturalist, died February 24, 1912. She was born in 1821. In 1869 she published a pamphlet showing the relation of birds to the animal kingdom. This pamphlet was the germ of a series of charts which she prepared later. These included "A Chart of the Classification of Birds," "A Chart of the Animal Kingdom," and "A Chart of Biology." She also prepared "Water-Color Paintings of Wild Flowers" and "Studies in Forestry."

LEWIS, WILLIAM H. See *BAR ASSOCIATION, AMERICAN.*

LIBERIA. An independent negro republic on the west African coast, covering an area estimated at about 41,000 square miles (other estimates, from thirty-five to forty thousand), and having about 1,500,000 inhabitants (or 2,000,000 according to some calculations), including about 10,000 Americo-Liberians. The indigenous negroes are mainly pagans, except the Mohammedan Mandingo tribe. There are said to be cannibals in the interior. Monrovia (with about 600 inhabitants) is the capital.

Native industries are backward, and trade is carried on under difficulties; roads being few and railroads unknown. Dense forest covers great tracks through which passage is not possible under present conditions. The imports for 1911 are estimated to have amounted to \$1,025,000, and the exports to \$975,000 (palm oil and kernels, piassava fibre, coffee, rubber, and ivory). Trade is mostly with Hamburg, the United Kingdom, the Netherlands, and the United States. Monrovia (since 1910) is a station on the cable route from Germany to Brazil, and beginning with 1912 a station on the French cable route to French West Africa. Revenue (1910-11), \$489,656. An English source places the revenue at \$471,335 and the expenditure at \$470,000 for the year 1911-12. External debt (1912), \$170,000. A president elected for four years (January 1, 1912-16, Daniel Edward Howard) is the executive. International financial controller, R. P. Clark (American), with G. Lange representing Germany, R. Harpe the United Kingdom, and F. Wolff, France.

HISTORY. President Daniel Howard was inaugurated on January 1, to succeed President Barclay, who had held office for eight years. The new president made especial reference in his inaugural address to the relations of Liberia to the great powers, declaring that conditions gave positive assurance of Liberia's integrity. He referred also to the satisfactory conclusion of the prolonged financial negotiations, owing to the interest of United States, Great Britain, and other powers. In March a loan agreement was concluded with American, German, British, French, and Dutch banks, subject to the settlement of outstanding claims on the Liberian government. A settlement with the German creditors was concluded in June. At the beginning of November it was announced that the German gunboat *Panther* had been ordered from her station at Kamerun Bay to the Liberian coast to protect German subjects, disturbances having arisen among the natives. The lives of Europeans and especially of Germans employed in the factories were said to be in danger.

LIBRARY ASSOCIATION, AMERICAN. A

society incorporated in 1879 for the purpose of developing the public library in its bearing on American education and by coöperation to increase the efficiency of library administration. The conference of the association in 1912 was held on June 26-July 2 at Ottawa, Canada. The keynote of the meeting was the concern of the community in the awakening and development of taste in individuals. Some of the principal papers were those dealing with "The efficiency of the library staff and scientific management," "What the library schools can do for the profession," "Library publicity for the sake of information and support," "The opportunity which the open door of the library offers as a means of education and development beyond the schools," and "The relations between library assistants and the public." One of the most important events of the conference was the report submitted by a committee appointed to study the relation which the public library should bear to the municipality. The committee strongly advised against grouping the library with departments of the city which have little or nothing to do with educational work, such as parks, police departments, etc., and strongly recommended that the library either be governed by a distinctly independent board of trustees or else grouped with the other educative agencies of the city. The committee was continued with the request that it draft a recommended library chapter for a city charter. Another important committee report dealt with the deterioration of newspaper paper, a problem which has been carefully studied and experimented upon by a committee of the association for the past two years.

The publishing board of the association during 1912 issued, among other publications, a revised edition of its *List of Subject Headings* and a continuation of the *A. L. A. Catalogue*, consisting of an annotated selection of 3000 of the best books published since 1904. Officers or specially appointed delegates have attended during 1912, sixteen out of thirty-nine State library meetings as official representatives of the American Library Association. The officers for 1912 were as follows: President, Henry E. Legler, librarian of the Chicago Public Library; first vice-president, E. H. Anderson, assistant director of the New York Public Library; second vice-president, Mary F. Isom, librarian of the Portland (Oregon) Library Association; treasurer, Carl B. Roden, assistant librarian, Chicago Public Library; and secretary, George B. Utley, 78 E. Washington Street, Chicago, Ill.

LIBRARY BUILDINGS. See *LIBRARY PROGRESS.*

LIBRARY OF CONGRESS. At the end of the fiscal year 1912 there were in the Library of Congress 2,012,393 books, 129,123 maps and charts, 591,632 volumes and pieces of music, and 349,745 prints. The accessions during the year included 120,664 printed books and pamphlets, 34,622 volumes and pieces of music, 10,731 prints, and 5177 maps and charts. The library also contains a large number of manuscripts, but a numerical statement of this is not possible. There were many valuable gifts of printed books during the year. Chief among these were the Deinard collection of Hebraica, brought together during many years by Ephraim Deinard of Arlington, N. J. There were included in this gift 9936 volumes and pamphlets. They were presented to the library

by Mrs. Jacob H. Schiff, of New York. Mrs. Henrietta Irving Bolton presented to the library the unique library of her late husband, Henry Carrington Bolton. This numbered 1631 volumes and pamphlets. These works related chiefly to the history of chemistry and bibliography on that subject. The Karow collection of works relating to Napoleon Bonaparte was presented to the library by the widow of the late Major Edward William Karow of Savannah, Ga. The collection numbered nearly 300 volumes. From the Mexican embassy at Washington came the gift of 1264 books and pamphlets, including many relating to Mexico and Central America, together with 2000 numbers of periodicals. Prince Roland Napoleon Bonaparte presented the library with 19 volumes, chiefly his own scientific publications. Perhaps the most notable purchase of books made during the year was that of the Hoes collection relating to the Spanish-American War. This numbers 43,866 pieces, and includes books, pamphlets, periodicals, and manuscripts. In the Division of Manuscripts there were many important accessions during the year. These include the Maury papers, additional Van Buren papers, Mexican Inquisition papers, the Edwin M. Stanton papers, the Louise Chandler Moulton collection, and the additional Welles papers. The Jefferson collection was enriched by the addition of 131 unedited letters. The librarian is Herbert Putnam.

LIBRARY PROGRESS, 1912. GENERAL DEVELOPMENT. The library year of 1912 was a year of quiet growth, unmarked by such dramatic events as the catastrophe of the New York State Library fire and the New York Public Library opening, both of which made 1911 an exceptional library year. The national library conference held in Ottawa, Canada, June 26-July 2, emphasized international library interests. Library coöperation between the United States and Canada was strengthened and library interests on both sides stimulated by contact. Closer relation between the library and municipality is an encouraging indication of library progress, and the cost and administration of libraries has received more concentrated attention from librarians during the year.

ASSOCIATIONS AND COMMISSIONS. In the United States there are 34 States that have library commissions or bodies serving commission purposes. Through the activity of the State commission library facilities are extended throughout the State. Rural communities, where population is too scattered to admit of the establishment of library buildings, are thus brought into contact with books. The leading commissions publish library bulletins in which professional articles, news notes, and reading lists are printed. The League of Library Commissions is affiliated with the American Library Association and includes membership from all commissions. This association meets twice a year. Its eastern section generally meets in March at Atlantic City and its western section at Chicago in January. Important policies of commission organization and coöperation receive attention at these meetings. Of the 48 States of the Union, 36 have State organizations. The State association is distinct in organization and purpose from the State commission. Its membership is made up of the libraries and library workers of the State and through its meetings

and activities it stimulates the library interests of the State. Many of the State associations hold joint meetings or conferences with one or more other State associations. At these conferences programmes are offered almost equal in value to the programmes of the national conventions. California, Wisconsin, New York, Ohio, New Jersey, and Pennsylvania have held meetings of broad scope. The Pacific Northwest Library Association is an association covering Washington, Oregon, and British Columbia, and its annual meetings in September are among the most progressive library conventions. Affiliation between the State and national associations is a current question to which librarians are giving careful consideration.

LIBRARY BUILDINGS. The new central building of the St. Louis (Mo.) Public Library was opened January 6, 1912. This building is the result of the efforts of Frederick M. Crunden, who built up the St. Louis Library and who died in 1911. The new building was obtained through the gift of \$1,000,000 from Mr. Carnegie, one-half of which was apportioned to the central building and the other half for branches of the St. Louis Public Library. Since the fall of 1909 Mr. Arthur E. Bostwick has been the librarian of the St. Louis Public Library. The City Library of Springfield, Mass., opened its new building in June, 1912. Mr. Hiller C. Wellman is librarian. The beautiful new building of the University of California at Berkeley was opened March 23, 1912. The Free Public Library of Elizabeth, N. J., and the University of Texas Library also opened imposing new buildings during the year.

LIBRARY APPOINTMENTS. Changes in library personnel of considerable interest occurred during the year. Frederick W. Jenkins became librarian of the library of the New York School of Philanthropy. There were appointments of two new State librarians, Miss Sallie Dorsey in Maryland, and Herbert E. Holmes in Maine. Mr. Lawrence J. Burpee, librarian of the Ottawa Carnegie Library, resigned for work in a different field. Mr. Purd B. Wright resigned from the librarianship of the Kansas City (Mo.) Public Library, and Mr. William Watson resigned from the librarianship of the San Francisco Public Library. Mr. William F. Yust, previously of the Louisville (Ky.) Free Public Library, has become librarian of the Rochester (N. Y.) Public Library; Mr. Joseph L. Harrison, previously of the Providence (R. I.) Athenæum, has become librarian of the Forbes Library of Northampton, Mass.

LIBRARY LITERATURE. New publications of value have been contributed as follows: Miss Hasse's new volume on Ohio in the *"Index of Economic material in documents of the States of the United States"*; Frank K. Walter's *Abbreviations and technical terms used in book catalogs and in bibliographies*; F. W. Faxon's bibliography *Literary annuals and gift books*; the New York School of Philanthropy's library bulletins; E. A. Savage's *Old English libraries*; Burchard's *Guide to the law and legal literature of Germany*; *"Bibliothèques, livres et libraires,"* a course of nineteen lectures given during the school year 1910-11 under the auspices of the École des Hautes Études Sociales. The *Library Journal* and *Public Libraries* are the two leading library periodicals in the United States and are issued monthly.

LIBRARY TRAINING SCHOOLS. There are eleven

library training schools in the United States. Their courses vary from one to two years and some schools admit only students who hold B. A. degrees. The schools are connected with libraries, universities, or State commissions. There are several brief summer library courses extended by library commissions or library schools with the purpose of giving systematic instruction to untrained library workers. Many libraries also give preliminary courses of training to fit applicants for work within their own grades of service.

CARNEGIE GIFTS. The total of library donations for the year was \$2,112,000. In individual library benefactions Mr. Carnegie gave approximately \$1,203,000, the largest gift, \$750,000, being made to the San Francisco Public Library. To the Carnegie Corporation of New York, Mr. Carnegie gave \$125,000,000 for the purpose of educational and library benefactions.

LIBRARY TRAINING SCHOOLS. See LIBRARY PROGRESS.

LIBYAN DESERT. See EXPLORATION.

LIEBMANN, OTTO. A German philosopher, died January, 1912. He was born at Löwenberg in 1840, and was educated at the universities of Leipzig and Halle. In 1872 he was appointed professor at Strassburg and after a service of ten years at that institution went to the University of Jena. His best known writings were as follows: *Vier Monate vor Paris*, a journal published anonymously (1871); *Kant und die Epigonen* (1865), in which, criticising the followers of Kant, he urged a return to their master and became the first of the Neo-Kantians; *Ueber die Freiheit des Willens* (1866); *Ueber den objektiven Anblick* (1869); and *Analysis der Wirklichkeit* (3d ed. 1900); *Gedanken und Thatsachen* (1882-99); *Klimas der Theorien* (1884); *Geist der Transcendentalphilosophie* (1901); *Grundriss der kritischen Metaphysik* (1901).

LIFEBOATS. See SAFETY AT SEA, and TITANIC, LOSS OF.

LIFE INSURANCE. See INSURANCE.

LIGHT. See PHYSICS.

LIGHTHOUSES. There were in 1912, ending June 30, the following aids to navigation maintained by the United States Lighthouse Service.

The number of lighted aids (4516) can be compared with the 4224 maintained in 1911, the increase being in all classes except light-vessel stations, the number of which was 51 as in the previous year. For light-vessels there were maintained 65 ships, 14 of which were relief vessels, and Congress in 1912 appropriated \$130,000, for one light vessel for general service, and \$250,000 for additional light-vessels for general service. Plans were under consideration for 4 light-vessels, one of which, a small ship, was for the Great Lakes, and one large first-class vessel, one large vessel and one small vessel for the Atlantic Coast. Of the light-vessels in service 33 had self-propelling machinery and 31 sail-power. Since the close of the fiscal year 10 additional lights were added to Alaska, making a total of 95 lights on the waterways of that Territory in November, 1912, as compared with 37 lights on January 1, 1910. There were in 1912, 265 aids to navigation as compared with 160 in 1910.

CROWN POINT LIGHTHOUSE. This light was reestablished August 7, 1912, supplementing the old structure built in 1858, located on the northeasterly point of the peninsula of Crown

Lighted Aids		Total
Hyper-radiant lights	1
First-order lights	57
Second-order lights	25
Third-order lights	70
Three-and-a-half-order lights	19
Fourth-order lights	338
Fifth-order lights	148
Sixth-order lights	88
Range-lens lights	23
Reflector lights	103
Lens-lantern lights	590
Post-lantern lights	2,552
Electric lights without lens	13
Light-vessel stations	51
Gas-lighted buoys	255
Gas and whistling buoys	40
Gas and aerial bell buoys	51
Float lights	92
Total	4,516
Lights on fixed aids	4,027
Lights on floating aids	489
Total lighted aids	4,516
Unlighted Aids		
Fog signals, engine power	252
Fog signals, clock-work	235
Fog signals, hand-power	22

Submarine signals	43
Buoys, whistling (unlighted)	84
Buoys, bell (unlighted)	205
Buoys, iron	1,833
Buoys, spar (wood)	4,159
Daymarks, beacons, etc.	1,474
Total unlighted aids	8,308
Grand total	12,824

Point off Port Henry, N. Y., and marking the turn of the dark, narrow channel at Chimney Point in Lake Champlain. The new tower was built to commemorate the 300th anniversary of the discovery of Lake Champlain by Samuel de Champlain, and consists of an ornamental cylindrical tower of cut granite blocks surrounded by 8 Doric columns of the same material, which rest on a conical base of rough granite. The tower and columns support an ornamental cut granite cornice, gallery, watch room, and lantern parapet on which is placed a cast-iron fourth-order cylindrical helical bar lantern with an ornamental copper roof, the focal plane of the lantern being 61 feet above grade line. On the base of the new tower was built a pyramidal pedestal capped by the prow of a canoe which supports a heroic group in bronze with Champlain as the central figure, a gift of the Republic of France. The memorial lighthouse was built by joint action of the States of Vermont and New York, and was dedicated with formal ceremonies in the summer of 1912, the French ambassador and high officials of the United States government being present.

In the fiscal year ended June 30, 1912, new lighthouses were completed at the following points: Staten Island, N. Y.; New London Ledge, Conn.; Lloyd Harbor, N. Y.; Crown Point, N. Y.; Elbow of Cross Ledge, N. J.; Split Rock, Minn.; Rock of Ages, Mich.; Livingstone Channel, Mich.; White Shoal, Mich.; Cape Hinchinbrook, Alaska; and Alcatraz, Cal.

AIDS TO NAVIGATION ON THE PANAMA CANAL. In order to provide for night navigation on the Panama Canal an elaborate system of range lights, buoys, and beacons was worked out, and the erection of the various towers and other construction was in active progress during 1912. The general scheme involves a range of two lines at each end of the longer tangents to prolong the sailing line in order that the pilot

may keep his course up to the turning point. To secure these prolonged tangents it was necessary to clear a broad pathway of about 480 feet through the jungle until suitable locations were found for the lights. Where possible the various lighthouses made use of electricity, with acetylene for the floating buoys, and the towers and beacons, which were located in inaccessible places. The candle-power of the range lights varies according to the length of range from about 2500 to 15,000 candle-power, the most powerful lights naturally being those marking the sea channels at the Atlantic and Pacific entrances which are visible for between 12½ and 18 nautical miles. The beacons and gas buoys will have about 950 candle-power. The towers are of reinforced concrete construction, standardized where possible with varying forms of foundations, depending upon the site. They vary in height, depending upon their position, and owing to their isolated locations have in many instances presented difficulties of construction, as materials have had to be transported by hand.

A summary of the various aids to navigation to be used in lighting and buoying the Panama Canal is as follows:

One harbor light (west breakwater) lighted by incandescent oil vapor lamps or acetylene.

Fourteen range towers, lighted by electricity.

Eighteen range towers, lighted by acetylene gas.

Forty-six beacons, lighted by electricity.

Three beacons, lighted by acetylene gas.

Fifty-nine gas buoys, lighted by compressed acetylene dissolved in acetone.

One hundred spar buoys (unlighted).

Two gas buoys, lighted by acetylene. (Channel to terminal docks and dry dock at Cristobal.)

Seven nun buoys, unlighted. (Channel to terminal docks and dry dock at Cristobal.)

LIGHTSHIPS. During the year a lightship with a reversible 4-cylinder 2-cycle Diesel engine of 220 horsepower was placed in service at the entrance of the River Elbe from the North Sea. This vessel was 173 feet in length by 25 feet 3 inches molded beam, 12 feet 6 inches draft, and had a displacement of 720 tons. She had a fine clipper bow and was both seaworthy and well equipped. Internal-combustion engines of 35 horsepower were used to drive the dynamos and supply power for other purposes.

LILIENCRON, ROCHUS, BARON. A German author, died March, 1912. He was born in Plön, Holstein, in 1820. He studied theology, jurisprudence, and philology at the universities of Kiel, Berlin, and Copenhagen. In 1847 he became *privat-docent* at Bonn. After holding various government positions he became in 1850 professor at Kiel and two years later was appointed to the chair of German language and literature at the University of Jena. While there he published with W. Stade, *Lieder und Sprüche aus der letzten Zeit des Minnesangs* (1954). Under the direction of the Historical Commission of Munich he began in 1858 the collection of folk-songs which culminated in his *Historische Volkslieder der Deutschen vom 13.-16. Jahrhundert* (4 vols., 1865-1869). For the same commission he also edited *Allgemeine deutsche Biographie*. In 1869 he was made a foreign member in ordinary of the Bavarian Academy of Sciences, and settled in Munich. He removed to Schleswig in 1879.

LIME. The total production of lime in the

United States in 1911, according to figures of the United States Geological Survey, was 3,392,915 short tons, valued at \$13,689,054, compared with 3,505,954 tons, valued at \$14,088,039 in 1910; a decrease of 113,039 tons. The total number of producers reported in 1911 was 1089, compared with 1126 in 1910. This decrease in the number of producers was due partly to the inactivities of small kilns operated by farmers for burning lime for local use as fertilizer, and partly to the tendency of the industry toward concentration of plants into fewer and larger units. In 1911, 44 States and Territorial possessions, including Hawaii and Porto Rico, reported production of lime, while in 1910 lime was produced in 43 States. The five leading States in 1911 in order of their production were Pennsylvania, Ohio, Wisconsin, West Virginia, and Missouri. Pennsylvania produced 841,723 short tons, valued at \$2,688,374; in Ohio, 405,562 tons were produced; in Wisconsin, 250,638; in West Virginia, 179,966; and in Missouri, 158,368. Nearly half the lime manufactured in the United States is used as structural material and the remainder, amounting to 1,750,000 tons, is consumed in chemical uses. The principal uses which lime has in building operations are in lime mortars and plasters, in gaging Portland cement mortars, concrete, and gypsum plasters, and as a white-wash.

The imports of lime into the United States in 1911 amounted to 6232 short tons, valued at \$55,255, and the exports were 207,232 barrels, valued at \$153,212.

LIPPE. See GERMANY.

LIQUORS. The term "liquors" includes four classes of alcoholic beverages: Wines, malt liquors, distilled liquors, and cordials. Under the head of "wines" are included various fermented beverages made from different kinds of fruits, such as wine, cider, blackberry wine, etc. Under the head of "malt liquors" are those products prepared by the fermentation of a mash made from various kinds of grain, such as ale, beer, porter, stout, etc. Under the head of "distilled liquors" are classed such products as rum, brandy, gin, etc., which are made by the distillation of some fermented product. And, lastly, under the head of "cordials," are grouped those compounded preparations made from brandy or wine, with flavoring matters and sugar, the well-known examples being, in part, blackberry cordial, Benedictine, apricot cordial, and similar products.

WINE. *Le Moniteur Vinicole* publishes the table on the next page for the wine production of the world for 1911 and 1910, which probably shows more nearly the production of wine in those two years than any previous statement.

From this table it is seen that there was a much greater production of wine in 1911 than in 1910, which apparently was a bad year all over the world. The production shown for the United States, of 28,600,000 gallons, is believed to be much below the actual production. But, it is impossible to obtain accurate figures on the total production of wine in the United States, as it is not under government supervision. The estimated production of wine in France for 1912 is considerably higher than for 1911, being 1,512,034,710 gallons.

AMERICAN FORTIFIED WINE. The production of fortified wine in the United States, according to the report of the commissioner of Internal Revenue, showed a very large increase

	1911 Gallons	1910 Gallons
France	987,482,100	627,652,608
Corsica	3,441,900	3,417,012
Algeria	194,340,894	185,100,388
Tunis	3,300,000	3,300,000
Italy	930,600,000	644,446,000
Spain	368,694,400	248,235,526
Portugal	61,690,000	44,000,000
Azores, Canary Islands, and Madeira	770,000	880,000
Austria	63,800,000	22,000,000
Hungary	83,600,000	55,000,000
Germany	57,200,000	13,200,000
Russia	94,600,000	28,600,000
Switzerland	20,900,000	5,600,000
Turkey and Cyprus	26,400,000	17,600,000
Luxembourg	1,980,000	550,000
Greece	50,600,000	55,000,000
Bulgaria	28,600,000	19,800,000
Servia	11,000,000	8,800,000
Rumania	41,800,000	13,200,000
United States	28,600,000	24,200,000
Mexico	560,000	198,000
Argentine Republic	79,200,000	57,090,000
Chile	63,800,000	50,600,000
Peru	4,290,000	1,980,000
Brazil	7,700,000	5,600,000
Uruguay	4,400,000	3,080,000
Bolivia	1,540,000	440,000
Australia	4,400,000	3,520,000
Cape of Good Hope.....	2,640,000	2,860,010

in 1912, the increase being almost entirely confined to the State of California, which is a large producer of wines of this type.

	Tax gal. brandy used 1911	1912	Wine gal. fortified 1911	1912
California	4,951,640	6,153,132	18,850,166	23,467,441
Hawaii	10,190	16,598	43,593	70,884
New York	133,392	142,422	548,208	595,009
N. Carolina	5,834	7,820	53,116	54,102
Misc.	461	1,331	8,684	11,190
Total U. S.	5,101,617	6,322,303	19,498,767	24,198,526

From this table it will be seen that there were produced in 1912 4,699,859 more gallons of fortified wines than in the year 1911, and 1,220,786 more gallons of brandy used. This large increase of production was principally confined to the sherry, angelica, and muscatel types, there being practically twice as much angelica and muscatel produced in 1912 as in 1911. In 1910 there was a very considerable production of fortified sweet wines in the State of Virginia, but during 1911 and 1912 practically no wine of this type was made in that State. The production of Scuppernong wine is shown by the report of the commissioner to be confined to the fourth district of North Carolina, 54,102 gallons being produced in 1912, and 53,116 gallons in 1911.

FERMENTED LIQUORS. The production of fermented liquors during the year 1912 was 62,176,694 barrels, or a decrease of 1,106,429 barrels, as compared with the product of 1911, a decrease of 33,192,870 gallons, or, approximately one-third of a gallon per capita less. There was also a decrease in the number of breweries operating, there being 1461 breweries in 1912, or 31 breweries less than in 1911. Undoubtedly this decrease in the number of breweries operated was due to the passage of prohibition laws and the closing of breweries in certain States. As compared with 1910 the contrast is even greater, there being 197 less breweries in operation in 1912 than in 1910.

DISTILLED SPIRITS. During 1912 there were 820 distilleries in operation in the production of distilled spirits, a decrease of 103 from the previous fiscal year. The decrease

in number has been steady in recent years. Four years ago there were in operation 1587 registered distilleries, or nearly twice as many as at the present time, the falling off being due very largely to the extension of the prohibition laws, especially in the southern States, where many small distilleries were in operation a few years ago. The total production of distilled spirits, exclusive of fruit brandy, in 1912, was 178,249,985 taxable gallons, as against 175,402,395.5 gallons in 1911, an increase of 2,847,589.5 gallons. Further, there was an increase of tax-paid spirits of 1,200,511 gallons during the fiscal year 1912. This increase in the amount of distilled spirits, compared with the number of distilleries in operation, shows a very marked tendency towards larger distilleries. The table given below shows the production of the various kinds of distilled spirits in the United States for the past four years. It shows that the principal increase in production during the past year was in the manufacture of commercial alcohol and neutral or cologne spirits, with a very slight reduction in the amount of production of whisky. There is still included under the head of "whisky," as has been for the past two years, a large amount of distilled spirits made from molasses, and as yet the case pending in the courts involving this question has not been brought to a decision:

Year	Rum	High Wines	Gin
1909	1,952,374	221,277	2,482,743
1910	1,730,551	206,534	2,985,435
1911	2,077,904	165,017	3,345,370
1912	2,266,063	131,001	3,577,861

Year	Whisky	Alcohol	Commercial Alcohol
1909	70,152,174	42,583,108	16,078,082
1910	82,463,894	50,703,845	15,841,370
1911	100,647,155	44,205,329	21,780,391
1912	98,209,574	45,869,685	24,492,304

The bottling of whisky in bond has not shown the same increase during the past year as has been noted in previous years, but instead, a very appreciable reduction, 9,752,486 gallons being withdrawn for this purpose during the past year, against 10,631,091 gallons in 1911. There was also a decrease in the amount of distilled spirits bottled in bond for export, 41,188.1 gallons being bottled in 1911 as against 39,775.6 in 1912.

There is still a very large amount of illicit distilling in the United States, 1443 such distilleries being seized and destroyed in 1912. Of these, 213 were in Alabama, 402 in Georgia, 90 in Kentucky, 267 in North Carolina, 162 in South Carolina, 104 in Tennessee, 151 in Virginia, and 34 in Florida. These were all small distilleries.

The table on the next page shows that the raw material used in Germany for the production of distilled spirits is quite different from that used in the United States, potatoes being the principal raw material in Germany, while corn and molasses are the principal sources in the United States. The very large production of alcohol from potatoes shows the opportunity in this country to develop this industry.

CORDIALS. The ruling of the board of food and drug inspection of the Department of Agriculture prohibiting the importation of absinthe into the United States went into effect on October 1, 1912. This ruling also prohibits its shipment in interstate commerce, on the ground

PRODUCTION OF DISTILLED SPIRITS IN GERMANY FROM VARIOUS MATERIALS

Year	Potato Gallons	Yeast Gallons	Grain Gallons	Molasses Gallons	Miscel. Gallons
1902-03	69,165,000	11,400,000	4,940,000	2,300,000	496,000
1903-04	79,460,000	11,940,000	6,114,000	2,430,000	601,000
1904-05	75,000,000	12,600,000	7,420,000	2,820,000	967,000
1905-06	91,760,000	12,600,000	6,930,000	2,170,000	810,000
1906-07	72,940,000	12,420,000	7,160,000	2,320,000	784,000

1909-10	76,800,000	9,360,000	6,090,000	1,990,000	992,000
1910-11	78,200,000	8,040,000	6,170,000	2,300,000	732,000

that it contains an added deleterious substance. As yet, no prosecution has been brought on the interstate shipment of this cordial, but its sale is practically restricted now to the States where a small amount is produced. The ruling practically means the end of the production and consumption of absinthe in the United States, and is in line with action which has been taken in other countries where its use has been found to be very harmful.

LIQUOR REGULATION. As only fourteen States held regular sessions of their legislatures in 1912 the volume of laws relating to liquor traffic was not as large as in 1911. Nearly all the legislatures in session, however, passed some measures aimed to restrict or regulate the traffic and in several of the States votes were taken on amendments to the liquor laws. A brief summary of the most important events related to the liquor regulation is given below. Additional notes will be found under the States in their regular order.

The legislature of Arkansas passed a resolution in the legislative session of 1912 submitting a prohibitory constitutional amendment to a vote of the people. This vote was taken in September and resulted in a majority against prohibition of 15,968. Under the local option law passed by the California legislature in 1911, 80 supervisal districts in California adopted no license during the succeeding 18 months, closing thereby 818 saloons in northern and central California. The vote on the question of State-wide prohibition in Colorado in November, 1912, resulted in a victory for the liquor interests. The vote under the local option law of Connecticut, which was taken in October, 1912, resulted in a victory for no license in 94½ towns and a victory for license in 73½ towns. The Tippins bill, passed by the legislature of Georgia, providing for the suppression of the near-beer establishments in that prohibition State, was vetoed by the governor. The Kentucky legislature, in the session of 1912, adopted an amendment to the county unit local option law of that State making the law apply to all counties uniformly. Heretofore the law exempted from its operation all cities having a population of 3000 or more. The amended law permits each county as a unit to vote on the liquor question, regardless of the size of any cities within the bounds of the county. In the Maine campaign of 1912 the Democratic State platform declared it "to be their purpose to use all possible endeavor to amend the constitution" by adding a local option provision. The Republican platform declared: "The people, by majority vote, have declared against the abrogation of the amendment of the constitution relating to Prohibition. We accept the verdict of the people and are emphatically opposed to all attempts to reopen this question in any

form. We demand that the statutes be strictly and honestly enforced. Ours is a government of law. The law must be respected." On this platform the Republican candidate for governor was elected by a plurality of 3295 and a Republican majority in both houses of the legislature was elected.

In the 1912 session of the Maryland legislature, a local option bill was passed by the House of Representatives but defeated in the Senate by one vote. As a result of the elections under the local option law in Massachusetts, of the 33 cities of the State, 18 are under license and 15 are under no license for the year beginning May 1, 1912. Of the 320 towns of Massachusetts for the same year, 73 are under license and 247 are under no license. A number of minor provisions passed by the legislature of Mississippi makes possible the better enforcement of the prohibition law of that State. In New Mexico the lower house of the legislature in 1912 passed a prohibitory resolution by a vote of 27 to 15. The Senate, however, by a majority of 16 to 8, refused to concur in the resolution. In Pennsylvania, during 1912 the railroads of the State put into effect and operation the law prohibiting the sale of liquors on dining cars which, for a number of years, had been a dead letter. The result of the election in Tennessee in November, 1912, was an overwhelming indorsement of the State prohibition law. The vote on State-wide prohibition in West Virginia in November, 1912, resulted in a majority favorable to the amendment of 82,342, all but three counties of the State giving large majorities in favor of prohibition. The amendment goes into effect in 1914.

From a national standpoint the introduction to the so-called Kenyon-Sheppard bill in Congress was of the greatest importance. This bill is aimed to prevent the shipping of liquors for sale into States which by statute or by constitution prohibit the manufacture and sale of intoxicating liquors. The bill placed the enforcement of the law into the hands of the Interstate Commerce Commission. The measure received the support of nearly all the senators and representatives from States in which the sale and manufacture of liquors are prohibited and its passage was urged by religious organizations and societies formed to combat the liquor traffic.

The Anti-Saloon League was active in forwarding legislation for the restriction of the liquor traffic in all the States in which the legislatures were in session.

LISTER, JOSEPH, (FIRST) BARON. An English physician and scientist, died February 10, 1912. He was born at Upton, Essex, April 5, 1827. He was educated at London University, receiving the degrees of B. A. and M. B. in 1852. In the same year he became a Fellow of the

Royal College of Surgeons, England. For a short time after his graduation he acted as resident assistant in the University College Hospital. He then went on a holiday tour to Scotland and in Edinburgh saw so much that was important and instructive in relation to his profession that he obtained permission to extend his stay. He acted for a time as assistant to Professor Syme and afterwards as his house surgeon. This post he resigned in 1856 and was soon afterwards appointed assistant surgeon to the Edinburgh Royal Infirmary. He began in this position to teach as a private lecturer on surgery and continued to do this until his appointment to the chair of surgery in the University of Glasgow, in 1860. Lister had early been impressed with the great mortality which was at that time attendant upon surgical operations. Almost every operation was followed by what was known as surgical fever and even in the most successful cases the recovery was accompanied by a wound during the whole of the healing process. The probabilities of death even in the case of the most skillfully performed operation were so great that the benefit of anaesthetics was to a great extent nullified. Lister became acquainted with the great discovery of Pasteur that fermentation and putrefaction were not mere chemical changes resulting from contact with the atmosphere, but that they were due to the activities of minute living organisms and could not occur if these organisms were excluded. He at once grasped the surgical possibilities of this discovery and applied himself to the task of rendering them of practical applicability for the preservation of life. His first idea was to kill any germs which had already found admission to the wound and then to effect a protection against the entrance of more. After much consideration he selected carbolic acid as a germicide and cotton wool as a protective. The wounds were thoroughly washed out with carbolic acid and were covered with a protective dressing which was well secured by a bandage. The patients thus treated remained free from surgical fever and when the wounds were opened they were clean and free from irritation. The dressings were renewed with strict precautions against the admission of germs and the cases recovered without interruption.

The first public announcement of Lister's method was made in March, 1865. The next few years were devoted to efforts to simplify and bring it to perfection. His theories and expectations were received with incredulity in many quarters and in others with reasoned doubt, due largely to the stress which had been laid in some of Lister's early teaching on the necessity of excluding air as the universal germ carrier from all surgical or accidental injuries. The questions which thus arose were finally answered by Metchnikoff's discovery of what he called the "phagocytic" action of the white corpuscles of the blood, that is, of their power to envelop and destroy intruding organisms. It was rendered clear by research that the majority of floating organisms existing in the air were less dangerous to the patient than many kinds which might be derived from his own skin in the vicinity of the wound or from the hands of the surgeon or from instruments which had been imperfectly cleaned after a former operation. This resulted in the method of cleansing the skin with the greatest care, in the neighborhood of the part to be operated upon,

and also in similarly treating the hands of the surgeon and his assistants. The instruments and materials used in the operation were sterilized by boiling and were lifted out of the boiling solution into a bactericide one in which they remained immersed until the moment of use. The dressings then were made sterile and impervious to micro-organisms from without.

Improvements which Lister subsequently introduced included the use of catgut as a ligature for cut arteries. These ligatures were left to be absorbed by the tissues. The actual results of these discoveries and improvements in the treatment of wounds can never be precisely known, but it was asserted in 1900 that Lister had already saved more human lives than all the wars of the preceding century had sacrificed. Claim is made for him that "in regard to the cure of disease, relief of suffering, and the saving or prolongation of life, he has been the greatest of all benefactors to the human race."

In addition to the offices held by Lister noted above he was from 1877 to 1893 professor of clinical surgery at King's College, London. He was created a baronet in 1883 and a baron in 1897. Among his published writings are: *Remarks on a Case of Compound Dislocation of the Ankle, with other Injuries, Illustrating the Antiseptic System of Treatment* (1870); *On the Effects of the Antiseptic System of Treatment upon the Salubrity of the Surgical Hospital* (1870); and *A Contribution to the Germ Theory of Putrefaction and Other Fermentative Changes* (1875).

LITERATURE, ENGLISH AND AMERICAN. The statistics of book production as given in the *Publisher's Weekly* show a curious difference in the present trend of the two countries. In Great Britain there is a continuous and rapid increase in the number of books published every year; the number having risen from 6004 in 1901 to 10,804 in 1910, and to 12,067 in 1912. In the United States, on the other hand, there has been a decline since the high-water mark of 13,470 in 1910. The figures given in the accompanying table include new editions as well as new books, and a considerable part of the literature is shared by both countries; that is, of the 10,903 books published in the United States during the past year, 7975 were by American authors and 2928 by English and other foreign authors. Belles-lettres and poetry are apparently increasing in popularity in Great Britain and decreasing in America. In England more attention is being given to science, both pure and applied, and to educational and juvenile literature. In the list of American publications the most significant tendency is the multiplication of works in the allied fields of sociology, political economy, law and history.

FICTION. There has been a retardation in the flood of American fiction that had risen so high in previous years, but in England the increase continues. On the whole the quality has been improved by the weeding out of weak, offensive, and suggestive novels, although the year may not be signalized by the production of any one novel of the first rank. *Marriage*, by Herbert George Wells, marks a departure from the mood that has characterized his novels for several years; being a serious consideration of the question of a marriage under modern conditions and the gradual working out of a happy union through a difficult situation, not the usual

one of illicit love, but of the press of financial and social responsibilities. Another noteworthy English novel *Mrs. Lancelot*, by Maurice Hewlett, is almost the sole exception to the general tone of English fiction. Here is not a "triangle" but a quadrilateral plot, with a wild-rose lady and three lovers to give excuse for the author's lyrical rapture over her perfection. In contrast *Mrs. Ames*, by E. F. Benson, describes a plain, elderly woman who, by sheer force of character, dominates her circle in a little English town. One of the cleverest novels of this clever author, it carries more than a suggestion of a moral and is a brilliant work of satire, as well as a masterly portrayal of a middle-aged woman equal to that of *Mrs. Thompson*, by W. B. Maxwell. Mr. Maxwell's latest novel, *General Mallock's Shadow*, is a powerful story of the effect upon an old Indian officer made by an unjust accusation of cowardice, and the devotion of his two daughters who passionately believe in their father's honor. *A Rogue's March*, by Evelyn Tempest, is also a story of India, and of moral obliquity; although never offensively didactic its morality is unimpeachable. *London Lavender*, by E. V. Lucas, is a whimsical and discursive but entertaining story of a young married couple in a London lodging-house. *Manalive*, by Gilbert Keith Chesterton, is a parable of protest against conventionality. Beatrice Harraden, has equalled her early successful novel *Ships That Pass in the Night* in *Out of the Wreck I Rise*, a study of two women and a man, each of the three characters being a distinct and interesting type. William J. Locke tells in his usual engaging vein of *The Joyous Adventures of Aristide Pujol*, a sunny child of Provence, gallant and gay, unscrupulous, and yet beneficent. Miss Ethel Sidgwick is the author of three unusual novels: *Promise*, *The Gentleman*, and *Herself*, the first the boyhood of a musical genius (suggesting by piquant contrast *Jean Christophe* by Romain Roland), the second the tale of a young Scotchman in Paris, and the last, *Herself*, just issued, the life of a young Irish girl thrown on her own resources at seventeen. *Between Two Fires* is also the work of a young woman writer, Miss Clo Graves, under

the pseudonym of "Richard Dehan"; the scene is that of the Crimean War and Ada Merling is a transcript from the gentle life of Florence Nightingale. *The Marriage of Captain Kettle*, by Cutcliffe Hyne, continues the career of a popular hero. The romance of the verge of empire is ever attractive to Englishmen, and it has been well represented in 1912 by *Guinea Gold*, by Beatrice Grimshaw, who stages her story on Samarai, the little island off the southeastern coast of New Guinea, and in the gold fields of the interior; *The Veldt Dwellers*, by F. Bancroft, the story of an English family in the Bushveld of the northern Transvaal during the Boer war; *Twist Land and Sea*, by Joseph Conrad; *Pike and Carronade*, by Major G. F. MacMunn, adventures on the Indian frontier, in Burma and in Africa; *The Street of the Flute-Player*, by H. de Vere Stacpoole, a story of Athens and the Athenians; *A Candidate for Truth*, by John Davys Beresford, is a continuation of the life story of Jacob Stahl, and a remarkable study of character; *Monsieur Carnifex*, by Alexander Crawford, about a troubled Balkan kingdom, with plenty of stirring incidents; *One Crowded Hour*, by Sydney C. Grier, a story of two Sicilies; *King Errant*, by Flora Annie Steel, whose hero is Zahir-uddin Mahomed, the founder of the dynasty of the Great Moguls, and *The Lost World*, in which Sir Arthur Conan Doyle not only transports the reader to South America, but to a prehistoric plateau full of survivals of Jurassic beasts! Anne Douglas Sedgwick, author of *Tante*, follows that unusual novel with *The Nest* and Eric Parker produces in *The Promise of Arden* a delightful successor to *The Sinner and the Problem* of a decade ago. *The Turnstile*, by A. E. W. Mason, is a novel of politics and Arctic exploration. *The Port of Dreams*, by Miriam Alexander, is a story of the Jacobite conspiracies of the eighteenth century in Ireland. *The Royal Road*, by Alfred Ollivant, gives the gray life history of a common London workman in a very different style from that of *Bob, Son of Battle*. *Come Rack! Come Rope!* by Robert Hugh Benson, gives us another idealized portrait of Mary Stuart. *The Lee*, by Rose Macaulay, is the £1000 prize story in a recent London competition. A few other English novels are worthy of note: *Cynthia; a Daughter of the Philistines* and *The Man Who Was Good*, by Leonard Merrick; *Erica*, by Mrs. Henry de la Pasture (Lady Clifford); *The Chequer Board*, by Lady Sybil Grant; *The Charwoman's Daughter*, by James Stephens; *Mary Pechell*, by Mrs. Belloc Lowndes; *The Palace of Logs*, by Robert Barr (Dublin and Canada in the days of George III.); *The Trespasser*, by D. H. Lawrence; *The Wind Among the Barley*, by M. P. Willcocks; *Three Women* by Netta Syrett; *Left in Charge*, by Victor L. Whitechurch, a pretty story of English village life. Eden Phillpotts brings out two novels, *The Lovers* and *The Forest on the Hill*. *The Green Overcoat*, by Hilaire Belloc, is a whimsical story of the adventures of a grave professor in a borrowed coat.

American novelists of the first rank are represented by Edith Wharton who, in a gloomy story, *The Reef*, tells of the career of a young American girl making a living for herself in Europe and snatching at happiness to a tragic end. *The Financier*, by Theodore Dreiser, is one of the author's painstaking studies of an unworthy character, not unlike *Sister Carrie*

and Jennie Gerhardt in the heavy, uncompromising method by which is built up a memorable picture of realistic power, that of a man whose life is devoted to money, its attainment, and the pleasures it will buy. Mary Johnston follows her successful novel *The Long Roll*, which has Stonewall Jackson as its central figure, with *Cease Firing*, another story of the Civil War, and Robert E. Lee is its protagonist. *The Price She Paid*, by the late David Graham Phillips, gives the career of a young woman qualifying herself for the opera. *The Streets of Ascalon*, by Robert W. Chambers, is his annual message to the richest, if not the best, American society. *The Wind Before the Dawn*, by Dell H. Munger, is a powerful story of the great Kansas prairies and of a domestic tragedy in the revolt of a generous woman against unbearable tyranny from her refined, but selfish, husband. *The Soddy*, by Sarah Camstock, is another story of the Western plains and a romance of faith in irrigation. *The Lady and Sada San*, by Francis Little, is a sequel to *The Lady of the Decoration*. *The Cry In the Wilderness*, by Mary E. Waller, is a story of life in the Canadian forest. *The Net*, by Rex Beach, is a tale of Sicily and New Orleans. *The Heroine in Bronze*, by James Lane Allen, deserts Kentucky for New York and tells a pretty story of a lovers' quarrel and misunderstanding. *Charge It*, by Irving Bacheller, is a sequel to *Keeping Up With Lizzie*, and *The Squirrel Cage*, by Dorothy Canfield, teaches the same wholesome lessons of simplicity of living. *The Voice*, by Margaret Deland, is a new Dr. Lavendar story. *A Man's World*, by "Albert Edwards" (Arthur Bullard), is a frank presentment of unpleasant phases of city life. *The Rich Mrs. Burgoyne*, by Kathleen Norris, less moving than *Mother*, is nevertheless a wholesome story. *The Penny Philanthropist*, by Clara E. Laughlin, a cheery presentment of a penny-a-day philanthropist and optimist. *Mirabel's Island*, by Louis Tracy; and *The Gate Openers*, by K. L. Montgomery, are meritorious tales.

Some of the most remarkable stories of the supernatural of recent years have been collected in *Pan's Garden*, by Algernon Blackwood; *The Moon Endureth, Tales and Fancies*, by John Buchan; *More Ghost Stories of an Antiquary*, by M. R. James; *The Stoneground Ghost Tales*, by E. G. Swan. Other short stories are: *Back Home*, by Irvin S. Cobb, delightful sketches of southern life; *The Unknown Quantity*, by Henry Van Dyke, a book of romances and some half-told tales; *Eve's Other Children*, by Lucille Baldwin Van Slyke, stories of the Syrians in Brooklyn; *May Iverson Tackles Life*, by Elizabeth Jordan, refreshingly humorous studies of girls in a convent; *Phoebe, Ernest and Cupid*, by Inez Haynes Gilmore, a picture of middle-class suburban family life in America; *Scientifico Sprague*, by Francis Lynde, stories of a deductive detective; *The Red Cross Girl*, by Richard Harding Davis.

ESSAYS AND LITERARY CRITICISM. It would seem that there has been a revival of the old contemplative essay during the past few years as well as the emergence of a new sort of essay, not at all contemplative; A. C. Benson's leisurely books being an example of the former style, and G. K. Chesterton's vivacious chains of antitheses of the latter. Parody as a subtle form of criticism appears in: *A Christmas Garland*, by Max Beerbohm, in which sixteen

contemporary English authors are cleverly imitated. The volume of essays entitled *The Inn of Tranquility*, by John Galsworthy, is divided into two parts: "Concerning Life," and "Concerning Letters," on both of which subjects the author speaks with ripe wisdom. *Letters From Solitude*, by Filson Young, are written from a pleasant village in Fontainebleau. *At Prior Park and Other Papers*, by Austin Dobson, are concerned with men, books, houses and works of art of the eighteenth century. *Among the Idolmakers*, by Lawrence Pearsall Jacks, is a witty and delightful bit of criticism of current fads in philosophy. *Arrested Fugitives*, by Sir Edward Russell, comprises both essays and addresses. *A Little of Everything*, by E. V. Lucas, contains sunny and genial chats upon a wide range of topics. *Studies and Appreciations*, by Darrell Figgis, includes much able and courageous literary criticism. *The Love of Nature Among the Romans*, by Sir Archibald Geikie, is sufficiently described in the title. *This, That and the Other*, by Hilaire Belloc, and *A Miscellany of Men*, by Gilbert Keith Chesterton, are alike in their power of awakening interest in everyday happenings, and the latter exhibits anew the wit, humor, and imagination that have distinguished his preceding volumes. *Walking Essays*, by A. H. Sidgwick, and *A Tramp's Sketches* by Stephen Graham, voice the joys of the open road. We note also among English essayists: Major Gambier-Parry who writes *Allegories of the Land*; Lord Rossmore who in *Things I Can Tell* gossips in a somewhat cynical way of the society of his time; William Stebbings whose second volume of *Truths or Truisms* is of unusual interest. *Men, Women and Minxes*, by Mrs. Andrew Lang, are charming essays with a prefatory note by the late Andrew Lang; *The Note-Books of Samuel Butler*, author of *Erewhon*, arranged and edited by Henry Festing Jones, are extremely interesting. *The Problem of Edwin Drood*, by Sir William Robertson Nicoll, again opens the discussion of *The Mystery of Edwin Drood*, and apparently settles for all time the fact that Drood was murdered. *English Epic and Heroic Poetry*, by W. MacNeile Dixon, professor of English poetry in the University of Glasgow, is a well-written discussion of an old-fashioned theme. *Books and Bookmen and Other Essays*, by Ian Maclaren, comprises a selection of pleasant chats on various subjects. Books by American essayists are numerous and noteworthy. Easily first is: *On Some of Life's Ideals: Three Essays*, by William James, a plea against a dull conventionality in regarding life. *The American Mind*, by Bliss Perry, considers all the printed records for 300 years a part of American literature, town-records, and diaries being included in his survey. *Time and Change*, by John Burroughs, is gently agnostic in its content and full of the serenity of a lover of woods and meadows. *Gateways to Literature and Other Essays*, by Brander Matthews, a volume of literary comment, criticises the German and some English authors for "putting the reader to unnecessary trouble." *A History of English Prose Rhythm*, by George Saintsbury, identifies quantity with accent or stress, and divides prose into feet. Other discussions are: *Humanely Speaking*, by Samuel McChord Crothers; *Is There Anything New Under the Sun?*, by Edwin Björkman; *The Provincial American and Other Papers*, by Meredith Nicholson, contain-

ing a good word for the country west of the Hudson River; *Nietzsche and Art*, by Anthony M. Ludovici, an attack on modern culture; *The Maker of Rainbows*, poetic dreams in prose by Richard Le Gallienne; *In Other Words*, by Franklin P. Adams; *The Posthumous Essays of John Churton Collins*, edited by L. C. Collins; *Morgan's Essay on the Dramatic Character of Sir John Falstaff*, edited by W. A. Gill, a most interesting reprint of a book published in 1777.

Students will find *The History of English Literature From Beowulf to Swinburne*, by the late Andrew Lang, especially valuable for its chapter on "Early Scottish Literature." Critical essays on poetry are: *Essentials of Poetry*, the Lowell lectures for 1911, by William Allan Nielson; *Poetry and Prose*, by Adolphus Alfred Jack; *Lectures on Poetry*, by John William Mackail; *A History of English Lyrical Poetry* from its origins to the present time, by Edward Bliss Reed; *Poets and Poetry*, by John Bailey; *The Greek Genius and Its Meaning to Us*, by R. W. Livingstone, treats of "Greek modernity."

DRAMA. Since plays, even the successful ones, are now being commonly published in English, the reader has at last an opportunity to make his own comparisons with contemporary foreign productions. The pessimistic and decadent plays of August Strindberg, hitherto known to most English readers by reputation alone, have many of them been translated from the Swedish during the year by Edwin Björkman and others, and besides we have equally depressing plays by the two Russian authors, Anton Tchekoff and Maxim Gorky. From the French we have a translation by Ruth Helen Davis of *The Daughter of Heaven* by Pierre Loti and Judith Gautier, a spectacular tragedy in a Chinese setting, produced at the Century Theatre in New York under the author's direction. In English drama, perhaps more courageous, certainly more robust, we have notable plays by several well-known authors: *The Terrible Meek*, a striking drama of the crucifixion, by Charles Rann Kennedy; *The War God*, a five-act tragedy, and *The Next Religion*, by Israel Zangwill; *The Pigeon*, a fantasy in three acts, and *The Eldest Son*, by John Galsworthy; *The Grey Stocking and Other Plays*, by Maurice Baring; *Milestones*, a play in three periods, *Honeymoon*, a comedy in three acts, *What the Public Wants*, a newspaper play in four acts, *Cupid and Common Sense* a play in four acts, with a preface on the "Crisis in the Theatre," *Polite Farces* for the drawing-room, all by the versatile and indefatigable Arnold Bennett. *Sherwood*; or *Robin Hood and the Three Kings*, poetical dramas in musical verse, by Alfred Noyes; *Five Little Plays*, by Alfred Sutro, clever society scenes; *Three Comedies*, by Ludvig, Baron Holberg; *The Nun of Kent*, a drama in five acts, by Grace Denio Litchfield; *Ginevra*, a play of medieval Florence, by Edward Doyle; *The Summons of a King*, by Philip Decker Goetz; *Plays of Protest*, by Upton Beall Sinclair; *Waters of Bitterness and The Olodhopper*, by S. M. Fox; *To-Morrow*, a play in three acts, and *Yankee Fantasies*, five one-act plays, by Percy MacKaye; *Embers*, one-act plays of contemporary life by George Middleton; *As a Man Thinks*, by Augustus Thomas; *Rust*, a play in four acts, by Algernon Tassin; *Jelfs*, by Horace Annesley Vachell, has been successfully staged. In dramatic criticism, we find noteworthy: *Plays and*

Players in Modern Italy, by Addison McLeod; *The Elizabethan Playhouse and Other Studies*, by W. S. Lawrence; *The Evolution of the English Drama up to Shakespeare*, with a history of the first Blackfriars Theatre; a survey based upon original records now for the first time collected and published by Charles William Wallace, part IV. of "Schriften der Deutschen Shakespeare-Gesellschaft."

POETRY. The poetry of 1912 is marked by a new note, not perhaps in the many thin volumes of lyrics that come with every year, but indubitably in the dramatic poems and rhymed monologues of John Masefield and Wilfrid Wilson Gibson. The writings of both are characterized by a passion for justice and a deep sympathy with suffering, especially of the working class. *The Everlasting Mercy* and *The Widow of Bye Street*, by John Masefield, are rhymed narratives, almost novels in verse; *Womenkind, Daily Bread and Fires*, by Wilfrid Wilson Gibson are dramatic monologues written in terse and direct style, and the simplest of words, but carrying a message of indignant revolt against injustice and tender sympathy with the poor. *The Singing Man, a Book of Songs and Shadows*, by Josephine Preston Peabody (Mrs. Lionel S. Marks), author of *The Piper*, repeats the note of championship of labor and ardent love for humanity. *The Stranger at the Gate*, by John Gneisenau Neihardt is of the same order. *Heralds of the Dawn*, by William Watson; *Scum o' the Earth and Other Poems*, by Robert Haven Schaffer; *The Candle and the Flame*, by George Sylvester Viereck; *Moods, Songs, and Doggerels*, by John Galsworthy, may be mentioned in this connection, as being, in some sense, poems of protest. More purely lyrical are: *The Book of Love*, by Elsa Barker, a woman's love for a man voiced in 250 poems; *Poems*, by Gerald Gould, simple, intense and sincere; *The Lute of Life*, by James Newton Matthews, poems by a physician; *The Inverted Torch and Other Poems*, by Samuel John Alexander, a true poet; *Ballads and Rhymes*, by the late Andrew Lang; *Little Gray Songs From St. Joseph's*, by Grace Fallow Norton, verses of unusual quality; *The Tragedy of Etarre*, a poem by Rhys Carpenter; *Poems*, by Francis Gray Ticknor, edited and collected by Michelle Outcliff Ticknor; *A Sheaf of Poems*, translations by Bayard Taylor and Lillian Bayard Taylor Kilani; *In a Portuguese Garden*, by Cara E. Whiton Stone; *Psyche*, by Francis Coutts; *Quiet Places*, by Corlas Wupperman; *The Sailor Who Has Sailed*, by Benjamin R. C. Low; *The Vista of English Verse*, compiled by Henry S. Pancoast; *In Vivid Gardens*, by Marguerite Wilkinson; *A Little Book of Homespun Verse*, by the late Margaret E. Sangster; *Poems*, by Harriet McEwen Kimball; *An Urban Faun*, by Jean Wright; *First Love*, by Louis Untermeyer; *Youth and Other Poems*, Charles Hanson Towne; *From the Lips of the Sea*, by Clinton Scollard; *Lays of the Lake*, by John C. Wright; *Madrigals*, by Thomas A. Daly, the author of *Canzoni*, who continues his delightful lyrics in the Italian-American dialect. *Songs From Books*, by Rudyard Kipling, is a collection of the bits of verse scattered through his prose-work. *Poems*, by the late Rosamund Marriott Watson, are beautiful and sincere. *Nature and Other Poems and A Wiltshire Village*, by Alfred Williams, a worker in the Swindon forges, remind the reader of Whitman or Blake, but

with a note of their own. We should mention also: *Uriel and Other Poems*, by Percy MacKaye; *The Unconquered Air*, by Florence E. Coates; *Poems*, by W. J. Cameron; *The Soul's Destiny*, by William Avon; *Poems, Mathematical and Miscellaneous*, by Henry Daw Ellis; and *The Lyric Year*, a collection of one hundred American poems, submitted in competition for prizes.

LITERARY BIOGRAPHY. The year has been rich in biographical studies, at least two great biographies having appeared, one on each side of the sea. *Mark Twain*, by Albert Bigelow Paine, is of unusual length, three volumes of 1700 pages each, the result of six years of arduous work. The interest of the subject, the most popular of American men of letters, for whom all the world felt a personal affection, and the honesty of the portrayal make it the leading work in this field published in the United States during the year. Much of the story is told in letters and journals. The *Letters of George Meredith*, edited by his son, fill 630 pages of intense interest to all students of literature and lovers of Meredith. A personality so vigorous and vital leaves its mark on all it touches, and especially on intimate correspondence. The letters cover fifty years of active life and disclose the fineness of the man to those who have known only the author. *The Three Brontës*, by May Sinclair, is an able characterization of the genius of the three Yorkshire sisters, and may well supplement Mrs. Gaskell's admirable *Life of Charlotte Brontë*. Another creditable work, by an Englishwoman, is: *Byron*, by Ethel Colburn Mayne, temperate in tone and scholarly in presentment; a critical, analytical, and yet sympathetic study of the poet. Two of his contemporaries are ably treated in: *Wordsworth Poet of Nature and Poet of Men*, by Prof. E. Hershey Sneath of Yale University; and in the painstaking annotations of Coleridge's poems: *The Complete Poetical Works of Samuel Taylor Coleridge*, edited by E. H. Coleridge. *George Gissing. A Critical Study*, by Frank Swinnerton, which the author calls a "record of one who failed," is pitched in the same low key as *The Private Papers of Henry Ryecroft*, by George Gissing, which appears in a new edition. *Lafcadio Hearn*, by Nina H. Kennard, contains some letters to his half-sister Mrs. Atkinson, and *Lafcadio Hearn*, by Edward Thomas, is a brief but coherent epitome of the essential facts. *Adam Lindsay Gordon and His Friends in England and Australia*, by Edith Humphries and Douglas Sladen, is the first memoir of the Australian poet published in England, although he died in 1870, and this year, too, we have the first complete editions of his work: *The Poems of Adam Lindsay Gordon*, arranged by Douglas Sladen, and *The Poems of Adam Lindsay Gordon*, edited by Frank Maldon Robb. *George Borrow, the Man and His Books*, by Edward Thomas, is a genial and pleasing biography of the author of *Lavengro*. Another *Life of George Borrow*, by Herbert Jenkins, has been compiled from unpublished documents, his works and correspondence. *Charles Dickens as Editor*, by R. C. Lehman, is chiefly composed of letters to William Henry Wills, for twenty years Dickens's sub-editor on *Household Words* and *All the Year Round*. *Robert Browning, the Poet and the Man*, by F. M. Sim, is sincere in appreciation and rich in material. *William Makepeace Thackeray*, by Sidney Dark, is a fresh and in-

dependent estimate in the series "Little Books on Great Writers." In the field of English literature we should also mention: *Letters of William Cowper*, edited and chosen by J. G. Frazer; *Keats, Shelley and Shakespeare. Studies and Essays in English Literature*, by S. J. Mary Suddard; *Great Writers of America*, by W. P. Trent and John Erskine; *Oscar Wilde*, by Arthur Ransome; *Five Types*, by G. K. Chesterton. Biographies of foreign writers are numerous as usual: *Nietzsche*, by Paul Elmer More; *Friedrich Nietzsche and His New Gospel*, by Emily S. Hamblen; *Ecce Homo*, by Friedrich Nietzsche; *Victor Hugo: His Life and Work*, by Arthur F. Davidson; *The Great Russian Realist*, by J. A. T. Lloyd, treating of Feodor Dostoevsky whose *Brothers Karamazov* is translated by Constance Garnett; *From Ibsen's Workshop*, translated by A. G. Chater, with an introduction by William Archer, who edited a complete edition of Ibsen's works. Some unusually delightful reminiscences are: *Our House and London Out of Our Windows*, by Elizabeth Robins Pennell; *A Personal Record*, by Joseph Conrad, published in England under the title *Some Reminiscences*; *Hail and Farewell*; *Salve*, by George Moore, a singular autobiography in three volumes.

GENERAL BIOGRAPHY. The most important biographical achievement of the year is the completion of the great *Dictionary of National Biography* by the third and final volume of the *Second Supplement*, edited by Sir Sidney Lee, which includes those who died in the period between the death of Victoria, January 22, 1901, and the year 1911. The whole work contains memoirs of 31,757 persons of distinction in the British empire. There are 1635 new biographies considered in the two supplements issued since the 63 original volumes were completed in 1900. The dictionary, as a whole, is remarkable for its impartiality, accuracy, and comprehensiveness, as well as for its avoidance of superfluous praise. *The Girlhood of Queen Victoria*, in two volumes, by Viscount Esher, is a selection from her majesty's diaries between the years 1832 and 1840, culled from over a hundred journals written in her own hand, and of much historic and biographical interest in their revelation of the character and the education of the queen. *The Life of David Lloyd-George*, by H. Du Parc, is to consist of four volumes, the first of which has been issued. *The Life of General Booth* is a collection of estimates by various authors, including the Rev. R. J. Campbell, Lady Francis Balfour, W. H. Beveridge, and others, who recognize his practical genius and power of organization. The second volume of William Flavelle Monypenny's *Life of Benjamin Disraeli, Earl of Beaconsfield*, covers the ten years from 1837 to 1846, perhaps the most stirring decade of his life. The death of the author leaves this important work but half done. *Portraits and Sketches*, by Edmund Gosse, includes thirteen memoirs of contemporaries and friends. *Memories*, by Sir Frederick Wedmore, reflects pleasant and discreet reminiscences. *The Life of John Henry, Cardinal Newman*, by Wilfrid Philip Ward, is an important work.

Other English biographies worthy of mention are: a new life of *Edward Irving*, by Jean Christie Root; *Arthur James Balfour as Philosopher and Thinker*, by Wilfrid Short; *The Macready Diaries, 1833-1857*, edited by William Toynbee; *A Cosmopolitan Actor, David*

Garrick and His French Friends, by Frank A. Hedgecock; *Maitland of Lethington*, by E. Russell, a study of the life and times of the minister of Mary Stuart; *Letters From Madame Du Deffand to Horace Walpole*, filling three volumes, edited by Mrs. Paget Toynbee; *Recollections of a Court Painter*, by Henry Jones Thaddeus, recalls the courts of the nineteenth century; *Family and Heirs of Sir Francis Drake*, by Lady Elliott-Drake; *Lives of the Hanoverian Queens of England*, Vol. II., by Alice Drayton Greenwood; *Life and Work of William Pryor Letchworth*, by Josephus Nelson Letchworth; *The Three Sisters of Lord Russell of Killowen*, by Matthew Russell; *Margaret and Ethel MacDonald*, by J. Ramsay MacDonald; *The Life of Henry Hartley Fowler, First Viscount Wolverhampton*, by his daughter Edith Henrietta Fowler (Mrs. Robert Hamilton); *The Letter-Bag of Lady Elizabeth Stanhope, 1806-1873*, by A. M. W. Stirling; *Lord Chatham and the Whig Opposition* by D. A. Winstanley; *The Life of Sir Joseph Banks*, president of the Royal Society, by Edward Smith; *Francis Paget*, bishop of Oxford, by Stephen Paget and J. M. C. Crum; *The Life of Sir Howard Vincent*, by S. H. Jeyes and F. D. How; *My Own Times*, by Lady Dorothy Nevill; *The Fourth Generation*, reminiscences by Janet Ross; *Unseen Friends*, by Mrs. William O'Brien; *The Battle of Life, a Retrospect of Sixty Years*, by T. E. Kebbel, an octogenarian; *Sixty Years in the Wilderness*, by Sir Henry Lucy; *Thirteen Years of a Busy Woman's Life*, by Mrs. Alec Tweedie; *Correspondence of Sarah Spencer, Lady Lyttelton*, edited by Mrs. Hugh Wyndham; *Mary Sidney, Countess of Pembroke*, Sir Philip Sidney's favorite sister, by Frances Berkeley Young; *George Frederick Watts: the Annals of an Artist's Life*, by M. S. Watts.

In foreign biography, there are a few meritorious works that should be mentioned: *William the Silent*, by J. C. Squire; *The Life of St. Francis of Assisi*, by Father Cuthbert; *St. Francis of Assisi*, by Johannes Jørgenson; *The Letters and Journals of Count Charles Leiningen Westerbury (1848-1849)*, edited by Henry Marczali, written from prison and some of them in farewell under the shadow of the scaffold; *Marie Antoinette: Her Early Youth*, by Lady Younghusband; *Forty-five Years of My Life, 1770-1815*, by the Princess Louise of Prussia, edited by Princess Radziwill; *Carmen Sylva and Sketches from the Orient*, by Pierre Loti; *The Comedy of Catherine the Great*, by Francis Henry Gribble; *The Life of Michael Angelo*, by Romain Roland; *The Life and Times of Rodrigo Borgia*, by Arnold Matthew; *Caesar Borgia*, a study of the Renaissance, by John Leslie Garner; *The Life of Caesar Borgia*, by Rafael Sabatini; *Great Educators of Three Centuries*, by Frank Pierrepont Graves; *The Man Who Saved Austria: Baron Jellačić*, by M. Hartley; *Prince Talleyrand and His Times*, by Frederick Auguste Loliée; *Memoirs of Francesco Crispi*; *Letters and Recollections of Mazzini*, by Harriet Eleanor (Baillie-Hamilton) King; *Michael Heiprin and His Sons*, by Gustav Polak; *Hercules Brabazon Brabazon: His Art and Life*, by C. Lewis Hind.

In American biography we have a new portrait of Lincoln in *Personal Traits of Abraham Lincoln*, by Helen Nicolay, which supplements Hay and Nicolay's History. *Washington and Lincoln, Leaders of the Nation in the Constitutional Eras of American History*, by Robert

W. McLaughlin, is a comparison of the two great statesmen. *John Hancock*, by Lorenzo Sears, is the first biography that has ever been written of that famous patriot. *Marcus Alonzo Hanna: His Life and Work*, by Herbert David Croly, and *The True Daniel Webster*, by Sidney George Fisher, are worthy and readable works. Biographies of two remarkable American women are: *Frances Willard: Her Life and Work*, by Ray Strachey, and *The Life of Ellen H. Richards*, by Caroline Louisa Hunt. An arresting autobiography *The Promised Land*, by Mary Antin, tells the story of an immigrant girl in the New World. *Woodrow Wilson* by Hester E. Hosford, and *Woodrow Wilson: the Story of His Life*, by William Bayard Hall, give brief outline sketches of the President-elect. *The Story of J. Pierpont Morgan* is told by Carl Hovey, and that of *Alexander Hamilton*, by William Smith Culberson. *One Welshman: a Glance at a Great Career*, by the late Whitelaw Reid, is an able address on the life and character of Thomas Jefferson. *General Joseph Wheeler and the Army of the Tennessee*, by John Witherspoon Du Bose, is an enthusiastic tribute. Two men interested in education are discussed in: *Educational Views and Influence of DeWitt Clinton*, by Edward Augustus Fitzpatrick, and the *Life of Dr. D. K. Pearsons*, the friend of the small college, by Edward Franklin Williams. A charming autobiography is that of Yoshio Markino, *When I Was a Child*, giving an artless narrative of his home life and education in Japan. *Memories of James McNeil Whistler, the Artist*, by Thomas R. Way, gives most of its space to Whistler as a lithographer. *The Autobiography of an Individualist*, by James O. Fagan, while giving the experiences of an adventurous life, is also a plea for the open shop.

RELIGION. To the increasing interest in the problems of the moral and spiritual life the coming of Professor Rudolf Eucken to America may have contributed. Previous to his receiving the Nobel prize for idealistic literature in 1908, only one of Eucken's works had been translated into English, a volume published in 1878 with an introduction by President Noah Porter of Yale. Now we have all of his important works: *Life's Basis and Life's Ideals*, *Main Currents of Modern Thought*, *The Truth of Religion*, *The Problem of Human Life* and others. *The Meaning of God in Human Experience: A Philosophic Study of Religion*, by William Ernest Hocking, shows not only the equipment of a professor of philosophy, but also a sympathetic understanding of the greater mystics. *Civilization at the Cross Roads*, by John Neville Figgis, in a way the sequel or at least the supplement of his *The Gospel and Human Needs*, is courageous in its apologetic, and seeks rational foundation for religious beliefs. *Thy Rod and Thy Staff*, by Arthur Christopher Benson, tells the story of his conversion during illness from the "spectatorial" attitude toward life, looking at it through study windows, to a regenerating faith. *Within: Thoughts During Convalescence*, by Sir Frederick Younghusband, is another book produced by a severe illness. *Modern Problems*, by Sir Oliver Lodge, is mentioned here because of its ethical trend and the chapters on "The Nature of Time" and "Bal-four and Bergson." *Life's Tangled Thread*, by the Right Reverend W. Boyd-Carpenter, is a defense of life against the modern pessimist. *Creative Revelation*, four lectures on the

Miraculous Christ, by J. G. Simpson, deals with miracles ably and candidly from the orthodox standpoint. *An Outline of the History of Christian Thought Since Kant*, by Edward Caldwell, continues the sketch of the reformed theology begun by Dr. Arthur McGiffert in his *Protestant Thought Before Kant*. *The Golden Bough, Part V.: Spirits of the Corn and of the Wild*, by J. G. Frazer, continues the work on magic and religion and forms a rich storehouse of legend and folk-lore. *The Autobiography and Life of George Tyrrell*, arranged with supplements by Miss M. D. Petre, is of great interest in its contribution to the history of Modernism. *The Peasant Sage of Japan*, translated by Tadasu Yoshimoto, tells of the beautiful story of the life of Sontoku Ninomiya. Some practical aspects of religious effort are considered in the series of "Catholic Studies in Social Reform." III. *The Housing Problem*, edited by Leslie A. St. Toke, and IV. *The Church and Eugenics*, by the Rev. T. J. Gerrard.

Landmarks in the History of the Welsh Church, by the Right Reverend Alfred George Edwards, Bishop of St. Asaph, has an added interest because of the present movement for the disestablishment of the church in Wales. *The Eve of Catholic Emancipation: being the History of the English Catholics During the first Thirty Years of the Nineteenth Century*, by the Right Reverend Monsignor Bernard Ward, has reached its third and concluding volume. *Studies in Early Church History*, by Cuthbert Hamilton Turner, the brilliant lecturer and inspiring teacher at Oxford, will be welcomed.

HISTORY. Perhaps the most important characteristic of the work done in history during the last few years has been the revolution in the point of view from which history is written. There has been a shifting of emphasis from the purely political to the economic and social, from the sensational and exceptional to a consideration of the permanent forces which mold society, from fields remote from the interests and problems of to-day to a careful analysis of contemporary institutions and events. These tendencies have long been apparent among the advance guard engaged in historical research, but only recently have they attained popular literary expression. The best exposition of this change of attitude on the part of modern historians and the motives which have combined to bring it about is to be found in Professor James Harvey Robinson's volume of essays, *The New History*. The most important of the coöperative histories is the *Cambridge Medieval History*, planned by J. B. Bury, edited by H. M. Gwatkin and J. P. Whitney, which worthily succeeds *The Cambridge Modern History* now completed; the first volume presenting a view of the transition from the ancient to the medieval world. Another consideration of medieval times is given by Charles Robert Leslie Fletcher, in *The Making of Western Europe during the Dark Ages, 300-1000 A. D.* *Saints and Heroes to the End of the Middle Ages*, by George Hodges, is human and entertaining. *The Story of Europe*, by Samuel Bannister Harding and Margaret Snodgrass, is wide in its scope, and well adapted to the younger students of history. *The History of the People of the Netherlands*, by Petrus Johannes Blok, reaches its fifth and final volume, treating of the eighteenth and nineteenth centuries.

English history for 1912 is varied in interest but generally marked by a desire for a broad survey of the past achievements of the English

people in each of many fields of activity. The first volume of *A Modern History of the English People*, by R. H. Gretton, pictures the period from 1880 to 1898, with the promise of a second volume which shall bring the story down to the present day. *The Constitutional History of England*, by Thomas Erskine May, Baron Farnborough, is an able survey from the Whig standpoint. The older England is described in *The Romanization of Roman Britain*, by F. Haverfield. *The History of the British Nation from the Earliest Times to the Present Day*, by A. D. Innes, is a scholarly treatment of the subject in 1000 pages of careful analysis. Another topic of perennial interest is represented this year by *Puritanism in England*, by H. Henly-Henson, and *The Romantic Story of the Puritan Fathers* dealing with the English Boston and the history of the Puritans before they emigrated, by Albert Christopher Addison; *Warfare in England*, by Hilaire Belloc, is a little book on the strategical topography of England and, incidentally, of her campaigns. *The History of the British Foreign Policy from the Earliest Times to 1912*, by Arthur Hassall, is too brief for so extensive a survey, but it is accurate and gives the main events and their results. Among the histories of narrower scope we may mention *Robert Kett and the Norfolk Rising*, by Joseph Clayton, which tells the dramatic story of the revolt of the 16,000 peasants led by Kett in 1549; *The Minority of Henry the Third*, by Kate Norgate; *The History of the Royal Family of England*, by Frederick G. Bagshawe; *Studies in the History of English Commerce in the Tudor Period*, by A. J. Gerson, E. A. Vaughn, and Miss Neva R. Deardorff. Among the new books on Ireland we have a few of value: *The Beginnings of Modern Ireland*, by Philip Wilson; *The Irish Revolution*, by Michael J. F. McCarthy, vol. I treating of the murdering time from the Land League to the first Home Rule bill with an attempt at an impartial attitude; *The Land War in Ireland*, being a personal narrative of events in continuation of "A Secret History of the English Occupation of Egypt," by Wilfrid Scawen Blunt; *The Viceroy of Ireland*, by Charles O'Mahony. In Scottish history we have *The Roman Wall in Scotland*, by George Macdonald, an inquiry into the history of the Roman occupation of Britain; *Scotland and the French Revolution*, by Henry W. Meikle, an able treatment of the influence of the French Revolution upon the political and social unrest in Scotland and upon the Scottish church. We have some interesting recollections of Parliament in two books: *Letters and Character Sketches from the House of Commons*, by the late Sir Richard Temple, and *The House of Commons from Within*, by the Right Honorable Robert Farquharson. *The Decline of Aristocracy*, by Arthur Ponsonby, may be mentioned here, because of its chapters on "Lords and Commons" and on "The Aristocrat of To-day." *Cambridge and its Story*, by Arthur Grey, is a history of the evolution of the university.

In the field of French history we note with surprise that books on Napoleon are fewer than usual. *Napoleon's Last Campaign in Germany*, by F. Loraine Petre, is a partisan view; *Pitt and Napoleon*, by John Holland Rose, contains some new letters; *Joachim Murat: Marshal of France and King of Naples*, is a bit of vivid history by Andrew Hilliard Atteridge. *The Story of France*, by Mary MacGregor, extends to the Third Republic. *France of Joan of Arc*, by An-

drew C. P. Haggard, is a readable narrative. *The Russian People*, by Maurice Baring, tells in an interesting way of the country and its history with special reference to recent events and present conditions. *The Outline of the Russo-Japanese War, 1904-1906*, by Charles Ross, is a military history of the conflict. *Germany in the Nineteenth Century*, by John Holland Rose and others, is a critical and scholarly volume. *Arabic Spain: Sidelights on Her History and Art*, by Bernard and Helen M. Whishaw, is an interesting work, although the authors have no knowledge of Arabic and discover no new sources. *The Common People of Ancient Rome*, by Frank Frost Abbott, discusses such modernistic topics as the cost of living and governmental control of corporations and trades unions.

TRAVEL AND CONTEMPORARY HISTORY. The memorable geographical event of the year 1912 is the discovery of the South Pole, recorded in *The South Pole*, an account of the Norwegian Antarctic Expedition in the *Fram*, 1910-1912, translated by A. J. Chater from the records of Captain Amundsen, with an introduction by Dr. Fridtjof Nansen, who also publishes *In Northern Mists*, a history of our knowledge of the Arctic regions.

Now that Africa, north and south, has been opened to the tourist, and even the interior offers no considerable adventure, the number of books aiming to throw light upon the Dark Continent is rapidly increasing. In fact Africa has displaced Italy from the position it has long held at the head of the list of books devoted to travel and description. The annexation of Tripoli by Italy and the establishment of a French protectorate over Morocco during the year have drawn attention to the northern shore of Africa and at the instigation of the steamship lines it has become in recent years the most popular part of the Mediterranean tour. Among the books of the year treating this region with varying degrees of seriousness are: *Aspects of Africa*, historical, political, colonial, by Roy Devereux; *In French Africa*, by Miss Betham-Edwards; *About Algeria*, by Charles Thomas-Stanford; *Algiers, the Sahara and the Nile*, by Rachel Humphreys; *The Last Frontier*, by E. Alexander Powell; *African Shores of the Mediterranean*, by Cyril Fletcher Grant and L. Grant; *A Motor Flight Through Algeria and Tunisia*, by Mrs. Emma Augusta Ayer; *The Land of Veiled Women*, by John Foster Fraser; *Tripoli the Mysterious* by Mabel Loomis Todd; *The Holy War in Tripoli*, by G. F. Abbott. Of the other books on Africa there is only space to mention the following: *Africa of To-day*, by Joseph King Goodrich; *The Tailed Head Hunters of Nigeria*, by A. J. N. Tremearne; *A Resident's Wife in Nigeria*, by Constance (Belcher) Larymore, describes the heart of Africa; *Alone in West Africa*, an impressionistic record of travel, by Mary Gaunt; *My Soudan Year*, by E. S. Stevens; *A Colony in the Making: or Sport and Profit in British East Africa*, by Lord Cranworth; *In the Shadow of the Bush*, by P. Amaury Talbot, life in British Nigeria; *The Life of a South African Tribe*, describing the inner life of a Bantu people, by Rev. Henri A. Junod, the result of missionary labors in Portuguese East Africa, an extremely interesting work; *Animal Life in Africa*, by James Stephenson-Hamilton, the fruit of nine years' study; *Dawn in Darkest Africa*, by John H. Harris, organizing secretary of the Anti-slavery and Aborigines Protection

Society; *Among Congo Cannibals*, by the Rev. John H. Weeks; *Boyd Alexander's Last Journey*, by Herbert Alexander, containing the diary of the expedition of 1908-1910 to the Wadai-Darfur region where French and British possessions meet; *Trekking the Great Thirst*, sport and travel in the Kalahari desert, by Arnold W. Hodson.

Books on Turkey continue to abound, and we may venture the prophecy that the Balkan War will stimulate the production or the publication of many more next year. Among the volumes of 1912 dealing with the Ottoman empire and the Near East must be mentioned: Sir Edwin Pear's comprehensive discussion of racial and social questions, *Turkey and its People; Turkey and the Turks*, by Z. Duckett Ferriman; *Behind Turkish Lattices*, by Hester Donaldson Jenkins; *A Modern Pilgrim in Mecca and a Siege in Sanaa*, by A. J. B. Wavell; *Travels and Studies in the Nearer East*, vol. I, part 2, by Albert Ten Eyck Olmstead, B. B. Charles, and J. E. Wrench, in their search for Hittite inscriptions; *A Land that is Desolate*, an account of a tour in Palestine, by Sir Frederick Treves, Bart.; *To Mesopotamia and Kurdistan in Disguise*, by E. B. Soane; *Across the Roof of the World*, by P. T. Etherton; *The Strangling of Persia*, in which W. Morgan Shuster tells the story of his experience in trying to reform the finances of Persia; *Through Greece and Dalmatia*, by Emilie Isabel (Wilson) Barrington, a good account of a six weeks' trip; *Karakoram and Western Himalaya*, 1909: an account of the expedition of H. R. H. Prince Luigi Amedeo of Savoy, by Filippo de Filippi; *Narrative of the visit to India of their Majesties King George V and Queen Mary*, and of the Coronation Durbar held at Delhi December 12, 1911, by the Hon. John Fortescue; *The Malay Peninsula*, by Arnold Wright and Thomas H. Reid; *Through Shen-Kan*, by R. S. Clark and A. de C. Sowerby; *Empires of the Far East*, by Lancelot Lawton.

Japan of the Japanese, by Joseph Henry Longford; *The Japanese Nation*, by Inazo Ota Nitobé, the exchange professor from Japan; and *American-Japanese Relations*, by Kiyoshi Karl Kawakanu, are the leading books on Japan. There is a good *Story of Korea*, by Joseph Henry Longford. China, in the transition through which it is passing, evokes much comment on its precarious politics. *China and the Manchus*, and *The Civilization of China*, by Herbert A. Giles, and *The Passing of the Manchus*, by Percy H. Kent, treat of the recently deposed dynasty. Another able work is *Recent Events and Present Policies in China*, by J. O. P. Bland, joint author with E. Backhouse of *China Under the Empress Dowager*. Other important works on this subject are: *China's Revolution*, by Edwin Dingle, a succinct history of the main facts; *The New China*, by Henri Barel; *The Chinese Revolution*, by Arthur Judson Brown.

Books on continental travel are fewer than usual. On Italy, always a tourist country, we have a few important travels: *A Wanderer in Florence*, by E. V. Lucas; *My Italian Year*, by Richard Bagot, really the result of twenty years of residence; *The Cities of Lombardy*, by Edward Hutton; *The Story of Lucca*, by Janet Ross and Nelly Erichsen. Passing to other Mediterranean cities we have: *Monaco and Monte Carlo*, by Adolph Smith, and *The Romance of Nice*, by J. D. E. Loveland. "France" usually means Paris, as we find in *Byways of Paris*, by Georges Cain; *Old Paris*, by Henry C.

Shelley; *Sensations of Paris*, by Rowland Strong; *My Parisian Year*, by Maude Annesley; but we have also *Rambles Around French Chateaux*, by Mrs. Francis M. (Parkinson) Gostling; *From the South of France*, by Thomas A. Janvier; *The Spell of France*, by Caroline Atwater Mason; *In the Heart of the Vosges*, by Mathilda Barbara Betham-Edwards; *In the Carpathians*, by Mrs. Lion Phillimore. Other European travels include: *Letters from Finland*, by Rosalind Travers; *Home Life in Norway*, by H. K. Daniels; *Two Visits to Denmark*, by Edmund William Gosse; *Germany and the German Emperor*, by Herbert Perris; *German Memories*, by Sidney Whitman; *Modern Germany*, by J. Ellis Barker (revised to 1912); *England and Germany*, by leaders of public opinion in both empires collected by Dr. Ludwig Stein, editor of *Nord und Süd*; *The Tourists' Russia*, by Ruth Kedjie Wood; *Undiscovered Russia*, by Stephen Graham; *Russia in Europe and Asia*, by Joseph King Goodrich.

The imminent opening of the Panama Canal has attracted attention to Latin America and turned the tide of tourists southward. James Bryce, now completing his term of service as British Ambassador at Washington, gives his *Observations and Impressions* of South America, opening with a vivid picture of the Panama Canal, and describing his tour down the west coast to Peru and across to Argentina and Brazil. *Panama* by "Albert Edwards" (Arthur Bullard), is an interesting account of the canal, the country, and the people. The etchings of Joseph Pennell, published in *Pictures of the Panama Canal*, show that engineering works have more beauty than artists generally allow. *Guiana: British, Dutch, and French*, by James Rodway; *Lands of the Southern Cross*, by the Rev. Charles Warner Currier; and *In the Amazon Jungle*, by Algot Lange, are descriptive books of travel in South America.

Descriptions of North America are principally of the cold regions in Canada and Alaska: *Among the Eskimos of Labrador*, by Samuel King Hutton, a series of vivid descriptions; *Through Trackless Labrador*, by Hesketh Vernon Hesketh Prichard; *Reminiscences of the Yukon*, by Stratford Haliday Robert Louis Tollemache; *Canada To-Day and To-Morrow*, by Arthur E. Copping; *The Canadian Rockies*, by Arthur P. Coleman; *Sport in Vancouver and Newfoundland*, by Sir John Godfrey Rogers; *The Wonderland of the American West*, by Thomas D. Murphy; *The Spell of the Rockies*, by Enos A. Mills; *Saddle and Camp in the Rockies*, by Dillon Wallace; *My First Summer in the Sierra*, by John Muir. *America Old and New*, by J. Nelson Fraser, is the result of a rapid trip from west to east across the United States. Three books on Australia are worthy of mention: *Across Australia*, by Baldwin Spencer; *Sport and Pastime in Australia*, by Sir George Houston Reid; *Pioneers in Australasia*, dealing largely with Australia, by Sir Harry Johnston.

Other books of the year, especially those of a technical character, will be found in the special bibliographies attached to such articles as AGRICULTURE, ANTHROPOLOGY, EDUCATION FOOD AND NUTRITION, PHILOLOGY, PHILOSOPHY, POLITICAL ECONOMY, PSYCHOLOGY, SOCIOLOGY, etc.

LIVESTOCK INDUSTRY. See STOCK-RAISING.

LIVINGSTONE, LEONIDAS FELIX. An American public official and member of Congress, died February 11, 1911. He was born in Newton County, Ga., in 1832, and was educated in the public schools. He served throughout the Civil War as a private, and after its close engaged in farming. He was a member of the Georgia legislature for several years. In 1891 he was elected to the Fifty-second Congress. He was reelected and served successive terms until 1910, when he was defeated for reelection to the Sixty-first Congress.

LI YUAN HUNG. Vice-President of the Chinese Republic, assassinated April 2, 1912. Little is known of his history previous to the outbreak of the revolution at Wuchang. He was at one time a naval officer and afterwards entered the army, becoming well versed in military affairs. He was commander-in-chief of the rebel forces at the time of the outbreak at Wuchang. He was particularly active in protecting foreigners. See CHINA.

LOAN AND TRUST COMPANIES. The report of the Comptroller of the Currency summarized the statistics for 1410 loan and trust companies with aggregate resources on June 14, 1912, of \$5,107,000,000. These institutions were distributed as follows: New England States, 181, with aggregate resources of \$605,038,000; Eastern States, 494, with \$2,958,852,000 resources; Southern States, 271, with \$251,940,000 resources; Middle Western States, 320, with \$1,180,004,000; Western States, 70, with \$45,886,000; and Pacific States, 74, with \$65,720,000. The aggregate resources of the 81 loan and trust companies of New York City greatly exceeded those of any other community, being \$1,821,889,000. The 278 loan and trust companies of Pennsylvania reported resources amounting to \$750,696,000; and those of Illinois and Massachusetts ranked next in order. The principal item of resources included loans and discounts of \$2,711,241,000, of which nearly one-half were based on collateral security other than mortgages; and nearly 20 per cent. on real estate, including mortgages. The investments included bonds and other securities amounting to \$1,219,139,000. In this were included a small sum of United States bonds, State, county, and municipal bonds amounting to \$202,293,000; railroad bonds of \$380,190,000, and bonds of other public service corporations of \$208,673,000. The individual deposits included \$2,319,055,000 subject to check, \$910,850,000 in savings accounts, \$395,983,000 in certificates of deposit, and \$48,688,000 in certified and cashiers' checks. The cash on hand was \$282,151,000, being 7.67 per cent. of the individual deposits. Compared with 1908 there was an increase of 568 in the number of trust companies reporting to the comptroller; capital stock, which amounted to \$418,985,000, not including surplus and profits of \$560,741,000, had increased 50 per cent. during four years; individual deposits had increased over 96 per cent.; and aggregate resources over 78 per cent.

LOCHREN, WILLIAM. An American jurist, died January 28, 1912. He was born in County Tyrone, Ireland, in 1832. In 1834 he came with his parents to the United States. He grew up and was educated in Vermont. After studying law he was admitted to the bar in 1856, and in the same year removed to Minne-

sota. He served in the Civil War from 1861 to 1863. In 1869-70 he was a member of the Minnesota Senate. He was appointed judge of the first judicial district of Minnesota in 1881, serving until 1893, when he was appointed United States commissioner of pensions. In this office he remained until 1896. While commissioner of pensions he came into national prominence through his efforts to remedy many abuses in the Pension Department. In 1896 he was appointed United States district judge for the District of Minnesota. The famous Northern Securities case was before him. He was a Democrat in politics.

LOCKS. See CANALS.

LOEB, MORRIS. An American chemist and educator, died October 8, 1912. He was born in Cincinnati in 1863, and graduated from Harvard University in 1883. He studied at the University of Berlin, taking a doctor's degree from that institution. He afterwards carried on studies at the universities of Heidelberg and Leipzig. Returning to the United States he became in 1888 assistant in chemistry at Harvard University. He was *docent* in chemistry at Clark University from 1889 to 1891. From 1891 to the time of his death he was professor of chemistry at New York University and was director of the laboratory of that institution from 1895 to 1906. He was founder and sole maintainer of the Solomon and Betty Loeb Convalescents' Home, and was identified with many other philanthropic enterprises, chiefly for the benefit of those of the Jewish race. In 1911 he presented \$50,000 to Harvard University for the benefit of the Walcott Gibbs Chemical Library. He was a member of the board of education of New York City. Dr. Loeb was one of the most eminent chemists in the United States and contributed many important articles on chemistry and allied subjects to technical journals.

LOOMIS, EBEN JENKS. An American astronomer, naturalist, and writer, died December 2, 1912. He was born in Oppenheim, N. Y., in 1828, and was educated at the Lawrence Scientific School. While he was still a student the *American Ephemeris and Nautical Almanac* was founded in Cambridge and he became an assistant in the editing of this work, and senior assistant from 1859 to 1900, when he retired. He was a member of the United States Eclipse Expedition to the west coast of Africa in 1889. In addition to his scientific work he was an accomplished naturalist and was also a specialist in English literature, particularly in the works of Shakespeare. He wrote also many poems of great merit. He was the author of *Wayside Sketches* (1894); *An Eclipse Party in Africa* (1896), and *A Sunset Idyl, and Other Poems* (1903). He contributed to various papers and periodicals.

LOOS, CHARLES LOUIS. An American scholar and educator, died February 27, 1912. He was born in Wörth, Alsace, in 1823. He came with his father to the United States when still a boy, and in 1849 he was ordained to the Christian (Disciples) ministry. In 1857-8 he was president of Eureka College, Illinois, and from 1858 to 1880 was professor of ancient languages

at Bethany College. In the latter year he was chosen president of Kentucky University. He served in this position until 1897, when he resigned and became professor of Greek in that institution. He was president of the Foreign Christian Missionary Society in 1889.

LOTT, PIERRE. See DRAMA.

LOUISIANA. POPULATION. According to the Census Bureau statistics issued in 1912, out of a total population of 1,656,388 in 1910, the foreign-born whites numbered 51,807, compared with 51,853 in 1900. The largest number of these, 20,253, came from Italy; from Germany, 8897; from France, 5299; from England, 2056. Other European countries are represented by smaller numbers. The city of New Orleans, with a population of 339,075 in 1910, had a foreign-born white population of 27,711. In 1900 it was 29,569. The negroes in the States in 1910 numbered 715,874 and the mulattoes 152,577. In 1890 the negroes numbered 559,193 and the mulattoes 90,953.

AGRICULTURE. The acreage, value, and production of the principal crops in 1911 and 1912 are shown in the following table:

		Acreage	Prod. Bu.	Value
Corn	1912	1,805,000	32,490,000	\$32,490,000
	1911	1,800,000	33,300,000	23,310,000
Oats	1912	34,000	707,000	361,000
	1911	40,000	840,000	546,000
Rice	1912	352,600	11,812,000	10,985,000
	1911	371,200	11,693,000	9,237,000
Potatoes ...	1912	20,000	1,460,000	1,212,000
	1911	22,000	1,518,000	1,518,000

	1911	24,000	a 31,000	372,000
Tobacco	1912	500	b 150,000	45,000
	1911	500	b 225,000	69,750
Cotton	1912	c 361,123
	1911	c 395,000

a Tons. b Pounds. c Bales.

MINERAL PRODUCTION. The total production of petroleum in the State in 1911 was 10,720,490 barrels, a marked increase over the production of 1910, which was 6,841,395 barrels. By far the largest quantity was produced in the Caddo fields, 6,995,828 barrels. In the Vinton fields, which largely increased the production of 1911, were produced 2,454,103 barrels, compared with a production of only 26,701 barrels in 1910. From the Jennings fields were produced 1,180,177 barrels, a slight decrease from the production of 1910.

MANUFACTURES. The Thirteenth Census included statistics of manufactures in the State for the calendar year 1909. The industries giving employment to the largest number of wage earners in the State are those connected with the lumber and timber products. In these industries 46,072 persons were employed.

EDUCATION. The total enrollment for white pupils in the State in the school year 1911-12 was 201,297, and for colored pupils, 87,055. Of those enrolled in the white schools, 184,507 were in the elementary grades, and 16,790 in the high school grades. The total number of teachers employed was 6444, of whom 5267 were white and 1177 colored. The number of school-houses in use during the year was 3505. The average salary of male white teachers per month was \$79.10 and of female teach-

	Number or Amount 1909	1904	P. C. of Inc. 1904-'09
Number of establishments	2,516	2,091	20.3

ers, \$52.45. The number of white children in the rural schools was 103,852. The total disbursements for educational purposes in the State during the year was \$5,382,590.

POLITICS AND GOVERNMENT

There was much of political interest in the State during the year. A spirited campaign for governor was carried on for several months, which resulted in the nomination at the Democratic primary, January 23, of Luther E. Hall, candidate of the reform element of the Democratic party of the State. The total vote cast in the Democratic primary was about 120,000. In the State election in April, Hall received a vote of 50,591, compared to 4961 cast for Suthon, his Republican opponent. On August 28 the city of New Orleans voted for the commission form of government, by a vote of nearly 24,000 in the affirmative, and about 2100 against. Under this form the city will be governed by five commissioners, including the mayor. See MUNICIPAL GOVERNMENT.

The State legislature met in May, 1912, and on May 21, elected Joseph E. Randsell and Robert F. Broussard, Democrats, to the United States Senate, for the terms beginning 1913 and 1915, respectively.

Louisiana is so overwhelmingly Democratic that there was no doubt as to its vote for President in the election of November 5. A movement was started early in the year to hold a presidential primary for the Democratic nomination. The Democratic State central committee adopted a resolution to that effect, but it was withdrawn by the new committee, because of the unusual number of elections to be held during the year (seven, four primaries and three general elections), and the delegates to the Democratic national convention were elected at the regular convention held at Baton Rouge. The delegates were uninstructed. The delegates selected at the Republican convention were pledged to vote for President Taft. The election of November 5 resulted as follows: Wilson, 61,035; Roosevelt 9323, Taft 3834, Debs 5249. Wilson's plurality was 51,712.

The most important work of the legislature was the submission of a number of constitutional amendments, nineteen in all, most of which proposed changes in the tax and assessment system of the State, separating property for State and local taxation. These amend-

ments were voted down, as was also an amendment allowing women to serve on school and charity boards. A subsequent investigation of the vote on the amendments in New Orleans by the grand jury showed that a majority of the tally sheets had been changed and altered. Many thousand votes were altered by the election commissioners and over a hundred and sixty of these election officers were indicted. A constitutional amendment extending "the grandfather clause," allowing illiterate white voters to register and vote, if their fathers or grandfathers could vote, was carried by a small majority. The "recall" amendment was defeated.

In the election for a new school board for New Orleans, elected at large instead of by wards, and for the city commissioners, the regular or city Democratic organization elected all its candidates, after a spirited campaign by a reform or anti-ring faction of the Democratic party.

The new commission government took charge in December, 1912, but made very few changes in the personnel of the city employees.

OTHER EVENTS. The United States Treasury Department on August 22, instituted an action against the American Sugar Refining Co., of New Orleans, for the recovery of \$20,000 frauds through alleged dishonest sampling methods.

An investigation of the violation of the United States neutrality laws disclosed the fact that large supplies of guns and ammunition had been sold to Mexican and Central American revolutionists in New Orleans, and led to the indictment of a number of prominent business men in the city for conspiracy to violate neutrality laws and orders issued by the President during the Mexican revolutionary troubles.

LEGISLATION. The legislature of 1912 passed an unusually large number of important measures. Among these were the following: A joint resolution, proposing an amendment to the constitution, exempting certain classes of voters from the consequences of failure to possess the educational or property qualifications prescribed; a joint resolution ratifying the income tax amendment to the federal Constitution; a reform bill of lading act; a measure providing for a commission to prepare and recommend amendments to the constitution as to assessments and taxation. A conservation commission was created and its duties and powers defined. A commission was created for the purpose of revising and preparing amendments to the laws of the State relative to corporations. An act was passed providing for simplified pleading and practice. A measure was passed providing for a new charter for the city of New Orleans under the commission form of government, with the initiative, referendum, and recall. A measure was enacted creating a State tuberculosis commission. An elaborate act was passed governing the militia and establishing a military code. An important measure was enacted regulating the primary elections, making it compulsory that all nominations for candidates for United States senator, members of the House of Representatives, State, district, and parochial officers and members of the Senate and House of Representatives of the State, and for city and ward offices in all cities, towns, and villages shall be made by direct primary. An important conservation act was passed. An act was passed

providing a form of government for certain cities of the State, the city of New Orleans excepted, which provides for the commission form of government, provided the people of the cities included shall so vote. Several important measures relating to education were enacted. An elaborate corrupt practices bill was passed. Measures were enacted defining and punishing lotteries. The laws in respect to foreign corporations doing business in Louisiana were amended.

PRESENT STATE GOVERNMENT. Governor, L. E. Hall; Lieutenant-Governor, T. C. Barrett; Secretary of State, Alvin E. Hebert; Auditor, Paul Capdeville; Treasurer, L. E. Smith; Attorney-General, R. G. Pleasant; Superintendent of Education, T. H. Harris; Commissioner of Agriculture, E. O. Bruner; Commissioner of Insurance, A. E. Hebert; Commissioner of Public Lands, Fred J. Grace—all Democrats.

JUDICIARY. Supreme Court: Chief justice, J. A. Breaux; Associate Justices, A. D. Land, Walter B. Summerville, Frank A. Monroe, O. O. Provosty; Clerk, Paul E. Mortimer—all Democrats.

STATE LEGISLATURE, 1913. Both houses Democratic.

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

LOYSON, CHARLES, known as **PÈRE HYACINTHE**. A French preacher and theologian, died February 9, 1912. He was born at Orleans, France, in 1827, and was educated at Pau, where his father was rector of the local academy. Convinced that his true vocation was preaching he entered the Carmelite Convent at Lyons, and after taking vows, delivered a series of advent sermons, which brought him into conflict with the ecclesiastical authorities. In 1866 as advent preacher at Notre Dame he delivered a sermon against *La Morale Indépendante*, and in the following year selected as his theme, *La Morale dans la famille*. As a result he was denounced to the Roman Curia by the editor of the Roman Catholic *Journal de Paris*, and in 1869 he was summoned to Rome to defend himself before Pope Pius IX. This he seems to have done, but a few weeks later in an address at a meeting of the League of International Peace he provoked a fresh controversy by describing Judaism, Catholicism, and Protestantism as the "three great religions of the civilized world." For this language he was reproved by his order and was told to discuss other topics or to keep silence. He at once replied in a famous letter to the head of the Carmelites in Rome in which he formally broke with his order. This letter came on the eve of the great Ecumenical Council at Rome, which was to proclaim the infallibility of the Pope. In spite of the pleadings of friends and enemies alike, Père Hyacinthe refused to retract and the major excommunication was pronounced against him. Notwithstanding this he declared his intention of remaining a Catholic. He resumed the name of Charles Loyson and made a lecturing tour in America, where he was received with great enthusiasm. He returned to Europe again in 1869. In 1872 he married an American woman, and the Carmelite Order immediately pronounced his "interment." He founded in 1878 the Gallican Catholic Church, which was officially recognized by the state. He assumed the title of rector. In 1905, after separation of the church and state in France, he expressed the opinion that since

neither the destruction nor the transformation of the Church of Rome was possible, some *modus vivendi* was needed. He considered the ideal solution would have been a Gallican Church such as he had conceived it, but admitted that the task which he had undertaken had been beyond his unaided powers.

LUBECK. See GERMANY.

LUBLINER, HUGO VON. A German dramatist who wrote under the pen name of Hugo Burger, died in January, 1912. He was born in Breslau in 1846. His plays include: *Der Frauenadvokat* (1873), his first great success; *Die Modelle des Sheridan* (1875); *Auf der Brautfahrt* (1880); *Mitbürger* (1884); *Die armen Reichen* (1886); *Der Reiznitzer Bote* (1891); *Das neue Stück* (1894); *Der schuldige Teil* (1900), and *Die lieben Feinde* (1901).

LUDDEN, PATRICK ANTHONY. An American Roman Catholic bishop, died August 6, 1912. He was born near Castlebar, Ireland, in 1836, and studied at St. Jarlath's College, Tuam, Ireland, and at the Grand Séminaire, Montreal, Canada. He was ordained a priest in 1864. He served successively as assistant at the Cathedral in Albany, N. Y., pastor at Malone, N. Y., rector at the Cathedral at Albany, and vicar-general of the diocese from 1877 to 1880. From 1880 to 1887 he was pastor of St. Peter's Church at Troy, N. Y. In the latter year he was consecrated first bishop of Syracuse. He was the author of *Church Property*.

LUDWIG, ALFRED. A German philologist, died August, 1912. He was born in Vienna in 1832, and received his education in that city and Berlin. In 1860 he became professor of comparative philology at Prague. He published many works on philological subjects, which were marked by considerable originality and by independence of commonly accepted views. They include: *Der Infinitiv im Veda* (1871); *Agglutination oder Adaption* (1873); *Die philosophischen und religiösen Anschauungen des Veda* (1875); and *Der Rigveda* (1876-88), a translation, with commentary, which advances the theory, also held by Sayce, that many verb forms are more adapted to noun cases and not compounds of verb stem and pronominal suffix, the standard from the traditional side. The last work has been augmented by *Über die Kritik des Rigvedatextes* (1889) and *Über die Methode bei Interpretation des Rigveda* (1891). He also wrote on *Platons Apologie des Sokrates und Kriton* (1856, 6th ed., 1879). He resigned his professorship in 1901.

LUTHERAN CHURCH. A religious denomination, whose membership includes the largest body of Protestants in the world. There are four general bodies and in these are embraced two-thirds of the Lutherans in the United States. The chief independent synods are the United Norwegian Synod, the Joint Synod of Ohio, and the German Iowa Synod. The statistics of the denomination given below are furnished by the authorities of the denomination. According to the census of 1910, the total number of communicants of the Lutheran faith in the United States was 2,112,494.

The church statistics of the various subdivisions are as follows: General Council—Communicants, 495,468; ministers, 1644; congregations, 2519; benevolent offerings for 1912, \$597,980; receipts for local expenses, \$3,820,679. The Bible schools numbered 2868, with an en-

rollment of 302,838. The next biennial convention of the General Council will be held in Toledo, O., September 9, 1913. General Synod—Communicants, 405,939; congregations, 1769; ministers, 1351; church property valued at \$21,442,840; benevolent offerings, \$494,843; receipts for local expenses, \$2,729,202. The Sunday schools numbered 1710, with an enrollment of 294,193. The next convention will be held at Atchison, Kan., May 14, 1913. Synodical Conference—Communicants, 807,693; ministers, 2885; congregations, 3569; church property valued at \$14,885,000; amount raised for local expenses in 1912 was \$3,644,466. The Sunday schools numbered 799, with an enrollment of 158,364. This branch also maintains parochial schools, with an enrollment of 148,288. The next convention will be held in 1914. United Synod of the South—Communicants, 50,354; ministers, 247; congregations, 470; church property, valued at \$2,139,588; benevolent offerings, \$70,211; receipts for local expenses, \$230,099. The Sunday schools numbered 397, with an enrollment of 37,430. Independent Synods—Communicants, 646,639; ministers, 2908; congregations, 5990; church property, valued at \$17,089,207; benevolent offerings in 1912, \$760,679; local expenses, \$2,164,607. The Sunday schools numbered 2345, with an enrollment of 183,434. The grand total is 64 synods, 9062 ministers, 14,317 congregations, 2,307,877 communicants, 5868 parochial schools, with 272,812 pupils; 7366 Sunday schools, with an enrollment of 969,102. The church property is valued at \$85,514,238. The receipts for local expenses in 1912 were \$12,554,053 and for benevolent offerings, \$2,969,948.

The most notable events in Lutheran circles in 1912 were the beginning of a movement in the Ministerium of Pennsylvania to raise an educational fund of \$500,000 for the Philadelphia Theological Seminary and Muhlenberg College; the efforts of Pennsylvania College at Gettysburg to raise \$300,000, and the completion of a fund of \$125,000 by Augustana College at Rock Island, Illinois. The Artman legacies, amounting to about \$200,000, for various educational and benevolent institutions of the church and the creation of the "Artman Memorial Home for Lutherans," with a special legacy of \$100,000 and a residuary legacy, which may add \$200,000 more, was a notable legacy received during the year. Two new missionary conferences, the New England and the Red River, were organized in 1912. By the legacy of a Mr. Wills, St. John's English Congregation in Philadelphia, the oldest English Lutheran congregation in the world, was endowed in the sum of about \$75,000. There was a general revision of the methods of raising missionary and benevolent funds in a number of the synods.

In view of the uniting of the various Norwegian Lutheran bodies into one general body, a doctrinal conference was held by the Synodical Conference, a German body which has hitherto included one of the Norwegian bodies, to discuss the results of such a union upon itself, and a committee was appointed to urge the Norwegian body not to remain in the new union. A similar conference was held between two of the independent synods, the Joint Synod of Ohio and the Synod of Iowa.

LUITPOLD, KARL JOSEPH WILHELM. Prince Regent of Bavaria, died December 12, 1912. He was born at Würzburg, Bavaria, in 1821, and

at the time of his death was the oldest ruling prince in Europe. In 1844 he married the Archduchess Augusta of Austria. He fought in 1866 against Prussia, but in the Franco-German war was on the general staff of the Prussian army. He had a notable career as a soldier, and in 1886, following the death of his nephew, King Ludwig, he became prince regent of Bavaria. King Ludwig was for many years insane, and his brother, Otto, next in succession, was also insane. Luitpold was next in line of succession. He would not listen to suggestions that he assume the title of king, arguing that there was nothing in the constitution of Bavaria to warrant the barring of a prince from the throne, even on the score of madness. As a ruler, he enjoyed immense popularity and did much for the upbuilding of the resources of his country. He was particularly alert in developing the commercial and agricultural possibilities of the state and was a notable patron of the arts and crafts. During his regency, Munich, the capital, became constantly richer as an art centre. He was considered the most sagacious of the rulers of the German states and he was, in addition, a notable factor in the formation of the German empire itself. He had much to do with persuading the German rulers to offer to King William of Prussia the imperial crown. The keynote of his career as prince regent was simple straightforwardness as an administrator, and his affairs were conducted in a manner beyond criticism. On the occasion of his ninetieth birthday a costly public celebration was proposed. He refused this and expressed the wish that the public would establish a charitable fund, the income of which should be used for the common welfare instead of devoting large sums to the celebration of his birthday. His son and heir, Prince Ludwig, now more than seventy years of age, married the Archduchess Marie Thérèse of Austria d'Este, who is the "Queen Mary" of the English Jacobites.

LUNAR PETROGRAPHY. See **ASTRONOMY.**

LUXEMBURG. A central European grand duchy, neutral and independent. Area, 2586 square kilometers (998 square miles); population, December 1, 1910, 259,891. Luxembourg, the capital, had 20,848 inhabitants. Roman Catholics numbered 250,543. The grand duchy belongs to the German customs union. There were 525 kilometers of railway in 1911, 701 kms. of telegraph line. Iron is mined (1,728,973 metric tons in 1911). The budget as voted April 6, 1912, estimated the revenue at 18,696,137 francs; the expenditure at 20,629,710. The debt amounts to 12,000,000 francs; annuities, 493,150. The floating debt, for public works and railway construction, is limited to 19,335,774 francs.

The reigning house of Nassau became extinct in the male line with the death of the grand duke, William, February 25, 1912. He was succeeded by his daughter, Marie Adelaide (born June 14, 1894), who attained her majority and was formally enthroned June 14, 1912. Her sister, Princess Charlotte (born January 23, 1896), is heiress-presumptive.

LYDIAN INSCRIPTIONS. See **ARCHÆOLOGY.**

MACAO. A city on the Chinese island of Macao; a Portuguese dependency (with Colôane and Taipa). Total area, 4 square miles; population, 74,866.

MAC ARTHUR, ARTHUR. An American soldier, died September 5, 1912. He was born in Springfield, Mass., in 1845, and was educated in the public schools and by private tutors. He began service in the Civil War as first lieutenant in the 24th Wisconsin Infantry, and rose through various grades until he became lieutenant-colonel in 1865, and was honorably mustered out in the same year. In 1866 he was appointed second lieutenant in the 17th United States Infantry, and in the same year was transferred to the 26th Infantry, of which he was promoted to be captain. In 1870 he was assigned to the 13th Infantry. He was promoted to be major in 1896, brigadier-general of volunteers in 1898, major-general, 1898, brigadier-general in the regular army, 1900, major-general, 1901, and lieutenant-general, 1906. In 1865 he was brevetted lieutenant-colonel of volunteers for gallant service in the battles at Perryville, Stone River, Missionary Ridge, and Dandridge. He received the brevet of colonel in the same year for service in the battle of Franklin and in the Atlanta campaign. In 1890 he was awarded the congressional medal of honor for gallantry in the battle of Missionary Ridge in 1862. He participated in many of the most important engagements during the Civil War. In the Spanish-American War he commanded a brigade of the 8th Army Corps, which took part in the capture of Manila. He commanded the first brigade of the first division, 8th Army Corps, in the advance on Manila, July and August, 1898, and the battle of Manila, August 13, 1898. In 1898-99 he commanded the second division of the 8th Army Corps and was commander of the Department of Northern Luzon in 1899-1900. He commanded a division of the Philippines and was military governor, 1900-01. Returning to the United States he was in command of the Department of Colorado, 1901-02; Department of the Lakes, 1902; Department of the East, 1902; Department of the Lakes, 1902-03; Department of California, 1903; Pacific Division, 1904-07. He retired by operation of law on June 2, 1909.

MACCAMERON, ROBERT LEE. An American artist, died December 29, 1912. He was born in Chicago in 1866. After attending the public schools he went to Chicago and began to make sketches for newspapers. Soon afterwards he removed to New York and did illustrating for the newspapers of that city. In 1889 he went to Paris to study. He became a pupil of Gérôme. He became very successful as a painter of portraits. Among the best known of his are pictures of President Taft, President McKinley, Archbishop Ryan, Justice Harlan, Justice Brewer, and Madame Melba. In addition to his portraits he painted other notable pictures. These include "A Group of Friends" and "The Daughter's Return." These are at the Metropolitan Museum in New York. For his "Micarême," which was once destroyed and repainted, he received an honorable mention in the Paris Salon. For several years before his death he maintained studios in London, Paris, and New York. In 1912 he was made a Chevalier of the Legion of Honor. He was a member of several foreign and American art societies.

MCCARTHY, JUSTIN. An Irish novelist, historian, and former member of Parliament, died May 1, 1912. He was born in 1830 in Cork, and was educated in that city under pri-

vate tutors, chiefly for the reason that at that time no Roman Catholic in the British Isles could receive an academic degree. From 1848 to 1852 he was engaged in journalism in the city of Cork, and from 1852 to 1860 in the same profession in Liverpool. In 1864 he became editor of the *Morning Star* in London, a radical organ which especially represented the views of John Bright. This paper survived only four years, and Mr. McCarthy then became a member of the staff of the *Daily News*, to which journal he contributed both political and literary articles. He continued to take an interest in politics and in 1879 was elected to Parliament from the County of Longford. He remained in Parliament until 1900. Although he won considerable prominence as one of the Irish Nationalist party in Parliament, his services as a legislator were obscured by his fame as a writer. In 1880 he joined the Irish Land League and in the following year was registered as one of the original shareholders of the company which founded *United Ireland* and acquired the *Irishman*. In 1882 he became chairman of the Land and Labor League of Great Britain. Mr. McCarthy acted for some time as vice-chairman of the Irish Parliamentary party, and in 1890 headed the famous secession of forty-five members. He was elected chairman of the party in opposition to Parnell. This choice was in the nature of a compromise. The Irish party was at that time in close alliance with Gladstone, and it required, above all, a leader of conservative theories and respectability.

Mr. McCarthy had no great oratorical gifts, but his leadership obtained weight and authority from the very moderation of his speeches. He had nothing of the remarkable magnetism which enabled Parnell to hold together a discordant party, and intrigues and quarrels finally resulted in his abandoning the leadership. He resigned in 1896. From that time until his final resignation from Parliament he took little active part in the deliberations of that party. Mr. McCarthy's career as a novelist began early in his life. Either alone or with Mrs. Campbell Praed, he wrote many novels, which in their day were popular, but which now are little read. These included *Miss Misanthrope*, *Dear Lady Disdain*, *Maid of Athens*, *Mononia*, etc. His chief literary reputation rests upon his historical writings. *A History of Our Own Times*, which was completed in 1905, was perhaps the most popular English history since Macaulay's. Other historical writings include *A History of the Four Georges and William IV.*, *Modern England*, and *The Reign of Queen Anne*. He wrote also biographies of Sir Robert Peel, Pope Leo XIII., and W. E. Gladstone. He published a volume of *Reminiscences* in 1899, a volume of sketches entitled *Portraits of the Sixties*, and *The Story of an Irishman* (1904). Mr. McCarthy was well known in the United States where he made many visits and delivered lectures. He was a contributor for many years on English political and literary topics to the *Independent*.

M'CHESNEY, DORA GREENWELL. An American writer, died July 5, 1912. She was born in Chicago in 1871 and was educated privately. She made a study of historical subjects, especially relating to the English civil war and was the chronicler of Lord Strafford and Prince Rupert. Among her published writings are, *Kathleen Clare*, *Her Book*, 1637-1641

(1895); *Miriam Cromwell, Royalist* (1897); *Rupert by the Grace of God* (1899); *Yesterday's To-morrow*, and *Wounds of a Friend* (1908). She also contributed many short stories and reviews to magazines.

MCCOMBS, WILLIAM F. See **PRESIDENTIAL CAMPAIGN.**

McLANE, JAMES WOODS. An American geologist, and hydrologist, died September 4, 1912. He was born in Dubuque, Ia., in 1853. He had no formal education. From ten years of age until twenty he worked on the farm of his father, and at the same time studied Latin, higher mathematics, astronomy, and surveying. He also read law and practiced in the local courts. Between the years 1874 and 1876 he worked at the forge and bench and invented a number of agricultural implements. The two succeeding years were devoted to the study of geology and archaeology, and in 1877-81 he made an extensive geologic and topographic survey of northeastern Iowa entirely on his own resources. Shortly afterwards he became attached to the United States Geological Survey in charge of a division. In 1886 he surveyed and mapped out 300,000 square miles in the southeastern part of the United States. He also completed geologic maps of the country and made extensive investigations of the Charleston earthquake. In 1894-5 he explored Tiburon Island, the home of a savage tribe about whom nothing had previously been known. In 1893 he was appointed ethnologist in charge of the Bureau of American Ethnology and held this position until 1903, when he resigned to take the place of chief of the department of anthropology at the St. Louis Exposition. Here he brought together an unprecedented assemblage of the world's peoples. From 1905 to 1907 he was director of the St. Louis public museum and from 1907 until the time of his death was a member of the Inland Waterways Commission. He was also an expert in the United States Department of Agriculture and a member of the American International Commission of Archaeology and Ethnology. He was senior speaker of the Department of Anthropology at the World's Congress of Arts and Sciences in 1904, and was a member of many foreign and American learned societies. He was distinguished as a lecturer and as a writer. His published writings include: *Geology of Chesapeake Bay* (1888); *The Lafayette Formation* (1892); *The Siouan Indians* (1897); *Primitive Numbers* (1901); *Outlines of Hydrology* (1908). He also wrote many scientific memoirs and over three hundred articles. He was one of the editors of the department of Anthropology in the *New International Encyclopedia*.

MCGILL UNIVERSITY. An institution for higher education at Montreal, Canada, founded in 1821. The students enrolled in the university in the autumn of 1912 numbered approximately 2000, of whom 500 were in MacDonald College, which includes a school for teachers, a school of domestic science, and a school of agriculture. There were 258 members of the faculty, of whom 74 were professors, 23 assistant professors, 87 lecturers, and 74 demonstrators. A noteworthy event in the history of the university in 1912, was the successful raising of a fund of \$1,600,000 by the citizens of Montreal, and a few of the graduates outside the city, for purposes of general endowment. The total value of the productive

funds of the university in the collegiate year 1911-12 was \$6,575,022. The annual income from all sources was \$770,839. The general library contained 136,791 volumes, and the medical library about 38,000. Principal, W. Peterson.

McILVAINE, CLARENCE W. An American publisher, died December 7, 1912. He was born in Vermont in 1865, and graduated from Princeton University in 1885. Soon after his graduation he joined the staff of Harper and Brothers, of New York. In 1891 he removed to London and formed a partnership with the late James R. Osgood under the name of Osgood, McIlvaine & Co. This firm acted as the English representatives of Harper and Brothers until Mr. Osgood's death in 1892, when the business was absorbed by Harper and Brothers. Mr. McIlvaine was keenly interested in art and was a friend of Whistler, Abbey, Millet, and other famous artists. He was also in intimate relations with well-known authors, including the late William Black, Thomas Hardy, the late Theodore Watts Dunton, Henry James, and Mrs. Humphry Ward.

McKINLEY, WILLIAM B. See **PRESIDENTIAL CAMPAIGN.**

McLANE, JAMES WOODS. An American physician and writer, died November 24, 1912. He was born in New York City in 1839, and graduated from Yale College in 1861. He studied medicine at the College of Physicians and Surgeons, taking his degree in 1864. In 1867 he was appointed lecturer on materia medica at the College of Physicians and Surgeons, and subsequently held other chairs in that school until in 1898, when he was appointed professor emeritus of obstetrics. From 1891 to 1903 he was dean of the medical faculty and was at one time president of the College of Physicians and Surgeons. From 1905 to the time of his death he was president of the Roosevelt Hospital and was consulting physician to other hospitals in New York City. He wrote many medical treatises.

MADAGASCAR. A great island in the Indian Ocean off the east African coast; a French colony. Antananarivo (Tananarive) is the capital, with 72,000 inhabitants.

Area, 585,300 square kilometers (225,984 square miles); population (1911), 3,104,881. Fianarantsoa has about 1000 inhabitants; Tamatave, 7026; Majunga, 4600.

PRODUCTION, COMMERCE, ETC. Agriculture and cattle-raising are the chief industries; rice the principal crop. The forests contain valuable timber. The mines yield gold, silver, iron, copper, lead, and zinc. Imports and exports, in 1910, 34,595,000 and 47,883,000 francs respectively; reported in 1911 at 46,700,000 and 47,500,000 francs. Railways (1912), 272 kilometers. The main line (Brickaville to the capital) is being extended from Brickaville to Tamatave, the extension to be completed in 1913.

FINANCE AND GOVERNMENT. The local budget balanced in 1910 at 30,750,000 francs. Debt, 99,283,000 francs. A governor-general (M. Picquié in 1912) administers the colony. Dependencies are Diego-Suarez, Nosy-Bé, and Ste. Marie.

MAGDALENA BAY. See **UNITED STATES, Foreign Relations.**

MAINE. POPULATION. According to the Census Bureau statistics issued in 1912, out of a total population of 742,371 in 1910, the for-

eign-born whites numbered 110,133, compared with 92,535 in 1900. The largest number of these, 40,386, came from Canada, other than French Canada; from French Canada came 34,934; from Ireland, 7886; from England, 5638; from Russia, 4744; from Scotland, 2388; and from Sweden, 2564. Other European countries are represented by smaller numbers. In 1910 there were 1363 negroes and 626 mulattoes in the State. In 1890 the negroes numbered 1190 and the mulattoes, 683.

AGRICULTURE. The acreage, value, and production of the principal crops in 1911 and 1912 are shown in the following table:

		Acreage	Prod. Bu.	Value
Corn	1912	16,000	640,000	\$480,000
	1911	18,000	792,000	713,000
Wheat	1912	3,000	70,000	72,000
	1911	3,000	63,000	69,000
Oats	1912	133,000	4,602,000	2,347,000
	1911	135,000	5,198,000	2,807,000
Potatoes	1912	117,000	23,166,000	12,741,000
	1911	118,000	21,240,000	16,355,000
Hay	1912	1,231,000	1,428,000	19,564,000
	1911	1,400,000	1,540,000	22,176,000

a Tons.

MANUFACTURES The Thirteenth Census statistics are for the calendar year 1909 and were compiled in 1912. Manufacturing is the leading branch of industry in the State. From the table given herewith it will be seen that there were, in 1909, 3546 establishments, employing 88,476 persons:

	Number or Amount 1909	1904	P. C. of Inc. 1904-'09
Number of establishments	3,546	3,145	12.8
Persons engaged in manufactures...	88,476	82,109	7.8
Proprietors and firm members..	3,661	3,379	8.3
Salaried employees	4,860	3,772	28.8
Wage earners (average number)	79,955	74,958	6.7
Primary horsepower	469,599	343,627	33.7
Capital	\$202,260,000	\$143,708,000	40.7
Expenses	154,821,000	129,208,000	19.8
Services	43,429,000	36,681,000	18.4
Salaries	5,797,000	3,989,000	45.3
Wages	37,632,000	32,692,000	15.1
Materials	97,101,000	80,042,000	21.3
Miscellaneous ...	14,291,000	12,485,000	14.5
Value of products.	176,029,000	144,020,000	22.2
Value of products less cost of materials	78,928,000	63,978,000	23.4

The largest number of wage-earners was found in industries relating to lumber and timber products, 15,086. In the manufacture of cotton goods were 14,634; in the production of paper and wood pulp, 8647; in the manufacture of woolen, worsted and felt goods, 8754; in making boots and shoes, 6626. The value of the product of paper and wood pulp industries was \$33,950,000; lumber and timber products, \$26,125,000; cotton goods, \$21,932,000. Woolen, worsted and felt goods, \$18,490,000; boots and shoes, \$15,509,000. The total number of persons employed in the manufacturing industries was 88,476. Of these 68,647 were male, and 19,829 were female. Employees under 16 years of age numbered 1387. The prevailing hours of labor were for more than one-half the wage earners 60 hours a week; 28.5 per cent. were in establishments where the hours of labor

were 54 a week; 11 per cent. in establishments where they were less than 54 a week, and only 8.4 per cent. in establishments where they were more than 60 hours a week. The largest number of wage-earners was in Lewiston, 6788; in Biddeford were 5076; in Portland, 4902, and in Auburn, 3452. The table above shows the general increase in manufactures in the five-year period, 1904-1909.

POLITICS AND GOVERNMENT

It was an active year in politics in Maine. As the result of elections held in 1911, the Democratic party was in power for the first time in thirty years. Although this was due largely to local issues, there was also an aggressive interest in 1912 in national politics. President Taft was strongly opposed in Maine on account of the reciprocity measure, which, it was argued, would seriously injure the farmers in the State, especially those near the Canadian border. The Progressive element in the State was very strong, and on April 10, the ten delegates selected by the Republican convention were pledged to vote for Mr. Roosevelt. The Democrats had already held their State convention on March 19. The Maine Democratic delegates are never instructed in their votes, but it was claimed that seven of the twelve were for Governor Wilson. On June 17 a primary election was held in which Edwin C. Burleigh won the Republican nomination for United States senator, and William T. Haines for governor. Senator Gardner and Governor Plaisted were renominated by the Democrats.

The election held on September 9 was of more than local interest. With Vermont, Maine is the only State which holds general elections prior to the November elections, and the results in these States are always held to forecast in a measure the results of the November elections. Local conditions, however, prevented a sharp alignment among the three parties. Although the Progressives were strong in Maine they did not desire to divide the Republican vote in the State election into two parts. An agreement was therefore made with the regular Republican party, both wings of that party voting as a whole for the Republican candidates for State offices and for the legislature. As a result of the election, William T. Haines, the Republican candidate for governor, received 70,298 votes against 60,905 cast for the Democratic nominee, Frederick W. Plaisted. In 1910 Mr. Plaisted received a plurality of 8735 votes. It was thus apparent that in two years 4758 votes had been transferred from the Democratic party column to the Republican. The Senate, as a result of the election, is strongly Republican, and the House is anti-Democratic, Republicans and Progressives having a small majority. The Republican and Progressive majority, on joint ballot, insured the election of Edwin C. Burleigh to the United States Senate, to succeed Obadiah Gardner, Democratic senator, who was appointed in 1911 to serve out the term of the late Senator Frye. The vote for President on Nov. 5 resulted as follows: Wilson, 51,113; Roosevelt, 48,493; Taft, 26,545; Debs, 2541; and Chafin, 945.

LEGISLATION. There was no regular session of the legislature in the State in 1912, but in March a special session was called, which passed an act making some changes in the conduct of elections and the preservation of the ballots. This measure, under the referendum clause of

the constitution, was voted for in the September election. At this session the legislature submitted to the people a proposition to amend the constitution, so as to empower the legislature to borrow not exceeding two millions of dollars for expenditure on the highways of the State.

STATE GOVERNMENT. Governor, William T. Haines, Rep.; Secretary of State, Cyrus W. Davis, Dem.; Treasurer, James F. Singleton, Dem.; Adjutant-General, Elliot C. Dill, Rep.; Auditor, T. F. Callahan, Rep.; Attorney General, W. R. Pattangall, Dem.; Superintendent of Education, Payson Smith, Rep.; Insurance Commissioner, A. P. Havey, Dem.; Commissioner of Agriculture, John P. Buckley, Dem.; Commissioner of Public Lands, F. E. Mace, Dem.

JUDICIARY. Supreme Judicial Court: Chief Justice, William P. Whitehouse, Rep.; Associate Justices, L. C. Cornish, Rep.; Albert M. Spear, G. E. Bird, Dem.; Albert R. Savage, Rep.; A. W. King, Rep.; George F. Huley, Dem., and George M. Hanson, Dem.; Clerk, C. W. Jones, Rep.

STATE LEGISLATURE, 1913. Republicans, Senate, 21; House, 78; joint ballot, 99; Democrats, Senate, 10; House, 73; joint ballot, 83; Republican majority, Senate, 11; House, 5; joint ballot, 16.

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

MAINE, U. S. S. The remains of the United States battleship *Maine*, which had been destroyed by an explosion in the harbor of Havana in 1898, just previous to the Spanish-American War, were towed out to sea and sunk in deep water amid appropriate ceremonies on March 16, 1912. This famous wreck had been enclosed by a cofferdam so as to permit the removal of the mud and water, and then the tangled débris of the forward part was cut away largely by the use of the oxy-acetylene torch. The after part, which remained more or less intact, was closed with a wooden bulkhead and was floated clear of the bottom and it was arranged that it should be towed out to sea beyond the three-mile territorial limit and there sunk with full naval honors. This plan was adopted from sentimental and other reasons in preference to demolition by dynamite, and the same engineering skill and foresight that attended the uncovering of the wreck were expended in arranging for the final disposal of the famous battleship. The wooden bulkhead was provided with five sluices, each about five feet high by one foot wide, to admit the sea water while in addition there were sea-cocks in the bottom. Provision was also made for destroying the bulkhead by the explosion of dynamite should the other devices fail to work, but its use was not necessary. The United States navy was represented by the battleship *North Carolina* and the scout cruiser *Birmingham* at the burial of the *Maine*, the former having been ordered to receive the bodies of sixty-six of the crew of the *Maine* which had been recovered during the excavation of the wreck and carry them back to the United States for burial in the National Cemetery at Arlington. After the remains of the sailors had been transferred to the battleship with full military honors the naval procession was formed and in tow of three tugs the *Maine* passed out of Havana Harbor on her last journey, followed by the American warships and four Cuban gun-

boats to the sound of minute guns from Cabanas Fortress. When the requisite distance off shore had been reached, a hollow square was formed, sailors boarded the wreck, and the sea-cocks were opened. Slowly the battleship settled in the sea with a large American flag flying from a central staff. Taps were sounded, a parting salute was fired from the warships, and thousands of roses were strewn over the watery grave of the first battleship of the new American navy. The burial of the recovered bodies took place at Arlington National Cemetery on March 23. Here it was proposed to erect the mainmast of the *Maine* as a memorial. The other mast, together with a turret and guns, was presented to the Republic of Cuba and the latter were to be combined in a memorial with a marble figure representing the Cuban Republic and various bronze tablets. The designs for this memorial were accepted by President Gomez late in the year and an appropriation of \$20,000 requested for its construction.

MAINE, UNIVERSITY OF. A State institution for higher education at Orono, Me., founded in 1865. The attendance in all departments of the university in the autumn of 1912 was 953, and the faculty numbered 91. Among the new appointments during the year were those of William Edward Barrows, Jr., professor of electrical engineering and Ralph Rigby Glass, lieutenant, U. S. A., professor of military science and tactics. There was in addition a number of instructors appointed in various departments. Prof. Walter K. Ganong resigned as professor of electrical engineering and Prof. A. C. Varnum, colonel, U. S. A., resigned as professor of military science and tactics. The library contained about 48,000 bound volumes and 11,000 pamphlets. President, R. J. Aley.

MALACCA. See STRAITS SETTLEMENTS.

MALARIA. The most interesting work done recently in the study of malaria was that of Bass and Johns, who were sent to Panama by the Tulane School of Tropical Medicine to perfect a technic for the artificial cultivation of the plasmodia. The results of their work appeared in the *Journal of Experimental Medicine*, October, 1912. Bass and Johns were able to cultivate the parasites in human serum, in Locke's fluid from which calcium chloride is omitted, and in human ascitic fluid. Positive cultures of the parasites were made in the three forms of malaria and carried as far as four generations from the parent culture. The parasites will grow only in red blood-corpuscles. When segmentation occurs and the plasmodia escape from the red blood-corpuscles, they are attacked and destroyed by leukocytes, when these are present. The blood serum is also destructive of the parasites. It is the conclusion of Bass and Johns that the plasmodium in the blood of a patient can pass from cell to cell only when the cell is in direct contact with another cell containing a segmenting parasite, and then only when the opening for the exit of merozoites occurs opposite the cell to be infected. This probably occurs frequently in the small capillaries through which the non-segmented parasite cannot pass, its protoplasm being less yielding than that of the red blood-cells. It was also discovered that blood drawn within one or two hours after a full meal was for culture media better than if drawn after fasting, which agrees with the clinical observa-

tion that the parasites will often disappear from the blood and the paroxysms will cease if the patient is put to bed and receives a purgative with a light diet. Equally interesting is the observation that calcium salts when added to the culture media caused hæmolysis of the infected as well as the non-infected cells. The authors suggest this as an explanation of malarial hæmoglobinuria, the amount of calcium salts in the blood being perhaps slightly augmented by the calcium in drinking-water or food. Only a slight excess of calcium over the normal amount is required to produce this effect. Hæmolysis from the calcium in non-infected, normal blood does not occur.

The experiments offer an interesting suggestion as to the way in which quinine acts in malaria. The authors believe that it does not directly kill the parasites, but produces permeability of the red blood-cells with destruction of the parasites of the blood serum.

MALAY STATES. See **FEDERATED MALAY STATES**; **JOHORE**; **KELANTAN**; **KEDAH PERLIS**; **TRENGGANU**.

MALBY, GEORGE R. A member of Congress from New York, died July 5, 1912. He was born in Canton, N. Y., in 1857, and was educated at Canton Academy and at St. Lawrence University. In 1881 he was admitted to the bar and four years later began the practice of law at Ogdensburg. In 1890 he was elected to the State Assembly and was re-elected for three successive terms. In 1894 he was chosen speaker. In the following year he was elected to the State Senate and remained a member of that body until 1907, when he was sent to Congress to succeed William H. Flack. He was re-elected to successive Congresses until 1911.

MALDIVÉ ISLANDS. See **CEYLON**.

MALE POPULATION IN THE UNITED STATES. See **SEX DISTRIBUTION**.

MALLET, JOHN WILLIAM. An American chemist, died November 7, 1912. He was born in Dublin, Ireland, in 1832, and graduated from Trinity College, Dublin, in 1853. He removed to the United States in the same year. In 1854 he was appointed professor of analytical chemistry at Amherst College. In 1855-6 he was chemist of the Alabama Geological Survey and was professor of chemistry in the University of Alabama from 1855 to 1860. He served in the Confederate army on the staff of General Rodas in 1861 and in the following year was transferred to the artillery and was placed in general charge of the ordnance laboratories of the Confederate States. In 1865 he was paroled as lieutenant-colonel. In the same year he became professor of chemistry in the medical department of the University of Virginia, and was professor of analytical, industrial, and agricultural chemistry in the same institution from 1868 to 1872, and of general and industrial chemistry from 1872 to 1883 and again from 1885 to 1908. In the latter year he was made professor emeritus of chemistry. In addition to his duties at the University of Virginia he lectured at Johns Hopkins University and the University of Texas and was professor of chemistry at the Jefferson Medical College, Philadelphia. He was three times a member of the United States Assay Commission. He was a member of many American and foreign scientific societies. He wrote many papers for scientific transactions and journals.

MALTA. An island (91½ square miles) in the Mediterranean Sea; which, with the islands of Gozo (24½ square miles), Comino (1 square mile), and Filfla and Cominotto (mere islets), forms a British crown colony. Total civil population (1911 census) 211,473 (105,584 males). Valletta, the capital, had, April 2, 1911, 44,029 inhabitants, including suburbs (Floriana, Sliema, and St. Julien's); the Three Cities (Senglea, Cospicua, and Vittoriosa), 26,551; Citta Vecchia (the old capital), 8896; Victoria (formerly Rabat), 5655. The natives are of Punic origin, and their speech is said to be derived from the Carthaginian and Arabic languages. Valletta is a coaling station and the centre of a large transit trade. There are 7¾ miles of railway. Imports and exports of dutiable goods (1910-11), £1,026,567 and £14,408 respectively; total imports for home consumption, £2,356,043; total exports, £863,429. Total weight of goods transhipped (1910-11), 14,597 tons. Revenue (1910-11), £441,444; expenditure, £467,373. Tonnage entered and cleared, 8,667,037 (British, 4,796,133). Governor (1912), Gen. Sir H. M. Rundle (appointed 1909).

A Royal Commission was appointed in the autumn of 1911 to inquire into the administration of Malta. The report of the commission attributed the financial and economic difficulties to the rapid increase of population without a corresponding increase in the means of subsistence. It made a number of suggestions as regards taxation, education, and judicial procedure, and declared that reforms in these respects could be only palliative and that the immediate end to be attained was a plan for systematic immigration on a large scale. A commission of the British admiralty inspected the defenses of Malta on June 1.

MALTA FEVER. See **VETERINARY SCIENCE**.

MAMMALS. See **ZOOLOGY**.

MANCHU DYNASTY. See **CHINA**.

MANCHURIA. A Chinese dependency, lying east of Mongolia and Chihli and between Korea and the Amur River, which separates it on the north from Siberia. Capital, Mukden.

Manchuria consists of three provinces: Heilungkiang, in the north, capital Tsitsihar; Kirin, capital Kirin; and Shengking, in the south, capital Mukden. The southern part of Shengking known as Kwantung, occupying the end of the Liaotung Peninsula and containing Dairen and Port Arthur, is held by Japan under lease acquired from Russia at the end of the Russo-Japanese War. (See **KWANGTUNG**). Outside of Kwantung, Manchuria is virtually divided into Russian and Japanese "spheres of influence." The Russian sphere is much the larger, extending south to the Japanese sphere at Kwanchengtze (Changchun), the southern limit of the Russian railway, which connects with the Japanese railway from Port Arthur and Dairen. Another Japanese railway connects Mukden with Antung, on the Yalu River, which separates Manchuria from Korea. This line connects with the Korean railways. The area of Manchuria is stated at 362,483 square miles; for population, see **CHINA**, section *Area and Population*. Estimated population of important towns: Antung, 161,000; Mukden, 158,000; Kwanchengtze, 80,000; Newchwang (Yingtze), at the mouth of the Liao, 61,000; Newchwang (30 miles up the Liao), 50,000;

Liayang, 40,000; Harbin, 35,000; Tsitsihar, 30,000; Teihling, 28,600; Fenghwangcheng, 25,000; Sinminfu, 20,000.

The principal agricultural products are soy beans, kafir corn, millet, corn, barley, and tobacco. The Manchurian soy bean provides most of China's large bean export. Coal and iron are mined. Foreign trade is included in that of China. Imports and exports at the Manchurian open ports in the direct foreign trade were valued in 1910 at 46,725,156 and 58,093,583 haikwan taels respectively; in 1911, 54,052,669 and 67,954,165. These figures include the trade of Dairen (in Japanese Kwantung), which are: Imports and exports in 1910, 18,671,515 and 20,183,290 haikwan taels; in 1911, 24,012,724 and 24,184,154.

For Manchurian railways, see CHINA, section *Communications*; see also JAPAN, section *Communications*. Financial statistics of Manchuria are not available. Governor of the three provinces in 1911: Heilungkiang, Sung Hsia-lien; Kirin, Ch'en Chao-ch'ang; Shengking, Chang Hsi-huan.

MANITOBA. A province of the Dominion of Canada. Area, 73,732 square miles. Population (census of June 1, 1911), 455,614, as compared with 255,211 in 1901. Winnipeg, the capital, had 136,035 inhabitants, as compared with 42,340 in 1901. The province is administered by a lieutenant-governor, Douglas Colin Cameron, from August 1, 1911. Premier (1912), Sir Rodman P. Roblin. The area stated above does not include a portion of the Northwest Territories annexed to Manitoba in 1912. The northern boundary of the province was advanced to the 60th parallel. See CANADA.

MANUFACTURES. See UNITED STATES, *Manufactures*, and State articles.

MARATHONS. See CROSS-COUNTRY RUNNING.

MARIANA ISLANDS. See GERMAN NEW GUINEA.

MARIE, Princess of Belgium, mother of King Albert of Belgium, died November 26, 1912. She was born in 1845, and on April 25, 1867, was married to Prince Philippe, Count of Flanders, brother of King Leopold of Belgium. Prince Philippe died in 1905. King Albert was the second son, the first, Prince Badouin, who was born in 1869, dying in 1891. She was of the Hohenzollern family and distantly related to Emperor William of Germany. She left, besides King Albert, two daughters, Princess Henriette, wife of Prince Emmanuel of Orleans, Duke of Vendôme, and Princess Josephine, wife of Prince Charles of Hohenzollern-Sigmaringen.

MARSDEN, SAMUEL EDWARD. Bishop of the diocese of Bristol, New South Wales. He was born in 1832, and was educated at Trinity College, Cambridge. He was ordained to the ministry in 1855, and after serving in several parishes in England was appointed bishop of Bathurst, New South Wales, in 1869. He held this post until 1885. He was appointed assistant bishop of Gloucester in 1900, honorary canon of Gloucester, and from 1906 to 1909 honorary canon of Bristol.

MARSHALL, THOMAS RYAN. Elected Vice-President of the United States, November 6, 1912. He was born in Manchester, Ind., on March 14, 1854. His father, Dr. Daniel M. Marshall, was descended from the family of Chief Justice John Marshall, the patriot and

jurist of the Revolutionary period. His grandfather, Riley Marshall, came from Virginia and settled in Grant County, Ind. On his mother's side he is related to Carroll of Carrollton, one of the signers of the Declaration of Independence. His father was a physician and an uncompromising Democrat of the Jeffersonian school. After receiving instruction at home and in the public schools, his education was completed at Wabash College, from which he graduated in 1873, at the age of 19. During his term in college he gained the leadership in debates and literary activities. He began the study of law, after his graduation, in Columbia City, where his parents then lived. After his admission to the bar he began at once a career which was more than ordinarily successful. His natural eloquence, together with strong personal magnetism, combined to win him many cases before juries. Up to the time of his nomination as Democratic candidate for governor in 1909 he had held no public office. He was, however, well known throughout the State. He was elected by a plurality of about 8000. His election was due largely to the aggressive campaign of speaking which he carried on from the time of his nomination until the election. In 1895 he married Miss Lois Kinsey of Angola, Ind. The details of Governor Marshall's nomination and election will be found in the article **PRESIDENTIAL CAMPAIGN**.

MARSHALL ISLANDS. See GERMAN NEW GUINEA.

MARSH ISLAND PURCHASE. See ORNITHOLOGY.

MARTINIQUE. A French colony; an island in the Lesser Antilles. Area, 987 sq. kilometers (381 sq. miles); population (1911), 184,084. Fort-de-France, the capital, has about 27,000 inhabitants. Imports (1910), 19,563,000 francs; exports, 27,687,000. The local budget is said to have balanced in 1910 at 5,000,000 francs. Debt, 4,511,000 francs. M. Fourreau was governor in 1912.

MARYLAND. **POPULATION.** According to the Census Bureau statistics compiled during 1912, out of the total population of the State in 1910, 1,295,346, the foreign-born whites numbered 104,174, compared with 93,144 in 1900. Of these the largest number came from Germany, 36,602; from Russia, 27,522; from Austria, 8291; from Italy, 6968; and from England, 5178. Other European countries were represented by smaller numbers. In the city of Baltimore, with a population of 558,485, 77,043 were foreign-born whites. Of these the largest number, 25,989, came from Germany, and 24,796 from Russia. The negroes in the State in 1910 numbered 232,250, and the mulattoes, 43,152. In 1890 the negroes numbered 221,565 and the mulattoes, 34,361.

AGRICULTURE. The acreage, value and production of the principal crops in 1911 and 1912 are shown in the table on the next page.

MINERAL PRODUCTION. There were produced in the State in 1911 4,685,795 short tons of coal, with a value of \$5,197,066. This is a decrease of 531,330 short tons from the output of 1910. The product in the latter year was stimulated by the strike of miners in the Middle West. The coal mines of the State gave employment in 1911 to 5981 men.

MANUFACTURES. The Thirteenth Census included statistics of manufactures in the State. These figures cover the calendar year 1909. The

		Acreage	Prod. Bu.	Value
Corn	1912	670,000	24,455,000	\$13,450,000
	1911	670,000	24,455,000	15,407,000
Wheat	1912	599,000	8,985,000	8,536,000
	1911	605,000	9,378,000	8,534,000
Oats	1912	45,000	1,350,000	608,000
	1911	46,000	1,242,000	608,000
Rye	1912	27,000	418,000	334,000
	1911	28,000	406,000	349,000
Potatoes	1912	37,000	4,144,000	2,404,000
	1911	39,000	1,755,000	1,597,000
Hay	1912	381,000	a 575,000	8,280,000
	1911	276,000	a 199,000	4,458,000
Tobacco	1912	26,000	b 17,160,000	1,373,000
	1911	26,000	b 19,110,000	1,433,250
		a Tons. b Pounds.		

following table gives a summary of the results of the census for the calendar years 1909 and 1904, with per cent. of increase from 1904 to 1909 and from 1899 to 1904:

	Number or Amount 1909	1904	Increase 1 1904-1909
Number of establishments	4,837	3,852	25.6—0.9
Persons engaged in manufactures	125,489	107,303	16.9 (2)
Proprietors and firm members	5,376	4,505	19.3 (2)
Salaried employees	12,192	8,624	41.4 27.9
Wage earners (average number)	107,921	94,174	14.6 (3)
Primary h. p.	218,244	165,449	31.9 25.3
Capital	\$251,227,000	\$201,878,000	24.4 35.3
Expenses	285,955,000	216,917,000	31.8 18.3
Services	59,053,000	44,988,000	31.3 14.6
Salaries	13,617,000	8,844,000	54.0 29.2
Wages	45,436,000	36,144,000	25.7 11.5
Materials	199,049,000	150,024,000	32.7 16.0
Miscellaneous	27,853,000	21,905,000	27.2 48.2
Value of products	315,669,000	243,376,000	29.7 15.3
Value added by manufacture (value of products less cost of materials) ..	116,620,000	93,852,000	24.9 14.2

1 A minus sign (—) denotes decrease. 2 Figures not available. 3 Less than one-tenth of 1 per cent.

The industry employing the largest number of wage-earners was the men's clothing industry, in which 19,784 persons were employed.

FINANCE. The report of the treasurer for the fiscal year ending September 30, 1912, showed a balance at the beginning of the fiscal year of \$1,471,520. The receipts for the year amounted to \$8,908,454, and the disbursements to \$8,553,744, leaving a cash balance on hand September 30, 1912, of \$1,826,229. The total debt of the State amounted at the end of the year to \$13,028,095. This was an increase of \$2,599,169. From this there should be deducted bonds and cash held in the sinking funds and mortgages to the value of \$1,500,000. The net debt is therefore \$5,826,258. The chief source of income is from taxation, and the chief expenditures are for education and for the support of State institutions.

CHARITIES AND CORRECTIONS. The institutions under State control are the Hospital for Consumptives at Eudowood, the Maryland House of Correction at Jessups, the Maryland Penitentiary at Baltimore, the Maryland Hospital for the Insane at Catonsville, the Maryland Tuberculosis Sanitarium in Frederick county, and the Springfield Hospital for the Insane at Sykesville. In addition to these, most all of the private asylums, hospitals, and homes

of the State receive State aid. The reformatory institutions include the Female House of Refuge, Henry Watson Children's Aid Society, House of Good Shepherd (white), House of Good Shepherd (colored), Industrial School for Colored Girls, Maryland School for Boys, St. Joseph's House of Industry, and St. Mary's Industrial School. These are all in Baltimore.

POLITICS AND GOVERNMENT

Politics in Maryland excited more than local interest during 1912 on account of the presidential primaries held on May 6, and the complications resulting from the dispute over the awarding of the Republican delegates. The bill providing for presidential primaries was passed by the legislature and was signed by Governor Goldsborough on April 4. The campaign which preceded this election was aggressively carried on by both factions of the Republican party. See **PRESIDENTIAL CAMPAIGN.**

The results of the election held on May 6 were complicated on account of the peculiarity of the Maryland law, which differs from that of any other State. At this primary delegates were elected to the State convention, while at the same time a direct vote for presidential preference was taken in each county and city legislative district throughout the State. The delegates to the national convention are elected at the State convention, the way in which the delegates vote at the State convention being determined by the preferential vote in each county and city legislative district. The delegates to the national convention are required by the primary law to carry out conscientiously the expressed wish of the voters as to the presidential nominee. In this election sixty-six Roosevelt delegates to the State convention were elected, as against sixty-three for Mr. Taft. That is, sixty-six delegates were elected from counties and districts in which the preference vote was cast for Mr. Roosevelt, although four or five of these delegates were personally favorable to Mr. Taft. For some days there was doubt as to what action would be taken by the leaders of the two factions. It was then announced by the governor of the State, who was one of the Taft leaders, and by the Taft manager, that they wished the convention to carry out in good faith the preference of the voters as expressed in the primary.

The Democratic choice of the voters was Champ Clark, and on May 6 the Democratic State convention met and endorsed Mr. Clark. The Republican State convention met on May 14 at Baltimore. Although the majority for Mr. Roosevelt had been so pronounced in the presidential primaries the convention was controlled by friends of President Taft. The delegates were divided. Eight were given to Mr. Roosevelt, six to President Taft, and one was neutral. The Progressive leaders, after the Chicago convention, were not satisfied with this result, and late in July they decided on a complete separation from the Republican party, and named a separate set of presidential electors. Sixteen delegates and as many alternates were chosen to represent the Progressives at the convention of the Progressive party, and a committee was appointed to name Progressive electors to appear on the presidential ticket. A resolution provided that no elector on the Taft ticket should be placed on the Progressive ticket.

until he first resigned. As a result of this action, the Republican convention reconvened on September 11 and ousted those electors favorable to Roosevelt who had been named at the first convention, electing in their place eight who were adherents to President Taft. The convention also endorsed the action of the Chicago convention in renominating President Taft and Vice-President Sherman. The results of the election held on November 5 were as follows: Governor Wilson received 112,674 votes, Roosevelt 57,789, Taft 54,956, Debs 2996, Chafin 2244, and Reimer, Socialist Labor, 322. Governor Wilson's plurality was 54,885. There was no election for State officers in 1912, as the term of Governor Goldsborough does not expire until 1916. He was elected in November, 1911, and went into office January, 1912.

An attempt to pass a local option was killed in the State Senate on March 31.

Just before the beginning of the session of Congress in December, 1912, the senior senator from Maryland, the Hon. Isidor Rayner, died and Governor Goldsborough appointed Mr. William H. Jackson, Jr., Republican, to serve until the General Assembly meets in 1914 to elect a senator to serve for the remainder of the term for which Mr. Rayner had been elected.

An important event to Maryland and the city of Baltimore in 1912 was the opening of the extension of the Western Maryland Railroad, from Cumberland, Md., to a connection with the New York Central system near Pittsburgh, Pa. This extension gives Baltimore a third trunk line to Pittsburgh and the West.

LEGISLATION. The legislative session of 1912 was an important one. At the November election in 1911 the Democrats elected a large majority of both houses of the legislature, but their candidate for governor, Arthur P. Gorman, Jr., was defeated by Phillips Lee Goldsborough, Republican. Austin L. Crothers, the outgoing governor, a Democrat, remained in office for one week after the beginning of the legislative session, and in that time the Democrats passed two bills, one repealing the so-called Wilson ballot law and the other changing the primary election law so as to provide greater safeguards in casting and counting the vote. These two laws were signed by Governor Crothers, the outgoing governor, an act almost unprecedented in the State. Several enabling acts for the amendment of the constitution of the State were passed. One of them authorizes the legislature to abolish the punishment for people who sell their votes and to put the penalty upon the vote-buyer alone. Another permits the printing of bills for final passage in the legislature, the present constitution requiring that they be engrossed. Three other amendments of minor importance were proposed and all of them will be submitted to the people for ratification in November, 1913.

Among other important laws passed was one making an appropriation of \$3,170,000 to continue the work of road-making by the State, which was begun in 1908. The Haman oyster-planting law was amended with the design of further encouraging the cultivation of oysters in the Chesapeake and its tributaries. A bill creating a school of technology in the Johns Hopkins University was enacted. It provides an appropriation of \$600,000 and \$50,000 a

year additional and requires 129 free scholarships to be granted. See also **EMPLOYERS' LIABILITY.**

Baltimore city was authorized to make additional loans for sewers, paving, etc., and the continuance of important works of improvement that have been in progress since the great fire of 1904.

STATE GOVERNMENT. Governor. Phillips L. Goldsborough, Republican; secretary of State, R. P. Graham, Republican; treasurer, Murray Vandiver, Democrat; adjutant-general, C. C. Macklin, Republican; attorney-general, Edgar Allan Poe, Democrat; superintendent of education, M. B. Stephens, Democrat.

JUDICIARY. Court of Appeals—Chief judge, Andrew H. Boyd; associate judges, N. Charles Burke, William H. Thomas, John R. Pattison, Hammond Urner, John P. Briscoe, Henry Stockbridge, and Albert Constable; clerk, Caleb C. Magruder—all Democrats except Stockbridge and Urner, Republicans.

STATE LEGISLATURE 1913. Senate, Democrats 19, Republicans 8; House, Democrats 60, Republicans 41; joint ballot, Democrats 79, Republicans 49. Democratic majority, Senate, 11; House, 19; joint ballot, 30.

The representatives in Congress will be found in the section *Congress*, article **UNITED STATES.**

MASEFIELD, JOHN. See **LITERATURE, ENGLISH AND AMERICAN.**

MASSACHUSETTS. POPULATION. The Census Bureau compiled in 1912 figures giving certain characteristics of the population of the State. These include statistics of white and colored population. Out of a total population of 3,366,416 in 1910 the foreign-born whites numbered 1,051,050, compared with 840,114 in 1900. The largest number of these, 222,883, came from Ireland; from Canada, other than French Canada, came 160,712; from French Canada, 134,460; from Russia, 117,248; from England, 92,411; from Italy, 85,019; from Sweden, 39,533; from Austria, 35,509; from Germany, 30,483, and from Portugal, 25,698. In the city of Boston, with a population in 1910 of 670,585, the foreign-born whites numbered 240,722, compared with 194,933 in 1900. Other European countries are represented by smaller numbers. The negroes in the State in 1910 numbered 38,055 and the mulattoes 13,956. In 1890 the negroes numbered, 22,144 and the mulattoes 8036.

AGRICULTURE. The acreage, value, and production of the principal crops in 1911 and 1912 are shown in the following table:

		Acreage	Prod. Bu.	Value
Corn1912	47,000	2,115,000	\$1,629,000
1911	47,000	2,068,000	1,716,000
Oats1912	8,000	272,000	128,000
1911	8,000	280,000	162,000
Rye1911	8,000	48,000	46,000
1912	26,000	3,380,000	2,535,000

1912			

a Tons. b Pounds.

MANUFACTURES. The Thirteenth Census statistics are for the calendar year 1909 and were compiled in 1912. Massachusetts is one of the most important of the manufacturing States.

The table herewith shows that in 1909 there were 11,684 manufacturing establishments, which gave employment during the year to an average of 644,399 persons:

	Number or Amount 1909	1904	P. C. of Inc. 1 1904-'09
Number of establishments	11,684	10,728	9.0
Persons engaged in manufactures...	644,399	532,481	21.0
Proprietors and firm members..	11,194	11,258	—0.6
Salaried employees	48,646	32,824	48.2
Wage earners (average number)	584,559	488,399	19.7
Primary horsepower	1,175,071	938,007	25.3
Capital	\$1,279,687,000	\$965,949,000	32.5
Expenses	1,320,866,000	992,294,000	33.1
Services	364,462,000	272,044,000	34.0
Salaries	63,279,000	39,655,000	59.6
Wages	301,173,000	232,389,000	29.6
Materials	830,765,000	626,410,000	32.6
Miscellaneous	125,649,000	93,840,000	33.9
Value of products.	1,490,529,000	1,124,092,000	32.6
Value of products less cost of materials	659,764,000	497,682,000	32.6

1 A minus sign (—) denotes decrease.

The largest number of wage-earners were employed in the industries connected with cotton manufacture, 108,914; in the manufacture of boots and shoes, 83,063; in the manufacture of woolen goods, 53,873; and in foundry and machine-shop products, 44,179. The value of the product of the boot and shoe industry was \$236,343,000; of cotton goods, \$186,462,000; woolen goods, \$141,967,000; foundry and machine-shop products, \$86,926,000; printing and publishing, \$47,445,000. The total number of persons engaged in manufactures in 1909 was 644,399, of whom 447,267 were male, and 197,132 were female. The persons under 16 years of age employed numbered 20,735. The prevailing hours of labor for a large majority of the wage-earners was between fifty-four and sixty hours a week; 27.6 per cent. of the total were employed in establishments where the prevailing hours of labor were fifty-four or less, and only 7.4 per cent. where they are sixty or more a week. In Boston the average number of wage-earners was 69,637; in Lawrence, 30,542; in Worcester, 28,221; in Lynn, 27,368; in Fall River, 37,139; in Lowell, 32,757; in New Bedford, 26,566.

POLITICS AND GOVERNMENT

The legislature met in 1912, and the most important enactments will be found noted in the paragraph *Legislation* below. The year was an interesting one politically and industrially in the State. It was marked politically by the first presidential primary election, and industrially by a strike at Lawrence, which, on account of its complications, took on a national aspect. The strike and its results will be found discussed in the article *STRIKES*. Governor Foss was inaugurated for the second time on January 4. In his inaugural address much space was devoted to national topics. Of great interest was his declaration that the Boston Railroad Holding Company must be dissolved and the New Haven, and Boston and Maine Railroads physically connected for a Greater Boston. He also advocated public ownership of docks and water terminals, and new laws providing for safety in invest-

ment. The House of Representatives on February 2 unanimously ordered a thorough investigation of all railways terminating in the city of Boston. The presidential primary bill was passed by the legislature and was signed by Governor Foss on May 15. The election itself was held on April 30.

The campaign immediately preceding the primary election held on April 30 was a very vigorous one. Both the President and Mr. Roosevelt made many addresses. In one of these Mr. Taft declared that if the presidential term were six years with no reelection, the President would not be compelled to go on the stump and defend himself against gross misrepresentation. Mr. Roosevelt in one of his addresses insisted that the President was supported chiefly by "bosses," and that his course during his term had been marked by flabby indecision and helpless acquiescence in the wrongdoing of crooked men. The votes at the primary showed curious results. While Mr. Taft had a popular majority of about 3600, the eight Roosevelt delegates-at-large were elected on account of the rejection of many Taft ballots. These were defective because the name of an independent candidate had been added to the list and votes had been cast for nine instead of eight delegates. Mr. Roosevelt promptly declined to take advantage of these errors and urged the delegates-at-large to support Mr. Taft, but they did not accept his suggestion. Among the Democrats Champ Clark received the largest number of votes. See *PRESIDENTIAL CAMPAIGN*.

Primaries for the election of State officers and representatives in Congress were held on September 4, and resulted in the renomination of Governor Foss, Democrat, and the nomination of Joseph Walker, Republican. The Progressive party nominated as their candidate for governor Charles S. Bird, a well-known manufacturer. The Democratic and Republican State conventions, which met in October, ratified the result of the primaries.

The election of November 5 resulted as follows: Wilson received 173,408 votes, Roosevelt 142,228, Taft 155,948, Debs 12,616, Chafin 2254, and Reimer 1102. For governor, Foss received 193,184 votes, Walker 143,597, and Bird, Progressive, 122,602.

OTHER EVENTS. On May 21 Senator W. Murray Crane announced that he would not be a candidate for reelection. His term expires in 1913. Among the possible candidates as his successor were mentioned Congressman John W. Weeks, ex-Governor Draper, Curtis Guild, ambassador to Russia, and Congressman Samuel W. McCall. On May 24 the State Senate passed a bill establishing the minimum wage for women and minors in manufacturing and mercantile establishments. The Senate in May by a unanimous vote approved the constitutional amendment for the direct election of senators. This had already been approved by the House.

LEGISLATION. The legislature of 1912 passed a number of unusually important measures. These included: A minimum wage law (see *MINIMUM WAGE*), an act amending the inheritance law so that only the real estate of a deceased non-resident is taxed on the theory that the tax on his personal property at the time of his death should go to the State where he resides; an act increasing the amount recover-

able from a railroad corporation for death through negligence from five to ten thousand dollars; an act prohibiting discrimination in the sale of commodities and aimed at unjust discrimination and at the creation of monopolies and combinations to destroy the trade of others. A measure was enacted regulating tenement houses in towns. A commission on economy and efficiency for the commonwealth was established, as was also a State board of labor and industries. A joint resolution of the legislature ratifying the proposed amendment to the Constitution of the United States providing that senators shall be elected by the people of the several States was passed. Resolutions were passed providing for an amendment to the constitution authorizing the referendum. This resolution was referred to the next general court. Resolutions were also passed advocating the establishment of a parcels post system by the United States government. See also **CHILD LABOR** and **LABOR LEGISLATION**.

STATE GOVERNMENT. Governor, Eugene N. Foss, Democrat; lieutenant-governor, D. J. Walsh, Democrat; secretary of State, F. J. Donahue, Democrat; treasurer, Elmer A. Stevens; auditor, John E. White; adjutant-general, G. W. Pearson; attorney-general, James M. Swift; secretary of the board of agriculture, J. Lewis Ellsworth; commissioner of insurance, Frank H. Hardison; commissioner of education, David Snedden—all Republicans except Foss, Donahue, and Walsh.

JUDICIARY. Supreme Judicial Court for the Commonwealth: Chief justice, Arthur Prentice Rugg; justices, James M. Morton, John W. Hammond, Henry Newton Sheldon, William C. Loring, Henry K. Braley, and Charles Ambrose De Courcy; clerk of the court, C. H. Cooper—all Republicans.

STATE LEGISLATURE, 1913. Senate, Republicans 27, Democrats 13, Progressives 0, Socialists 0; House, Republicans 137, Democrats 94, Progressives 8, Socialists 1; joint ballot, Republicans 164, Democrats 107, Progressives 8, Socialists 1. Republican majority, Senate, 14; House, 34; joint ballot, 49.

The representatives in Congress will be found in the section *Congress*, article **UNITED STATES**.

MASSACHUSETTS SAVINGS BANK INSURANCE. See **INSURANCE**.

MASSENET, JULIEN ÉMILE FRÉDÉRIC. A French composer, died August 6, 1912. He was born at Montaud, Department of the Loire, in 1842. He received his musical education at the Paris Conservatory, where he won praises for his pianoforte playing and for fugue-writing. His musical studies began when he was barely nine years of age. He subsequently studied under Ambroise Thomas, and in 1863 won the Grand Prix de Rome. He spent two years in that city, which he describes as the most memorable of his life. On his return to Paris his *Grand'tante* was produced at the Opéra Comique. It was not until after the Franco-German War, however, that he took first rank among French composers by the production of *Don César de Bazan*. This was followed by *Les Erinnyes* (1873); *Le Roi de Lahore* (1877); *Hérodiade* (1881); *Manon* (1884); *Werther* (1892); *Thais* (1894); *Sapho* (1897); *Le Jongleur de Notre-Dame* (1902); *Ariane* (1906), and *Thérèse*. In addition to his operas he wrote several cantatas and oratorios. He

compiled many collections of songs and became famous throughout the musical world. In 1878 he was made professor of advanced composition at the Conservatory and held this post until 1896. In 1878 he was elected to the Académie des Beaux-Arts and in the same year made a successful tour of Great Britain. His musical works are notable chiefly for their instrumentation. He was a master of bizarre effects.

MATCHES, PHOSPHOROUS. See **LABOR LEGISLATION**.

MATES. See **NAVAL PROGRESS**.

MATHEWS, WILLIAM SMITH BABCOCK. An American musician and educator, died April, 1912. He was born in Loudon, N. H., in 1837, and was educated in the public schools. He studied music in Boston and became a teacher of music in 1853. He was for a time adjunct professor of music at the Wesleyan Female College, Macon, Ga., and from 1867 to 1893 he was organist of the Centenary M. E. Church, Chicago. From 1869 to 1871 he was editor of the *Musical Independent*. He was a member of the staffs of several Chicago papers from 1877 to 1887. He established in 1891 a magazine, *Music*, which, in 1903, was merged in *Philharmonic*. He wrote widely on musical subjects and among his published works are: *How to Understand Music* (1880-1888); *Music and Its Ideals* (1897); *Dictionary of Musical Terms* (1895); *The Masters and Their Music* (1898); *Popular History of Music* (1901). He also compiled many collections of music for pedagogic purposes and edited several collections of Masters of Music. He contributed articles to many musical publications.

MAURICE, JOHN FREDERICK. An English major-general, died January 12, 1912. He was born in London in 1841, the oldest son of Frederick Denison Maurice. He entered the Royal Artillery as lieutenant at the age of 20, and seven years later was appointed instructor in military history and afterwards of tactics at the Royal Military College at Sandhurst. His first active service was seen in 1873 when he accompanied Sir Garnet Wolseley to the Gold Coast as private secretary. He served throughout the Ashanti War and was mentioned in dispatches on several occasions. In 1875 he was promoted to be captain and during the Zulu war a few years later acted as deputy assistant adjutant and quartermaster-general. During the campaign in Egypt in 1882 he served on the headquarters' staff. Returning to England he was for the next five years professor of military history at the Staff College. In 1895 he was made major-general.

Although his experience in actual service was long and useful, General Maurice will be best remembered as a writer, a thinker, a student of war and of national problems. He was a clear and forcible writer and his judgment was almost invariably sound. His work *Hostilities Without Declaration of War* became almost a classic in military writing. It is an historical abstract of the cases in which hostilities have occurred between civilized powers before declaration of war, between the years 1700-1870. At the expiration of the South African War, General Maurice was appointed to prepare the official history of this campaign. He was limited within strict lines by the military authorities and thus a history which otherwise would have been of the greatest interest became little more than a colorless statement of facts. Among his writings, in addi-

tion to those mentioned, are, *Life of Frederick Denison Maurice* (1884); *Balance of Military Power in Europe* (1888); *War* (1891); *National Defenses* (1897); and *Diary of Sir John Moore* (1904).

MAURITANIA. A French West African territory, governed from St. Louis (Senegal) by a commissioner (1912, Lieutenant-Colonel Patey) under the direction of the governor-general for French West Africa (q. v. for area, population, etc.). The chief towns are Port-Etienne, Boutilimit, Aleg, Moudjeria, Kaedi, Selibaby, etc. Excepting a few groups rendered semi-sedentary by the necessity for tending the plantations of palms by which they obtain a livelihood, the Moors who constitute the larger proportion of the population are all nomads. They live in encampments, driving their flocks from pasture to pasture as the water supply fails. Travel is by caravan. Manual labor is considered dishonorable among the Moors. The negroes cultivate millet, barley, etc., gather gums for export, and catch and dry fish. Grazing is the occupation of the nomads, who raise camels, horses, cattle, sheep, and goats. Salt exists in great abundance. Lieutenant-Colonel Mouret was commissioner in 1912.

MAURITIUS. A supposedly volcanic island (720 square miles) in the Indian Ocean; a British crown colony. Total civil population (1911 census), 368,510; population inclusive of military, 370,393 (222,361 Indo-Mauritians, 35,526 other Indians, 3662 Chinese, 108,844 persons of European, African, or mixed blood). The natives of European race are in large part French creoles. Port Louis, the capital, had (1911) with suburbs, 50,060 inhabitants; Curepipe, 17,173; Mahebourg, 4068. The cultivation of sugar-cane is the staple industry. Export of sugar (1910), 215,743,242 kilos.; estimated value, Rs. 34,734,663; rum, Rs. 29,761; vanilla, Rs. 17,412; aloë-fibre, Rs. 627,501; coconut oil, Rs. 141,968; molasses, Rs. 510,727. Total imports and exports (1910), including shipping charges on home products heretofore excluded, Rs. 37,545,260 and Rs. 37,109,170 respectively. Revenue 1910-11, Rs. 11,129,988; expenditure, Rs. 9,578,243; customs revenue, Rs. 4,059,115. Tonnage entered and cleared (1910), 986,267 (763,786 tons British). External debt, June 30, 1911, £1,296,090. Major J. R. Chancellor (appointed November, 1911), was governor in 1912).

MAXWELL, W. H. See EDUCATION.

MAY, KARL. A German writer, died April 1, 1912. He was born in Ernstthal in 1852, and was educated at the Schoolmasters Seminary for Self-Instruction. While still a student he began to write and produced a work called *Favorite Occupations, A Study of the So-Called Inner Man*. He also wrote on immortality, world peace, development of world peoples, noblemen, knowledge, and the human soul. He wrote many stories of Indian life and translated stories from the Arabic, Turkish, Persian, and Chinese.

MAYOTTE AND THE COMORO ISLANDS. A group of islands belonging to France, administered under the government of Madagascar. Total area, 2168 square kilometers (837 square miles); population (1911), 97,750. Imports and exports (1909), 1,133,429 and 2,700,652 francs respectively. The budget for Mayotte (1909) balanced at 221,341 francs,

and for Grand-Camore at 176,200. Administrator for Mayotte, M. Garnier-Mouton in 1912.

MEADE, WILLIAM EDWARD. Bishop of the Church of Ireland, died October 12, 1912. He was born in 1832, and was educated at Trinity College, Dublin. After serving in various parishes in Ireland he was appointed archdeacon of Armagh in Cork, 1885. In 1893 he was elected bishop of the United Dioceses of Cork, Cloyne, and Ross. For thirteen years he held the important office of secretary to the General Synod. He wrote *The Pastor's Inner Life* (1882) and several sermons.

MEDICAL PROGRESS IN 1912. Many notable advances were made in the control of epidemic diseases and the problem of preventive medicine during 1912 (see DIPHTHERIA, HOOKWORM DISEASE, POLIOMYELITIS (Infantile Spinal Paralysis), MENINGITIS, PELLAGRA, RABIES, TETANUS, TYPHOID FEVER, OCCUPATIONAL DISEASES, SMALL-POX, and VACCINATION). Tropical diseases engaged a large share of the attention of the various countries having territorial possessions in hot climates (see BERIBERI, INSECTS AND THE PROPAGATION OF DISEASE, MALARIA, PLAGUE, SLEEPING SICKNESS). Several new drugs were introduced, among which may be noted ATOPHAN, GYNOVAL, NEOSALVARSAN, PROFERRIN, PROPÆSIN, THROMBOKINASE, TYRAMINE. The quest for a cancer cure and for the means of limiting the spread of tuberculosis was perseveringly followed (see CANCER, TUBERCULOSIS). Advances in surgical technic and in the knowledge of anesthetics were published (see ANÆSTHESIA, SURGERY). Other medical items and statistics will be found under their respective captions.

MEDICAL SCHOOLS. See UNIVERSITIES AND COLLEGES.

MEDITERRANEAN SQUADRON. See NAVAL PROGRESS.

MEIGS, ARTHUR VINCENT. An American physician and writer on medical subjects, died January 1, 1912. He was born at Philadelphia in 1850, and was educated at the Classical Academy of Philadelphia and in medicine at the University of Pennsylvania, where he took his degree in 1871. He was for many years physician to the Pennsylvania Hospital, and from 1904 to 1906 was president of the College of Physicians, Philadelphia. He was the author of *Milk Analysis and Infant Feeding* (1885); *The Origin of Disease* (1889); *A Study of the Human Blood Vessels in Health and Disease* (1907). He also contributed various articles to medical journals.

MELVILLE, GEORGE WALLACE. A rear-admiral of the United States navy, retired, died March 16, 1912. He was born in New York in 1841. He was educated in the common schools and in the Brooklyn Polytechnic Institute. He enlisted in the navy as assistant engineer in 1861, and served during the Civil War. After the war he saw service in various stations and at navy yards. In 1879 he was chief engineer of the *Jeannette* expedition to the polar regions under the command of Lieutenant-Commander De Long. He had previously taken part in a

polar expedition as chief engineer on the *Tigress* in search of the *Polaris*. When the *Jeannette* was crushed in the ice Melville headed the only party of survivors which escaped from the wastes of the Lena delta. On his return to the United States he headed the expedition which recovered the records of the *Jeannette*, and the remains of De Long and his companions. In 1890 he was advanced fifteen numbers and given a gold medal by special act of Congress for bravery in the Arctic regions. He was appointed in 1887 engineer-in-chief of the navy and was reappointed to this position in 1892-96. He was made rear-admiral in 1899. He was notable as a designer, and his greatest professional successes were the triple-screw fliers, *Columbia* and *Minneapolis*. He was retired on January 10, 1903. He invented many mechanical appliances for use on ships and elsewhere. He was the author of *In the Lena Delta*.

MENDELISM. See BIOLOGY.

MENINGITIS, EPIDEMIC CEREBROSPINAL. Outbreaks of this fatal disease occurred in Kentucky, Louisiana, and Texas, and many sporadic cases were reported from other parts of the United States. Up to April 13 there were 159 cases of cerebrospinal meningitis in Louisville, with a mortality of over 42 per cent. In Shreveport, La., and vicinity there were, since December 4, 1911, 111 cases originating in the city and 19 were imported from Texas; a total of 130. Twenty-seven patients were white and 84 colored. Among the cases in the city there were 69 recoveries and 38 deaths, making the percentage of recoveries 65. Of the whites, 23, or a percentage of 85, recovered. The disease occurred most frequently among negroes between the ages of 11 and 20. The greater number of cases and higher percentage of deaths among the colored population are probably accounted for by the difference in economic and hygienic conditions. The percentage of recoveries at Shreveport is a little higher than the average in the Texas epidemic, the deaths in the latter State being between 40 and 60 per cent. In one city in Texas, where most cases occurred, the mortality in the city hospital under the serum treatment was 27 per cent., while among those treated outside of the hospital with and without serum it was 60 per cent. In a few places the death rate reached 85 per cent. The showing in favor of hospital treatment combined with the serum was remarkably good, as compared with the ordinary management of these cases.

Epidemic cerebrospinal meningitis is transmitted principally through the agency of healthy carriers. The specific germ of the malady, *Diplococcus intracellularis meningitidis* of Weichselbaum, has its natural habitat in the nose and throat. The disease is undoubtedly transmitted directly from person to person, for the *Diplococcus intracellularis* is of such low vitality that it succumbs quickly to drying, sunlight, and other noxious influences. Because of this fact individuals sufferings from the disease are decidedly restricted in their sphere of potential pathogenicity, and as only a very few of those who acquire the organism are sensitive or susceptible to it, the perpetuation and dissemination of meningitis must depend on the healthy carriers who transmit the diplococcus from one to another until an impressionable subject is reached. The num-

ber of persons who are thus made carriers during an outbreak of meningitis is far greater than the number of cases of meningitis. Nearly one-fourth of all individuals residing in the immediate vicinity of meningitis cases act as carriers, harboring the germs in the respiratory passages without displaying any evidence whatever of disease or suffering any inconvenience. In apparently the healthiest of subjects virulent diplococci have been discovered, and even the saliva has been found contaminated. In carriers the germs occur abundantly in the posterior part of the nasal chambers and in the rhinopharynx. Other persons equally exposed as carriers, but not inhabiting the same dwelling, rarely become infected. Aside from epidemic outbreaks, the germ is seldom discoverable in healthy persons; there are, however, occasional persons who, once sheltering the diplococcus in the nasopharynx, carry it permanently, thus perpetuating the disease. These chronic carriers are especially active during the periods intervening between epidemics. It appears that the *Diplococcus intracellularis* can readily obtain a foothold on the mucous membranes of the majority of individuals, but with only a comparatively small proportion of these subjects is it able to invade the tissues and manifest its pathogenic effects.

The best treatment as yet brought forward is the injection of the specific antiserum of Flexner. This investigator has examined nearly 1300 cases of this disease in which the serum was used. These cases were representative, coming from all parts of the country. Of 1249 patients, 849 recovered and 400 died, fixing the death rate at 30 per cent. The normal death rate in this disease before the discovery and use of the serum was about 70 per cent.

MERŒ. See ARCHAEOLOGY.

MERRIAM, HENRY CLAY. An American soldier, died November 18, 1912. He was born at Houlton, Me., in 1837, and at the outbreak of the Civil War was a student of Colby College. He entered the Union army in 1862 and was appointed captain in the 20th Maine Infantry. He resigned this office in the following year and was made captain of a regiment of colored troops, and to the close of the war he served with different regiments of negro soldiers, rising to the rank of lieutenant-colonel. He was mustered out of service in 1865 and in the following year was appointed major in the regular army. He rose through the different grades, becoming brigadier-general in 1897. He served as major-general of volunteers in 1898-9, and in 1901 was advanced to the rank of major-general, retired. He received brevet rank for "faithful and meritorious services during the campaign against Mobile." He was also awarded the Congressional Medal of Honor for conspicuous gallantry at Fort Blakeley. He served in numerous expeditions against the Indians in the West and commanded the Departments of Columbia and California. In this capacity he organized, equipped and forwarded troops for the Philippine expedition in 1898. In 1900 and 1901 he commanded the Department of the Colorado. He was the inventor of the Merriam infantry pack.

MERSEY IMPROVEMENT. See DOCKS AND HARBORS.

METALLURGY. The development and improvement of various metallurgical processes was fairly active in 1912, and there was the usual amount of investigation and research in progress. Many important papers in this field were presented to the International Congress of Applied Chemistry held in Washington and New York. In iron and steel metallurgy the improvement of the product, especially as regards steel rails, was under active discussion and investigation, while the advances of previous years in electro-metallurgical processes were maintained. The following paragraphs, based in large part on authoritative reviews of metallurgical progress published in the annual summary of the *Engineering and Mining Journal* (New York), indicate some of the more important developments of the year.

GOLD AND SILVER. While the application of cyanidation found increasing application during 1912, yet no remarkable discoveries were to be recorded either of a mechanical or metallurgical nature. The various ores require more or less individual study and treatment and the scientific side of the problem was more conspicuous than ever. In Colorado cyanidation had completely triumphed over chlorination, the largest plant working the latter process closing down in January, 1912. The Clancy process for treating the telluride ores of Cripple Creek was tested during the year and the Ajax mill was built for the special exploitation of this method. It was believed that the results had not altogether met the expectations of those developing the process. During the year electro-cyanide methods continued to receive study, but little more than encouragement was received from the various experiments. The metallurgy of gold and silver seemed to have reached a stage where further developments were secured by careful and economical arrangement and technical investigation, especially with a hope towards chemical improvements, rather than by the adoption of new and radical methods which for several years had not been forthcoming.

LEAD. A new lead smelter equipped with four 100-ton Dwight-Lloyd blast-roasting machines went into blast at Tooele, Utah, during the year and was notable for the high efficiency of its mechanical equipment, eliminating the usual large number of laborers required for handling materials. A ~~H~~orkes desilverizing plant to refine lead bullion was also built at Chicago and was to be in operation towards the end of the year. The record of the year seemed to be more concerned with technical progress in the line of research than with radical changes in methods of treating either lead ores or desilverizing lead bullion. At the International Congress of Applied Chemistry, R. C. Canby presented a valuable historical paper on the development of the American blast furnace, and other papers of a scientific and practical nature were read at this convention.

ZINC. In 1912 the Japanese began zinc smelting by the putting in operation at Amagasaki, near Osaka, two furnaces, each comprising 60 retorts and by erecting a plant of three furnaces of 120 retorts each near Kasaoka, on Konoshima Island, in the province of Okayama, where regenerative furnaces were installed with

the Rhenish form of retorts. In American roasting furnaces attempts were being made to secure greater economies of fuel, as previously this consideration has not figured to the same extent that it has in Europe. Electric smelting of zinc received much experimental attention in 1912, both in Europe and from the Canadian Department of Mines. In the United States the experimental plant at Hartford, Conn., of W. McA. Johnson, continued in operation and a dozen tons or so of spelter were produced, while other experiments were carried on by the Butte and Superior Copper Company and the New Jersey Zinc Company. At Trollhättan and Särpsborg electrothermic spelter was produced chemically, but in the main, progress in this field was rather limited and but little advance was being chronicled. Hydro-metallurgical processes for zinc smelting, both chemical and electro-metallurgical, were attracting attention, though none had resulted in an active commercial success.

COPPER. Many new copper smelteries of large size were completed in 1912, and while radical innovations were not evident these plants showed the most modern methods for efficient operation, and in blast furnace smelting this was accomplished by first sintering all fine material so that the amount of fines in the charge was reduced to a minimum. The reverberatory furnaces built were of large size, but showed few radical departures from current practice. Progress was made during the year in the important field of fume condensation which in some places where the evil was greatest required the shutting down of copper smelteries and the removal of plants. Methods were in use whereby the dust, sulphuric acid, and sulphur trioxide contained in the escaping gases were collected and the Cottrell system found wider application for this purpose. Prof. Stuart W. Young's method, known as the thiogen process, where sulphur oxides and furnace gases are reduced to elemental sulphur by means of hydrocarbons, was installed at Campo Seco, Cal., and was found successful in collecting the reduced sulphur. During the year various hydro-metallurgist processes for recovering copper from its ore were the subject of considerable experimentation. Most of these involved elaborate chemical processes, but a successful outcome of at least some of the experiments was anticipated.

IRON AND STEEL. The year 1912 was noteworthy for active attempts to improve the quality of iron and steel, particularly of steel for rails, as various defects and weaknesses had developed which were responsible for railway wrecks. Methods were being developed or investigated to eliminate pipes, blow-holes, and the segregation of solid inclosures in the ingots of cast steel from which the rails were rolled, and an elaborate inspection of manufacture and use was adopted for every rail produced. The chief difficulty in the opinion of many metallurgists was securing a sound ingot. While discarding the upper portion, as had been usual in the best practice, was recommended as the safest way, Sir Robert Hadfield, before the autumn meeting of the Iron and Steel Institute of Great Britain, proposed that the top of the ingot when cast should be heated by means of a charcoal fire, with the result that the segre-

gation and depth of pipe were greatly diminished and correspondingly less discard was necessary. The Talbot method described during the year consisted in rolling the ingot before it had solidified inside and so obtaining the advantages of liquid compression, namely, the impoverishment of the non-ferrous elements of the centre instead of their segregation there. Dr. Hans Goldschmidt proposed that a can of thermit be introduced at the bottom of the liquid ingot so as to free it from gases, oxide inclosures, etc., by the violent stirring produced by the thermit reaction. Various methods to prevent blow-holes and slag inclosures were studied and the results published by Packer and Mars, Troubine, Stead, Austin, and other experts.

The composition of steel also attracted attention during the year and the addition of small amounts of copper for rails and steel tubes was attended with much interest, and the desire to learn of the results in service of rails was expressed. The addition of ferro-silicon and ferro-manganese was further investigated and the chemical relations of the resulting compositions duly studied. An important investigation on charcoal cast iron published by J. E. Johnson, Jr., during the year attracted wide attention. Another interesting study was of Mayari iron and steel, made from the Mayari iron ores of Cuba, which after smelting in a blast furnace produced a pig iron containing up to 3 per cent. of chromium and 1.5 per cent. of nickel. Mixing Mayari iron with other irons was said to give a superior quality of casting as regards wear, strength, finish, and closeness of grain, and the material was in demand for chilled castings and others of great strength or good finish. Blast furnace improvement during the year tended towards cheaper cost of installation and economy of operation without any radical innovations. In the open-hearth process the cost of oil fuel led to the use of tar and coke-oven gas.

There were also developed during the year new open-hearth raw materials, especially iron sponge, made by subjecting iron ore to a stream of carbon dioxide gas, which seemed to have a valuable availability for such regions as California, where the gas could be cheaply obtained from peat, oil, etc. Improvements for the making of small cast steel ingots were introduced in European and American plants, while a new process of considerable efficiency for the manufacture of charcoal iron of exceptional purity by the use of an open-hearth furnace was introduced in the United States. A large manufacturer of wrought iron introduced mechanical puddling by the Roe puddling furnace on a large scale, and other mechanical improvements were also to be recorded.

ELECTRO-METALLURGY. Electric iron and steel works were being developed during 1912 wherever waterpower was available, especially in Norway and Sweden, while at many plants electric furnaces were being used in the manufacture of special steels. An electric blast furnace was built at Domnarfvet, near Trollhättå, while a steel works with a capacity of 1500 tons of rolled steel annually was planned by the Stavanger Company, to include rolling mills and a steam-hammer plant. It was reported that in Sweden 70 electric furnaces were in active operation, including ore-smelting furnaces and furnaces for melting or refining steel.

In Germany electric steel was attracting increased attention and the Remscheid-Hasten works were being used for its manufacture by the Lindberg process, for which a new 25-ton furnace, said to be the largest in use, was installed during the year. This process works upon molten Thomas steel supplied from the outside steel plant and was said to be more economical than the Siemens-Martin process. In Luxemburg a large electric furnace was being operated mainly for ferro-manganese at Esch, and in Austria the Lindberg electric steel plant was being erected. The Fischer process for the electrolytic deposit of pure iron was attracting increased attention in Germany, and sheets one-fifth of an inch in thickness were obtained almost pure, with remarkable magnetic properties, notable among which was the small amount of hysteresis loss, so that it was particularly applicable for dynamo and transformer work.

In Germany the electric steel furnace has been found particularly useful for making rails and in four years' experience these have been found to be unbreakable. A less extended experience with electric rails has been had in the United States, and for two years 5600 tons were reported in service with a similar record. In the United States an electric furnace for smelting iron ore was in operation at Heroult, Cal., with a capacity of about 20 tons per day. Pig iron is here produced at a cost of about \$14 per ton and of good quality, free from manganese, sulphur, and phosphorus and available for cheap conversion in the open-hearth furnace. American steel makers were using electric furnaces for the manufacture of steel castings and for the super-refining of steel from Bessemer and open-hearth furnaces, a large furnace for the latter purpose being installed by the Bethlehem Steel Company.

METEOROLOGY. The summer of 1912, like that of 1911, proved to be exceptional in the annals of meteorology, but, unlike that of 1911, was characterized by the excessive rainfall and low temperatures that were experienced in many widely separated regions of the globe. The excessive temperatures of the preceding year were apparently responsible for the early and extensive breaking up of the Greenland ice field, with the result that an abnormal drift of both icebergs and ice floes was observed in the western Atlantic during the whole summer. So extensive was this drift that ice was found as far south as latitude 36°, or the latitude of the Mediterranean. The effects of this unusual condition were far more noticeable on the eastern shores of the Atlantic than on this side. Great Britain and western Europe experienced the wettest and coldest summer on record. During practically the whole of the summer high pressure areas were stationary near the Azores and between Iceland and Scandinavia, with the result that all the atmospheric disturbances arriving from the Atlantic were deflected so as to cross Great Britain and the central belt of Europe, and, in conjunction with the lowering of the temperature of the Gulf Stream by the excessive ice-drift, gave rise to the unfavorable

weather conditions experienced in those countries.

WEST INDIAN HURRICANES. Dr. O. L. Fassig, in the *Journal of the Washington Academy of Sciences*, gave an interesting analysis of 135 storms recorded by the United States Weather Bureau in the West Indies from 1876 to 1910. He showed that their paths coincide closely with the two great branches of the great equatorial current of the North Atlantic Ocean. The path of greatest frequency lies along the track of the southern branch of this current, starting near the Windward Islands and, after running in a westerly and northwesterly direction through Jamaica, recurving and passing out towards the northeast into the Atlantic. Less frequently hurricanes are developed to the north of the Windward group and in this case they move across the Bahamas and, recurving east of Florida, pass out into the Atlantic in a northeasterly direction like the others. Ordinarily the storms of the early part of the season, which lasts from May to November, begin in the western waters of the Caribbean Sea; later in the season they originate more to the east. The mean daily progress of the storms traversing the inner track is 250 miles, while those taking the outer track move at the rate of 390 miles a day. It was found that conditions favorable to the formation of hurricanes are produced by changes in the position and intensity of the permanent areas of high and low atmospheric pressure.

SHORT-PERIOD DISTURBANCES OF THE WEATHER. In an interesting series of "Atmospheric Studies" published in the *Bulletin of the Mount Weather Observatory*, Sandström discussed the causes of the peculiar periodicity which is frequently observed in the weather phenomena at the end of a snowstorm in the mountainous regions of Sweden. This periodicity consists in alternations of hurricane winds and sunshiny calm, repeated at intervals of about 25 minutes and often lasting for a considerable period. His explanation is that the plain at the foot of the mountain is covered by a layer of air of great density, and this again by a layer of lighter air. The upper layer, being rendered heavy by the snow which permeates it, begins to rush down the mountainside and so forms an aerial cascade which pushes away the heavy layer from the base of the mountain, causing it to become heaped up at no great distance. With the deposition of the snow, the snow-laden air becomes lighter again and reascends the mountain, and the displaced heavier layer now rushes back. The cascade of snow-laden air continues, the rebounding air of the valley is again pushed back, and the cycle is repeated. The result is the institution of a series of aerial waves several hundred feet high in the region of discontinuity between the two layers. These waves are propagated in some instances to a distance of nearly 70 miles and give rise to the periodic weather phenomena over the intervening region.

VORTEX MOTIONS IN THE ATMOSPHERE. In the same series of studies Sandström also discussed the hydrodynamic vortex theory in its application to meteorological phenomena. He considers that vortices in the atmosphere belong to one of two classes: rotating vortices, in which the vortex lines are nearly vertical; and "glide" vortices, in which they are very nearly horizontal. The latter kind may give rise to

the former, but the reverse process has not been observed. Rotating vortices are usually circular, while "glide" vortices are unsymmetrical, the air concerned being separated into two regions by a glide plane or surface, which is usually somewhat inclined to the horizontal. The air above the glide surface is humid and has a higher temperature than the dry and heavier air below it; the pressure gradient is always directed toward the glide surface, so that the air is pressed against the surface, which is thereby accentuated in spite of the tendency of friction to obliterate it. Above and below the surface the air currents move in opposite directions, while along the surface itself there is calm. Off the west coast of Norway a dry cold east wind with fine weather is often experienced in winter. This east wind rushes down from the mountains, attaining its maximum velocity near the shore, and is bounded in the upper air by a glide surface at an altitude of about 1000 feet, above which a light west wind prevails. The altitude of the glide surface decreases to the Atlantic Ocean, and along it there takes place a conversion into wind of the heat of the Gulf Stream coming from the Atlantic. It is estimated that along a coastal belt about 300 miles long the heat energy is converted at the glide surface into the kinetic energy of wind at a rate equivalent to 22,500 millions of horsepower.

ECHELON CLOUDS. In the *Bulletin of the Mount Weather Observatory*, Humphreys gave an explanation of the formation of certain clouds which to an observer on the surface of the earth seem to resemble a flight of stairs, and to which he has therefore given the name "echelon clouds." The appearance is produced by a series of evenly spaced cumulus clouds having plane lower surfaces at a uniform level. The conditions prevailing over the region covered by such clouds involve the uniform vertical distribution of water vapor and substantially uniform vertical temperature gradients; the amount of humidity is rather large, and vertical connection is occurring in many separate places, but nowhere with violence.

BOOKS. Among the more important works on meteorology published in 1912 may be mentioned the following: Milham, *Meteorology, a Textbook on the Weather, the Causes of Its Changes, and Weather Forecasting*; Rotch and Palmer, *Charts of the Atmosphere for Aeronauts and Aviators*.

METHODIST EPISCOPAL CHURCH. This denomination is the largest in point of membership among the Protestant denominations in the United States. The total number of communicants in 1912 was 3,293,526, a gain of 58,891 over 1911. The churches numbered 28,433, an increase of 24, and the ministers, 18,714, an increase of 219. The Sunday schools numbered 36,014, and in them were 4,035,624 scholars and teachers. The total value of church property was \$191,762,983. The denomination has mission conferences in Austria-Hungary, Bulgaria, Denmark, Finland, France, Italy, Germany, Norway, Russia, Sweden, and Switzerland. Missions are carried on in nearly all the countries of Asia and in north and central Africa and Liberia. There are missions also in South America, Hawaii, and Mexico. Missions are carried on through the board of foreign missions. The total receipts for mission-

ary purposes during the year amounted to \$1,046,113 and the disbursements to \$1,546,967. Other organizations of the denomination are the Freedmen's Aid Society, the board of education, which has general charge of the educational institutions, the Methodist Book Concern, through which the publications of the denomination are issued, and the Epworth League, which is the association for the young people of the church. The women of the denomination carry on the Woman's Foreign Missionary Society, Woman's Home Missionary Society, and other benevolent and social work of the church.

Under the auspices of the denomination are maintained many universities and colleges. The largest of these are De Pauw University, Indiana, Northwestern University, Illinois, University of Southern California, Boston University, Ohio Wesleyan University, and Wesleyan University, Connecticut. Ten theological schools are maintained for white students and five for colored.

The general conference of the denomination met at Minneapolis on May 1. Eight bishops were elected: H. C. Stuntz, T. S. Henderson, W. O. Shepard, N. Luccock, F. J. McConnell, F. D. Leete, R. J. Cooke, and W. P. Thirkield. Three bishops retired. These were H. W. Warren, David H. Moore, and Thomas B. Neely. Two missionary bishops were elected for southern Asia, John Wesley Robinson and William P. Eveland. The conference passed a resolution asking Congress to pass the Kenyon-Sheppard bill, forbidding interstate traffic in liquors. The conference refused to modify the law of the denomination relating to amusements. A commission was authorized to continue negotiations with the Methodist Episcopal Church, South, and the Methodist Protestant Church for possible organic union or closer federation. Other Methodist bodies were cordially invited to join in an effort to unify the various branches of the denomination in one great Methodist Church. A plan to revise the ritual was rejected, but a commission was appointed to consider a report in 1916. Official editors in treating of biblical matters were directed to "avoid unsettled questions as far as is consistent with honesty in teaching."

METHODIST EPISCOPAL CHURCH, SOUTH. This body, which includes the greater number of Methodists in the Southern States, had in 1912, according to the official statistics of the denomination, 1,950,646 members. Of these, 29,285 were outside the United States. Traveling preachers numbered 6992 and local preachers 4749. There were 16,274 churches and the value of the church property was \$50,193,598. The schools and colleges of the denomination were valued at \$12,483,479, with an endowment of \$3,557,315. Sunday school scholars numbered 1,381,647, of whom 31,347 were outside the United States. The officers and teachers numbered 129,575. There were paid out for foreign missions, in 1912, \$445,121 and for home missions \$411,453. These figures do not include contributions by the women's missionary society. For church extension there were distributed \$227,229 and for superannuated preachers \$281,159. For educational purposes were spent approximately \$240,000.

METHODISTS, COLORED. The colored branches of the Methodist Episcopal Church include the Colored Methodist Episcopal

Church, with 233,911 members, 2863 ministers and 2809 churches; the African Methodist Episcopal Church, with 858,323 members, 6920 churches, 6170 ministers; the Zion Union Apostolic Church, with 3059 members, 45 churches, and 33 ministers; the Union American Methodist Episcopal Church, with 18,500 members, 255 churches, and 138 ministers; African Union Methodist Protestant Church, 4000 members, 125 churches, and 200 ministers; Reformed Methodist Union Episcopal Church, 4397 members, 58 churches, and 72 ministers. The largest of these denominations have their chief strength in the Southern States.

AREA AND POPULATION. Many of the Mexican states were brought into prominence by the revolutionary movements of 1911 and 1912; all of them, together with the territories and Federal District, are named in the following table, which shows area, population (census of October 27, 1910), and density per square kilometer:

	Sq. kms.	Population	Density
Aguascalientes	7,692	120,511	15
Campeche	46,855	86,706	1.8
Coahuila	165,099	362,092	2.2
Colima	5,887	77,704	13

* Tepic	28,371	171,173	6
Total	†1,987,201	15,115,612	‡7.6

* Territory. † 767,258 square miles. ‡ Nearly 2 per square mile.

The total in 1900 was 13,607,259, of whom 43 per cent. were of mixed blood (mostly Indian and white), 38 per cent. Indian, and 19 per cent. white. The larger cities, with population (1910 census), include: Mexico, 470,659; Guadalajara, 118,799; Puebla, 101,214; San Luis Potosí, 82,949; Monterey, 81,006; Mérida, 61,999; León, 57,722; Veracruz, 45,021; Aguascalientes, 44,800; Morelia, 39,160; Chihua-

hua, 39,061; Pachuca, 38,620; Oaxaca, 37,469; Orizaba, 36,189; Tacubaya, 35,830; Guanajuato, 35,147; Saltillo, 35,063; Querétaro, 35,011; Durango, 34,085; Toluca, 31,247; Zacatecas, 25,906; Colima, 25,148; Jalapa, 24,816; Celaya, 23,112; Irapuato, 21,281.

In 1910 there were 49,938 marriages, 435,386 births, and 467,965 deaths; immigrants, 79,484.

EDUCATION. Primary instruction is free and nominally compulsory. Latest official figures available are for 1906: Elementary schools (primary), 8451 (with 542,539 pupils); elementary schools (superior), 354 (51,789); secondary and collegiate schools, 38 (4581); professional, 66 (8734); private, 2562 (163,020).

INDUSTRIES. In proportion to the country's capabilities, agricultural production is small. The leading crops include corn, cotton, henequen, wheat, sugar-cane, coffee, beans, and tobacco. Mining is of preëminent importance, and large amounts of foreign capital, especially American, have been invested in mineral exploitation. Many mining properties were affected disastrously in 1912 by the disturbed political conditions. The most important metals mined are silver, gold, copper, lead, antimony, and zinc. The gold and silver produced have been valued, respectively, as follows in fiscal years: 1889-90, 1,383,655 pesos and 39,156,687 pesos; 1899-1900, 15,444,666 and 70,218,914; 1904-5, 28,407,312 and 79,047,148; 1909-10, 48,295,508 and 76,371,884; 1910-11, 49,481,955 and 80,878,729. These figures show a remarkable development in the output of precious metals, especially gold; silver production reached its highest value in 1907-08, with 85,366,904 pesos. The principal manufactures are cotton and other textiles, tobacco goods, sugar, and spirits. In the year 1908-9 the mill consumption of raw cotton was 35,434,639 kilos; 1909-10, 34,736,154; 1910-11, 34,568,212. In the last year the output was 15,090,669 bolts of piece goods and prints and 2,766,973 kilos of yarn. In 1909-10 and 1910-11 tobacco manufactures amounted to 8,972,547 and 8,874,118 kilos; alcohol, 39,352,205 and 37,127,173 liters.

COMMERCE. For the fiscal years 1900, 1905, 1910, 1911, and 1912, ended June 30, the values of imports and exports have been as follows, in pesos:

Year	Imports	Exports		Total
		Mdse.	Prec. metals	
'00	128,796,606	79,031,336	79,216,597	158,247,933
'05	178,204,962	114,634,924	93,885,527	208,520,451
'10	194,865,781	141,060,746	118,985,524	260,046,270
'11	205,874,273	150,795,273	142,958,367	293,753,640
'12	182,660,691	158,540,708	139,473,469	298,014,177

Classified imports in fiscal years 1911 and 1912: Animal substances, 17,433,251 and 16,466,011 pesos; vegetable substances, 38,600,222 and 31,284,213; mineral substances, 52,030,587 and 46,710,312; textiles and their manufactures, 24,640,269 and 21,281,110; chemicals and drugs, 12,990,250 and 12,075,487; beverages, 6,813,346 and 6,744,083; paper, 5,608,939 and 5,120,733; machinery and apparatus, 25,811,176 and 23,383,811; vehicles, 9,095,206 and 4,604,224; arms and explosives, 3,212,567 and 5,385,843; miscellaneous, 9,638,455 and 9,604,859. Classified exports in the two years: Mineral products, 180,005,965 and 186,207,602 pesos;

vegetable products, 91,267,202 and 83,610,345; animal products, 16,802,140 and 19,861,197; manufactures, 3,609,670 and 6,604,428; miscellaneous, 2,068,662 and 1,730,602. Leading exports in 1910-11 and 1911-12: Silver, 80,867,861 and 89,568,354 pesos; gold, 62,090,505 and 49,905,114; copper, 26,300,228 and 33,501,873; henequen, 25,062,140 and 21,430,081; coffee, 8,623,775 and 13,563,044; rubber, 21,187,770 and 11,797,798; hides and skins, 10,773,770 and 10,509,201; guayule, 11,797,910 and 9,935,130; live animals (mostly cattle), 4,799,185 and 7,913,346; lead, 6,539,098 and 6,019,146; chick peas, 3,078,662 and 4,463,730; ixtle, 3,190,680 and 3,792,678; woods, 3,440,968 and 3,568,417; sugar, 943,366 and 3,491,404; chicile, 3,745,968 and 3,211,090; vanilla, 2,630,545 and 2,154,164; antimony, 2,046,689 and 1,728,338; zacatón root, 2,361,120 and 1,698,614. Trade by countries, in thousands of pesos:

Total, including other....	205,874	182,661	293,754	298,014

For the first five months of the fiscal year 1913 imports were valued at 77,598,958 pesos, as compared with 74,163,230 pesos in the first five months of the fiscal year 1912; exports, 140,611,472, as compared with 113,992,891. The increase, therefore, in the five-months' period was 3,435,728 pesos (4.63 per cent.) in imports and 26,618,580 pesos (23.35 per cent.) in exports.

SHIPPING. In direct international navigation, there entered in the year 1910-11, 1998 vessels, of 3,727,519 tons (steam 1342, of 3,609,823), and cleared, 1964, of 3,852,234 tons (steam 1361, of 3,746,805). Merchant marine (1911), 32 steamers, of 16,648 tons net, and 50 sail, of 8712 tons net.

COMMUNICATIONS. Railways in operation September, 1912, 25,287 kilometers (15,713 miles), of which 19,877 kms. were controlled by federal or state government; as compared with 24,717 kms. (15,358 miles) in operation in September, 1911; 24,559 kms. in 1910, and 24,161 kms. in 1909. Federal telegraph lines in 1912, 74,899 kms., with 530 offices; other lines, 8387 kms. Post offices (1911), 2858.

During 1912 it was reported that the following branch lines of railway, with a total length of 1116 miles, were under construction by the National Railways of Mexico: Durango-Canitas line and Sombrerete branch, 172 miles; Durango-Llano line, 63 miles; Penjamo-Ajuno line, 87 miles; San Andres Tuxtla branch of V. C. and T. Railway, 45 miles; Cerro Colorado branch of V. C. and T. Railway, 32 miles; Veracruz-Tampico short line and connection to Honey line, 379 miles; Tampico-Matamoros line, 264 miles; and Allende-Las Vacas line, 74 miles. The Pachuca City Electric Railway, 27½ miles in length, in the state of Hidalgo, and the Micos-Concepción, an electric rail-

way 44 miles in length, were contracted for during the year. In connection with the recent revolution in Mexico the destruction of railway property was considerable, especially in the north, where the North-Western Railway Company suffered.

FINANCE. The monetary unit is the silver dollar, or peso, whose value is legally fixed at 0.75 gram of fine gold, or 49.846 cents. In the fiscal year 1910-11, revenue amounted to 111,142,482 pesos and ordinary expenditure to 100,913,924 pesos. The budget of 1911-12 showed estimated revenue and expenditure of 110,070,100 and 105,432,347 pesos, respectively; for 1912-13, 103,657,000 and 103,602,400. The latter budget showed estimated receipts as follows: Customs, 47,891,000 pesos; stamps (including internal revenue), 32,525,000; direct taxes, 11,150,000; posts and telegraphs, 6,800,000; taxes on mines, 2,050,000; lottery, 1,000,000; various, 2,241,000. Larger estimated expenditures: Finance and public debt, 35,054,108 pesos; war (and marine), 21,667,206; communications, 16,048,325; interior, 13,218,228; public instruction, 7,418,203; fomento, 3,993,083. Public debt, June 30, 1912: External, 302,977,624; internal, 136,726,367; floating, 482,574; total, 440,186,565. Charges on external and internal debt in fiscal year 1912, 28,952,598 pesos.

ARMY. Internal disturbances in the republic had their effects on the army and naturally interfered with the schemes of reorganization and recruitment adopted in 1910 and 1911. In fact, the active army was concerned in the effort to put down the various uprisings of the revolutionists and to maintain governmental supremacy in the Federal District, where the greater part of the state forces continued to be concentrated. In 1912 the forces were estimated to number about 30,000, having practically the same organization as in the previous year, with varying strength and efficiency on the part of the rural troops. While compulsory service was supposed to come into effect in 1912, yet it did not serve materially to increase the numbers of the army. In organization and service the unrest of the times, described below under *History*, were so apparent as to render of little service any discussion of theoretical strength and organization of the army beyond that given in previous issues of the YEAR BOOK.

NAVY. The navy in 1912 included: 2 gunboats (*Tampico* and *Veracruz*, built in 1903), of 1000 tons each; 2 gunboats (*Bravo* and *Morelos*, 1904), of 1200 tons each; one small cruiser (*General Guerrero*, 1909), of 1630 tons; one transport (*Progreso*); 2 corvettes (*Zaragoza* and *Yucatán*); 3 dispatch boats, and several small vessels of little value. Personnel (1912), 216 officers and 1240 men.

GOVERNMENT. The republic of Mexico is a federation of states, autonomous in local affairs but bound together by the constitution and fundamental laws. The constitution bears date of February 5, 1857, and received its latest modification April 25, 1912. The president is elected indirectly for six years and is assisted by a cabinet of eight members. The legislative body consists of two houses, the Senate (56 members, elected by direct vote for four years, two for the Federal District and each state) and the Chamber of Deputies (233 members, also elected by direct vote, for two

years). Gen. Porfirio Díaz was president during 1877-80 and from 1884 until his resignation May 25, 1911, which was forced by the revolution under the leadership of Francisco I. Madero. Díaz was succeeded by the secretary for foreign affairs, Francisco León de la Barra, as acting president. In October, 1911, Madero was elected president and on November 6 was inaugurated for the term ending November 30, 1916 (the unexpired term of Díaz). Vice-president, José Marino Pino Suárez. Ministry in 1912: Pedro Lascurain, foreign affairs; J. Flores Magón, interior; Manuel Vásquez Tagle, justice; José Marino Pino Suárez, public instruction; Rafael Hernández, fomento, colonization, and industry; Manuel Bonilla, communications and public works; Ernesto Madero, finance and commerce; Gen. A. García Peña, war and marine.

HISTORY. The revolution of Francisco I. Madero culminated in the triumph of the revolutionists and the proclamation of peace on May 18, 1911. On June 7 General Madero entered Mexico City in triumph. During the remainder of the year the country continued to be in a disturbed condition and in the closing months the followers of Zapata were still in arms. On November 18 General Reyes, who had been a candidate for the presidency against General Madero, and who finding his election hopeless, had withdrawn from the contest and retired to Texas, was arrested by United States officials at San Antonio, Texas, on the charge of violating the neutrality laws. He was released on bail and thereupon returned to Mexico and tried to raise an army, but finding no support, surrendered to the Madero government on December 25 and was thrown into prison. It was hoped that this promised an interval of peace, but early in 1912 it was evident that the country was by no means pacified. The hostility of Zapata and his followers in the south continued to cause alarm, and in other parts of the country there were several distinct revolutionary movements, though they were not well organized. The new president was blamed for a lack of firmness in not dealing more effectually with the revolt in the first instance, and it was held that vigorous and prompt action was necessary to inspire respect for the army and the government. Warnings were addressed to President Madero by the United States government that fighting should be avoided in quarters that would endanger the lives of American citizens, and a large force of American troops was held in readiness to protect American non-combatants. During February there were frequent rumors of revolt and general indications of a widespread spirit of unrest. The American government was maintaining the same attitude toward Madero as it had toward Díaz; that is to say, it was not planning to cross the frontier unless American and foreign lives and property were menaced, but was holding its army in readiness to intervene if necessity should arise. On February 27 the capture of Juárez by the rebels was announced, but at the same time a report was issued that the rebel forces had fallen into an ambush at San Pedro and lost 237 killed and wounded. Gen. Pascual Orozco, Madero's lieutenant in the revolution of 1911, joined the rebels and became military and civil governor of Chihuahua. A great many American residents had left the disturbed region by the

first week in March. The prospects of peace improved somewhat before the end of March, the better classes seeming to incline toward the support of the government. The United States Senate passed a resolution authorizing the President to prohibit the shipment of arms and ammunition to any American country in which they could be used for revolutionary purposes.

During the spring the reports concerning the revolutionary movement in Mexico were very confusing and indeterminate. According to President Madero, the estimates of federal losses published in foreign papers were greatly exaggerated. He said that General Orozco's troops, on the other hand, had suffered heavy losses and were unable to pursue the federal general. He said that the issue of the campaign was beyond doubt. On the other hand, it was said that the revolutionists had, on the whole, been successful in fighting around Torreón. President Taft, in order to make President Madero's task easier, made an exception in favor of the Mexican government to the proclamation against the exports of arms to Mexico.

During May, June, and July federal successes were reported at Cautro Cienegas, Comijos, Rellano, and Bachimba, and on July 9 the federals took Chihuahua, which the rebels had made their headquarters and which they abandoned as the federals came northward. The rebels made Juarez their headquarters, but abandoned this city in turn and the federals occupied it on August 20. The rebel forces of Orozco were now scattered throughout the northern part of Sonora, where they destroyed much property and caused the flight of a large number of Mormon colonists, chiefly Americans, who left their farms and sought refuge in the United States. General la Huerta was in command of the successful federal operations against Orozco. While the federals gained these advantages in the north, the southern provinces became more disturbed and it was not long before the revolution reappeared in the north again. Among the other reported engagements during the summer and autumn were the capture of Ixtapa, where the Zapatists were reported to have killed the entire garrison and a number of townsmen. At the beginning of September it was estimated that the rebel forces numbered 18,000 and that 17 states were affected, but the movement was hindered by lack of organization, being made up of separate divisions who agreed only in their desire to overthrow the Madero government. In September the Zapatists were reported to have sustained a defeat at Tenancingo. Raiding was renewed in Chihuahua in October. On October 16 General Felix Diaz, the nephew of the ex-president, who had placed himself at the head of a revolutionary body, captured the city of Vera Cruz. After a brief delay to admit of the withdrawal of non-combatants, the federal troops proceeded against the rebels and recaptured the city almost without resistance. Diaz and his staff were taken prisoners and the rebels were disarmed. Sentence of death was imposed upon Diaz and two of his officers on October 26, but the execution was postponed and he was afterwards imprisoned. The collapse of the Diaz movement seemed to improve the government's position, but at the close of the year affairs were still very threatening. On December 18 it was reported that General

Orozco, who had returned to northern Mexico, had captured the town of Casas Grandes.

For further notes relating to Mexico see EXPLORATION; ARBITRATION, INTERNATIONAL, and UNITED STATES, *Foreign Relations*.

MICHIGAN. POPULATION. According to the Census Bureau statistics compiled in 1912, out of a total population of 2,810,173 in 1910 the foreign-born whites numbered 595,524, compared with 540,196 in 1900. The largest number of these, 142,713, came from Canada; from Germany came 130,538, from Russia, 38,009; from Holland, 33,470; from Austria, 31,495; from French Canada, 28,082; from Sweden, 26,373; from England, 42,721; from Finland, 31,079; from Ireland, 20,443; and from Hungary, 11,064. Other European countries were represented by smaller numbers. In the city of Detroit, which had a total population of 465,766 in 1910, there were 156,565 foreign-born whites, compared with 96,051 in 1900. The negroes in the State in 1910 numbered 17,155 and the mulattoes, 8036. In 1890 the negroes numbered 15,223, and the mulattoes, 8187.

AGRICULTURE. The acreage, value, and production of the principal crops in 1911 and 1912 will be found in the following table:

		Acreage	Prod. Bu.	Value
Corn1912	1,625,000	55,250,000	\$31,492,000
1911	1,680,000	55,770,000	36,250,000
Wheat1912	700,000	7,000,000	6,720,000
1911	1,025,000	18,450,000	16,236,000
Oats1912	1,485,000	51,826,000	17,108,000
1911	1,500,000	42,900,000	19,734,000
Rye1912	370,000	4,921,000	3,199,000
1911	400,000	5,840,000	4,964,000
Potatoes1912	350,000	36,750,000	16,068,000
1911	330,000	31,020,000	22,024,000
Hay1912	2,395,000	3,185,000	40,450,000
1911	2,411,000	2,797,000	47,549,000

a TONS.

MINERAL PRODUCTION. The State ranks second in the production of iron. The quantity produced in 1911 was 8,944,393 long tons, compared with a product of 13,303,906 long tons in 1910. The value of the product in 1911 was \$23,808,935, as compared with a value of the product of 1910 of \$41,393,585.

The copper mines of the State produced in 1911, 497,281 fine ounces of silver against 330,500 fine ounces in 1910. The silver production is mostly from the electrolytic of the copper produced.

In connection with the mining of copper there were produced 497,281 fine ounces of silver valued at \$263,559 or a total value for both metals of \$27,743,572. This is a decrease in value from the output of 1910, \$715,898, and is due to a slightly smaller output of copper and a little lower average price for the metal.

The production of coal in the State in 1911 was 1,476,074 short tons, valued at \$2,633,803. The production in the State has decreased each year since 1907, when the maximum product, 2,035,858 short tons, was obtained. The competition of high-grade Pennsylvania coal brought by way of the lake ports is the principal factor in curtailing the output in the State.

MANUFACTURES. The Thirteenth Census statistics are for the calendar year 1909 and were compiled in 1912. The growth of the manufact-

uring industries of the State has been closely related to the development of transportation facilities. The rapid advance in manufactures dates from about 1825, when the Erie Canal was opened, affording connection with the eastern seaboard. The table herewith shows that in 1909 there were in the State 9159 manufacturing establishments which gave employment to 271,071 persons.

	Number or Amount 1909	1904	P. C. of Inc. 1904-'09
Number of establishments	9,159	7,446	23.0
Persons engaged in manufactures...	271,071	200,196	35.4
Proprietors and firm members...	8,965	7,732	15.9
Salaried employees	30,607	17,235	77.6
Wage earners (average number)	231,499	175,229	32.1
Primary horsepower	598,288	440,890	35.7
Capital	\$583,947,000	\$337,894,000	72.8
Expenses	591,296,000	374,842,000	57.7
Services	153,838,000	98,749,000	55.8
Salaries	34,870,000	17,470,000	99.6
Wages	118,968,000	81,279,000	46.4
Materials	368,612,000	230,081,000	60.2
Miscellaneous	68,846,000	46,012,000	49.6
Value of products	685,108,000	429,120,000	59.7
Value of products less cost of materials	316,497,000	199,039,000	59.0

The largest number of wage earners was employed in the industries connected with lumber and timber products, 35,627; in manufactures of automobiles, 25,444; in foundry and machine shop products, 21,649; in the manufacture of furniture and refrigerators, 16,610. The automobile industry ranks first in the value of the product, \$96,651,000. This is followed by lumber and timber products, \$61,514,000; foundry and machine shop products, \$45,399,000; flour mill and grist-mill products, \$34,861,000; furniture and refrigerator, \$38,642,000. The persons engaged in manufactures in the State numbered in 1909 271,071, of whom 231,915 were male and 39,156 were female. The persons employed under 16 years of age numbered 2517. The prevailing hours of labor for nearly one-half the wage earners were 60 a week. Of the remainder the majority worked from 54 hours a week to between 54 and 60 hours a week. The largest number of wage earners was in Detroit, 81,011; in Grand Rapids there were 17,590; in Flint, 7088; in Kalamazoo, 6272; in Saginaw, 5990, and in Battle Creek, 4175.

FINANCE. The receipts for the fiscal year 1912 amounted to \$14,190,498, and the expenditures to \$1,445,519. The balance on hand at the end of the year was \$8,980,404. The chief sources of income are from the general tax, \$6,788,627, and from the specific and railroad tax, \$5,748,652. Later all goes to the primary school fund. There is no State debt.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions under the control of the State, with their populations in 1912, are as follows: Kalamazoo State Hospital, 2015; Pontiac State Hospital, 1394; Traverse City State Hospital, 1398; Newberry State Hospital, 836; Ionia State Hospital, 439; State Psychopathic Hospital, 47; Home for Feeble-Minded and Epileptic, 981; State Prison, Jackson, 762; Michigan Reformatory, Ionia, 578; Branch Prison, Marquette, 311; Industrial School for Boys, Lansing, 779; Industrial Home for Girls,

Adrian, 341; State Public School, Coldwater, 179; School for Blind, Lansing, 144; Employment Institution for Blind, Saginaw, 81; School for Deaf, Flint, 309; Soldiers' Home, Grand Rapids, 872; State Sanatorium, Howell, 66. In addition to these, there are 39 private incorporated institutions which are engaged in the business of receiving, maintaining, and placing minor children. The board of corrections and charities in the State, which has charge of these institutions, has made some important recommendations to the legislature. These include the extension of the authority of the board over city and village jails, homes for the aged and defective, and also the granting of power to the county agents of the board to visit homes in which children have been placed out. An amendment to the juvenile court law is also suggested, to provide for appeal to higher courts and for other powers in regard to this law. The board asks for legislation giving to cities or counties authority to establish houses of correction. The desirability of securing a State survey to determine the location of the centres of propagation and dispersal of mental and physical defectives, was pointed out.

POLITICS AND GOVERNMENT

The year was one of the most eventful in the political history of the State, owing largely to dissensions between the Progressive and the regular Republican wings of the Republican party. The Progressives were very strong in Michigan, and Governor Osborn was one of the seven governors who signed the appeal to Mr. Roosevelt that he should become a candidate. When President Taft was renominated Governor Osborn helped organize the third party and advocated Theodore Roosevelt's nomination, but he dissented from the third party's plan to nominate its own candidates for State, congressional, legislature, and county offices. Shortly after election he was advocating a plan to harmonize the differences between the Republican and the National Progressives.

Governor Osborn, on February 13, called a special session of the legislature for the specific purpose of enacting a presidential primary law. The legislature convened February 26 and the bill passed both houses, but a two-thirds vote was necessary to give it immediate effect, so as to become operative in 1912. It did not receive this vote in the Senate, therefore it did not become operative until 90 days after the close of the session, which was too late for the 1912 conventions.

The governor, on March 16, again issued a call for a special session for the same purpose as the first. The legislature convened in special session on March 20, and again an effort to have enacted an immediately effective presidential primary bill was defeated.

The Republican State convention for the election of six delegates-at-large to the national convention met on April 11, at Bay City. The proceedings were disorderly in the extreme. Anticipating that there might be riotous doings between the Taft and the Roosevelt factions to get control of the National Guard armory, the place officially designated for the convention, national guardsmen were called to duty to see that no damage was done to the building. Both factions held conventions in the armory at the same time, and each elected

six delegates-at-large to the national convention.

On the same day, and preceding the convention, the delegates met in caucus by congressional districts. Five districts elected 10 Roosevelt delegates, the remaining seven districts 14 Taft delegates. The national convention seated the six Taft delegates-at-large, so Michigan was officially represented in that convention by 20 Taft delegates and 10 Roosevelt. The 10 delegates bolted Taft's renomination along with the Roosevelt delegates of other States.

The Michigan Democrats sent an unstructured delegation to the Baltimore convention. On the first ballot at Baltimore the delegation voted 19 for Champ Clark, 10 for Governor Wilson, and one for Governor Marshall.

The National Progressive party met at Jackson July 20, organized a State party, and elected delegates to the convention that nominated Col. Roosevelt. This was of more local interest because it was the first State convention held by that party and the platform adopted was said to have been approved by Mr. Roosevelt. Senator Dixon, the Progressives national chairman, attended the convention and participated in the framing of the platform. The platform began with denunciation of the "fraud" and "cheating" at Chicago, and of the "unholy alliance of crooked business with crooked bosses." It contained a call for the initiative and referendum, recall, direct nomination, direct election of senators, equalization of tax burdens, a parcels post, an extension of the postal savings bank system, government ownership of express and telegraph service, a physical valuation of railway property, more power for the Interstate Commerce Commission, extension of the civil service and the consular service, equal suffrage, conservation of natural resources, and "severance of the diplomatic service from such financial interests as are seeking to exploit defenseless nations." The platform opposed the currency plan of the Monetary Commission. In relation to the trusts and the tariff the platform recommended: "The federal regulation of all corporations engaged in interstate business, and the prohibition of the creation of artificial values by watered stocks and bonds."

L. Whitney Walkins, a Republican State senator, was indorsed for governor. State primary elections were held August 27. Senator Walkins was nominated by the Progressives, Amos S. Musselman by the Republicans, and Woodbridge N. Ferris by the Democrats.

At the same primaries Theodore M. Joslin was nominated for United States senator by the Progressives, William Alden Smith was renominated by the Republicans, and Alfred Lucking by the Democrats.

The Roosevelt presidential electors carried the State in November by a plurality of 66,768, it being the first time since 1852 that the Republicans failed to carry the State at a presidential election. The official vote was: Roosevelt, 219,012; Taft, 152,244; Wilson, 150,751; Debs, 23,911; Chafin, 8934; Reimer, 1252.

The Democrats carried the State for governor by a plurality of 24,054, the official vote being: Ferris, 194,017; Musselman, 169,963; Walkins, 155,372.

The Republicans elected the rest of the State ticket by pluralities around 10,000. Mr. Ferris

is the second Democrat to be elected governor since 1852.

The Republicans elected 75 members of the legislature, the Democrats 40, and the National Progressives 17. This gave the Republicans a majority of eight on joint ballot.

A proposed woman suffrage amendment to the constitution was defeated at the November election. The vote was: For woman suffrage, 247,375; against, 248,135. At the election in April, 1912, 25 counties voted on local option. The drys carried 14 of the counties and the wets 11.

Of the 83 Michigan counties 35 are now dry.

OTHER EVENTS. On July 26 nine aldermen and the secretary of the council committees of Detroit were arrested on the charge of accepting bribes. These men were arrested as the result of investigations carried on by William J. Burns. Among them was Thomas Glinnan, president of the council and a candidate for mayor, and E. R. Schreiter, who was also secretary of the American League of Municipalities. These arrests rose out of an effort on the part of the Wabash Railway Company to have part of a street vacated in order to make room for freight warehouses. The council opposed this application and action was delayed. Mayor Thompson suspected that an effort was being made to obtain bribes, and with the help of a citizen of means obtained the services of Mr. Burns. The latter sent to the city a detective who professed to represent the interests of the railroad. He is alleged to have been approached by Schreiter with a corrupt proposition and negotiations with several aldermen are said to have followed. The application of the railroad was then granted. When the bribers came to the office of the detective to receive their money, it was handed to them, and they were confronted with the evidence of a dictograph which had recorded their conversations with the detective. The arrest of the aldermen thereupon took place.

LEGISLATION. At the legislative session of 1912 a number of bills of unusual importance were passed. Among these was an act authorizing the construction or purchase of detention hospitals for the care and treatment of persons afflicted with contagious or communicable diseases in cities having a population of less than five thousand inhabitants. The banking laws of the State were amended. A presidential primary act was passed (see *Politics and Government* above). An elaborate employers' liability measure was enacted. (See **EMPLOYERS' LIABILITY**.) This is, however, optional with the employee, under the usual coercion of being deprived of certain defenses if he does not come into this arrangement. These measures were passed at the first session of the legislature. At the second session the following measures were among those enacted: An act to amend the liquor laws of the State; an act to amend the law as to the conduct of, and preventing fraud and deception at, elections. The game laws of the State were amended. A joint resolution was adopted, proposing an amendment conferring on women the right to vote. This amendment was to be submitted at the general election in November (see above). Another joint resolution proposed an amendment relative to the amendment of the charters of cities and villages. This amend-

ment gives a large measure of local self-government to such cities and villages.

STATE GOVERNMENT. Governor, W. N. Ferris, Dem.; lieutenant-governor, John Q. Ross; secretary of State, Frederick C. Martindale; treasurer, John C. Haarer; auditor, Oramell B. Fuller; attorney-general, Grant Fellows; adjutant-general, R. C. Vandercook; superintendent of public instruction, Luther L. Wright; commissioner of insurance, Calvin A. Palmer; commissioner of State Land Office, A. C. Carton—all Republicans, except Ferris and Vandercook.

JUDICIARY. Supreme Court: Chief justice, Joseph H. Steere; justices, John E. Bird, Joseph B. Moore, Aaron V. McAlvay, Charles A. Blair, Flavius L. Brooke, John W. Stone, Russell C. Ostrander.

STATE LEGISLATURE, 1913. Republicans, Senate, 21; House, 54; joint ballot, 75. Democrats, Senate, 5; House, 35; joint ballot, 40. Progressives, Senate, 6; House, 11; joint ballot, 17. Republican majority, Senate, 10; House, 8; joint ballot, 18.

MICHIGAN, UNIVERSITY OF. An institution of higher learning at Ann Arbor, Mich., founded in 1837. The students enrolled in the various departments of the university in the autumn of 1912 numbered 5620. The officers of instruction and administration numbered 486, of whom 102 were deans and professors, 27 junior professors, 56 assistant professors, 132 instructors, 101 assistants and demonstrators. The other members of the faculty included administrative officers, members of the library staff, assistants in the museum, etc. There were few changes in the faculty in the higher grades in 1912. The following are the most noteworthy: Dr. Campbell Bonner was appointed professor of Greek language and literature in place of Martin L. D'Ooge, retired; Henry E. Riggs was appointed professor of civil engineering in place of Professor Gardner S. Williams, resigned; Professor Horace W. King was appointed professor of hydraulic engineering; William C. Hoad, professor of sanitary engineering; Lewis M. Gram, professor of structural engineering; Louis H. Boynton, professor of architecture. A number of changes were made in the medical and law schools. Graduate work heretofore conducted in connection with the department of literature, science, and the arts has been rearranged and a graduate department established, of which Dr. Karl E. Guthe has been elected dean. The management of the department is vested in an executive board, which acts together with the president of the university and the dean of the department. The university received no noteworthy benefactions during the year, although a number of small gifts were received. The amount of productive funds, which are chiefly in the form of State loans and private endowments, amounted to about \$900,000 and the annual income to about \$1,400,000. The library contained about 306,000 volumes, of which 235,089 were in the general library. President, Harry B. Hutchins.

MICOU, RICHARD WILDE. An American theological educator, died June 1912. He was born in 1848 and was educated in the University of Georgia. He also studied at several foreign universities and received his theological education at the General Theological Seminary. He was ordained a priest in the Protestant Episcopal Church in 1872 and served in suc-

cessive pastorates at Franklin, La.; Kittanning, Pa., and Waterbury, Conn. In 1892 he was appointed professor of systematic divinity at the Philadelphia Divinity School. He remained here until 1898, when he became professor of fundamental theology and systematic divinity at the Virginia Theological Seminary. This position he retained until the time of his death.

MIKKELSEN, EJNAR. See POLAR EXPLORATION.

MILITARY PROGRESS. In spite of the efforts of peace societies, preparation for possible war has gone on unremittingly. No abatement of energy is observable in any field, whether organization, material, or increase of numbers. The leading military nations have held their manœuvres as usual. The most striking feature on the material side has been the extension of military ballooning and aviation. The Turco-Italian War dragged on until the far more dangerous situation disclosing itself in the Balkan Peninsula compelled Turkey, in October, to come to terms with her adversary, the supremacy of Italy in Tripoli being recognized. The dominating military event of the year has been the war between the allied Balkan states (Rumania excepted) and Turkey, a war that has amazed the world, and the consequences of which cannot now be foretold with even approximate accuracy.

AVIATION AND BALLOONING. This subject has attracted the most serious attention. Every great military nation is straining every nerve to attain success in applying the "conquest of the air" to reconnaissance and information service, and to actual offensive service in war. Some idea of the growth of the subject may be had from comparing appropriations in France; in 1909, 240,000 francs for experimental purposes; in 1912, the sum asked for rose to 7,600,000 francs. The German budget for 1912 contemplated a credit of 9,000,000 marks. Our own country has done practically nothing in comparison with foreign effort. Germany has an aviation school at Döberitz and stations at other points of the empire. France has its "centres of aviation"; Russia a station at Sevastopol. The English government, early in the year, laid down conditions for a competition of military aeroplanes, in part open to all comers, in part reserved to English builders. The money prizes offered are enormous. The Italian government has done the same thing. In France military aviation is already spoken of as the "fourth arm"; its relations to the other arms of the service are being worked out. Aeroplane ballistics have been investigated and it is proved, e. g., that artillery fire can be controlled from an aeroplane, and that in any case the aeroplane can be used to indicate to batteries objectives invisible to the batteries themselves. Germany is soon to create an aviation corps. England, in April, definitely organized its aviation corps, as did Italy hers in June. With characteristic energy and thoroughness Germany is endeavoring to overcome France's lead in aeroplanes and at the same time to extend and develop her own dirigible fleet. She owned or controlled in 1912 30 dirigibles, some of which could develop a speed of over 40 miles an hour. Her military dirigible fleet proper before the end of 1912 consisted of 20 vessels, divided into

cruisers of the first class, used for strategic reconnaissance and susceptible of taking the offensive, and cruisers of the second class, used for tactical reconnaissance. This fleet is further reinforced by auxiliary cruisers not included in the foregoing 20. The service of these dirigibles is completely organized: staff, personnel, "home ports," area, and terrain of operations. The value of these great aerial cruisers as offensive engines of war is no longer a matter of doubt. The German experiments have shown that, given a trained personnel and proper apparatus, it is possible to attain sufficient accuracy against troops in mass, dockyards, arsenals, etc., etc. Special guns are developed to attack the dirigibles, since beyond 1000 meters altitude the ordinary guns of an army are practically powerless.

The greatest enemy of the dirigible is the aeroplane; the Germans, to meet this danger, propose to mount a machine gun on top of their dirigibles and also to provide special armor for their upper surface as a protection against grenades, etc., thrown from an aeroplane above. The aeroplane, whether in Germany or elsewhere, is no whit behind the dirigible. As a result of the experience gained in 1912, it may be laid down that these two engines supplement each other; thus the dirigible is for strategic exploration and, later, destruction of enemies' troops, ships, camps, etc.; the aeroplane is the organ to be employed in reconnaissance. But aviators are by no means content to limit their efforts to mere reconnaissance. For the first time in the history of the aeroplane, bombs weighing 22 pounds have been used in aerial warfare in Tripoli with indifferent results on account of the great height (1000 meters) at which aviators were compelled to fly. Even at this height, the Turkish Mauser bullet has succeeded in hitting the aeroplane; better results may be expected from the "Lewis gun for aeroplanes," the invention of an American officer, Lt.-Col. I. N. Lewis, Coast Artillery Corps. This gun weighs 25½ pounds, and requires but one man to operate it. No tools are needed to disassemble or assemble it, other than the nose of its own bullet. Air cooled, it fires up to 750 shots a minute and in tests so far made has shown remarkable accuracy and facility of operation and control. (*London Engineering*, November 8, 1912.)

UNITED STATES. A considerable body of troops has been kept patrolling the Mexican border in order to maintain due observance of the neutrality laws. A state of profound peace has prevailed in the Philippines. Armed intervention in Cuba, at one time imminent, was averted. The construction of the defenses of Manila, of Hawaii, of the Panama Canal, and of Guantánamo is being continued. In the coast defense system of the United States, now taken as a model, the training of the personnel has reached such a state that, under normal conditions, the accuracy of the armament alone limits the result. Under present conditions mortar fire can be opened at 15,000 yards; the new mortar, such as will be used in the Panama defenses, will give a range of 20,000 yards. The projectile weighs 700 pounds. See **UNITED STATES, Army.**

AUSTRIA-HUNGARY. The entire army of the dual monarchy has been reorganized. Before this reorganization went into effect, the or-

ganic law of 1868, even as amended in 1889, had failed to meet the military necessities of the empire. On July 5, 1912, therefore, the emperor sanctioned a number of laws under the effect of which the available resources in trained men have been greatly increased. (See **AUSTRIA-HUNGARY.**) The following table shows this increase in comparison with former strength:

	Formerly	Under New Law
	No. Men	No. Men
Army common to both kingdoms	800,000	1,360,000
Austrian landwehr	250,000	240,000
Hungarian honved	164,000	220,000
Total	1,214,000	1,820,000

GERMAN EMPIRE. The German army on October 1, 1912, under a law passed four months before, was increased by two army corps, formed by joining various elements hitherto more or less independent. Although the numerical increase of the army, due to this creation of two new corps, is not great, the step taken marks an epoch in the development of the German military power, as one of these corps is to take station on the eastern (Russian) and the other on the western (French) frontier. So placed, they strengthen very considerably the system of "cover" furnished by the German army and help on the ulterior passage to the offensive. One new "inspection," the 7th, is created, with headquarters at Saarbrücken. The new military law of 1912 completes and reinforces the quinquennate of 1911. It emphasizes the determination of the great general staff constantly to increase the offensive value of the army and to develop to the utmost its preparedness for war, its *Kriegsber-eitschaft*. The increases under this law represent the greatest effort made by Germany since 1870. The statutory peace strength of the army on October 1, 1912, or shortly afterwards, was 694,000 officers, non-commissioned officers, and men. If certain other classes of men be added the enormous total reaches 710,000 men. The total increase of the army is 49,000, a part of which goes to the creation of 68 new field batteries, an increase of 288 guns. See **GERMANY.**

OTTOMAN EMPIRE (Turkey). A radical reformation of the Turkish army was carried out at the end of 1911. It had for its objects: (1) Modification of the high commands; (2) methodic preparation of increase of military strength; (3) endeavor to better tactical use of the army. The old organization of the army was clumsy to a degree. Under modern conditions it lent itself to the necessities of neither peace nor war. Before 1911 there were 7 commands or military regions, and 2 independent divisions spread over the face of the Ottoman empire; each of these regions comprised a variable number of infantry divisions, of cavalry, and artillery of the active army (*Nizam*) and of reserve divisions (*Redif*). The reformation contemplated in its technical aspect the so-called ternary system, under which the corps=3 divisions=9 regiments=27 (or more) battalions. The grade of general of brigade disappears. Fully carried out, the Turkish army would count 527 battalions of infantry. The new régime further introduced Christian re-

cruiting—confessedly a delicate matter, whatever the point of view, whether Christian or Mussulman. At the end of 1911 one-fourth of the recruits were Christians. We cannot here enter into the complexities of Turkish army reform. Following close upon the overthrow of the *ancien régime*, embarrassed by financial considerations and the question of Christian recruitment, valorous as the Turkish army has proved itself in the past, it was ill prepared in 1912, with its old system abandoned and its new barely begun, to undertake a war against an equally valorous but ready antagonist.

The organization of the empire provides for the mobilization of 43 active divisions, 48 *redif* divisions of the first class (instructed men), and 6 *redif* divisions of the second class (partly instructed men). The active division consists of 3 regiments of 3 battalions with one battalion of scouts, 1 regiment of artillery of two or three groups, 1 squadron of cavalry or of mounted infantry, and 1 company of the supply train (rations for three days and ammunition pack train). The army corps comprises, as usual, the corps artillery, the bridge train, the sanitary corps, etc.

BULGARIA. This country has for the past two years made serious efforts to develop and strengthen its military organization, not only for the defense of its territory, but so as to be able to intervene abroad in the interests of the Bulgar race, wherever found in the Balkan Peninsula. Thanks to the sacrifices made, Bulgaria had in 1912 a well-officered, well-instructed army, whose mobilization had been the object of methodical preparation. The men in the ranks have remarkable individual qualities, and their officers are all graduates of the Military School at Sofia. Many of them have studied in foreign schools. Mobilized, the Bulgar army has in its first line 9 divisions of infantry, containing each: 2 brigades of infantry, of 2 regiments of 4 battalions; 2 squadrons of cavalry; 9 four-gun batteries, 75 mm. rapid-fire Schneider guns; 3 to 6 six-gun batteries, Krupp; 1 four-gun battery of howitzers, rapid fire; 2 companies of pioneers, and 1 platoon of telegraph troops. Including reserve troops, etc., Bulgaria could place in the field (first line): 216 battalions or 225,000 rifles, 5000 sabres, and 800 guns. In the second line she could call upon about 150,000 men who had received military training and about 60,000 half-instructed men.

The weak points of the system are the limited ammunition supply, the shortage of horses, making the supply system in the field inadequate, and the numerous new units brought out by mobilization. The total budget of the kingdom for 1912 was 186,560,855 francs, of which 40,495,527 were to the credit of the war department.

SERBIA. This country, like Bulgaria, had made considerable progress of late years in respect of organization, instruction, and equipment. The weak points of the system are the same as those of Bulgaria to at least the same degree. In the first line Serbia, in 1912, could put into the field 5 divisions of infantry, organized in time of peace and constituted, each, as follows: 4 regiments of 4 battalions; 9 four-gun batteries; 3 squadrons; and, in addition, 5 divisions of recent creation. Counting all resources, Serbia could muster 127,000 rifles,

7500 sabres, 306 rapid-fire field guns, 26 howitzers, and 36 mountain guns.

GREECE. The Greek army had just undergone a process of reorganization, as a consequence of which it could take the field with 42 active battalions, 24 reserve battalions, 36 field batteries, 12 mountain batteries, 3 heavy batteries, and 1 brigade of cavalry.

MONTENEGRO. This country has no permanent army. Under the law all men fit for service are liable up to the age of 62. Theoretically, the army has a certain organization, but the deficiency of any real supply system limits the range of its offensive action.

For further details see articles on the UNITED STATES, FRANCE, GERMANY, GREAT BRITAIN, and other foreign countries, and also TURKEY AND THE BALKAN PEOPLES.

MILLER, JAMES RUSSELL. An American clergyman and author, died July 3, 1912. He was born at Harshaville, Pa., in 1840, and graduated from Westminster College in 1862. In 1867 he was ordained to the Presbyterian ministry. From 1869 to 1878 he was pastor of the Bethany Church in Philadelphia. He afterwards filled pastorates at Rock Island, Ill., and in the Holland Memorial Church and St. Paul's Church, Philadelphia. He became pastor of the latter church in 1900 and continued in that position until the time of his death. From 1880 he was editorial superintendent of the Presbyterian Board of Publication and Sunday School Work. He was a prolific writer and produced many works, chiefly of a religious nature. They include: *Week Day Religion* (1880); *Practical Religion* (1888); *Hidden Life* (1895); *Young People's Problems* (1898); *The Inner Life* (1904); *The Gate Beautiful* (1909); *The Beauty of Every Day* (1910); *The Beauty of Self-Control* (1911). His books are translated into nearly every foreign language.

MILLET, FRANCIS DAVIS. An American artist and war correspondent, died at sea April 15, 1912. He was born in Mattapoisett, Mass., in 1846. During the war he served as drummer boy in the 60th Massachusetts Volunteers until 1864, when he was appointed acting assistant contract surgeon in the Army of the Potomac. At the close of the war he entered Harvard College, graduating in 1869. After graduation he went into the newspaper work in Boston, where he remained until 1871, when he studied art in the Royal Academy in Antwerp. Two years later he became secretary to Charles Francis Adams, commissioner from Massachusetts to the Vienna Exposition. He reported the exposition for the New York papers and at the same time studied art and assisted Mr. Adams. In 1875 he returned to the United States and assisted John La Farge in the decoration of Trinity Church in Boston. At the outbreak of the Russo-Turkish War in 1877 he became war correspondent for the New York *Herald*, the London *Graphic*, and other papers. He accompanied his descriptions of battles with sketches. For bravery under fire during this campaign he received six decorations. After the close of this war he studied

art in Paris and in 1878 was a member of the Fine Arts Bureau in the Paris Exposition. For a few years following he remained in the United States, but afterwards bought a home in Worcestershire, England, where he lived for the rest of his life. In addition to the activities mentioned above, he was at different times director of decorations at the Chicago Exposition, special correspondent to the *London Times* in the Philippines, chairman of the advisory committee of the National Gallery at Washington and vice-chairman of the United States Commissioners of Fine Arts. His pictures are hung in many of the important museums in the United States and Europe. In his later years he painted mural decorations for the Court House at Newark, N. J.; the Federal Building at Cleveland, the State Capitol at St. Paul, the Custom House at Baltimore, and other public buildings. Among his best-known paintings are "The Triumph of Ceres," "A Cozy Corner," in the Metropolitan Museum of Art; "At the Inn," "Between Two Fires," in the Tate Gallery, London. In addition to his painting, Mr. Millet wrote much for magazines and was the author of the following volumes: *A Capillary Crime, and Other Stories* (1892); *The Danube, From the Black Forest to the Black Sea* (1891), and *The Expedition to the Philippines* (1899). He also translated Tolstoy's *Sebastopol*. He was for one term president of the National Academy of Design and was a member of many associations in the United States and Europe. Mr. Millet was one of the victims of the *Titanic* disaster.

MINERALOGY. The year's developments in this science included no individual researches or discoveries of extraordinary importance, but as a whole represented, nevertheless, substantial progress. An investigation which combined features of interest in both the fields of geology and mineralogy was that on the mineral sulphides of iron, published by Allen, Crenshaw, and others of the Carnegie Geophysical Laboratory. Among other results the study furnished a solution of the long-standing problem as to the chemical nature of pyrrhotite, one of the commoner vein minerals. It was shown that pyrrhotite represents really a solid solution of sulphur in ferrous sulphide, which fact accounts for the variable composition found on analysis. Experimental products obtained by decomposition of iron disulphide, or by chemical synthesis, were characterized by a considerable range of sulphur content, dependent upon the temperature and pressure of the sulphur vapor in each trial. The products all resembled the natural mineral in physical and chemical properties. It was also found that pyrrhotite is dimorphous, crystallizing in both the orthorhombic and monoclinic systems. Troilite, the monosulphide of iron, should be considered to constitute the end member of the solid solution series and can not pass hereafter as an independent species. The disulphides marcasite and pyrite reflect different conditions of occurrence, and although marcasite readily changes to pyrite by heat treatment the reaction is not reversible. The limiting temperature for marcasite is 450°C., which explains the general absence of the mineral in igneous rocks. The formation of pyrite in deep veins and hot springs involves alkaline waters, while pyrrhotite is a surface product probably formed from cold acid waters.

The present system of nomenclature for minerals was discussed by H. S. Washington, who

favored the adoption of a new method which would recognize the important diagnostic features used in mineral classification. These features include chemical composition and crystal form, and on their basis a nomenclature could be constructed following the lines of the terminology of inorganic chemistry in which the word combination expresses the character of the acid and salt. The existing system has not changed essentially since the time of Pliny, when minerals were named variously according to qualities, uses, or localities, the more recent innovations consisting of the introduction of proper names. An outline for a tentative scheme is given in the paper and will no doubt arouse interest in the subject, although it may not lead to such a revolutionary change as is proposed.

DIAMONDS. This interesting mineral was the subject of a monographic treatise by Fersmann and Goldschmidt, which appeared during the year. Regarding the moot question of genesis, the authors conclude that the diamond crystals were formed in a state of suspension in a molten liquid or magma. The solution from which the crystals were derived was characterized by a saturation point for carbon of extreme delicacy so that the periods of growth and reabsorption alternated in a way seldom observed in the growth of any other mineral. Derby, who has studied the diamond fields of Brazil, in a recent paper expressed the view that the conditions of extreme heat and pressure postulated in the common theory of a magmatic origin were really unessential. As an alternative hypothesis that should command serious consideration, he advocated the method known as replacement, according to which the diamond was crystallized out of a carbon-bearing solution that circulated through the rock and dissolved out the cavities in which the crystals were formed. The practical interest of the problem is chiefly in connection with the possible development of a process for the artificial production of gem stones. See **CHEMISTRY, INDUSTRIAL**.

Discoveries of new diamond occurrences continue to be reported from Africa, which apparently is destined to maintain its preëminence in this department of mining. The latest finds are in the Kassai district, Belgian Congo, where some 600 specimens were reported to have been secured by a Belgian-American company. The character of the deposits has not been described, but it is probable they belong to the placer type. Another new locality, in the Katanga district of northern Rhodesia, has been under exploration by a British company. A considerable quantity of gem stones has been obtained of late from placer workings in German Southwest Africa.

The second largest diamond, of which there is authentic record, was uncovered during the year in the Premier mine, the Transvaal. The stone weighed 1699 carats in the rough, but was not of first quality. The largest stone on record, the Cullinan, came from the same mine in 1905; it has since been broken up and cut.

METEORIC FALL. An event which attracted the attention of mineralogists was the great meteoric shower that occurred near Holbrook, Navajo county, Ariz., on the evening of July 19. One of its notable features was the number of individual stones, over 14,000 having been collected from an area about one-half mile wide by three miles long. In weight they ranged from a maximum of nearly 14 pounds

down to one or two grains. The shower was apparently made up at first of a few large stones; these exploded when near the earth by the frictional heat developed in passing through the earth's atmosphere, a circumstance noted by local observers. The specimens that were collected all represent the type of meteorite called aeroliths or stony meteorites. They contain only a little iron, besides pyrrhotite and magnetite, the metallic minerals amounting to about four per cent. of the volume. Some specimens from the surface portion of the original masses show characteristic pitting and flowage structure from melting of the stone when in contact with the air.

NEW MINERALS. The following is a list of new species described during the year 1912. *Neocolemanite* is an allotropic form of colemanite, with which it agrees in chemical composition but differs in optical and physical properties; found near Lang, California. *Eichbergite*, a sulphide of copper, iron, antimony, and bismuth, occurs in magnesite deposits at Eichberg, Semmering, Austria. It forms masses of indistinctly crystalline structure, of metallic iron-gray color. *Fermorite* is a new arsenate and phosphate of calcium and strontium; it comes from the manganese deposits of Sitapur, India. The crystallization appears to be hexagonal, and the color is white or pinkish white. *Muthmanite* belongs to the telluride group of minerals, containing one part each of gold and silver and one of tellurium. It has earlier been referred to other compounds of tellurium. *Thorceitite* is described as a silicate of the rare-earths, orthorhombic, grayish-green, from Iveland parish, southern Norway. *Chrometite* consists of equal parts of chromic and ferric oxides; the octahedral crystals are feebly magnetic. The type locality is Mt. Zeljin, Servia. *Sheridanite* belongs to the chlorite minerals, but differs from the other representatives in the practical absence of iron; it comes from Sheridan county, Wyoming. *Voelckerite* is the name proposed by Rodgers for a variety of apatite in which oxygen takes the place of chlorine and fluorine.

MINERAL PRODUCTION. Details of the production of the leading minerals in 1911 and 1912 will be found in the articles on those minerals, as coal, copper, gold, iron and steel, etc. The table on pages 415-16 gives a summary of the production of all minerals, including metals and non-metals, in the United States in the calendar years 1910-1911:

MINES, BUREAU OF. See UNITED STATES, Bureau of Mines.

MINE SWEEPERS. See NAVAL PROGRESS.

MINIMUM WAGE. One of the most important parts of the programme for social standards in industry (see SOCIAL ECONOMICS) is the establishments of a living wage. This wage is such an amount as will maintain a normal standard of living, including the preservation of the health and efficiency of the worker. The demand for it is based partly upon the belief that the workers in sweated trades are exploited because of their ignorance and their lack of bargaining power, and in part upon the belief that insufficient wages must result in the perpetuation of poverty, ignorance, vice, crime, and progressive degeneracy, all of which impose upon other industries and society at large additional social burdens. The living wage is therefore demanded both in interest of the worker and in the interest of the welfare

of the group as a whole. The most common objection to the establishment of minimum wage by law or by official decree is that past experience in the regulation of wages has proved futile. But it is argued that there is much difference between the establishment of general wages by official decree and the fixing of a rate below which the employer shall not go in bargaining. Moreover, a great part of the English efforts at regulation of wages was designed to keep wages down by establishing maximum rates to meet a situation where labor was scarce, whereas the minimum wage movement is designed to meet the situation where labor is relatively abundant.

The wage board for the fixing of legal minimum rates was originated as a means of destroying sweating (q. v.). Victoria first established wage boards in 1896, and they have since been adopted in England and Massachusetts. Several other American States, notably Wisconsin and Minnesota, considered their adoption in 1912. A constitutional amendment authorizing minimum wage legislation was adopted in Ohio. Moreover, the policy of "minimum wage standards for working women" was indorsed by the Progressive party; and was approved by the Democratic candidate for the presidency. In England the miners secured an act of Parliament authorizing the establishment of minimum wages in that industry. Their success led to frequent demand by radical labor leaders for the enactment of a minimum wage for all industries. Indeed some of these, with strong leanings toward syndicalism (q. v.), declared not only for a general minimum wage but for one of a very substantial sort.

VICTORIA, AUSTRALIA, AND NEW ZEALAND. The Victorian wage boards were established not only as a means of abolishing sweating and protecting the white standard of living from the undermining competitions of colored races, but also to preserve peace (see ARBITRATION AND CONCILIATION, INDUSTRIAL). The law provides for the establishment of a wage board in each trade. These boards are composed of from four to ten members, chosen equally by or in behalf of employers and workers to fix lowest legal wages not only for the sweated trades, but also for any trade, even the most highly skilled. Since 1907 there has been no limitation on the discretion of the boards, which now number nearly one hundred, in fixing minimum wages. There is, however, a court of industrial appeals, established in 1903, to which either party concerned may appeal from the decision of a board. The Victorian law is of special interest from the standpoint of social policy because it takes no account of the possibility of the destruction of an industry which cannot pay a living wage and at the same time meet outside competition. As regards wages, the Victorian boards are said to have brought about a degree of fixity, together with a massing of wages near the minima established, though this may mean only a leveling up and not a reduction of wages that were above the minima. Another effect has been a great increase in the extent and certainty of industrial peace. In the third place they have furnished much incidental protection to the standard of living.

Conditions very similar to those obtaining in Victoria are found throughout Australia and New Zealand. So general has been the resort

MINERAL PRODUCTS OF THE UNITED STATES CALENDAR YEARS 1910 AND 1911

Product	1910		1911	
	Quantity	Value	Quantity	Value
METALS				
Pig iron (a) (spot value, b) long tons (2240 lbs.)..	26,674,123	\$412,162,486	23,257,288	\$327,334,624

MINERAL PRODUCTS OF THE UNITED STATES CALENDAR YEARS 1910 AND 1911

Product	1910		1911	
	Quantity	Value	Quantity	Value
METALS				
Talc, fibrous	71,710	728,180	62,080	613,286
Thorium minerals (monazite), and zircon	99,301	12,006	3,208	802
Titanium ore (rutile)	1,132,000	44,480
Tungsten ore	1,821	807,307	1,139	407,985
Uranium and vanadium minerals	(p)	305,500
Total value of nonmetals	1,242,820,417	1,245,896,653
Total value of metals	747,790,718	672,179,600
Estimated value of mineral products unspecified (p)	300,000	250,000
Grand total	1,990,911,135	1,918,326,253

(a) Production of iron ore. 1910: 56,889,734 long tons; value at mines, \$140,735,607. 1911, 40,989,808 long tons; value at mines, \$86,419,830. Statistics for iron ore and value of pig iron are collected by the Survey; statistics for pig iron output were furnished by the American Iron and Steel Association prior to 1910.

(b) By "spot," value is meant value at the point of production.

(c) Average price per troy ounce in 1910, 54 cents; in 1911, 53 cents.

(d) Since 1905, coining value, \$20.671834625323.

(e) The product of domestic ores only.

(f) Of 75 avoirdupois pounds net.

(g) Includes antimony smelted from imported ores, and also antimony contained in hard lead.

(h) Includes nickel in copper-nickel alloy, and in exported ore and matte.

(i) In 1910, small production from Alaska, North Carolina, South Dakota, and Texas. In 1911, from Alaska and Texas.

(j) Including brown coal and lignite, and anthracite mined elsewhere than in Pennsylvania. Coke, 1910: 41,708,810 short tons; value at ovens, \$99,742,701. 1911: 35,551,489 short tons; value at ovens, \$84,130,849.

(k) Value of clay mined and sold as unmanufactured clay. 1910: \$3,625,485. 1911: \$3,480,763.

(l) Includes limestone for iron flux, but not grindstones.

(m) Included under feldspar and quartz.

(n) In 1910, also whitening; in 1911, also zinc oxide.

(p) Includes nitrate of soda, carbonate of soda, sulphate of soda, and alum clays used by paper manufacturers; and bismuth, cadmium, lithium, and selenium, valued together in 1911 at about \$103,000.

TOTAL VALUE OF THE MINERAL PRODUCTS 1910-1911

	1910	1911		1910	1911
Metals	\$ 747,790,718	\$ 672,179,600	Unspecified	\$ 300,000	\$ 250,000
Nonmetals	1,242,820,417	1,245,896,653			
Total	\$1,990,911,135	\$1,918,326,253			

to wage boards, or to industrial courts which have power to fix wages, that the vast majority of principal occupations are now working under wages established by official decrees, especially in New Zealand, where official recognition of the trade unions is made. This undoubtedly is one of the chief causes for the high degree of industrial peace which prevails in these countries. Indeed it would seem that in nearly all countries there is an inevitable tendency toward governmental interference in the adjustment of wages in coal mining, in all forms of public utilities, and in those trades where sweating or obvious exploitation of labor is found. In coal mining and the public utility a such interference is necessary primarily in order to guarantee the continuance of the production of goods or services involved. With the increasing strength of the unions, governmental action necessitated by general welfare must take some form of fixing minimum wages.

GREAT BRITAIN. The English minimum-wage law enacted in 1909 and effective in 1910, was designed primarily to destroy sweating in industries carried on in the workers' homes. It is carried out through the medium of trade or wage boards. Such boards have been established in tailoring; in paper-box making; in finishing, mending, and darning of machine-made lace, net and lace curtains; and in certain kinds of chain-making. The law may be

extended to other industries by the board of trade. Separate wage-boards are established for each industry. The members are appointed by the board of trade, by employers, and by workers. If the industry is widely scattered, local or district committees are formed. The trade-boards must fix time wages and may fix piece wages; and these may be fixed for a whole trade or any part or process, or for a special class of workers. Within six months after the first announcement of rates these become obligatory, and failure to adhere to them renders the employer liable to a fine of not more than £20; the employer must also reimburse the worker to the amount of underpay. The trade-boards may grant to any defective worker a permit enabling him to work at rates below those prescribed. Provision is also made for special consideration of beginners in a trade. Appeals may be taken from the trade-boards to the board of trade.

One effect of this minimum-wage legislation has undoubtedly been to increase the average rate of wages in the industries to which it applies. The wide diversity of wages paid for the same work has been eliminated through a process of leveling up. There has also been a stimulus to organization among both workers and employers. Along with this has gone a better organization of the trade itself, primarily through the elimination of middlemen

and middlewomen and other subcontractors. Some work formerly done in homes has been transferred to factories. This is believed to be an advantage since it reduces the possibilities of sweating, increases supervision, and favors the introduction of sanitary and other regulations and the prevention of exploitation of children.

In mining a quite different turn was given to minimum-wage legislation in England, as a result of the demands of the Welsh miners for a trade-agreement guaranteeing a minimum-wage of 5s. (\$1.25) per day. (See GREAT BRITAIN, *Coal Strike and Minimum Wage*.) Early in the year it was voted by the miners of Great Britain to go out in a general strike at the end of February on the refusal of operators to accede to this demand. The miners contended that they could not make a living when employed in abnormal places, as on narrow veins, making impossible a normal output. In the latter part of March the number of men out of work was estimated at a million and a half, causing a general cessation of industry and widespread misery. Prof. H. S. Jevons estimated the loss at \$50,000,000 a week. Compulsory interference by the state seemed necessary and this took the form of a minimum-wage law rather than government operation of the mines. (See GREAT BRITAIN, *Minimum Wage Law*.) Wage-boards were established and their decrees made compulsory, except that either mine owners or miners may close a mine by refusal to accept the decision. The law required the fixing of minima for both men and boys, regard being had for the average wages of the district for different classes of workers. Some pits were closed by owners on the ground that they could not afford to pay the wage fixed. This development of minimum-wage legislation is very notable, especially since it was only remotely connected with the world-wide movement for a living wage. The previous English law related only to sweated home industry. The 1912 law extended state interference to a principal industry. Since freedom of contract with respect to wages has been one of the most firmly grounded doctrines of modern economic theory, this new interference with natural economic processes was described by many, both in England and America, as excessively socialistic and bound to necessitate still further state intervention. At the same time, however, it must be noted that the idea of a minimum rate had long been a factor in the collective agreements of miners and mine-owners; and that the principle of a living wage has been fully accepted by economists, publicists, and captains of industry.

UNITED STATES

There has been strong opposition among American manufacturers and publicists to the regulation of wages by law, both on general economic and on constitutional grounds. It has been thought both impossible and inexpedient to regulate wages, since they will be determined in last analysis by the supply and demand of labor. The constitutional restriction found in the fourteenth amendment and the doctrine of freedom of contract based thereon have been considered serious impediments to securing legislation which would

withstand the scrutiny of the judiciary. On the other hand, most States reserved constitutional freedom of contract to men only, and it has been thought possible, therefore, to secure minimum-wage laws applicable to women and children. Moreover, the courts, both of the States and of the nation, have shown some tendency to broaden and strengthen the police-powers, and to take into account general social considerations as well as strictly legal ones. This tendency has been shown in the opinion of the highest courts of the United States and of Illinois in cases relating to hours of work for women.

MASSACHUSETTS. A minimum-wage commission was appointed by the governor of Massachusetts in 1911 to investigate the wages of women and children in confectionery factories, retail stores, laundries, and the cotton industry. This commission found that there was a wide diversity in the wages paid in the same industry for the same grade of work at different places, a condition typical of sweated trades. Taking the four industries together, they found that 40 per cent. of those employed received under \$6 per week, the proportion ranging from 66.2 per cent. in candy factories to 29.5 per cent. in retail stores. In one candy factory, 53.3 per cent. received less than \$5 per week, while in the other seven factories no employee of eighteen or over was receiving less than \$5. On the basis of the report of this commission the legislature enacted a law instructing the governor to appoint a commission of three persons to establish a minimum-wage board for the fixing of wages of women and children in any occupation in which the wages paid to a considerable number of workers is believed to be inadequate to maintain an American standard of living, or to maintain the health of the workers. The law provides that the wage-board shall have an equal number of representatives of employers and workers, together with a smaller number of representatives of the general public, to be appointed by the governor's commission; or this latter commission may appoint all members of the board. The law forbids the payment of wages less than the minimum fixed by the wage-board. Failure to comply is to be punished by public notice in the local press, public opinion being depended upon to enforce conformity to a board's decree. This law, not being mandatory, is clearly not unconstitutional.

WISCONSIN. The Wisconsin minimum-wage bill defined the minimum-wage as such compensation for labor as would enable employees to secure for themselves and those dependent upon them the necessary comforts of life. The bill did not attempt to define "necessary comforts of life." The bill authorized the Wisconsin industrial commission to investigate, by various means, so as to ascertain and classify the oppressive employments and to fix for each underpaid employee the standard of living wage. The bill provided for the establishment of minimum wage boards after the British type, which should provisionally translate the standard-of-living wage into wage-scales adapted to the special conditions of the various sweated industries.

ADVANTAGES AND DISADVANTAGES. Among those who object to minimum wages are those who contend that there is no necessity for

legislation. The promoters of minimum-wage legislation claim that such necessity is shown by the numerous investigations into wages and standards of living which have been made by Streightoff, Chapin, the Immigration Commission, the Pittsburgh Survey, the Massachusetts Commission, above referred to, and numerous smaller investigations in nearly all of the large cities of the United States. These reports uniformly showed that low wages were attended by physical deterioration of the wage-earner and his family. A second objection is that such legislation is impracticable and inexpedient, because efforts to regulate wages by law will be defeated by the operation of economic forces. This is answered by the contention that this objection does not apply to the establishment of minimum standards. It is further contended that wage-earners tend to get what they are worth; that to raise the wages of inefficient workers by law will encourage inefficiency and will prevent the elimination of the inefficient from economic life. The defenders of minimum-wage legislation contend in opposition that unskilled workers often do not get what they are worth, partly because of the oppression of some employers, and partly because they are victims of social and industrial maladjustment. Again it is contended that there are industries which cannot afford to pay a standard-of-living wage. In opposition to this there are those who say that such industries are parasitic and ought to be driven out of the country as detrimental to social welfare. It is pointed out that in the United States, workers of different standards of living either compete with each other or are finding employment in different industries. It is recognized as impossible to establish at once an American standard of payment for alien workers with much lower standards of living. This undoubtedly constitutes a practical difficulty in the United States. It is recognized also that minimum-wage legislation may throw out of employment some workers whose efficiency is so low that their employment would be unprofitable. For such workers, some freely advocate charitable support by the State; others advocate that they be granted special permit to work at less than the legal rate. The advocates and the opponents of minimum-wage legislation do not agree as to whether such legislation would tend to reduce the wages of workers who originally receive slightly more than the minimum. It seems probable, however, that with organization of the workers and publicity of conditions to prevent the depression of wages minimum-wage laws would not reduce the remuneration of any class of skilled or semi-skilled workers. See CHILD LABOR; ARBITRATION AND CONCILIATION; INDUSTRIAL; SWEATING; and WOMEN IN INDUSTRY.

MINING INDUSTRY. The Thirteenth Census published in 1912 its report on the mining industry, giving the statistics for the year 1909. The number of persons engaged in the mining industry on December 15, 1909, was 1,139,332, of whom 1,065,283 or 93.5 per cent. were wage-earners; 49,374 proprietors, and 24,675 were clerks. There were employed 8151 boys under 16 years of age, of whom 6968 or 85.4 per cent. were employed in the coal mining, 489 in iron, and 694 in other mining industries. Practically all the boys employed in

the anthracite coal mining work above ground. In mining bituminous coal more than three-fourths work under ground.

The gross value of the products of the mines and quarries, including petroleum and natural gas wells, in 1909 was \$1,238,410,322. Coal mining was the leading industry in point of value. The value of coal sold as such and of the coke produced at the mine amounted to \$577,142,935, of which anthracite contributed \$149,180,471; bituminous, \$427,962,464. Petroleum and natural gas came next with a product valued at \$185,416,884. Other industries contributing over \$10,000,000 worth of products were: Copper, \$134,616,987; iron, \$106,947,082; gold and silver, \$94,123,180; lead and zinc, \$31,363,094; limestone, \$29,832,492; granite, \$18,997,976; phosphate rock, \$10,781,192. These nine industries employed 95 per cent. of the wage-earners engaged in producing enterprises and contributed 96 per cent. of the total value of products of mining industries.

Pennsylvania ranked first in the value of its mining products, \$349,059,786. Of this the coal produced was valued at \$296,424,311. Other States with a product of over \$25,000,000 value were: Illinois, \$76,658,974; West Virginia, \$76,287,889; Michigan, \$67,714,479; Ohio, \$63,767,112; California, \$63,382,454; Minnesota, \$58,664,852; Montana, \$54,991,961; Colorado, \$45,680,135; Arizona, \$34,217,651; Missouri, \$31,667,524; Oklahoma, \$25,637,892. The District of Columbia and Mississippi had no mineral production in 1909.

MINING LANDS. The Thirteenth Census was the first in which an inquiry was made into the amount of land controlled by producing mines, and the results obtained are of considerable interest. In 1909, the year for which the statistics were compiled, the total acreage of all land belonging to producing mines was 24,216,000 acres. Not all of this area was in actual use, as large tracts are held in reserve. The greater part of this land is mineral and oil land, but there were also 1,139,000 acres of timber land and 1,662,000 acres of other land. This includes land which had not been surveyed and whose mineral resources were still unknown, as well as some land used for building and other purposes.

Of the total area controlled by operators of mining enterprises in 1909, more than one-half (12,695,000 acres) was connected with the petroleum and natural gas industries. Of the remainder much the largest part was reported for the coal industry. Holdings connected with bituminous mines are far more extensive than those pertaining to anthracite mines, the former amounting to 7,717,000 acres and the latter to 465,000 acres. Iron mines were third in extent, the holdings amounting to 1,313,214 acres, of which 456,000 acres were in timber and 468,924 acres were reported under "other land." The proportion of reserved land was greater under this than in any other of the mining industries. The mines producing precious metals controlled 588,263 acres, of which 469,455 acres were mineral land, 33,745 timber land, and 85,063 acres other than mineral or timber land. The phosphate rock industry reported 243,221 acres of mineral land and 92,580 of timber land. The mineral land of the copper industry totaled 126,851 acres, and 57,781 acres were timber land, while the remainder was reported as "other land." The

limestone quarries controlled 128,495 acres and the lead and zinc mines, 125,322 acres.

Of the total area controlled by mine operators, 38.8 per cent. was owned by the operators themselves and the remainder held under lease. In the petroleum and natural gas industry, all but 5.4 per cent. of the land is held under lease. The two industries showing the greatest percentage of land owned are the copper industry, in which the operators owned 98.6 per cent. of the land controlled, and the phosphate rock industry, in which the percentage owned was 96.2 per cent. In the coal industry, 68.1 per cent. of the anthracite land was owned, and 73 per cent. of the bituminous land. The iron industry owned 81 per cent. of its holdings, the lead and zinc operators, 81.8 per cent., and the precious metal mines 78.4 per cent. In the quarrying industries, of the lands devoted to granite quarrying, 83.6 per cent. were owned, and of the limestone industry, 74.8 per cent.

MINNEAPOLIS. See GARBAGE AND REFUSE DISPOSAL.

MINNESOTA. POPULATION. According to the Census Bureau statistics compiled in 1912, out of a total population in 1910 of 2,075,708, the foreign-born whites numbered 543,010, compared with 504,933 in 1900. Of these, the largest number, 122,511, came from Sweden; from Germany came 109,455; from Norway, 105,258; from Austria, 37,252; from Canada, 29,592; from Finland, 26,602; from Russia, 17,517; from Denmark, 16,130; and from England, 12,136. In the City of Minneapolis, with a total population in 1910 of 301,408 there was a foreign-born white population of 85,938, compared with 60,983 in 1900. The negroes in 1910 numbered 7084 and the mulattoes, 2616. The negroes in 1890 numbered 3683 and the mulattoes 1702.

AGRICULTURE. The acreage, value, and production of the principal crops in 1911 and 1912 will be found in the following table:

	Acreage	Prod. Bu.	Value
Corn	1912 2,266,000	78,177,000	\$28,925,000
	1911 2,200,000	74,140,000	39,294,000
Wheat	1912 4,325,000	67,038,000	48,938,000
	1911 4,350,000	43,935,000	40,420,000
Oats	1912 2,948,000	122,932,000	31,962,000
	1911 2,948,000	67,214,000	26,886,000
Rye	1912 262,000	6,026,000	3,013,000
	1911 240,000	4,488,000	3,501,000
Potatoes	1912 245,000	33,075,000	9,261,000
	1911 225,000	25,875,000	15,008,000
Hay	1912 1,661,000	a 2,541,000	16,262,000
	1911 799,000	a 799,000	9,508,000

a Tons.

MINERAL PRODUCTION. Minnesota ranks first among the States in the production of iron ore. It produced in 1911, 23,398,406 long tons valued at \$48,447,760, compared with a product of 31,966,769 long tons valued at \$78,462,560 in 1910.

MANUFACTURES. The Thirteenth Census statistics are for the calendar year 1909 and were compiled in 1912. Although Minnesota is not essentially a manufacturing State, the proportion which the value of its manufactures represented of the total value of manufacturing products in the United States, increased steadily from less than two-tenths of one per cent. in 1859 to 2 per cent. in 1909. The table herewith shows that in 1909 there

were 5561 manufacturing establishments in the State, which gave employment to 104,406 persons:

	Number or Amount 1909	1904	P. C. Inc. 1904-9
Number of establishments	5,561	4,756	16.9
Persons engaged in manufactures	104,406	83,301	25.3
Proprietors and firm members	5,376	4,524	18.8
Salariat employees	14,263	9,141	56.0
Wage earners (average number)	84,767	69,636	21.7
Primary horsepower	297,670	220,984	34.7
Capital	\$275,416,000	\$184,903,000	49.0
Expenses	376,062,000	279,924,000	34.3
Services	62,923,000	44,876,000	40.2
Salaries	15,452,000	9,033,000	71.1
Wages	47,417,000	35,843,000	32.4
Materials	281,622,000	210,554,000	33.8
Miscellaneous	31,517,000	24,494,000	28.7
Value of products	409,420,000	307,858,000	33.0
Value of products less cost of materials	127,798,000	97,304,000	31.3

In industries connected with lumber and timber products were 20,704 wage-earners; in foundry and machine shop industries, 6002; in industries connected with railways, 8232; in flour mill and gristmill industries, 4345. The flour mill and gristmill manufactures have the largest value of product, \$139,136,000; lumber and timber products, \$42,353,000; slaughtering and meat-packing, \$25,754,000; butter, cheese, and condensed milk, \$25,287,000; printing and publishing, \$15,982,000; foundry and machine shop products, \$15,609,000. The total number of persons engaged in manufactures in the State in 1909 was 104,406, of whom 90,058 were male and 14,348 female. The wage-earners under 16 years of age numbered 306. The prevailing hours of labor for the great majority of wage-earners were from 54 to 60 a week; only 16.7 per cent. of the total were employed in establishments where the hours were less than 54 and only 4.1 per cent. in establishments where they were more than 60. The largest number of wage-earners was in Minneapolis, 26,962; in St. Paul, 19,339; in Duluth, 6083, and in Winona, 2032.

EDUCATION. The number of pupils in the public schools of the State in 1912 was 448,800. The teachers numbered 15,984. There were 8917 school-houses and the school property was valued at \$35,331,954. The school expenditures for the year amounted to \$15,346,133. There were maintained 57 agricultural and industrial schools, 211 high schools, 204 graded schools, 2362 first-class rural schools, 1394 second-class rural schools, and 81 teachers' training departments in high schools. The permanent school fund of the State is larger than that of any other State, except Texas, and is increasing at the rate of \$1,500,000 a year. This is largely on account of the royalties on iron ore. Educational progress in the State in recent years has concerned itself chiefly with the furtherance of practical education, the establishment of industrial departments in the high schools and normal schools, and the improvement of rural schools and rural school teaching. The Putnam act, passed by the legislature of 1911, provided \$2500 for the establishment and maintenance of industrial and agricultural departments in high schools

of the State. Thirty such schools have been designated and have qualified. These schools have special instructors in agriculture, manual training, cooking, and sewing, and have demonstration plots of at least five acres. Industrial courses have also been added to the curriculum of the five normal schools of the State. Consolidation of rural schools has been effected in different parts of the State, and 65 such schools were in operation in 1912. A rural school commissioner has been added to the Department of Public Instruction to have charge of the rural schools and direct oversight in consolidation movements. The State has engaged a health expert to travel about and demonstrate to the citizens that rational conservation of the mental and physical health of children is possible and practicable with the means already at hand. Three plans are proposed: Organization with a medical officer and a nurse or nurses; organization with a school nurse or nurses only; organization by the employment of a simple, non-medical health survey on the part of the teacher only. To make it possible for every community, however small, to possess the necessary technical knowledge, the State board of health will maintain at the State capital a "clearing house of information concerning child hygiene, medical supervision, the teaching of school hygiene, and the like."

FINANCE. The receipts for the year ending July 31, 1912, were \$15,805,302. The cash balance at the beginning of the year was \$3,508,491. The disbursements for the fiscal year amounted to \$16,321,065, and the cash balance at the end of the year was \$2,992,728. The chief sources of income are railroad 4 per cent. gross earnings tax, inheritance taxes, insurance companies taxes, express companies taxes, general State taxes, and royalties on iron ore. The chief disbursements are for State institutions, general school aid, special school aid, and the expenses of the executive departments of the State.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions under the control of the State, with their average population in 1912 were as follows: Anoka Asylum, 533; Hastings Asylum, 536; Fergus Falls Hospital, 1626; Rochester Hospital, 1274; St. Peter Hospital, 1117; School for the Blind, 80; School for the Deaf, 260; School for the Feeble-minded, 1332; Owatonna Orphans' Home, 242; Red Wing Industrial School, 285; Home School for Girls, 100; Reformatory, 421; Stillwater Prison, 769; Tuberculosis Sanatorium, 85; Home for Crippled Children, 91.

POLITICS AND GOVERNMENT

The chief political interest in the State, aside from the presidential campaign, was the first trial of a new primary law for the nomination of candidates for State offices. Primaries were held in May for the election of delegates to the Republican national convention. In these the Roosevelt forces were victorious. Of the 81 counties in the State, Roosevelt carried 67, Taft 9, and La Follette, 5. On May 16 the Republican State convention instructed the 24 delegates of the State to vote for Theodore Roosevelt in the national convention. The Democrats in convention for the election of delegates to the Democratic national con-

vention instructed the delegates to vote for Woodrow Wilson. On July 30 the Progressive party held its first convention at Minneapolis, and delegates were elected to the Progressive national convention. Primaries for the nomination of State officers under the new law were held on September 17. The main State-wide contest was between Governor A. O. Eberhart, who was seeking renomination, and five other Republican candidates for the office. The Democratic candidates were C. M. Andrist and P. M. Ringdal. In the primaries Governor Eberhart was renominated by the Republicans, and Mr. Ringdal by the Democrats. The successful candidates for the United States Senate were Knute Nelson, Rep., and Daniel W. Lawler, Dem. The Progressive party on September 21 held a convention and nominated P. V. Collins for governor, and other State officers. The election of November 5 resulted as follows: For President, Roosevelt, 125,856 votes, Wilson, 106,426, Taft, 64,344, Debs, 27,505, Chafin, 7886, and Reimer, 2212. For governor, Eberhart received 129,688 votes, Ringdal, Dem., 99,659, and Collins, Progressive, 33,465.

LEGISLATION. An important measure passed at the legislative session of 1912 was the State primary election law for the nomination of all State officers. (See **ELECTORAL REFORM.**) This law embraces the first and second choice that is embodied in other recent legislation on this subject following a somewhat similar law in Wisconsin. The latter also provides that the justices of the supreme court, judges of the district, probate and municipal courts, county superintendents of schools, and municipal officers in cities of the first-class containing a population of more than fifty thousand, shall be nominated upon separate non-partisan ballots. An act, unusually strict in its provisions, relating to corrupt practices at primaries and elections was passed. A joint resolution was adopted ratifying the amendment to the Constitution of the United States providing for the election of senators by popular vote and also a resolution ratifying the amendment to the federal Constitution providing for an income tax. A measure was enacted amending the law as to the employment of children (see **CHILD LABOR**), and another measure regulating foreign fraternal benefit societies doing business in the State.

STATE GOVERNMENT. Governor, Adolph O. Eberhart; Lieutenant-Governor, J. A. Burnquist; Secretary of State, Julius A. Schmah; Auditor, S. G. Iverson; Treasurer, Walter J. Smith; Attorney-General, L. A. Smith; Adjutant-General, Fred B. Wood; Superintendent of Education, C. G. Schultz; Commissioner of Insurance, J. A. Preus; Commissioner of Agriculture, J. S. Maxfield—all Republicans.

JUDICIARY. Supreme Court: Chief Justice, Calvin L. Brown, Rep.; Associate Justices, Andrew Holt, Rep.; C. L. Brunn, Dem.; P. E. Brown, Rep.; Oscar Hallam, Rep.; Clerk, I. A. Caswell, Rep.

STATE LEGISLATURE, 1913. Republicans, Senate, 42; House, 90; joint ballot, 132. Democrats, Senate, 20; House, 26; joint ballot, 46. Republican majority, Senate, 22; House, 64; joint ballot, 86.

The representatives in Congress will be found in the section *Congress*, article **UNITED STATES.**

MINNESOTA, UNIVERSITY OF. A State university for higher education, founded in

1869. The enrollment in all departments of the university in the autumn of 1912 was 6,953. Of these, 4055 were in the university courses and 2898 in secondary (agricultural) schools and extension course. The faculty numbered 499. Among the noteworthy changes in the faculty during the year were the following appointments: William R. Vance, dean of the law school; E. M. Morgan, professor of law; Dr. Margaret Sweeney, professor in the department of rhetoric and dean of women; J. Anna Norris, director of health and physical education for women; Lieut. James B. Woolnough, professor of military science; A. V. Storm, professor of agricultural education; Ernest W. Major, associate professor of animal nutrition; Arthur C. Smith professor of animal husbandry; A. B. Recknagel, professor of lumbering; and Harriet Sewall, librarian, school of agriculture. Among the resignations and retirements were the following: Henry T. Eddy, as dean of the graduate school and professor of mathematics and mechanics; Arthur E. Haynes, professor of mathematics; Willis M. West, professor of history; Major E. L. Butts, professor of military science; and Ada B. Comstock, professor in rhetoric and dean of women. The productive funds of the university amounted at the end of the collegiate year 1912 to \$1,506,136. There are about 160,000 volumes in the library. President, George E. Vincent, LL.D.

MINOR PLANETS. See ASTRONOMY.

MIQUELON. See SAINT PIERRE.

MISSISSIPPI. POPULATION. According to the Census Bureau statistics in 1912, out of a total population of 1,797,114 in 1910 the foreign-born whites numbered 9389, compared with 7625 in 1900. Of these, the largest number, 2130 came from Italy; 1663 from Germany. Other European countries were represented by smaller numbers. Mississippi has the smallest proportion of foreign-born white population of all the States. The negroes in 1910 numbered 1,009,487 and the mulattoes, 171,005. It will be noted that the negroes constitute by far the larger proportion of the population of the State; in 1890 they numbered 742,599 and the mulattoes, 85,166.

AGRICULTURE. The acreage, value, and production of the principal crops in 1911 and 1912 are given in the following table:

	Acreage	Prod. Bu.	Value
Corn	1912 3,106,000	56,840,000	\$40,356,000
	1911 2,850,000	54,150,000	38,988,000
Wheat	1912 8,000	96,000	92,000
	1911 9,000	108,000	108,000
Oats	1912 113,000	1,966,000	1,180,000
	1911 130,000	2,392,000	1,555,000
Rice	1912 2,200	77,000	69,000
	1911 2,100	76,000	69,000
Potatoes ...	1912 10,000	890,000	801,000
	1911 9,000	747,000	855,000
Hay	1912 201,000	a 297,000	3,712,000
	1911 100,000	a 150,000	1,650,000
Cotton	1912	883,678
	1911	c 996,601

a Tons. c Bales.

MANUFACTURES. The Thirteenth Census included statistics of manufactures. These are for the calendar year 1909. The most important general results of the census are given in the table below. The most important industry in point of number of wage-earners employed and value of the product was the lumber and timber industry. In this 33,397 wage-

earners were employed and the value of the product was \$42,793,000. The oil, cotton seed, and cake industry gave employment to 2503 wage-earners and the value of the product was \$15,966,000. There were no other industries in which the value of the product exceeded \$5,000,000. In the cotton industries were employed 2645 wage-earners and the value of the product was \$3,102,000. In the fertilizing industries were employed 449 and the value of the product was \$2,125,000. The total number of wage-earners in the State in 1909 was 49,326, of whom 1058 were under 16 years of age. Of these, 447 were females. The prevailing hours of labor for nearly half the wage-earners of the State are 60 hours a week, and a large proportion work between 60 and 72 hours a week. In the city of Meridian was the largest number of wage-earners, 1524; in Vicksburg, 1202; in Jackson, 799; in Hattiesburg, 648, and in Natchez, 428. The following table shows the increase in manufacturing in the five-year period 1904-1909:

	Number or Amount 1909	P. C. Inc. 1904 1904-9
Number of establishments	2,598	1,520 70.9
Persons engaged in manufactures	56,761	42,966 32.1
Proprietors and firm members	2,974	1,588 87.3
Salaried employees	3,403	2,688 26.6
Wage earners (average No.)....	50,384	38,690 30.2
Primary horsepower	206,222	110,338 86.9
Capital	\$72,393,000	\$50,256,000 44.0
Expenses	\$8,707,000	\$9,074,000 40.0
Services	22,422,000	17,417,000 28.7
Salaries	3,654,000	2,598,000 40.6
Wages	18,768,000	14,819,000 26.5
Materials	36,926,000	25,801,000 43.1
Miscellaneous	9,359,000	5,866,000 59.8
Value of products	80,555,000	57,451,000 40.2
Value of products less cost of materials....	43,629,000	31,650,000 37.8

FINANCE. The report of the treasurer showed cash on hand October 1, 1911, of \$572,047. The receipts for the fiscal year amounted to \$4,179,307 and the disbursements to \$4,500,330, leaving cash on hand October 1, 1912, of \$250,999. The total bonded indebtedness of the State amounted to \$1,842,899. The chief sources of revenue are State and county taxes on personal property and privilege of licenses. The chief expenditures are for State institutions, colleges, and common schools.

CHARITIES AND CORRECTIONS. The Charitable and correctional institutions of the State include: The Confederate Soldiers' Home, Beauvoir; the Deaf and Dumb Institution, Jackson; the Blind Institution, Jackson; State Insane Hospital, Jackson; the East Mississippi Insane Hospital, Meridian; the State Charity Hospital, Vicksburg; the State Charity Hospital, Natchez; and the Mattie Hersee Hospital, Meridian. In 1910 the legislature authorized the establishment of a State charity hospital at Jackson, and this institution was opened to receive patients in 1912.

POLITICS AND GOVERNMENT

The legislature met in 1912 and the most important measures enacted will be found in the paragraph *Legislation* below. On January

17, James K. Vardaman was elected senator to succeed Senator Leroy Percy. Mr. Vardaman had been previously chosen in senatorial primary. On March 5 the legislature demanded the resignation of Senator Percy, who was defeated in 1911 in the senatorial contest by Mr. Vardaman. Senator Percy refused to resign. In a letter written in reply to the request of the legislature, he declared that he had been elected by a former legislature and that the legislature had no authority to ask for his resignation nor any reason for asking it. He referred to the alleged promise which he was charged with having made that he would resign if he failed of reelection in the primary. He explained that his pledge that he would resign had reference to his request for an extraordinary primary to be held in 1910 instead of 1911. This offer he declared was not accepted. The letter included the following statement: "I shall pay no heed to your resolution. I did not receive my commission from you; I will not lay it down at your behest; but I shall continue to do my duty to the people of Mississippi in the United States Senate as God gives me to see it, conscious that my course will meet the approval of the brain and manhood of my State." Senator Percy's resignation was asked for by the Vardaman faction of the legislature which held the power. This same majority assumed to take from the court the adjudication of a suit brought by the attorney-general against James K. Vardaman, for recovery of trust moneys, received by him when governor and unaccounted for. This suit was dismissed by the new attorney-general after the governor and the chancellor had refused to sanction dismissal.

The delegates sent by the State to the National Republican convention were pledged to vote for President Taft. Democratic preference primaries were held on May 7 and the delegates were pledged to Mr. Underwood. The Progressive convention was held at Jackson on July 31 and delegates were chosen to the National Progressive convention. Of the 150 delegates only three were white. The appearance of these delegates at the Progressive convention resulted in some friction. See **PRESIDENTIAL CAMPAIGN**.

There is practically no Republican party in Mississippi, and there was no question, therefore, as to the result of the election on November 5. The vote was as follows: Wilson, 57,227; Roosevelt, 3645; Taft, 1595, and Debs, 2061. Wilson's plurality was 53,582. There was no election for governor or State officers in 1912 as Governor Brewer's term does not expire until 1916.

OTHER EVENTS. The year was signalized in State and valley history by a spring flood in the Mississippi River which discharged a larger volume of water than any since the official record was established. In spite of the extensive enlargements of levees in recent years there was a break in the levee at Beulah Lake in Bolivar county which inundated large sections in that county, and half a dozen others; a number of lives were lost and hundreds of livestock drowned. The water was so late in subsiding that much of the inundated land was not planted.

LEGISLATION. The legislature of 1912 passed an unusual number of important measures. Among these were the following: Several im-

portant laws relating to taxation; a measure providing for the commission form of government in cities which adopt the act; a measure of unusual interest prohibiting hotels, restaurants, cafés, dining cars, railroad companies, and sleeping-car companies from allowing tips to be given to employees, to prohibit all persons from giving tips and to prohibit employees from receiving them. A measure was enacted making railroad corporations liable for damages for fire set directly or indirectly by locomotives and to give such corporations an insurable interest in the property along the line of the road. A measure was passed regulating the employment of children in mills, factories, etc., providing that no male under the age of thirteen or boy under the age of twelve shall be thus employed, and no boy under sixteen or female under eighteen shall work more than 8 hours a day nor more than 48 hours a week, or at night. (See the article on **CHILD LABOR**.) An act was adopted abolishing Greek letter fraternities, sororities, and secret orders among students in the University of Mississippi and in all other educational institutions supported in whole or in part by the State. This is probably the first legislation of this nature ever passed. A measure was enacted providing for regular annual sessions of the legislature. The laws of the State against trusts were amended. A joint resolution was adopted providing for an amendment to the constitution to bring about a session of the legislature on the Tuesday following the first Monday in January, 1912, and every two years thereafter. Another resolution proposed an amendment that nine or more jurors in civil suits may agree on a verdict and return it as the verdict of the jury. A resolution proposing an amendment to the constitution providing for the initiative and referendum to be voted upon in the November election, was adopted (see above).

STATE GOVERNMENT. Governor, Earl Brewer; Lieutenant-Governor, Theodore G. Bilbo; Secretary of State, J. W. Power; Treasurer, P. S. Stovall; Auditor, D. L. Thompson; Superintendent of Education, J. N. Powers; Attorney-General, Ross A. Collins; Adjutant-General, Arthur Fridge; Land Commissioner, J. H. Brown; Commissioner of Agriculture, H. E. Blakeslee; Commissioner of Insurance, T. M. Henry—all Democrats.

JUDICIARY. Supreme Court: Chief Justice, S. Smith; Associate Justices, S. C. Cook and R. F. Reed; Clerk, George C. Myers—all Democrats.

STATE LEGISLATURE, 1913. The State legislature is wholly Democratic.

The representatives in Congress will be found in the article **UNITED STATES**, section **Congress**.

MISSISSIPPI RIVER FLOODS. In the latter part of March and early in April, 1912, occurred the most disastrous floods on record in the Mississippi River and its tributaries. The flooded area covered 15,000 square miles, or a tract larger than the combined area of the States of Maryland and Delaware or of Vermont and New Hampshire. All the States bordering on the lower Mississippi were affected by these floods. Many lives were lost and the damage to property has been estimated at nearly \$45,000,000. The overflow of the river caused twelve crevasses in the levees which border it. Relief was given to the suf-

ferers by the United States government, by the Red Cross Society, and by other agencies. Appropriations amounting to \$1,240,000 were made by Congress for the purpose of providing tents, rations, and other necessities. The work of distributing this relief was organized and carried out by the quartermasters' and subsistence departments of the army, assisted by naval revenue and militia officers, by the Red Cross, and by local citizens' committees. For a considerable period of time 185,000 persons were furnished daily rations, 20,000 persons were furnished shelter, and 50,000 head of livestock were provided with forage.

The floods resulted from a series of unusual storms which visited the lower Missouri and Mississippi valleys and the pressure of the water proved too much for the levees in many places. See RED CROSS SOCIETY and MISSISSIPPI.

MISSOURI. POPULATION. According to the Census Bureau statistics compiled during 1912, out of the total population in the State in 1910, 3,293,335, there were 157,452 negroes and 44,690 mulattoes. In 1890 the negroes numbered 150,184 and the mulattoes 35,445. The total foreign-born white population of the State in 1910 was 228,896, compared with 215,775 in 1900. The largest proportion of foreign-born whites came from Germany, 88,138; from Ireland, 23,289; from Russia, 21,490; from Austria, 16,546; from England, 13,749; from Italy, 12,474, and from Hungary, 11,067. Nearly all the other countries of Europe are represented in the foreign-born population.

AGRICULTURE. The acreage, value, and production of the principal crops are given in the following table:

	Acreage	Prod. Bu.	Value
Corn1912	7,622,000	243,904,000	\$112,196,000
.....1911	7,400,000	192,400,000	115,440,000
Wheat1912	1,900,000	23,760,000	21,375,000
.....1911	2,300,000	36,110,000	31,777,000
Oats1912	1,125,000	37,125,000	12,994,000
.....1911	1,200,000	17,760,000	7,992,000
Rye1912	15,000	222,000	178,000
.....1911	16,000	226,000	190,000
Potatoes ..1912	95,000	7,980,000	5,506,000
.....1911	95,000	2,565,000	2,616,000
Hay1912	3,187,000	a 4,143,000	40,601,000
.....1911	2,480,000	a 1,468,000	19,391,000
Tobacco ..1912	6,000	b 6,000,000	720,000
.....1911	6,000	b 4,800,000	576,000

a Tons. b Pounds.

MINERAL PRODUCTION. The output of coal in the State in 1911 was 3,760,607 short tons, valued at \$6,431,066. This is a notable gain over the product of 1910, and exceeds the output of the State in any other year except 1907. The production of 1910 was 2,982,433 tons. The remarkable decrease in that year was largely on account of labor troubles. In 1911 the industry was practically free from these disturbances, and an increased output was the result. The coal mines of the State in 1911 gave employment to 9999 men, against 9691 in 1910.

There were produced in the State in 1911, 72,788 long tons of iron ore valued at \$153,676, compared with a product of 78,341 long tons valued at \$168,697 in 1910.

MANUFACTURES. The Thirteenth Census statistics are for the calendar year 1909 and were compiled in 1912. The State ranks high in manufacturing, due largely to the activity of

the industries of St. Louis and Kansas City. The table herewith shows considerable increase in the manufacturing industries in the five-year period, 1904-1909:

	Number or Amount 1909	1904	P. C. Inc. 1904-9
Number of establishments	8,375	6,464	29.6
Persons engaged in manufactures	185,705	156,585	18.6
Proprietors and firm members..	8,226	6,299	30.6
Salaried employees	24,486	17,119	43.0
Wage earners (average number)...	152,993	133,167	14.9
Primary horsepower..	240,467	247,861	37.4
Capital	\$444,343,000	\$379,369,000	17.1
Expenses	522,276,000	387,427,000	34.8
Services	109,837,000	85,646,000	28.2
Salaries	28,994,000	19,002,000	52.6
Wages	80,848,000	66,644,000	21.3
Materials	354,411,000	252,253,000	40.5
Miscellaneous	58,028,000	49,523,000	17.2
Value of products....	574,111,000	439,549,000	30.6
Value of products less cost of material	219,700,000	187,291,000	17.3

From this table it will be seen that in 1909 there were in the State 8375 manufacturing establishments, which gave employment to an average of 185,705 persons. The largest number of persons employed in any industry was found in those relating to boots and shoes, 17,396. Those engaged in the lumber and timber manufactures numbered 13,522; in printing and publishing, 10,790; in industries connected with railways, 8121; and in the manufacture of clothing, 7994. The value of the product was largest in the slaughtering and meat-packing industries. This was \$79,581,000. The value of the boots and shoes produced was \$48,751,000; flour and gristmill products, \$44,508,000; printing and publishing, \$29,651,000; malt liquors, \$27,447,000. The largest number of wage-earners was found in St. Louis, 87,371; in Kansas City, 14,643; in St. Joseph, 5390; and in Hannibal 2445. The value of the products of the industrial establishments of St. Louis was \$328,496,313, and of Kansas City, \$54,704,570.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions of the State include thirteen separately governed charitable and penal institutions, county jails, and almshouses or infirmaries in practically all counties of the State, and special institutions of this character controlled by some of the larger cities. There is also a general system of public relief of the poor in their homes, amounting to somewhat less than \$250,000 annually, and juvenile courts are established in the six largest urban districts of the State. In the thirteen State institutions about 12,000 inmates are enrolled; in the county almshouses, about 4600, and in the county jails, about 13,600. About 7000 persons receive public aid in their homes annually. In the State institutions about \$8,000,000 are invested and about \$3,000,000 in county jails and almshouses. The State Board of Charities and Corrections will present to the legislature in 1913, forty measures concerning the care of the unfortunates in the State. Among these are: Appropriation for a reformatory; provision for enlarging the Missouri Colony for the Feeble-minded at Marshall, and measures for bringing about a scientific, non-

partisan, honest administration of the charitable and penal institutions and better supervision and care for the dependent and neglected children of the State.

POLITICS AND GOVERNMENT

The legislature did not meet in 1912 as the sessions are biennial and the last was held in 1911. The next session begins on January 8, 1913.

Missouri took a conspicuous part in the political campaign of 1912. The leading candidate for the Democratic nomination up to the holding of the national convention was Champ Clark, one of the State's representatives in Congress and Speaker of the House. Governor Hadley was one of the leading Progressive leaders in the Republican pre-convention campaign and was one of the seven governors who signed the letter urging Mr. Roosevelt to be a candidate. He was in the first days of the convention floor leader of the Roosevelt forces, and made such an impression upon the delegates that he was spoken of as a compromise candidate for President and as a candidate for Vice-President. Governor Hadley, however, did not join the movement for a new party but gave his support to President Taft in the campaign following the convention.

The Republican State convention for the nomination of national delegates was controlled by the Progressive forces and the eight delegates of the State were instructed to vote for Mr. Roosevelt. The Democratic delegates were naturally pledged to Mr. Clark and voted steadily for him at the convention until after the final vote which nominated Governor Wilson had been taken.

In spite of the fact that Governor Hadley declined to join the Progressive party it continued an aggressive campaign following the Republican national convention, and on July 31 held a convention in which delegates were sent to Chicago to the National Progressive convention. It was decided there to hold a State convention on September 3 for the nomination of State officers. This action was largely taken through the advice of Mr. Roosevelt, who in the early part of September made a series of addresses in the State. At this convention, Judge Albert D. Norton of the St. Louis Court of Appeals was nominated for governor. Among the planks inserted in the platform were declarations in favor of woman suffrage preferential presidential primaries, direct election of senators, and the initiative, referendum, and recall. Primaries for the nomination of State officers had been previously held on August 6 by the Democratic and Republican parties. In these elections Elliott W. Major was nominated by the Democrats and John C. McKinley by the Republicans. The election of November 5 resulted as follows: For President, Wilson, 330,947 votes; Taft, 207,491; Roosevelt, 123,111; Debs, 28,145; Chafin, 5222; and Reimer, 1778. Governor Wilson's plurality was 123,456. For governor the vote was as follows: Major, Dem., 337,019; McKinley, Rep., 217,817; Norton, Prog., 109,146; Ward, Socialist, 28,145. The Democrats controlled the legislature by a majority of 100 on joint ballot.

OTHER EVENTS. On April 2, municipal elec-

tions were held in the State. Mayor Brown of Kansas City was defeated by Henry L. Jost, Democrat.

In July the house committee on elections of the House of Representatives by a vote of 6 to 3, held that Theron E. Catlin, Republican representative from St. Louis, should be unseated and that Patrick Gill, his Democratic opponent, should be seated in his place. The committee decided that Catlin's election was invalid because it was secured by a lavish expenditure of money. It was alleged that his father had spent \$13,000 for him in the campaign. His majority was 1200. This action of the committee was upheld by the House and Mr. Catlin was unseated.

STATE GOVERNMENT. Governor, E. W. Major; Lieutenant-Governor, W. R. Painter; Secretary of State, Cornelius Roach; Auditor, John P. Gordon; Treasurer, E. P. Deal; Attorney-General, John T. Barker; Superintendent of Education, William P. Evans—all Democrats except Evans.

JUDICIARY. Supreme Court: Chief Justice, Leroy B. Valliant, Dem.; Associate Justices, Henry Lamm, Rep.; Walter W. Graves, Dem.; A. M. Woodson, Dem.; H. W. Bond, Dem.; C. B. Faris, Dem.; R. F. Walker, Dem.; John C. Brown, Rep.; Clerk, J. D. Allen, Dem.

STATE LEGISLATURE, 1913. Democrats, Senate, 25; House, 113; joint ballot, 138. Republicans, Senate, 9; House, 28; joint ballot, 37. Progressive, Senate, 0; House 1; joint ballot, 1. Democratic majority, Senate, 16; House, 84; joint ballot, 100.

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

MISSOURI, UNIVERSITY OF. An institution of higher education at Columbia, Missouri, founded 1839. The number of students enrolled in the university, including the School of Mines and Metallurgy, a division of the university, for the session 1911-12, was 3063. The members of the faculty of regular teaching grade number 238. Few changes have occurred in the faculty. The productive funds of the university amounted to \$1,264,839, and the total income to about \$858,768. The larger part of this appropriation was by the State. The library contains approximately 152,193 volumes. This number includes 21,000 volumes shelved in the State historical library. At Columbia new buildings for manual arts and the experimental school of education, costing \$15,000 and \$5000 respectively, have been completed. New buildings for physics and agricultural chemistry costing \$100,000 and \$60,000 respectively, are being completed and will be ready for occupancy in February, 1913. At Rolla (school of mines and metallurgy) a library and assembly hall costing \$65,000 is practically completed. The enrollment for the session 1912-13 on October 15 was 2367 (includes 680 enrolled in summer session). Corresponding figures for 1911-12 were 2259. President Albert R. Hill, LL. D.

MOFFAT, GRAHAM. See **DRAMA**.

MOLINARI, GUSTAVE. A Belgian political economist, died January 28, 1912. He was born at Liège in 1819. He studied medicine and was for a time physician at Brussels, at the same time writing works on homeopathic medicine. He later removed to Paris, where he gained some distinction as a radical journalist, but was obliged by political conditions

to return to Belgium. He was appointed professor of political economy in the Musée Royal de l'Industrie Belge. In 1874 he was elected corresponding member of the Academy of Moral and Political Sciences of the Institut de France. In 1881 he became editor of the *Journal des Economistes* at Paris. He also took part in establishing several other economic journals. Among his published writings are the following: *Questions d'économie politique et de droit public* (2 vols., 1861); *L'évolution économique du XIXème siècle* (1880); *Les lois naturelles de l'économie politique* (1867), and *Comment se résoudra la question sociale* (1896).

MONACO. A hereditary constitutional monarchy (constitution of January 8, 1911), covering 1.5 square kilometers and having a population of 19,121. Population of Monaco (town), 2410; of La Condamine, 6218; of Monte Carlo 3794. There is no cultivation. Roman Catholicism is the only creed tolerated. The revenue, chiefly derived from the gambling concession at Monte Carlo, is spent largely for improvements. Reigning prince (1912), Albert (born 1848); heir-apparent, Prince Louis (born 1870).

MONEY TRUST. See TRUSTS.

MONGOLIA. See CHINA.

MONISTIC SYSTEM. See PHILOSOPHY.

MONOD, GABRIEL JACQUES JEAN. A French historian, died April 10, 1912. He was born in Havre in 1844. His studies were carried on at the École Normale and in Italy and Germany. In 1869 he began teaching at the École des Hautes Études, where he became director of the historical-philological section. He became in 1905 professor at the Collège de France. He was editor of the *Revue Critique* and was one of the founders of the *Revue Historique*. Among his published writings are: *Allemands et Français* (1871); *Études critiques sur les sources de l'histoire mérovingienne* (1872-85); *Jules Michelet* (1875); *Bibliographie de l'histoire de France* (1888); and *Les maîtres de l'histoire, Renan, Taine, Michelet* (1894); *Portraits et souvenirs* (1897); *Souvenirs d'adolescence* (1903); *Jules Michelet* (1905).

MONOPLANE. See AERONAUTICS.

MONTANA. POPULATION. According to the Census Bureau statistics compiled during 1912, out of the total population in the State in 1910, 376,053, the foreign-born whites numbered 91,644, compared with 62,373 in 1900. Of these, the largest number 10,598 came from Canada; 8574 from Germany; 8469 from Austria; 7153 from Norway; 6408 from Sweden; 8980 from England; 9469 from Ireland; and from Finland, 4111. Other European countries are represented by smaller numbers. The negroes in the State in 1910 numbered 1834, and the mulattoes, 611. In 1890 the negroes numbered 1490 and the mulattoes, 404.

AGRICULTURE. The acreage, value, and production of the principal crops in 1911 and 1912 are shown in the table in the next column.

MINERAL PRODUCTION. The gold production of the State in 1911 was \$3,710,571, a decrease of \$19,915 from the production of 1910. The production from the placer mines increased, while that from dry or siliceous ores fell off. The production from copper ores remained about the same as in 1910, and that from lead and zinc ores decreased. The silver output in

		Acreage	Prod. Bu.	Value
Corn	1912	24,000	612,000	\$ 428,000
	1911	20,000	530,000	424,000
Wheat	1912	803,000	19,346,000	12,381,000
	1911	429,000	12,299,000	9,470,000
Oats	1912	476,000	22,848,000	7,997,000
	1911	425,000	21,165,000	8,466,000
Rye	1912	10,000	235,000	141,000
	1911	8,000	184,000	132,000
Potatoes	1912	37,000	6,105,000	2,442,000
	1911	27,000	4,060,000	2,997,000
Hay	1912	640,000	a 1,216,000	10,093,000
	1911	612,000	a 1,224,000	12,240,000

a Tons.

the State in 1911 was 11,985,196 fine ounces, against 12,161,857 fine ounces in 1910. The copper ores, mostly from Butte, produced 9,597,761 ounces in 1911 and the dry or siliceous ores 1,613,253 ounces.

The output of blister copper in the State in 1911 was 271,814,491 pounds, compared with 283,078,473 pounds in 1910. In the copper production the State is surpassed only by Arizona. At the close of 1910 the State had yielded 5,598,253,884 pounds, or 34 per cent. of the total output of the United States since 1845. This gives it first rank in total production among the copper-producing States. Three copper smelting plants were operated in 1911. These were at Butte, Anaconda, and Great Falls.

The production of coal in the State in 1911 was 2,975,358 tons, valued at \$5,339,058. These figures showed an increase over the production of 1910, which was 2,920,970 short tons, valued at \$5,329,322. The coal production of the State has increased steadily during the last three years, the gains being due chiefly to the development in the Bull Mountain field, which was opened in 1908 after the construction of the Chicago, Milwaukee, and Puget Sound Railway through it. Montana was the only one of the Rocky Mountain States which showed an increase in coal production in 1911. There were employed in the coal mines of the State in that year 3866 men. There were only two labor disturbances during the year and these were not important.

MANUFACTURES. The Thirteenth Census included statistics of manufactures in the State. These figures cover the calendar year 1909. The chief results of the census are summarized in the table on the next page. The principal industries of the State are mining, agriculture, and stock-raising, and the principal manufacturing industries are those supplemental to its mining interests. The largest number of persons employed in a single industry are those connected with lumber and timber products. In these industries 3106 persons were engaged. In these industries also the largest amount of capital was invested, \$6,334,000.

FINANCE. The receipts for the fiscal year ending November 30, 1912, were \$4,046,691. The expenditures for the fiscal year amounted to \$3,568,131. The balance at the end of the year was \$1,401,641. The chief source of income was the property tax, and the chief expenditure is for the support of reform and educational institutions.

CHARITIES AND CORRECTIONS. The State has three institutions which are charitable, the Soldiers' Home, Columbia Falls, where there are about 75 veterans enjoying the comforts of the home. The national government shares in

	1909	1904	P. C. Inc. 1904-9

the support of this home; the State Orphans' Home, Twin Bridges, where there are about 150 children, ranging in age from a few days to 16 years. The State provides generously for the maintenance and education of these children and also seeks to find homes throughout its domain for them; and, the State Industrial School, Miles City, where there are about 75 boys and 5 girls. This institution is correctional and receives children, upon commitment by the district courts, between the ages of eight years and eighteen years. It is very well equipped for industrial and manual training.

POLITICS AND GOVERNMENT

The State legislature did not meet in 1912 as the sessions are biennial and the last was held in 1911. The next session begins January 6, 1913.

Political interest in the State in 1912 was increased by the fact that Senator Dixon was one of the most prominent leaders of the Progressive party and was the active campaign manager of Mr. Roosevelt throughout the campaign. See **PRESIDENTIAL CAMPAIGN**. The Republican State convention held in March elected delegates pledged to vote for President Taft. A meeting of the Progressive Republicans was held at Helena in April. The Democratic State convention on May 29 selected eight delegates to the national convention and instructed them to vote for Champ Clark for President. On July 30 the Progressive party held its first convention at Helena and elected delegates to the National Progressive convention at Chicago. The Progressive party held a convention for the nomination of State officers on September 7. Frank H. Edwards was nominated for governor. The platform adopted by the convention urged a complete reform of taxation in the State, arbitration of all labor disputes, prohibition of child labor, direct primary and direct election of United States senators. The Democrats and Republicans had already nominated candidates for State offices. These were Stewart, Democrat, and Wilson, Republican. The election on November 5 resulted as follows: For President, Wilson, 27,941 votes; Roosevelt, 22,456; Taft, 18,512; Debs, 10,855, and Chafin, 32. Governor Wilson's plurality was 5485. For governor, Stewart, Dem., received 25,375 votes; Wilson, Rep., 22,809; Edwards,

Prog., 18,858, and Duncan, Soc., 12,554. The legislature is Democratic by a majority of 25 on joint ballot.

OTHER EVENTS. Presidential elections were held on April 2. In Butte, where the mayor is a Socialist, the Socialists carried only one of the eight wards, and in Lewiston lost the only ward in which they were successful in 1911.

STATE GOVERNMENT. Governor, Samuel V. Stewart, Dem.; lieutenant-governor, W. W. McDowell, Dem.; secretary of state, A. M. Alderson, Dem.; attorney-general, D. M. Kelly, Dem.; treasurer, W. C. Rae, Dem.; auditor, W. Keating, Dem.; superintendent public instruction, H. A. Davee, Dem.; railroad commissioners, J. H. Hall, Dem., D. Boyle, Rep., E. A. Morley, Rep.

JUDICIARY. Supreme Court: Chief justice, Theodore Brantley; justices, Henry C. Smith, William L. Holloway; clerk, John T. Athey—all Republicans.

STATE LEGISLATURE, 1913. Senate, Democrats 16, Republicans 13, Progressives 2; Democratic majority, 3. House, Democrats 45, Republicans 23, Progressives 16, Socialists 1; Democratic majority 22. Joint ballot, Democrats 61, Republicans 36, Progressives 18, Socialists 1; Democratic majority 25.

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

MONTENEGRO. A European monarchy, hereditary and constitutional; a Balkan state. Area, 9080 sq. kilometers (3506 sq. miles); population, 285,000 (31 per sq. km.). The majority of the population belong to the Greek Orthodox church. Cetinje (5300 inhabitants) is the capital; Podgoritz has 10,053, Dulcigno 5081; Antivari, 2317. It is a mountainous, wooded country, with cultivable tracts where agriculture is carried on. The chief exports are skins (422,537 kronen in 1909), wool (364,246), horses (315,387), cattle (235,478), olive oil (230,967), sheep (63,113), etc.; total exports for the year, 2,435,550 kronen. Total imports, 6,181,369 kronen, distributed as follows: 3,063,053 kronen from Austria-Hungary, 1,384,804 from Italy, 947,521 from Turkey, 316,904 from France, 183,382 from Germany, 178,413 from the United Kingdom, 107,292 from other countries. Vessels entered (1911), 22, of 5030 tons. A railway runs from Antivari to Lake Scutari. The budget for 1912 estimates the revenue at 3,609,000 kronen and the expenditure at 4,187,126. Reigning sovereign, Nicholas I. (born 1841), father of the queen of Italy. Heir-apparent, Prince Danilo (born 1871). Premier, minister of war and of foreign affairs (1912), Gen. M. Martinovitch.

ARMY. While the army of Montenegro was organized on a militia basis, yet it takes a larger proportion of the population than any other European country, and in the Balkan War played an important part, making the first move against the Turks. Every Montenegrin is liable to military service from 18 years of age, spending two years in the recruit class, where he receives a maximum of six months' training each year, then thirty-three years in the active army, where a maximum of fifteen days' training each year is scheduled, and the remaining ten years in the reserve. The organization consisted of four divisions of infantry, three of which were composed of three brigades and one of two brigades, making a total of fifty-seven battalions. There is also a brigade

of artillery, which, in addition to its armament of old-pattern guns, received some new Canet field pieces previous to the war. The field army consisted of about 60,000, but had neither cavalry nor organized transport service. The territorial headquarters were maintained at Cetinje, Podgoritz, Niksitch, and Kolashine.

For history, see **TURKEY AND THE BALKAN PEOPLES**.

MONTGOMERY, THOMAS HARRISON, JR. An American zoölogist, died March, 1912. He was born in New York in 1873 and studied at the University of Pennsylvania from 1889 to 1891. He then studied in Berlin, where he received the degree of Ph. D. in 1894. From 1898 to 1903 he was professor of biology at the University of Texas. He then returned to the University of Pennsylvania, where he was professor of zoölogy from 1908 to the time of his death. He was a member of many learned societies. He contributed about eighty scientific monographs on biological subjects. He was the author of *Analysis of Racial Descent in Animals* (1906).

MONTSERRAT. A presidency of the Leeward Islands (q. v.). Plymouth, the chief town, has 1461 inhabitants. The cultivation of sugar in the island has declined, and that of limes is being yearly extended; 107,811 gallons of raw and 6270 of concentrated lime juice, 20 tons of citrate of lime, and 5670 crates of fresh limes were exported in 1910. Other fruits, cacao, and cotton are grown.

	1907-8	1908-9	1909-10	1910-11
Imports	£ 33,756	£ 40,132	£ 31,343	£ 38,106
Exports	35,103	45,304	31,569	34,393

* Tonnage entered and cleared.

Customs revenue (1910-11), £8509; public debt (December 31, 1909), £11,100. Commissioner (1912), Lieut.-Col. W. B. Davidson-Houston. See **LEEWARD ISLANDS**.

MOOSE JAW CITY COMMISSIONER. See **MUNICIPAL GOVERNMENT**.

MORAL EDUCATION. See **PHILOSOPHY**.

MORAL EDUCATION CONGRESS. See **EDUCATION**.

MORAVIANS, also called **UNITED BRETHREN** (*Unitas Fratrum*) and the Moravian Church. An evangelical denomination first established in the United States in 1735. The communicants in 1912 numbered 18,561, the ministers 145, of whom 36 were retired on account of age or other reasons, and the churches, 122. In several of the districts of the Northern Province Synod work was commenced which took up the discussion of church government questions preparatory to the Provincial Synod to be held in 1913, at which governmental changes may be effected. Missions are carried on in Africa, Alaska, Asia, Australia, Labrador, Nicaragua, South America, West Indies, and Bohemia. Educational institutions are maintained. These include the Moravian College and Theological Seminary, the Moravian Parochial School for boys and girls, and the Moravian Seminary for girls, all at Bethlehem, Pa.; Linden Hall Seminary for Girls at Lititz; Nazareth Hall for Boys at Nazareth, Pa., and an academy for girls at Salem, N. C. The next General Synod will convene in 1914.

MORGAN, HENRY ARTHUR. An English scholar and educator, died September 2, 1912. He was born at Gothenburg, Sweden, in 1830, and was educated at Shrewsbury School and Jesus College, Cambridge. He graduated in 1853. He was ordained to the ministry in 1859 and thereafter continued in residence in Jesus College. He was appointed tutor in 1863 and held that office until 1885, when he was elected master. Under his administration Jesus College became, from one of the smallest, one of the largest of the Cambridge colleges. Among his published writings are *The Northern Circuit, or Brief Notes on Sweden, Finland, and Russia* (1862); *The Tenure of Fellowships* (1871), and *Church and Dissent in Wales* (1892).

MORGAN, J. P. See **PRESIDENTIAL CAMPAIGN CONTRIBUTIONS**.

MOROCCO. An African sultanate under French protection by virtue of the treaty of March 30, 1912. Area, exclusive of the Tuat and the desert, 439,240 square kilometers (169,591 square miles). Population, between four and eight millions (300,000 Jews); Europeans in 1910, 19,243. Fez (the capital) has 101,820 inhabitants. Morocco (Marakesh), 60,034; Rabat, 47,144; Tangier, 46,270; Casablanca, 31,710. There are no authoritative financial statistics; customs duties bring about ten million francs annually, and the sultan's budget is placed at about seven million. Imports and exports by countries follow (1911), values in thousands of francs:

	Imps.	Exps.		Imps.	Exps.
U. K.	29,334	19,644	U. S.	718	758
France	45,359	31,373	Italy.	521	2,513
Germany ..	7,861	17,429	Other.	5,170	1,971
Spain	2,871	9,180			
Belgium ..	2,245	732	Total.	94,279	83,600

Principal exports were barley, 11,627 thousand francs; hides and skins, 7151; cattle, 6454; eggs, 5740; almonds, 5668; wool, 5263; wheat, 5203; flax, 4548; vegetables, 4278; canary seeds, 1814; slippers, 1420; corn, 1201; wax 1123. Vessels entered (1910), 3194, of 2,562,549 tons. There are no railways. Reigning sultan (1912), Mulai Yussuf, son of Mulai Hassan; proclaimed at Fez August 17, 1912, in place of his brother, Mulai Abd-el-Hafid. French resident-commissioner (1912) General Lyautey.

ARMY. The sultan of Morocco maintained a force of about 30,000 men of all arms, with mounted troops predominating, but this hardly could be called a permanent army in spite of efforts made by French officers to effect such an organization. Under General Moinier, who was engaged in this project, a mutiny developed, and General Lyautey formed four companies of infantry, sections of artillery, and engineers, and three squadrons of cavalry, from the 1200 men who refused to participate in the uprising. It had been proposed to form a shereefian guard and to organize the forces into nine battalions of infantry, five squadrons of cavalry, four mountain batteries, engineers, and other arms.

HISTORY

THE FEZ MASSACRE. The Protectorate Treaty was signed at Fez on March 30, M. Regnault having been entrusted by the French govern-

ment with its negotiation (see FRANCE, *History*). A serious outbreak occurred in the city soon afterwards. On the morning of April 18 a body of Shereefian troops appeared at the sultan's palace to demand redress for certain grievances, including the holding back of part of their pay. The native garrison immediately revolted. Sixty-eight of the French were massacred, and thirty wounded. The mob then attacked the Mellah, or Jewish quarter, which they pillaged and burned. Meanwhile a body of 1500 French troops encamped outside the city hurried back and held the mutineers in check at several points, but were not in sufficient force to restore order. Soon afterward a larger force arrived from Mekinez under General Moinier and put down the revolt. Over 100 Jews were reported to have been killed and 10,000 rendered homeless. The French government was moved by this event to vest the military and civil power in a single representative, and on April 28 General Lyautey, commander of the Tenth Army Corps, was appointed the first French resident-general in Morocco. His administration was directly under the control of the foreign office.

THE ATTACK ON FEZ IN MAY. Disaffection in the Sebu and Mulua tribes, which had recently developed, came to a head after the Fez massacres and resulted in attacks upon a French reconnoitring force of some 500 men near Mekinez. The Zemmur or Zaer tribesmen fell upon the French line, but they were repulsed with heavy losses. There was great discontent among the natives with the French administration and signs of a rising of the tribes to the east and throughout the whole region between the capital and the Algerian frontier. It was also reported that the tribes in the south had risen. Throughout the entire country there were signs of unrest. Finally, on May 25 the tribesmen, reinforced by contingents from the Riff, attacked Fez on all sides, and by the following morning they had succeeded in penetrating the town on the east. It was alleged that the rebel forces in the neighborhood of the capital numbered at least 20,000. The French garrison, about 5000 strong, had difficulty in repulsing them. Peace was afterwards restored in the territory of the Sebu and on the Algerian frontier. The policy of General Lyautey was to restore to power the popular chiefs in the south and, in general, to conciliate native feeling; and to hold and consolidate the regions already occupied, but for the present to attempt no new conquests. In accordance with this policy he dispatched a strong column to operate in the regions adjacent to the capital, while another force was engaged in pacifying the territory to the west and another near the Algerian frontier. By the end of June much had been accomplished toward the restoration of order in the disturbed districts.

THE SULTAN'S ABDICATION. For some time past the sultan Mulai Hafid had made known his desire to abdicate, but the French authorities, fearing the change, succeeded in keeping him on the throne. On July 10, however, he definitely renounced the throne. The French government accepted his abdication. It was arranged that he should retire to Tangier and receive a pension of 300,000 francs. He was succeeded by his brother, Mulai Yussuf, who was proclaimed sultan on August 14.

FIGHTING AT MARRAKESH. The abdication of

the sultan led to an uprising in the south, where a new pretender, El Heiba, made his appearance and was soon at the head of a formidable body of tribesmen and supported by all the powerful kaid of the region. He captured Marrakesh, the capital of southern Morocco, and then advanced northward against the troops commanded by Colonel Mangin. The French repulsed his attack, but were unable to pursue him. The fall of Marrakesh was a severe blow to French prestige. The European residents escaped in time, except nine Frenchmen, including the consul, who were held in the city as prisoners. At about the same time a French column was attacked near Fez, and lost a number of men. There was much anxiety in August over the fate of the French prisoners of Marrakesh. A slight engagement took place between the French and the pretender's force at Suk-el-Arba on August 25. The news at the end of August indicated a very disordered condition throughout the whole country from Marrakesh to Fez, and fears were expressed for the safety of European residents. On September 5, however, a French flying column 4000 strong under General Mangin left the camp at Suk-el-Arba and marched on Marrakesh, fifty-five miles distant. It was preceded by a detachment of cavalry. The enemy were driven back and the French troops entered Marrakesh on September 7, the pretender, El Heiba, having meanwhile been driven out by his own followers, who turned against him on the approach of the French. The nine French prisoners, who had been in the hands of tribesmen since August 15, were rescued.

The sultan announced in June that the hitherto closed port of Mehedia, on the Atlantic coast about eighteen miles north of Rabat, would be opened to foreign trade on January 1, 1913. For further discussion of Moroccan affairs, see FRANCE and SPAIN under *History*.

MORRIS, CHARLES. An American soldier, died October 28, 1912. He was born in Charlestown, Mass., in 1844, and graduated from the United States Military Academy in 1855. In the same year he was appointed first lieutenant in the 19th Infantry. He was promoted through various grades and became colonel in 1902 and brigadier-general in 1908. He retired by operation of law in the same year.

MORRIS, THOMAS JOHN. An American jurist, died June 6, 1912. He was born in Baltimore in 1837 and graduated from Harvard College in 1856. In 1861 he was admitted to the bar and practiced in Baltimore until 1878, when he was appointed United States district judge for the district of Maryland. This position he occupied until the time of his death. He was vice-president of the American Unitarian Association, and was a trustee of Johns Hopkins University.

MOULE, GEORGE EVANS. An English missionary bishop of the Methodist Episcopal Church, died March 3, 1912. He was born at Gillingham, Dorchester, 1828, and was educated at private schools and at Corpus Christi College, Cambridge. From 1851 to 1857 he

served as curate and chaplain of the Dorset County Hospital. In the latter year he was appointed missionary to China under the auspices of the Church Missionary Society. He was first stationed at Ningpo, and thus was a witness of the great Taiping rebellion. He was the first representative of the Church Missionary Society to form a permanent mission at Hangchow. From 1866, when he first took up his residence in this city, until 1911, he did not leave the country. In 1880 he was consecrated first missionary bishop of Mid-China. He resigned the bishopric in 1908, but continued to work at Hangchow until 1911, when ill health and advancing years compelled him to relinquish his work and return to England.

MOUNT HOLYOKE COLLEGE. An institution for the higher education of women at South Hadley, Mass., founded in 1837. The students in the college in the autumn of 1912 numbered 749 undergraduates and 7 graduates. There were 84 members of the teaching staff and 44 in the administrative staff. Six members of the faculty were on leave of absence. During the year the Half-Million fund, undertaken in commemoration of the seventy-fifth anniversary of the college, was completed. A total of \$553,000 was raised, of which \$108,000 will be applied to the erection of a student alumnae building, to cost \$125,000, and the remainder to the general endowment. A new institution hall is also to be built, a gift of Messrs. William and Joseph Skinner of Holyoke. The chief event of the year was the celebration of the seventy-fifth anniversary of the founding of the institution. This was held on October 8 and 9, and was observed with many picturesque and imposing ceremonies. President, Mary E. Woolley, M. A.

MOUNT WILSON SOLAR OBSERVATORY. See ASTRONOMY.

MOVING PICTURES. The exhibition of moving pictures in 1912 had reached a point where, in the United States alone, judged merely as an industry, it had become a matter of striking importance. The different business interests involved were said to represent a total investment of over \$200,000,000 and in one form or another moving pictures were offering employment to approximately half a million people. It was estimated that the daily receipts of the 20,000 places where moving pictures were exhibited aggregated \$500,000, while in Greater New York alone some 300,000 people daily were visiting the shows. There were maintained large studios, some of which represented buildings and equipments valued at over \$100,000, and in the larger establishments four or five plays a week were being produced for photographic record with all the care and elaboration of a modern melodrama. It is obvious, therefore, that the moving picture business is entitled to special consideration, involving as it does the use of real estate for exhibition halls, many of which had been specially built, the operation and maintenance of the shows, the manufacture of films and apparatus, and the provision of suitable topics for illustrations by exploration, travel, and mechanical, and other forms of enterprise. From the kinetoscope first exhibited in the form of a sort of peep-show by Thomas A. Edison in 1893 to the projection device of Lumière of Paris and Paul of London a few years later, the development and improvement of moving picture machines was

rapid and constant. Mr. Edison received numerous patents and one of these, granted August 31, 1897, was the subject of a decision in the U. S. Court of Appeals handed down late in 1912, that Edison was not the pioneer inventor of the moving picture machines, but was the inventor of a special form of camera used in making the photographs on such moving films. In 1911, as described in the YEAR BOOK of that year, the Kinemacolor process, whereby moving pictures were reproduced in their original colors with a striking verisimilitude of nature, marked another advance, and in 1912 the Kinetophone of Edison, whereby moving pictures were projected synchronously with the reproduction of appropriate sound by the phonograph, represented a further practical achievement.

The curiosity first aroused by the moving pictures soon was succeeded by interest in the scenes portrayed, and straightway they became a recognized feature of vaudeville and music halls, serving to attract the better class of people to such entertainments and to raise their general tone. As the industry progressed the dramatic possibilities of the films were seen, and soon a change was made from automobile races, military parades, and similar subjects to little dramas in pantomime specially staged by competent actors with necessary stage properties and scenery under illumination by arc and mercury vapor lamps. Then came the low-priced house with its wide and direct appeal, which immediately brought substantial returns, so that in even the smaller cities and towns such exhibitions could be conducted on a profitable basis. The appetite of the people for these picture stories seemed insatiable. Tragedy, comedy, romantic drama, religious episode, historical sketches, in fact everything capable of dramatic representation in pantomime, was enacted for the moving films, and famous plays and stories were reduced to such a basis, not to mention new plays specially written. Where the scenes were out of doors an open-air setting would be selected, and often the company would be taken *en masse* to the very scene of the action.

A school of moving picture actors had been developed, trained to deliberateness of movement and plainness of facial expression and gesture, but this did not prevent such artists as Bernhardt, Réjane, Lillian Russell, Nat Goodwin, James K. Hackett, and others from appearing in film plays. Madame Bernhardt was quoted as saying that in this way she was able to immortalize her art. Several of the most powerful American managers of the legitimate drama in 1912 were providing for moving pictures, and at some of their largest playhouses, conscious of the profits thus to be reaped. In fact, these moving picture representations were making serious inroads into the business of the ordinary theatres, and their low prices and the ease with which they could be established and operated led to a remarkable development which involved as a consequence large syndicates and exchanges for the distribution and rental of films. In the cities this rapid growth led to many complicated situations. It was claimed that the shows were often demoralizing on account of the nature of the films shown and the opportunities that they offered for the young to congregate in dark halls; and in the second place, the moving pictures being exhibited too often in temporary,

flimsy, and combustible structures afforded excellent opportunity for panic in case of an alarm of fire. The first series of difficulties were being met partly by legislation, as for example, local ordinances forbidding children to attend such shows without their parents or guardians and by more or less supervision or official censorship. The large producers united to maintain clean and moral films, enlisting in their aid a board of censors composed of prominent and disinterested people who passed on the suitability of the pictures. The fire and panic dangers were more serious, and in 1912 and previously a number of serious and fatal catastrophes occurred. Insurance underwriters and fire departments generally required precautions in the way of asbestos booths for the machines and varying degrees of protection of structure and exits.

Mention should be made of the use of the moving pictures to reproduce famous current events. Thus in 1912 the Balkan War, the construction of the Panama Canal, and other important circumstances were shown widely throughout the civilized world, while explorers like Shackleton and hunters like Paul Rainey exhibited moving pictures that aroused compelling interest in two continents. Pictures of wild animals in their native haunts in forest and jungle, often taken at great personal risk to the operator, attracted general as well as scientific interest. Biblical events, and classical topics, such as the Siege of Troy, were reproduced with care as to setting and costume. The moving picture industry naturally followed modern commercial methods with the inevitable tendencies toward consolidation and concentration. There resulted alleged combinations or trusts of manufactures and exchanges, which at the end of the year 1912 were receiving the attention of the Attorney-General of the United States as possible combinations in restraint of trade.

MUNICIPAL EFFICIENCY. See MUNICIPAL GOVERNMENT.

MUNICIPAL GOVERNMENT. Interest in this subject continues to be keen and there is steady progress in charter reform, including the commission plan and the short ballot; in municipal accounting and statistics; in the selection of trained administrative officers; in municipal home rule, or charter framing through local initiative, with freedom from legislative control; and a variety of other activities which are making cities and towns better living-places.

COMMISSION PLAN. To the list of some 200 cities and towns which had adopted commission government at the close of 1911 (see YEAR BOOK for 1911, pp. 471-3) there were added more than fifty in 1912. The records of the National Municipal League on November 15, 1912, showed a total of 257 commission cities, distributed geographically, in order of number, as follows: Northwestern group of States, 64; Southwestern, 59; North Central, 39; Pacific and Rocky Mountain, 32; South Central, 27; Middle, 15; Southern, 14; New England, 7. Notable additions in 1912 to the cities which have voted for the plan are New Orleans, La.; St. Paul and Duluth,

Minn.; Atlantic City and Long Branch, N. J.; Salem, Mass., and Pasadena, Cal. Votes against the commission plan were reported from Los Angeles, Cal.; Savannah, Ga.; East St. Louis, Ill., and five other places. Three cities which already had commission government voted in 1912 to continue it. These were Spokane, Wash. (15,225 to 9448); Baker, Ore., and Hutchinson, Kan. The largest city operating under the commission plan to date is New Orleans (339,000 population in 1910), but there are a half dozen others with a population of 100,000 or more, and on January 1, 1914, St. Paul, Minn. (214,000 in 1910), will join the list.

The vote of more than two to one against the commission plan at Los Angeles on December 3 was a surprise, as was also the light vote cast—about 30 per cent. of the registration. The proposed charter had been framed after long deliberation by a "board of freeholders," as the home rule charter framers of California are called. The board held numerous public hearings and consulted with members of the National Municipal League and others versed in charter framing from outside the city; and at the meeting of the league held in Los Angeles in July a long session was devoted to a discussion of the charter then being framed. Among the explanations of the defeat of the Los Angeles charter are these: It was submitted to vote only four weeks after the presidential election, giving relatively little time for discussion of the completed document; the City Council refused to print the charter for circulation in pamphlet form; the *Times* and the *Examiner* both opposed it; some feared the concentration of so much power in a few hands; but the chief objection, it is said, was the fear that some of the provisions of the charter would increase taxation. The charter provided for a mayor at \$7000 per annum and six commissioners at \$6000 each. These, a comptroller and a board of education of seven members, would have been the only elective officers. The mayor would have been commissioner of public safety. The six other commissioners would have been public utilities; public works; harbors and transportation; finance; welfare; and park, libraries and recreation. The initiative, the referendum, and the recall were included in the charter. An unusual, if not an original, feature was that the recall should apply to appointed as well as elected officials, but no petition for the recall of an appointed officer in the civil service could be filed unless a complaint against him had been acted upon adversely by the civil service board.

It is doubtful if any city charter previously drafted attempted to confer such sweeping powers. After authorizing the city to provide "by purchase, lease, condemnation, construction, or otherwise" everything that the most ambitious municipal socialist could ask, the proposed charter provided further that the city might own and do anything permitted by the State constitution, and in effect do almost anything within the powers of "any person, firm, or corporation whatever." Indebtedness was limited to 3 per cent. of the assessed valuation of all real and personal property, except that for revenue-producing public utilities and harbor improvements an additional 12 per cent. might be incurred. Immediately after the defeat of the Los Angeles charter two non-official com-

mittees were created to draft still another charter or else to frame amendments to the old one, which has been aptly described as a patchwork affair, long since outgrown by Los Angeles.

The commission plan charter for Duluth, adopted on December 3, 1912, to go into effect January 3, 1913, but with the first election of officers on April 1, 1913, was framed by a charter commission of fifteen members. This commission gave the following as the chief features of the charter: Elimination of party politics, bosses, and machines; nominations by petition; preferential voting; elimination of ward lines; four-year term of office, with adequate salaries; the men who make the laws will be responsible for their enforcement; the initiative, referendum and recall, and publicity features give the voters control of the city government. Each of the five commissioners is to be paid \$4000 a year until the population of the city is 100,000; then \$4500 until it is 150,000, and \$5000 a year thereafter. The commissioners decide which one of their number shall head the following divisions: Public affairs; finance; public works; public safety and public utilities. There is to be a civil service board of three members. The recall applies only to elective officers.

SAN FRANCISCO CHARTER AMENDMENTS. Of 37 charter amendments voted on at San Francisco on December 10, 1912, 17 were carried and 20 lost. A feature of the campaign was a pre-election agreement by the Chamber of Commerce, the San Francisco Real Estate Board, and the Civic League on which amendments ought to be carried and which defeated. Of 25 amendments recommended by these three bodies, 17 were carried and 8 lost; and of 12 advised against, every one was defeated. In general, amendments which would have led to increases in the bonded debt or in the number or salaries of employees were defeated, but some propositions involving expenditures for improvements to which the city was more or less definitely committed were carried. The most popular amendment was one authorizing exchanges of land for a civic centre and the erection of buildings in that centre (see CITY PLANNING). This was carried by 50,061 against 24,290. The least popular amendments were several providing salary increases; one of these, which would have increased the salary of the chief of police from \$4000 to \$6000 a year, was lost by a vote of 5449 against 64,128. The creation of a two-platoon police system and the enlargement of the police force brought out a very heavy vote and was defeated by 33,721 against 46,054. Almost as heavy and far more decisive was the vote of 15,087 to 63,770 against the formation of local-option (saloon) districts of not less than 50 contiguous blocks in one voting precinct. The total vote cast on the amendments as a whole was 81,104, which was about 60 per cent. of the registration. Considerable space has been given to the San Francisco amendments here because they illustrate the extremes to which some of the cities of the far West are going in the way of home rule and direct legislation, and show that a large measure of discrimination is sometimes used in the voting. It is interesting to note that only 30 per cent. of the vote was cast on the proposed new charter for Los Angeles and double that percentage on some of the 37 amendments at San Francisco.

OHIO CONSTITUTIONAL AMENDMENTS. Of the 42 amendments to the Ohio constitution submitted to popular vote on September 3, 1912, a number made notable changes and increases in the powers of municipalities. Among the amendments which were adopted the following are pertinent here: Providing a large measure of municipal home rule, including the right of cities and villages to frame their own charters; eight-hour day on public works; preferential primaries; competitive civil service examinations. Among the amendments defeated was one which would have authorized the use of voting machines and another which would have removed existing constitutional provisions which make it impossible to regulate advertising billboards located on private property.

CITY MANAGER PLAN. A few years ago Staunton, Va., being constitutionally barred from the commission plan, appointed a city manager to run the city, subject to the policy-determining action of the City Council. In June, 1912, Sumter, S. C. (about 10,000 population), voted 3 to 1 in favor of a city manager in conjunction with the commission plan (three commissioners). The British and German practice of advertising for applicants to fill the office was followed. The advertisement stated that an engineer of standing and ability was preferred and that the appointee would hold office as long as he gave satisfaction to the commissioners, and that he would have complete administrative control of the city, subject to the commissioners. Applicants were to address the secretary of the local chamber of commerce. An engineer from another city was appointed, but he resigned to take another position at once. A town manager for Norwood, Mass., was reported in 1912, to serve as town engineer, superintendent of public works, and director of the water and lighting systems.

EXECUTIVE COMMISSIONERS IN THE CANADIAN NORTHWEST. Enterprising cities in northwestern Canada scarcely heard of until yesterday are retaining the old mayor and council system and joining with it executive or administrative commissioners something like the boards of public works in a number of American cities, except that the Canadian councils keep a tight grasp on the public purse and decide matters of policy, either originally or as a last resort. Thus Calgary, Alberta, has a mayor and a council of twelve members. The council appoints two citizens, subject to approval by popular vote, who, with the mayor serving ex-officio, are known as city commissioners. The two commissioners are paid \$4000 a year and the mayor \$5000. The council refers various matters to the commissioners for study and recommendation and the commissioners recommend to the council appointments to executive offices. A two-thirds vote of the council is required to override a recommendation of the commissioners. The mayor has no veto power over the acts of the council, but he can vote in council on the recommendations of the commission, of which he is an ex-officio member. A similar commission exists at Moose Jaw, Saskatchewan, a city of 20,000 to 25,000. There L. W. Rundett, for many years city engineer of St. Paul, Minn., went early in 1912 to become a city commissioner at a salary of \$6000 a year. The second commissioner resigned from the city clerkship to accept the

position at \$3000 a year, and the mayor is the third commissioner. The "by-law" creating the commission and other interesting facts regarding the city government of Moose Jaw are given in *Engineering News* of August 1, 1912.

MUNICIPAL EFFICIENCY. A departure in municipal government is the recent creation of an efficiency division of the Civil Service Commission of Chicago. During 1912 this division made a series of notable studies, including the distribution of wages and salaries for the year and the formulation of standards of efficiency for street cleaning and for garbage and refuse collection and removal. The Milwaukee bureau of economy and efficiency went the way of other innovations of the Socialists when they lost control of the city government at the beginning of 1912. Articles reviewing bureaus of public efficiency and research and reference bureaus up to late in 1912 may be found in the *National Municipal Review* for January, 1913. A joint committee on the selection and retention of experts in municipal office reported in 1912 to the National Municipal League and to the National Civic Service Reform League, recommending the extension of civil service examinations to govern the choice of the higher administrative municipal officials, and making various suggestions as to the qualifications of civil service commissioners.

* City Manager Plan. † Advisory vote. § Reported by National Short Ballot Association that governor refused to approve charter on constitutional grounds.

MUNICIPAL LEAGUE, NATIONAL. The annual meeting of the league was held in Los Angeles on July 8-12. Its keynote was "expert city management." President Foulke in his address emphasized the importance of the subject, as did the secretary in his annual review, and other speakers in the debates carried on during the meeting. The president showed in detail how the merit system could be well applied to various departments of the city government, referring to the fact that the engineers for the Los Angeles aqueduct, the auditor for Kansas City, the chief of the fire department of New York City, the superintendent of highways in Philadelphia, the librarian of the public library in Chicago, and other high officers of city administration are appointed by competitive examination. Secretary Woodruff emphasized the fact that while Los Angeles had achieved real municipal home rule and had perhaps gone further than any other city in the country in eliminating national and State party considerations from municipal affairs, and had established honesty therein, its government was still far from being efficient in a modern sense. The commission form of government came in for a large measure of attention during the meeting. It was declared to be the greatest single contribution to the cause of better municipal government in the past decade. Professor Munro of Harvard declared that, "As a protest against the old municipal régime, it has been very effective; as a policy it has, despite its incidental shortcomings, fulfilled much of what its supporters claimed for it."

Socialism in American cities was one of the most interesting subjects discussed. Secretary Woodruff in his review pointed out that there are now about 1200 Socialist officials, and that the Socialist vote is rapidly growing. An interesting paper on "Socialism in California Cities" was read by Professor Cross of Leland Stanford University. Among other subjects considered were: "The Federal Government as a Potential Contributor of Municipal Advancement"; "Home Rule in California"; "Municipal

pal Health Problem"; "The Actual Operation of the Initiative, Referendum, and Recall"; and "The Actual Operation of Woman Suffrage in Pacific Coast Cities." The enrolled members of the league numbered 2600. On January 1, 1912, the publication of the *National Municipal Review* was begun. This takes the place of the *Proceedings of the National Municipal League*. The editor of the *Review* is Clinton Rogers Woodruff. The following officers were elected for 1913: President, William Dudley Foulke; treasurer, George Burnham, Jr.; secretary, Clinton Rogers Woodruff; vice-presidents: Miss Jane Addams, Camillus G. Kidder, A. Lawrence Lowell, George McAneny, J. Horace McFarland, Charles Richardson, Chester H. Rowell, James M. Thomson, and Dudley Tibbits.

MUNICIPAL OWNERSHIP. In December, 1912, the beginning of what it is hoped will be extensive municipal street railway systems in San Francisco, Cal., and Toronto, Ont., were put in operation. At San Francisco the municipal railway is known as the Geary Street line, and will run from Kearney Street, near the Oakland ferry, to the ocean beach. The portion put in operation extends to Golden Gate Park, a distance of about four miles. It is expected that the remaining part of the line will be ready in a few months. Under the San Francisco charter the accounts of municipally owned utilities must show all operating and capital charges, including depreciation, and the estimated taxes that would have been collected on the same property under private ownership. At Toronto the city has built nearly two miles of street railway known as the Gerrard Street line. On the completion of the Danforth and St. Clair Avenue lines the city will own about seventeen miles of single track. In some ten years the present extensive street railways now operated by the Toronto Railway Company will again come into possession of the city, as they did on expiration of a franchise some years ago.

ELECTRIC LIGHT AND POWER. The hydro-electric power commission of Ontario is now supplying 39,000 horsepower to municipalities on the Toronto circuit, of which Toronto was using about 17,000 horsepower late in 1912. The current is used for light and power. Winnipeg is going on with a municipal light and power system, for which \$3,250,000 was voted in 1906, and which will ultimately cost \$6,000,000. In July, 1912, a 60,000-horsepower hydroelectric plant had been built for the city, and two 60,000-volt transmission lines, seventy-seven miles long, had been built from the plant to a terminal house in or near the city. The municipal electric light plant of Seattle, Wash., reports having turned a loss of 2 per cent. on an indebtedness of \$876,000 for its first year (1905) into an annual surplus, 4.7 per cent. of the debt in 1911, besides having accumulated a surplus of 11 per cent., provided a 21 per cent. depreciation revenue, and reduced rates from 20 to 6 cents per kilowatt hour.

DOCKS AND HARBORS are being built and projected by cities of the East and West at a surprising rate. These activities have been greatly stimulated by the prospective early opening of the Panama Canal. Naturally, the greatest activity, or at least the most talked about, has been on the Pacific Coast. There Seattle, Portland, San Francisco, Oakland, Los Angeles, and San Diego are all busy with extensive dock or harbor improvements. On the Atlantic sea-

board Boston, New York, and Philadelphia are also engaged in extensive projects of the same general character. Kansas City, Mo., put in operation in June, 1911, a municipal wharf 50 feet wide, with a length of 526 feet on the water side and 566 on the land side; and in October, 1911, it contracted for a wharhouse, to be completed in 120 days, which was to be provided with an improved freight-handling system. An amendment to the Ohio constitution, adopted by a heavy majority, on September 3, 1912, authorizes cities and towns to own and operate public utilities, and to sell light and power to other municipalities to the extent of half of the output of the generating plant.

MURRAY, GEORGE ROBERT MILNE. An English botanist, died in January, 1912. He was born in Arbroath, Scotland, in 1858, and was educated at Strassburg University. From 1882 to 1886 he was lecturer on botany at the Medical School of St. George's Hospital. He was naturalist of the Solar Eclipse Expedition to the West Indies in 1886 and was scientific director of the National Antarctic Expedition in 1901. From 1895 to 1906 he was keeper of the department of botany at the English Museum. His publications include, *Introduction to the Study of Seaweeds* (1895), and joint authorship of *Handbook of Cryptogamic Botany* (1889). He also contributed many botanical papers to scientific periodicals.

MUSEUMS OF ART. The art year was notable for the shipment to America of the famous collections of J. Pierpont Morgan. The decision of Mr. Morgan to send his collection to the United States was reached after he had been informed, in 1911, that if portions of the collection then in the Victoria Albert Museum at South Kensington were still there at the time of his death a heavy tax would be levied against them by the British government. The value of the art objects at South Kensington was estimated at \$5,000,000. Shipments of the Morgan collection commenced early in February, and continued throughout the year.

The Metropolitan Museum of Art in New York, of which Mr. Morgan is president, arranged to show thirty of the paintings as a special loan collection in January, 1913. During 1912 the museum received a gift of over \$1,000,000 from Francis L. Leland, and a bequest from F. C. Hewitt, which will amount to about \$1,500,000. The north wing had been completed, but was not yet ready to receive exhibitions. Important acquisitions of the year include additions to the Hearn collection of American paintings, a large early canvas by Coreggio, "Four Saints," a collection of thirty-two early Italian paintings lent to the museum for a term of years by Mrs. L. C. Holden; important additions were made to the classical department; a series of ten Egyptian galleries was opened; a lecture hall seating about 500 was opened in the autumn of 1911 and is in demand for lectures to members, the public, and to teachers and pupils of the public schools. There were 3239 members; the attendance during 1912 was 690,183, and the total accessions by gift and purchase numbered 2696.

In Brooklyn the Museum of Arts and Sciences received from William T. Evans a series of twenty paintings by Otto Walter Beck, illustrating the life of Christ. A special loan collection of paintings owned in Brooklyn was shown at the institute's gallery in Montague Street, for the benefit of the "Little Italy Association." William H. Fox was appointed curator-in-chief of the museum, and took up his duties January 1, 1913.

The largest gift of the year to the Boston Museum of Fine Arts was from Francis P. Bartlett, who gave \$1,500,000 for the endowment fund. In April the Evans memorial wing, which is to contain galleries of paintings, was begun. Among the important acquisitions of the year were, "Portrait of a Lady," by Lucas Cranach the elder; "Portrait by John Eld," by Gainsborough; forty-five water colors by Sargent; seventy-one objects added to the Ross Oriental collection; colonial silver; Flemish tapestries. Special exhibitions held included works by members of the "Société des Peintres et des Sculpteurs," colonial furniture, early woodcuts, and recent acquisitions in Chinese and Japanese art. A print department has been endowed and FitzRoy Carrington was appointed on the staff of the museum as curator of the department of prints; the *Print-Collector's Quarterly* will hereafter be published by the museum.

Through the efforts of the director of the Albright Art Gallery, in Buffalo, the work by members of the "Société des Peintres et des Sculpteurs" of Paris was brought to the United States and shown first in Buffalo, and later in Chicago, St. Louis, and other cities. An exhibition of textiles was also installed. The Art Institute of Chicago is notable for its large school, where there were over 3000 students during 1911-12, and the attendance at the museum was 861,000 for the year ending June, 1912. Edward B. Butler offered to fit up a gallery for the reception of twenty paintings by George Inness, donated by him the previous year. A bequest of \$50,000 was left by Daniel H. Burnham to establish an architectural library. Thirty exhibitions were held during the year.

Frederick A. Whiting was appointed director of the Heron Art Institute at Indianapolis. Mr. Whiting's connection for ten years past with the Boston Society of Arts and Crafts, placed him in a position to strengthen that side of the museum's collections, and he was also deeply interested in educational work in coöperation with the schools. The energetic campaign carried on during 1911 to raise funds for an art gallery in Minneapolis was continued during 1912. McKim, Mead, and White were appointed architects, and the permit for the new building was granted in December, 1912, the cost to be about \$520,000.

The Hackley Art Gallery at Muskegon, Mich., founded by Charles H. Hackley, was dedicated June 21, 1912, under the supervision of the director, Raymond Wyer. The opening exhibition consisted of paintings of various modern schools, about two-thirds lent by collectors in different parts of the country. A permanent collection is being formed, and among the early purchases are a portrait by Sir Henry Raeburn, a landscape by Corot, "In the Surf," by Jozef Israels, and works by American painters. For many years there had been a small art society in New Orleans, but it was not until 1910 that there was a prospect of a permanent

museum of art. A gift of \$150,000 from Isaac Delgado led to the construction of the Delgado Museum, which was dedicated December 16, 1911. Frequent exhibitions are planned. The Louisiana State Museum, established in 1906, took possession of the old historic Cabildo, and the formal dedication was on April 30, 1912. The art collections are chiefly historical.

A new art gallery was being erected on the campus of the Rochester University, at Rochester, N. Y., at a cost of nearly \$200,000, by Mrs. James S. Watson, in memory of her son, James G. Averell. While the gallery will be the property of the university, it will be maintained for the benefit of the whole city, with a separate board of directors. The Bevier Memorial Building, to house the Department of Applied and Fine Arts of the Mechanics' Institute, was dedicated during 1912.

In 1908 an act was passed in the State legislature giving all cities in the State of Missouri having over 100,000 inhabitants the right to submit the question of an art tax to any general election held in the State. As a result, the city of St. Louis voted a tax to be levied on the assessed valuation of the city, to the extent of one-fifth of a mill per dollar, which would give an income of about \$125,000 a year. A State ordinance was approved February 3, 1909, establishing a public museum of fine arts, which took over the property of the old St. Louis Museum, the value of which approximated \$500,000. Since the death, in May, 1911, of Halsey C. Ives, who had been at the head of the museum and school since its foundation in 1881, there was no director until Robert A. Holland was appointed January 15, 1913, as director of the City Art Museum.

Elaborate plans were made for the Department of Art in connection with the Panama-Pacific Exposition, to be held in San Francisco in 1915. John E. D. Trask, director of the Pennsylvania Academy of the Fine Arts in Philadelphia, was appointed director of the Art Department; Jules Guérin is art director of color and decoration for the exhibition as a whole, and Karl Bitter and A. Sterling Calder are in charge of the sculpture. The Washington State Art Association moved from the rooms occupied in the Carnegie Library to a series of large rooms in a building nearer the heart of the city. Plans were made for the erection of a nine-story museum-auditorium building to be opened in 1913.

The Toledo Museum of Art, founded in 1901, had outgrown its quarters and a new building designed by Green & Wicks and H. W. Wachter was dedicated January 17, 1912. The opening of these galleries marks the completion of ten years of effort by the president, Edward D. Libbey, who gave the land and subscribed largely to the building fund; the director, George W. Stevens; and the towns-people, who gave in sums of from ten cents to \$15,000 toward the building fund. It opens free of debt and with an endowment fund. The cost was about \$500,000. At the time of the dedication there was an important loan collection of paintings, including twenty-five works by Jozef Israels.

This does not by any means include all the museums of art in the United States, but merely those which have dedicated new buildings during 1912, have had a new director whose appointment is likely to influence their growth, or have received important gifts.

MUSIC. It may not be amiss to summarize briefly the events of the five years preceding. The last year of Mr. Conried's directorship of the Metropolitan Opera House was memorable for the production of Strauss's *Salome*, which aroused such violent opposition that the work was withdrawn (1907). The following year Mr. Gatti-Casazza became the artistic manager of the famous operatic institution. By this time the Manhattan Opera House, under the management of Mr. Hammerstein, had become a formidable rival. The effect of this rivalry was particularly noted in a marked improvement of the chorus and scenic mounting at the older house (1908). As a further result of the struggle for supremacy the Metropolitan Company almost doubled its forces in all departments, and gave a series of performances at the New Theatre. A new opera house was opened at Boston. The New York Philharmonic Society was entirely reorganized under Gustav Mahler (1909). The continued keen rivalry between the Metropolitan and Manhattan companies had forced both into enormous expenses and heavy losses, so that finally Mr. Hammerstein withdrew, and sold all his interests to the rival organization. The greater part of the Manhattan company was then organized by Mr. Dippel as the Chicago Opera Company. In order to prevent a recurrence of such disastrous competition, the three great operatic institutions of New York, Boston, and Chicago came to a mutual understanding, and conceived a plan whereby they exchange their artists (1910). This exchange plan worked admirably in practice. But a more important result of this friendly understanding was the effective opposition they directed against the so-called Opera Trust. For years past the Milan publishing house of Ricordi had monopolized the rights of production of almost all Italian operas of any importance. Year after year they had raised their terms, and forced the opera houses to present works which the public did not want. When finally the trust formulated its demands, which amounted to nothing less than extortion, Mr. Dippel eliminated from his repertoire all operas controlled by Ricordi, and Mr. Gatti-Casazza greatly reduced their number in his repertoire (1911). Consult: *YEAR BOOK*, 1911; *MUSIC*, *The Opera Trust*.

THE OPERA TRUST. Although no official information has been given regarding the opposition to the Milan trust, there are unmistakable indications that the American managers have won a victory. It is known that one of the conditions demanded in 1911 was the production at the Metropolitan Opera House of Franchetti's *Cristoforo Colombo*. Not only has the work not been given, but it was not even announced as one of the probable novelties. Puccini's *Girl of the Golden West* had only three performances during the past year, as against nine of the preceding. Mr. Dippel firmly maintained the stand he had taken. During the season 1911-12 not a single performance of any of Puccini's works was given. That the trust must have come to an understanding with the Chicago company seems to be borne out by the fact that during the last weeks of the present year Puccini's *Manon Lescaut* was given three times.

DISCOVERIES OF MANUSCRIPTS. Closely following the discovery by Fritz Stein of a *Jena* Symphony by Beethoven (see *YEAR BOOK*, 1911, *MUSIC*, *Germany*) comes the news that Herman

Abert, professor of the history of music at the University of Halle, has discovered the orchestral parts of a *Charfreitagskantate* by Beethoven. On each part is written the composer's name in Beethoven's own handwriting. The work is written for a double quartette of trombones. Seyfried added a text for male chorus, in which form the work was performed at Beethoven's funeral. The trombone arrangement found by Professor Abert was written in 1812 for Music Director F. X. Gloeggel, of Linz. In the Liszt Museum at Weimar Peter Raabe found the scores of two lost works by Liszt. The first was written originally as an instrumental work and is called *Les Morts*. Later a male chorus to the words *Beati mortui qui in Domino moriuntur* was added. The composer had expressed the wish to have this work performed at his funeral, but at that time the score could not be found. The second work is a cantata, *Hungaria*, written in 1848, in Weimar, to a text by Franz von Schober. It is for soprano, tenor, and baritone solos, and mixed chorus. This work has nothing to do with the later symphonic poem of the same name. In the *Bach Jahrbuch* Dr. Werner Wolfheim gives an account of an unpublished cantata, *Mein Herze schwimmt im Blute*, by J. S. Bach. It is written for soprano, oboe, two violins, viola, and basso continuo. D. A. Martiensson discovered this score, which is in Bach's own handwriting, among papers of Philip Emanuel Bach in the Royal Library at Copenhagen. Judging from internal evidence and the general style of the work, Wolfheim assigns the composition to the year 1714. Wasielewski, in his *Life of Schumann*, relates that at a concert given by Clara Wieck at Zwickau in 1832 a movement of a symphony in G minor by Schumann was played. But no trace of this work was ever found until last summer, when the score was discovered in Weissenborn, near Zwickau. It was immediately performed at a philharmonic concert in Zwickau.

THE UNITED STATES

ARTISTS, INSTRUMENTAL. Never did a new pianist meet with a more enthusiastic reception than Wilhelm Bachaus. He is one of those rare artists in whom one finds combined the several supreme qualities of a number of different pianists. Technique he has in abundance, but it is the last thing one admires, because he uses it solely as a means. His tone is always full and noble, capable of the subtlest *nuances*. No one can play with more sympathetic understanding of the composer's meaning. After an absence of twelve years Leopold Godowsky was heard again. He plays with greater warmth than formerly, yet he can never make the hearer forget the stupendous technique. In his case the technical execution invariably attracts more than the interpretation. Vladimir de Pachmann bade his American admirers—and they are not few—farewell forever, and they showed in no uncertain manner how they loved and appreciated his exquisite art. A young American, Arthur Shattuck, who has won his first fame abroad, proved himself a fine pianist with a brilliant technique. Gottfried Galston also was received with marked favor. Lhevinne, Bauer, Stojowsky, Ganz, Schelling, and Mmes. Goodson and Bloomfield-Zeissler are established favorites who were always greeted by large and enthusiastic audiences.

Among the violinists the incomparable Ysaye proved the greatest attraction. This artist still stands unrivaled among the host of great violinists. It is difficult to state in precise terms just what constitutes his superiority; but when listening to him, one is spellbound. Kreisler was heard only in a few concerts with the Boston Symphony Orchestra. Zimbalist, Elman, and Miss Parlow continued the success they had achieved with their initial performances. A newcomer was Louis Persinger, a native American, who made a very favorable impression.

VOCAL. The past year introduced to the American public two new lieder-singers of the first rank. Elena Gerhardt has never sung in opera, and appeals only to the serious public that attends recitals. Mme. Charles Cahier, an American contralto, made her great reputation on the operatic stage in Vienna and Munich, but showed that she is equally great on the concert platform. Without Mme. Sembrich's wonderful song recitals the musical season would not be complete. Mme. Tetrassini appeared in concerts of operatic selections; the genuine song recital seems to have no attraction for her. The Russian cantor Sirota created something of a sensation by his wonderful art of interpreting the old melodies of the synagogue. A new Italian baritone, Titta Ruffo, excited his audiences to the point of frenzy. There is no doubt that he possesses a voice of unusual range and equally unusual beauty, which he uses with consummate skill. But, besides, he has a personality that exerts a dynamic force over his hearers. Unfortunately his programmes were made to please the popular taste. Song recitals of the highest artistic merit were given by Hess, Bonci, Slezak, Warlich, McCormack, and Meses. Schumann-Heink, Nordica, and Gluck.

ORCHESTRAL CONCERTS. By his will, the late Joseph Pulitzer bequeathed \$1,000,000 to the New York Philharmonic Society, one-half of which sum was to be paid as soon as the number of subscribers should have reached one thousand. At the opening of the season in the fall this condition was fulfilled. The society showed its gratitude by devoting one pair of its regular concerts to works by Mr. Pulitzer's three favorite composers, Beethoven, Wagner, and Liszt. Many changes were made in the personnel of the Boston Symphony Orchestra, especially in the strings. Several of the older members retired on a pension. The position of first cellist was filled by Otto Urack, who also is to act as assistant conductor. The return of Dr. Karl Muck as conductor of the famous orchestra was a source of general satisfaction. Under the leadership of Emil Oberhoffer the Minneapolis Symphony Orchestra has risen to the position of one of the best instrumental bodies in the country. A concert given in New York elicited unanimous praise for the excellence of its playing. Cincinnati seems to have bad luck with its symphony orchestra. Differences with the musical union in 1907 led to the dissolution of the original organization under van der Stucken, and for two seasons the city was without an orchestra. The new orchestra, organized in 1909, under Stokovsky, at once took its place among the great organizations and grew steadily in favor. When at the annual May festival the home orchestra was passed over in favor of the Chicago players, Mr. Stokovsky resented the action and resigned. Fortunately the board of di-

rectors kept the players together and engaged Dr. Ernst Kunwald of the Philharmonie at Berlin, under whose direction the orchestra began the new season most auspiciously. Mr. Stokovsky succeeded Carl Pohlig as leader of the Philadelphia Symphony Orchestra. An event of the first magnitude was the visit of Arthur Nikisch with the entire London Symphony Orchestra of eighty-five performers. The tour of the principal cities was a series of uninterrupted and well-deserved triumphs. It was Mr. Nikisch's first visit to America after an absence of eighteen years.

NOVELTIES. The Philharmonic Society of New York, under Stransky, introduced the much-discussed young Viennese composer, Erich Korngold, who is only 15 years of age, to the American public. The work is entitled *Overture to a Play*. It is remarkable chiefly for the treatment of the orchestral apparatus. The themes themselves are not very striking. One might characterize the style as that of the earlier Tchaikowski with some added touches of Strauss. From the same orchestra was heard a tone-poem by Delius, *In a Summer Garden*, which is distinguished by harshness and restlessness. A *Merry Overture*, by Weingartner, proved again what all his previous orchestral compositions have proved, that the eminent conductor is a splendid musician and past master of the art of instrumentation, but that he lacks all real creative ability. *Olaf's Wedding Dance*, by Alexander Ritter, is the work of a serious and sound musician, who has little to say that is of real importance. All these works were produced by the Philharmonic Society. Far more interesting, and of real musical value, were the almost unknown works of Smetana, of which Mr. Stransky produced several. Of the novelties played by the Theodore Thomas Orchestra of Chicago, under Mr. Stock, the most important was Busoni's *Fantasia Contrappuntistica* for orchestra and organ. Originally the work was written for piano, and the arrangement was made by Mr. Stock and the Chicago organist Middelschulte. The theme is taken from Bach's last composition, a fragment intended as a quadruple fugue. Mr. Stock also introduced a new overture by Georg Schumann, *Lebensfreude*, a pleasing composition. The Philadelphia Symphony Orchestra, under Stokovsky, played the introduction to Act IV. of a dramatic work written by H. Sandby upon the text of Ibsen's *Vikings of Helgoland*. The music is entirely descriptive, but scarcely sufficiently forceful for the delineation of the powerful drama. A new concerto for violin and orchestra by John Powell, produced by Efrem Zimbalist, with the assistance of Nahan Franko's orchestra, will not prove an addition to the literature of the violin. The work is hyper-modern in character, lacks decided themes, and the orchestration is far too heavy. A *Rhapsody for Clarinet and Orchestra* by Debussy was offered to the patrons of the Philharmonic Society. The work is typical of the composer's latest style. An endless surging of the orchestra, a kaleidoscopic succession of strange instrumental effects, a few detached notes from the solo instrument; nowhere any definite musical outline. In one of his piano recitals Rudolf Ganz performed the *sonata in E major, op. 2*, by Erich Korngold, whose works do not meet with the same enthusiastic reception here as in Europe. Surprising the sonata certainly is as

FOUR MUSICAL ARTISTS PROMINENT IN 1912

1901

the work of a mere boy. It lacks logical development and spontaneity. All in all, the novelties offered during the past year were a distinct disappointment.

MUSIC FESTIVALS. The number of music festivals held during the year in the United States was legion. It is worthy of record that scarcely one festival of importance was given where Mme. Schumann-Heink was not among the soloists. The most important event of this kind was the Bethlehem Bach Festival, under the direction of Frederic Wolle. It was the first one since 1906, when Mr. Wolle went to Berkeley, Cal. The principal work was the *Mass in B minor*. Besides that four cantatas, three of which had their first performance in America, were produced. The fifty-fourth annual Festival at Worcester, under the direction of Mees and Strube, brought Parker's *Hora Novissima*, Verdi's *Te Deum*, and the first performance of a new cantata, *Ruth*, by George Schumann, which proved to be a strong and beautiful work. At the biennial May Festival in Cincinnati, under van der Stucken, superb performances were given of Mendelssohn's *Elijah*, Franck's *Les Béatitudes*, Wolf-Ferrari's *La Vita Nuova*, and Berlioz's *Requiem*. A novel festival was that held at Bohemia Grove, near San Francisco. In the open air, among the giant trees of California, Henry Hadley's *The Atonement of Pan* was given under the direction of the composer. The New York Symphony Orchestra, under Walter Damrosch, and the New York Oratorio Society, under Frank Damrosch, joined forces in a four-day festival devoted entirely to the great orchestral and choral works of Brahms. *Ein Deutsches Requiem*, *Nänie*, and *Triumphlied*, and all four symphonies were performed. Bachaas played the piano concerto in Bb and Zimbalist the violin concerto. Mme. Matzenauer contributed some of the master's most beautiful songs.

OPERA. At the Metropolitan Opera House one hundred and sixty-four performances were given from a repertoire of forty-four operas by twenty-one composers. According to nationality, these were divided as follows: German, seventeen works by seven composers totaled sixty-eight performances; Italian, seventeen works by seven composers totaled seventy-four performances; French, eight works by five composers totaled seventeen performances; American, one work by one composer totaled four performances; Bohemian, one work by one composer totaled one performance. Wagner, represented by nine works, led with thirty-four performances. Next in order came Puccini, five of whose works achieved twenty-four performances. Third ranked Verdi with five works and twenty-one performances. The works most frequently given were Puccini's *La Bohème* and Leoncavallo's *Pagliacci*, each eight times. Next came Wagner's *Walküre* and Puccini's *Madama Butterfly*, each seven times. Wagner's *Tannhäuser*, Gluck's *Orfeo*, Verdi's *Aida*, Wolf-Ferrari's *Donne Curiose*, Humperdinck's *Königskinder* and *Hänsel und Gretel* were each given six times. Three novelties were produced. Wolf-Ferrari's *Donne Curiose* (January 3), with Farrar, Jadlowker, and Didur in the principal rôles, under Toscanini, was received with great favor. In style it marks a return to the opera bouffe of Mozart and Rossini. The music is light, graceful, and sparkling. The composer employs a small orchestra. The libretto is

rather poor, the chief fault being that the action is too long drawn out. Blech's *Versiegelt* (January 20), with Gadski, Jadlowker and Weil, under Hertz, in spite of excellent performances, met with an indifferent reception. Only four performances were given. Its chief fault is lack of originality. The composer has nothing new to say, and offers specimens of almost all operatic styles. Horatio Parker's *Mona* (March 14), the opera that received the \$10,000 prize, with Fonia, Homer, and Witherspoon, under Hertz, was a signal failure. The composer lacks all dramatic instinct. The music impresses one as the result of cold reflection; it is deficient in sensuous charm and spontaneity. Two works were revived for the purpose of exhibiting a new singer, Frieda Hempel, of Berlin. Owing to the artist's illness the initial performance of Mozart's *Magic Flute* resulted in a splendid triumph of stage-management, which here seems to have reached the very acme of perfection. Meyerbeer's *Les Huguenots* sounds to modern ears so tedious and threadbare that it is only offered with an all-star cast. By virtue of the system of exchange with the Chicago-Philadelphia company the patrons of the Metropolitan Opera House also heard the New York premières of Massenet's *Cendrillon* and Wolf-Ferrari's *I Gioielli della Madonna*, after the American premières of both works had taken place at Chicago. Among the new singers, Frieda Hempel, the famous coloratura soprano of the Berlin Opera, had aroused the highest expectations. She made her début in Meyerbeer's *Huguenots* during the last week of the year, and was plainly showing the effects of her recent illness, so that no just estimate could be formed. Ethel Parks, another coloratura singer, proved herself an excellent artist, although her voice is not very powerful. Lucrezia Bori made a very favorable impression with her fine, clear voice, flexible coloratura, and artistic acting. Among the men only one newcomer was heard, Edward Lankow, a sterling artist with a glorious bass. All the other artists were established favorites, such as Gadski, Fremstadt, Destinn, Rappold, Farrar, Sparks, Matzenauer, Homer; Caruso, Slezak, Burrian, Jörn, Jadlowker, Martin, Weil, Griswold Witherspoon, Hinshaw, and Scotti. A very valuable addition to the corps of conductors was Giorgio Polacco, a fine musician with much temperament and authority. The other conductors were Toscanini, Hertz, and Sturani.

The Chicago-Philadelphia Opera Company gave 120 performances from a repertoire of thirty works by nineteen composers. Wolf-Ferrari, represented by two works, led with eighteen performances. Five operas of Verdi totaled sixteen performances; while Wagner ranked third, with thirteen performances of three works. Three novelties were produced. Wolf-Ferrari's *I Gioielli della Madonna* (January 16), with Caroline White, Bassi, and Sammarco, under Campanini, scored an overwhelming and genuine success. It was presented thirteen times. The music delineates wonderfully the various dramatic situations. Parelli's *A Lovers' Quarrel* (March 6), with Zepilli, Berat, Bassi, and Sammarco, under Campanini, met with a cordial reception. It is rather light in character but full of charming melody. Goldmark's *Cricket on the Hearth* (November 7), with Teyte, Riegelmann, and Dufranne, under Winternitz, made a decidedly favorable impres-

sion. The music is very melodious, characteristic of the composer's best mood, and free from all ultra-modern touches. Of all Mr. Dippel's artists, the one that attracted the greatest attention was the Italian baritone, Titta Ruffo. Perhaps never in the history of opera in America have such frenzied demonstrations taken place as when this singer appeared in *Hamlet* and *Rigoletto*.

The Boston Opera Company gave ninety-five performances from a repertoire of twenty-eight operas by eighteen composers. Puccini led with twenty performances of four works. Next ranked Verdi, represented by five works, which achieved thirteen performances. Four performances of Wagner's *Tristan und Isolde* were given under the direction of Weingartner, while the cast was made up from the company's own artists and some stars of the Metropolitan company. For five performances of Debussy's *Pelléas et Mélisande* Mme. Le Blanc-Maeterlinck, the wife of the Belgian poet, was engaged. Mme. Nordica, one of Boston's special favorites, appeared as "Isolde" in some of the presentations of Wagner's work. No new work was produced during the year.

In the West a new operatic organization under the direction of Mario Lombardi appeared, which is known as the Pacific Coast Grand Opera Company. Among the works in its repertoire was Strauss's *Salome*. It even produced Zandonai's *Conchita* for the first time in America (September 28), thus anticipating by some months the American performance of that work announced by Mr. Dippel.

EUROPEAN COUNTRIES

GERMANY. The event of the year was the première of Richard Strauss's latest opera, *Ariadne auf Naxos*, which occurred on October 26 at Stuttgart. The composer seems determined to surprise the world with every new dramatic work. This time he has chosen one of Molière's best known comedies, *Le Bourgeois Gentilhomme*, to which he has written exquisite incidental music. "Jourdain," the principal character of the play, poses as an art Mæcenas. At an entertainment at his house *Ariadne auf Naxos*, a tragic opera, and *Zerbinetta*, a comic opera, both supposed to have been written by a protégé of his, are to be produced. As time presses, the host simply decides to have both works performed simultaneously. Thus we have not only a stage within a stage—an old device—but a comedy within a tragedy, which certainly is something new on the operatic stage. The other innovation is that the opera does not begin when the curtain rises. For two hours the audience must sit through Molière's comedy, in an adaptation by von Hoffmannsthal. In his latest work Strauss employs a very small orchestra (only thirty-six performers), but even thus this orchestral wizard offers new instrumental combinations and produces many beautiful effects. The vocal parts are of great beauty and singable, even if frequently difficult. Especially is this true of the principal aria of *Zerbinetta*, which goes up to high F sharp and is full of the most difficult coloratura work. The final duet between "Ariadne" and "Bacchus" is praised as one of the most beautiful strains in all music. Unstinted praise is bestowed upon the composer for his wonderful musical characterization of both the tragic and

the comic situations. The work was conducted by Strauss himself; the principals were Jeritta (*Ariadne*), Siems (*Zerbinetta*), Jadlowker (*Bacchus*). In spite of its great external success, it is doubtful whether this work will gain for itself a permanent place in the repertoire. Two serious objections are pointed out by German critics. The first is that few people can adjust themselves to the frequent changes from the serious to the comic, and *vice versa*; the second, that people are tired out by being compelled to wait for two hours for the beginning of the real opera. The Stuttgart success was repeated at Dresden, while after the Cologne première hissing was heard.

A new opera, *Der ferne Klang*, by Franz Schrecker, scored a most emphatic success at its first performance in Frankfurt. It is described as a work of rare beauty and pronounced individuality. Wolf-Ferrari's *Der Schmuck der Madonna* at its première in Leipzig was received with as great demonstrations as in America. A peculiar fate befell Nougé's *Quo Vadis* after its initial performance in Berlin. The critics condemned it unanimously; the public showed its unmistakable approval. Other works that met with success at their first production were Saint-Saëns's *Déjanire* (Dessau); Busoni, *Die Brautwahl* (Hamburg); Eulambio, *Ninon von Lenclos* (Leipzig); Neitzel, *Barberine* (Crefeld). An interesting revival in commemoration of the second centenary of the birth of Frederick the Great was offered by the Royal Opera of Berlin: King Frederick's only opera, *Il Re Pastore*. The last performance of *Tristan und Isolde* directed by Dr. Muck before his departure for Boston, was made the occasion of a tremendous ovation. During the twenty years that Dr. Muck had been one of the principal conductors of the Berlin Royal Opera he conducted 1071 performances of 103 different operas, of which thirty-five were novelties. By a strange coincidence he was succeeded by Emil Paur, who conducted the Boston Symphony Orchestra from 1893-8. The first season of the Kurfürstenoper ended disastrously, so that Director Moris was obliged to retire. However, a second season under a new director, Palfi, was inaugurated. The house itself was rebuilt and many improvements made in the ensemble. At Charlottenburg the new Municipal Opera, with a seating capacity for 2200 (the largest opera house in Germany), built for the purpose of rivaling the Royal Opera, was opened with a performance of *Fidelio*. The Leipzig première of Strauss's *Feuersnot* was made the occasion of a Strauss week, when all the other operas of the master were performed. At Dresden the fortieth anniversary of Ernest von Schuch as conductor of the Royal Opera was observed in a fitting and impressive manner. The work chosen for performance in the open air in the forest near Zoppot was Humperdinck's *Hänsel und Gretel*.

The annual festival of the Allgemeiner Deutscher Musikverein was held at Dantzig. For the first time in its history a work by a woman, Gisela Selden, was performed. Of the larger works, only Noren's *Concerto for Violin and Orchestra*, played by Petschnikoff, made an impression. The chamber music was of a better quality. A string quartette, *op. 16*, by Scheinpflug and a piano quintette *op. 50*, by Juon, proved to be works of real merit. Under the auspices of the German Brahms Gesellschaft a

second Brahms Festival of five concerts, under the direction of Fritz Steinbach, was given at Wiesbaden. All the great choral and orchestral works, as well as some of the chamber music, were heard. The success eclipsed even that of the first festival held at Munich in 1900. At Breslau a Bach Festival was arranged, during which only such works of the master were performed as were little known. The first Berlin performance of Mahler's *Eighth Symphony*, under Willem Mengelberg, assumed the proportions of a real festival. The chorus and orchestra numbered one thousand performers. The impression made, rather by the famous Dutch conductor (who had never been heard in Berlin) than by the work itself, was such that two extra performances had to be arranged. During the annual Mozart cycle at the Royal Opera in Munich the following works were produced: *Bastien et Bastienne*, *Il Seraglio*, *Così fan tutte*, *Le Nozze di Figaro*, *Don Giovanni*; while at the Prinzregententheater the annual Wagner festival performances were *Tristan und Isolde*, *Die Meistersinger*, *Der Ring des Nibelungen*. At Bayreuth *Die Meistersinger*, *Der Ring des Nibelungen*, and *Parsifal* were given.

The city of Berlin granted a subvention of 60,000 marks to the Philharmonic Orchestra on condition that it would abandon the concert tours during the summer, and remain in town giving symphony concerts at popular prices. The first summer season was successful, although the lowest admission was only 30 pfennig (8 cents). The Meiningen Court Orchestra, which was world-famous under Hans von Bülow, and later under his successor, Richard Strauss, again resumed its concert tours under the leadership of Max Reger, who proved himself but a mediocre conductor. Sam Franko's concerts of music of the eighteenth century, which he gave with the Blüthner Orchestra of Berlin, were highly appreciated. Ossip Gabrilowitch has risen to the first rank of conductors, but his activity during the past year shows that he has no intention of relinquishing his lofty place among the greatest pianists. At one concert he played both of Brahms's piano concertos. His greatest achievement, however, is the series of six concerts in Munich, in the course of which he illustrated the historical development of the pianoforte concerto from the earliest times to the present day. In Berlin Eugen D'Albert was welcomed by crowded houses on the occasion of his reappearance, after a retirement of six years, upon the concert platform. He played with the old-time mastery which won him his enviable reputation before he began to neglect his piano in order to gather laurels as a composer. From Berlin come reports, that sound absolutely incredible, of the playing of an 11-year-old violinist, Jascha Heifetz. Nevertheless, reputable and competent critics assure us that no living violinist can surpass this new prodigy in the rendition of those great concertos of Brahms, Beethoven, and Bruch. Even Leopold Auer, the boy's teacher, among whose pupils are several of the greatest living violinists, declares Heifetz to be the greatest genius he has ever taught.

ENGLAND. Some excitement was injected into a rather dull operatic season by the manifestos issued from time to time by Mr. Hammerstein, complaining of lack of support and berating the English for their apathy. In spite of excellent performances, the London Opera House was not

patronized. After the prices of admission had been considerably reduced, larger audiences were attracted for a time, but at no time did the undertaking pay expenses. Yet Mr. Hammerstein produced three novelties: Massenet's *Don Quichotte* and *Jongleur de Notre Dame*, and Holbrooke's *The Children of Don* (in English). For the production of the last work no less a conductor than Nikisch was engaged. All the critics agreed that the performance was superb, but they were unable to decide whether the music was great or grotesque. When the season had been completed, Mr. Hammerstein closed his house and withdrew from London operatic affairs. Nor was the old-established opera at Covent Garden any more successful. It was remarked that the best attended performances were those at which a ballet was introduced. Only two novelties were heard: Wolf-Ferrari's *I Gioielli della Madonna* and Zandonai's *Conchita*. In the Wagner works the absence of Dr. Richter was sorely felt; Dr. Rottenburg, of Frankfurt, was only a capable routine conductor. While the Moody-Manners Opera Company continued its production of grand opera in English, a dangerous rival arose for them in the Denhof Grand Opera Company, which gave, also in English, excellent representations of *The Mastersingers*, *Tristan*, *The Flying Dutchman*, *Orfeo*, and *Elektra* with such artists as Marie Brema, Perceval Allen, Kirkby-Lunn, MacLennan, and Balling as conductor. The London Philharmonic Society celebrated the centenary of its foundation by the performance at each concert of some work by a prominent English composer written especially for the occasion. Not one of those works made an impression. In this connection it may be recorded that perhaps nowhere, not even in Germany, are there produced so many novelties as at present in England. But very few ever get a second hearing. In spite of this fact a new "Society of Women Musicians" was organized, whose object is to perform works of its members. In connection with an exposition at Earl's Court called "Shakespeare's England," a series of concerts was arranged presenting only works inspired by the bard of Avon. Although many of the world's greatest composers, from Beethoven to Strauss, were represented, the undertaking proved a complete financial failure. At the Crystal Palace a Handel Festival was held, under the direction of F. Cowen, when *Israel in Egypt*, *The Messiah*, and miscellaneous works were rendered by a chorus of four thousand voices. Hereford, Birmingham, Bristol, and Brighton had their periodic music festivals. At the Hippodrome in London Mascagni drew vast audiences by conducting his *Cavalleria Rusticana*. He was followed by Leoncavallo, who conducted a new opera of his own in two acts, *I Zingari*, which failed to interest.

FRANCE. At the Grand Opéra the works of Wagner have figured more prominently than in any other year. The principal reason was the strike of the ballet. While the people in general love Wagner, fashionable society, which controls the opera house, had practically banished the works of the greatest of all dramatic composers in favor of works that introduce a ballet. The management availed itself of this strike to arrange a Wagner Festival, under the direction of Weingartner and Lohse. Massenet's last work, *Roma*, divided critical opinion, but the general impression was that the text de-

manded music of deep feeling and majesty, the very qualities in which Massenet is most deficient. At the Opéra Comique, Lazzari's *La Lépreuse* scored an unusual success. After the performance it was learned that this work had been sent in for a prize of 15,000 francs offered by the city of Paris. The prize was awarded to Mercier's *Elsen*, which at the Théâtre de la Gaité made a complete fiasco. At Marseilles the première of De Lara's *Les Trois Masques* called forth great enthusiasm. Under the direction of Weingartner five concerts of classical music were given in Paris. The works produced were Berlioz's *Requiem*, Handel's *Messiah*, Beethoven's *Missa Solemnis*, and several of Beethoven's orchestral works, the whole ending with a splendid performance of the *Ninth Symphony*. On this occasion the newly discovered "Jena" *Symphony* had its first performance in France. In a series of concerts directed by Nikisch a number of Tchaikowski's compositions were heard, which aroused unbounded enthusiasm in some quarters and equally violent opposition in others. At the age of 64 Lilli Lehmann gave two song recitals in Paris before crowded houses and evoked tumultuous applause with her masterly singing of German lieder. In recent years the Société Bach has done much to educate the French public to an appreciation of that almost unknown master's works. During the past year the famous Schola Cantorum has followed in the footsteps of the Bach Society. A few admirers of Brahms organized themselves into a Société des Amis de Brahms for the purpose of making propaganda for the great German master. Unfortunately their efforts have not met with success. The French public, accustomed to the hyper-modern harmonies of their national composers, absolutely refuses to have anything to do with Brahms. Word is received also of the establishment of a Société Frédéric Chopin. Among the board of directors appear the names of Chevillard, De Reszke, Ravel, and Rostand. In the prospectus we read that the object of the society is "to make known the works and preserve the honor of the composer's memory."

BIBLIOGRAPHY. Among the important books published during the year are the following:

BIOGRAPHICAL. H. Reiman, *Bach* (Berlin), completed and edited after the author's death by B. Schrader (brief, but authoritative. Profusely illustrated); M. Kalbeck, *Johannes Brahms*, vol. III., part II. (Berlin) (covers the years 1881-85); R. Schütz, *Stephen Heller, ein Künstlerleben* (Leipzig); J. Massenet, *Mes Souvenirs* (Paris) (written for his grandchildren; personal recollections from 1848 to 1912); T. de Wyzewa and G. de Saint-Foix, *W. A. Mozart, sa vie musicale et son œuvre de l'enfance à la pleine maturité*, 2 vols. (Paris) (biographical and critical, compiled from original sources, with a catalogue of the complete works in chronological order—the most complete and authoritative since Jahn); G. R. Kruse, *Otto Nicolai, ein Künstlerleben* (Berlin); W. Dahms, *Schubert* (Berlin) (the most exhaustive biography yet published. Contains thorough analyses of all important works. Profusely illustrated); F. May, *The Girlhood of Clara Schumann* (London) (an excellent study of the musical conditions from 1820 to 1840, as affecting the development of the young artist. Closes with the pianist's marriage in 1840); M. Steinitzer, *Richard Strauss* (Berlin) (the best and most compre-

hensive biography yet written. Illustrated); T. San Galli, *Beethoven* (Berlin); T. San Galli, *Brahms* (Berlin); A. Weissmann, *Chopin* (Berlin). The last four belong to the same series. All are scholarly and reliable works, with excellent facsimiles and illustrations. H. S. Chamberlain, *Richard Wagner*, 2 vols. (Munich) (originally published 1895. Text not materially changed, but many new illustrations).

HISTORY OF MUSIC. M. Emmanuel, *Histoire de la langue musicale*, 2 vols. (Paris) (a treatise on the development of music as a means of emotional expression from the earliest times to the present); G. Kanth, *Bilderatlas zur Musikgeschichte* (Berlin) (contains over twelve hundred portraits and illustrations. A valuable supplement to any complete history of music); H. Kretzschmar, *Geschichte des neuen deutschen Liedes*, vol. I (Leipzig), (traces the lied from earliest beginnings in the seventeenth century to Zelter); H. Riemann, *Handbuch der Musikgeschichte*, vol. II., part II. (Leipzig) (vol. I appeared in 1904; very comprehensive; result of original research; of interest rather to the student than the general reader); B. Studeny, *Beiträge zur Geschichte der Violinsonate in achtzehnten Jahrhundert* (Munich).

AESTHETICS, CRITICISM, PHILOSOPHY. A. Beyerslag, *Die Ornamentik der Musik* (Leipzig) (exhaustive and authoritative. Author had access to the vast collection of original manuscripts and first editions in the Royal Library of Berlin); E. Evans, *Handbook to the Vocal Works of Brahms* (London) (very scholarly and helpful, but too much detail); C. H. H. Parry, *Style in Musical Art* (London) (defines style as mode of expression. On this basis examines vocal, instrumental and choral style; takes up each individual art-form and traces development of national style); G. Setaccioli, *Debussy, Eine kritisch-ästhetische Studie* (Leipzig) translated by F. Spiro from the Italian into German (against Debussy's theories); R. Batka and H. Warner, *Hugo Wolf's musikalische Kritiken* (Leipzig); G. Adler, *Der Stil in der Musik*, vol. I. (Vienna) (treats of principles and kinds of style).

CORRESPONDENCE. B. Scharlitt, *Friedrich Chopins gesammelte Briefe* (Leipzig) (the most complete collection; contains many only recently discovered. Translation faithful and accurate); J. Joachim and A. Moser, *Briefe von und an Josef Joachim*, vol. II. (Berlin) covers period from 1858-68); E. v. Hellmer, *Hugo Wolf, Eine Persönlichkeit in Briefen* (Berlin); G. Kaiser, *Carl Maria von Weber, Briefe an den Grafen Karl von Brühl* (Leipzig).

MISCELLANEOUS. M. B. Foster, *History of the Philharmonic Society of London* (London) (a complete record of all the programmes, soloists, conductors, etc.); L. Frankenstein, *Richard Wagner Jahrbuch*, vol. IV.; A. Schering, *Bach-Jahrbuch*, vol. VIII.

MUSSEY, JOHN HERR. An American physician, died April, 1912. He was born in Strasburg, Pa., in 1856, and was educated at the Pennsylvania State Normal School. He studied medicine at the University of Pennsylvania, taking his degree in 1877. From that time until his death he practiced in Philadelphia, confining his attention chiefly to internal medicine. In 1881 he was appointed instructor in clinical medicine at the University of Pennsylvania and was successively made assistant professor and professor in that chair. He was

pathologist to the Presbyterian Hospital from 1884 to 1888, and was consulting physician to several other hospitals in Philadelphia. He was a member of many medical societies. Among his published works are *Medical Diagnosis*, and contributions to medical journals and standard articles in several encyclopædias and handbooks of medicine. He edited Volume IV. of *Diseases of the Lungs, Pleura, etc.*, of Nothnagel's *Practice*.

MUTHMANNITE. See METEOROLOGY.

MUTSUHITO. Emperor of Japan, died July 29, 1912. The name Mutsuhito means simply "gentleman." He was called by the common people Tenshi Sama, "August Son of Heaven," and by the educated class, Shu-jo, "Supreme Master." He was born November 3, 1852, and according to the Japanese chronology was the 121st of his line. At the time of his birth new ideas were beginning to have an effect on the conservatism of centuries in Japan. Orders were given to Commodore Perry to sail for Japan by President Fillmore almost on the day of the emperor's birth. The future emperor was born in the mountains of Kyoto and he early learned to love nature. During his first fifteen years, or until he succeeded his father, Osahito, he lived with his mother, who had been a lady of the imperial household. He received an education which, under the circumstances, was extremely liberal, and this was superintended by his mother. When he was crowned at Osaka on October 31, 1868, the country was on the verge of being torn asunder, as a result of the bitterness, which was partly political, partly commercial, partly religious, and largely superstitious, which arose after Commodore Perry had opened Japan to the Occident. Perry had unwittingly stirred up bloody strife which followed when foreigners were granted concessions by the preceding shogun, Iyemochi, who concluded the treaty with Commodore Perry in 1854.

Mutsuhito and his advisers began immediately after his accession to formulate a political constitution, which in turn was to lead the way to the assumption by the emperor of direct personal rule. As a step in this direction, the capital was transferred from Kyoto to Yeddo, where the shogun government had been held, and the name of the new capital was changed to Tokyo, or Eastern Capital. In 1869 he returned to the old capital to marry Haruko. In the year of his marriage and after he had been crowned at Osaka he showed the sincerity of his reforms by listing a number of them and binding himself by an oath to carry them out. In a moment of patriotic exaltation his supporters among the daimios, or nobles, surrendered their estates and their feudal privileges in a large measure to the young emperor. First in his list of proposed reforms was the establishment of a deliberative assembly. He was assisted by the patriotism of the nobles, and the voluntary surrender of their privileges was the death knell of feudalism that had existed in the empire for centuries. In 1873 torture was abolished, and a judicial system founded on the "Code Napoleon" was instituted by imperial decree. About this time officials about the court began to appear in European costume. English was introduced into the curriculum of the public common schools and these schools sprung up as if by

magic. The European calendar was also adopted. In 1869, as the result of a famine which made it necessary to transport large quantities of rice from the north to the south, transit facilities became a necessity, and when Sir Harry Parkes came forward with suggestions for financing a new railroad he at once received the sanction of Mutsuhito for the loan of a million pounds sterling. English engineers were secured to survey a line to run from Tokyo to Yokohama. In spite of great opposition in official as well as private circles, the emperor stood firm and the loan was granted.

The introduction of foreign innovations was bitterly opposed for years, especially in the provinces. Three times between 1876 and 1884 rebellions were started against the emperor and his attempts at modernism. The chief opponent of the emperor was the warlike clan, Satsuma, which dominated the army and navy. The emperor came into conflict with China as a result of troubles in Formosa, then claimed by the Chinese empire. Okubo, one of the most notable of the Japanese nobles, was sent alone to Peking, and there, with the backing of Mutsuhito, refused even at the risk of war to discuss the matter, according to Chinese dogma, but only in conformity with international law. China yielded and paid indemnity. It was not until 1877 that the Satsuma clan finally came under submission to the emperor. In that year, after seven months' fighting and the loss of 20,000 lives, the leader, Saigo, committed suicide. From this time forward the emperor was in supreme control in all parts of his empire. The trouble with China in 1874 caused the emperor and his advisers to give his whole time to the question of the Japanese navy and this work soon led to the building of a great fleet of warships. In 1894 came a more serious conflict with China, in which Japan was entirely victorious, but was deprived by the great powers of the fruit of victory, the possession of the great fortress, Port Arthur. This led finally to the Russo-Japanese War.

In addition to his remarkable qualities as a statesman, the emperor was one of the most productive and notable poets among his contemporaries in Japan, and much of his verse was published during his life. Characteristic of his rule was the power which he gave to his trusted servants in peace or war. He never interfered with details unless it was absolutely essential. The affection in which his subjects held him was remarkable and the great moral strength of the Japanese people came in large measure from the implicit confidence which they held in their ruler. All victories obtained by Japanese armies were ascribed to the virtue of the emperor's ancestors. A noteworthy trait was his generosity. In 1911 he gave \$1,500,000 to the victims of famine, flood, disease, and war. He gave without discrimination to all sects.

Although it is sometimes assumed that the Mikado had little real power or influence, it is said by those familiar with the course of events during his reign that this was not true and that he was personally responsible for the large measure of enlightenment and power that came to Japan from his accession to his death. NASH, HENRY SYLVESTER. An American theologian and educator, died November 6, 1912. He was born in Ohio in 1854 and graduated from Harvard College in 1878. He studied at the Episcopal Theological School of Cambridge and at Trinity College. He was ordained priest in the Protestant Episcopal Church in 1882. Two years later he was appointed professor of literature and interpretation of the New Testament in the Episcopal Theological School at Cambridge and he remained in this chair until the time of his death. He wrote *The Genesis of the Social Conscience* (1896); *Ethics and Revelation* (1898); *History of the Higher Criticism of the New Testament* (1900), and *The Atoning Life* (1907).

NATAL. One of the four original provinces of the Union of South Africa (q. v.). Pietermaritzburg, the seat of the provincial government, had (census of 1911) 30,555 inhabitants (14,737 whites). Durban is the largest town and only port. (Population of Durban borough, 69,187; with suburbs, 89,998, of whom 34,880 whites). Ladysmith had 5595 inhabitants, and Newcastle 2886. There were in 1910 57 government schools and 501 government-aided schools, with a total attendance of 31,972. For area, population, production, and trade, see **SOUTH AFRICA, UNION OF**. The amount of public revenue for the eleven months ended May 30, 1910, was £4,293,728; expenditure, £3,530,349; customs revenue, £459,314; public debt, May 30, 1910, £20,895,943. Administrator (1912), C. J. Smythe.

NATIONAL BANKS. According to the report of the comptroller of the currency the aggregate resources of the 7397 national banks in the United States on September 4, 1912 was \$10,863,400,000. The principal item of resources included loans and discounts amounting to \$6,040,000,000; or about 60 per cent. of all loanable funds. Of these loans, 9.6 per cent. were demand loans based on one or two-name paper; 16.6 per cent. demand loans secured by stocks, bonds, and other securities; 33.1 per cent. time loans secured by two-name paper; 20 per cent. time loans secured by single-name paper, and 20.6 per cent. loans based on securities. The aggregate loans were almost equally divided between the reserve cities and the country banks. New York City banks were credited with 16.1 per cent.; the banks of the central reserve cities, New York, Chicago, and St. Louis, were credited with 23.6 per cent.; and other reserve cities with 26.5 per cent. The importance of call loans for the New York City national banks was shown by the fact that the thirty-seven banks on June 14 had \$326,897,000 of demand loans secured by stock, bonds, and other securities. The money rate for stock exchange call loans ranged from 1¼ per cent. at various times in January and February to 8 per cent. in October; widest variations were in March, from 2 per cent. to 5 per cent., in September from 3 per cent. to 7½ per cent., and in October from 3 to 8 per cent. The time loan money rate varied from 2 to 4 per cent. during the first seven months, rising gradually to 5½ or 6 per cent. in October. Other items of the resources were \$724,085,000 of United States bonds to secure circulation, \$46,228,000 United States

bonds to secure United States deposits, and \$7,804,000 other United States bonds. Thus national banks held a total of \$778,177,000 of United States bonds, or slightly more than 80 per cent. of the total bonded indebtedness of the United States. National banks also held \$1,039,986,000 of other bonds, stocks, and securities. Their aggregate investments in loans and bonds were \$7,708,292,000, on which the average gross earnings were 5.84 per cent. The total capital stock paid in was \$1,046,012,000; surplus, \$701,021,000; undivided profits, \$242,735,000. The total gross earnings for the year ending June 30, 1912, were \$450,043,000; deductions from this for losses, premiums, and expenses left net earnings of \$149,056,000. From this latter were paid dividends amounting to 11.56 per cent. on the capital, or 6.93 per cent. on the combined capital and surplus.

The principal item of liabilities was the \$4,808,937,000 of individual deposits subject to check. There were in addition \$407,683,000 of demand certificates of deposit and \$504,490,000 of time certificates of deposit. During the last two years the comptroller has given special attention to the savings deposits of national banks. His report showed that on September 4, 3268 national banks reported savings departments, with 2,709,000 depositors and \$748,247,000 savings deposits. The law requires central reserve city banks to maintain a reserve of 25 per cent. in lawful money against all deposit liabilities. Banks in other reserve cities must maintain a reserve of 25 per cent., but one-half of this may be deposited with their agents in central reserve cities. All other banks must maintain a reserve of 15 per cent., but three-fifths of this may be deposited with their agents in reserve or central reserve cities. On September 4, the banks held \$1,467,739,000 as reserves, this being equal to 20.7 per cent. of their deposit liabilities. Classification showed that the central reserve cities were slightly under the legal requirement, this being due to a deficit of New York and Chicago banks. Other reserve city banks had legal reserves of 24.92 per cent. and country banks of 16.40 per cent.; both the latter, however, had additional available reserves.

The total outstanding circulation of the national banks on September 4, was \$713,823,000. This amounted to 19.5 per cent. of the general stock of money in the United States. Of the total circulation, the New York City banks were credited with \$47,200,000; central reserve city banks with \$77,700,000; other reserve city banks with \$376,500,000, and country banks \$472,600,000. Under the Aldrich-Vreeland act of 1908 incomplete notes of every bank to the extent of 50 per cent. of their capital are held in the vaults of the Treasury, the aggregate of such emergency currency being \$539,164,000. Of the outstanding circulation on October 31, only \$500,000 was in the form of \$1 and \$2 notes; \$139,997,000 were in \$5 notes; \$330,089,000 in \$10 notes; \$227,332,000 in \$20 notes; the remainder being in \$50, \$100, \$500, and \$1000 notes. The law requires every national bank to maintain with the Treasury a deposit in lawful money equal to 5 per cent. of its circulation. From this fund is redeemed all circulating notes presented for redemption to the Treasury of the United States. Notes that are mutilated are destroyed and replaced by new issues. In the year ending October 31,

1912, the national bank redemption agency received notes to the amount of 90 per cent. of the outstanding circulation, one-half of which was sent in from the city of New York. The cost to the national banks of maintaining their circulation amounted to \$4,251,000 during the year. This included the semi-annual tax on circulation, amounting to \$3,690,000, and cost of redemption of notes, \$505,700. The cost of redemption was \$0.78233 per one thousand dollars. Plans were matured for systematizing the designs of United States notes, silver and gold certificates, and national bank notes and at the same time reducing their size. Moreover, more artistic designs were sought as also added security against counterfeiting. The number of designs was to be reduced from 19 to 9 and the number of plates necessary for printing from 1200 to 200. It was estimated that the storage capacity of bank vaults would be increased by 25 per cent.; moreover, the reduction in size would reduce the folding and consequent wear on the notes, thus increasing their longevity. NAVAL PROGRESS. Progress in naval affairs during 1911 is here grouped under two main heads: *Aviation and General Progress.*

AVIATION

GREAT BRITAIN. A royal flying corps has been established, with a central flying school, and a military wing and a naval wing. The naval flying school is at Eastchurch. There were in December, 1912, two sections of the naval wing, one for aeroplanes, and the other for airships. In the military wing, there is one squadron for airships and kites, while three out of seven squadrons for aeroplanes have already been formed. On March 6, one naval hydro-aeroplane was under construction at Eastchurch, and two others were on order; experiments with this type were held at Sheerness,

Lake Windermere, and Barrow. The supplementary estimates, presented in July, contained £60,000 for aircraft; it was officially stated that this "is merely the forerunner of other and larger instalments in future years." Naval airship No. 2 is building at Barrow-in-Furness. Airship No. 1 has been taken to pieces. It was officially stated in the House of Commons, December 10, that the "Royal Flying Corps possesses the following ships: Military wing, *Beta, Gamma, Delta*, and a new *Gamma* under construction, to the cost of which naval funds will contribute half; Naval wing: One experimental Willows airship which has proved satisfactory; and one *Astra-Torres*, and one *Parseval* on order." The navy has acquired a hydro-aeroplane of the French Donnet-Léveque type.

Extra rates of pay per day for naval and marine officers belonging to the Royal Flying Corps are as follows:

	Ordinary pay	Flying pay
Squadron commanders	25 s.	
Flight commanders	17 s.	8 s.
Flying officers	12 s.	

The commanding officer of the naval wing receives £800 a year with quarters. Flying pay is paid continuously to aeroplane fliers, but only on the days of ascent in the case of airships. Thirteen naval and marine officers who are qualified aviators have been appointed to the naval wing of the royal flying corps with the increased rates of pay. Four officers are serving on the staff of the central flying school with increased rates of pay. Five other officers have just graduated (December) and will be graded flying officers immediately.

GERMANY. "On October 17, the *L. I.*, the first Zeppelin airship of the German navy, was taken over by the government. The *L. I.*, built at Friedrichshaven, is about 525 feet long, 50 feet in diameter, has 706,300 cubic feet capacity; three Maybach motors, one in the front and two in the rear gondola, each of 170 horsepower; the balloon consists of eighteen gas cells. The forward aluminum propellers have two blades; and the rear ones, four blades. The horizontal steering-gear has six vertical surfaces, and the elevation steering gear eight horizontal surfaces. An observation platform of sheet aluminum is erected on the top of the balloon, which is reached by means of a shaft. In the gangway between the two gondolas is a room for officers and men, in which wireless telegraph apparatus is fitted up. Arrangements have been made for bomb-throwing in time of war. After a few trips of small extent at the beginning of the month, the airship set out from Friedrichshaven on October 13 with twenty-one persons on board, among whom were the government examining committee and Count Zeppelin, and after remaining in the air for thirty-one hours, landed at Johannisthal. The journey proceeded by way of Bielefeld to Norddeich on the North Sea, and then eastwards via Helgoland, Kiel, Lübeck, and Hamburg to Berlin, a total distance of about 1050 miles, the average speed being 33 or 34 miles an hour. The *L. I.* is stated to have successfully fulfilled all the requirements of the naval authorities." (*The Engineer.*) At the end of November tests were being held at Friedrichshaven of the first hydro-aero-biplane, *F. F. I.*,

built by the Friedrichshaven-Manzell Airship Building Company. The vessel weighs 650 kilograms, has a 100-horsepower Argus motor, and carries two passengers. The tests will be continued until the conditions of the navy department are fulfilled; viz., a one-hour trip at a height of 500 meters, with two passengers. The Schütte rigid wood-frame airship made a night cruise of 16 hours on December 7. It was hoped that the army and navy would have a fleet of between fifteen and twenty airships before the end of 1912. Both departments seemed to be agreed about the aggressive value of airships, and to favor the rigid type, because it is possible to mount machine guns on top of the hulls of these vessels. It was said that the naval Zeppelin, now in service, with a surplus lifting power of three tons for armament and bombs, was likely to become a standard type. There were indications that a definite building programme had been prepared; and pressure was being exerted for a navy air-fleet law.

At the beginning of December, Germany possessed the following airships: 1 new naval Zeppelin, 9 military, including one new Zeppelin; 14 private, including two-passenger Zeppelins; but of these, 7 are under 3500 cubic meters volume, and are of little value; and one other, the *Suchard*, is built for an attempt to cross the Atlantic. The sum of \$476,172 was voted in the German naval estimates, 1912-1913, for airships and experiments with airships; \$702,358 is included in the German naval estimates, 1913-1914, not yet voted, for aeronautics, aviation, experiments, and special allowances. Formerly, aviation was under the office of ship-building equipment, which in turn was under the control of the dockyard bureau. A special aviation office has been established directly under the dockyard bureau. A special flying corps will be organized; for the winter half year, 1914 persons, including 9 officers, were ordered to aviation duty.

FRANCE. France leads the world in aviation. "She is spending \$4,886,000 this year on military aeroplanes. She is adding 300 scouting aircraft to the 200 she already owns. During the next year, and the year following, another 500 military machines will be added to her equipment; so that, at the end of 1914, she will possess an actual fleet of 1000 war-planes." (Claude Grahame-White, September 10.) There is a navy aviation headquarters on the coast of Fréjus, about half way between Toulon and Nice. The cruiser *Foudre*, formerly a mine ship, is now an aviation ship, stationed at Fréjus. The first hydro-aeroplane accepted, a Voisin, has been hoisted in and out in three minutes. Hangars are being erected ashore. During the blockade manoeuvres of the French fleet in the Gulf of Juan, a naval aeroplane obtained exact information about the disposition and movements of the blockading squadrons. Submarines had been detected navigating on the surface with evident intention of attacking the blockading force. One Nieuport (100 horsepower), three-place monoplane, and one Voisin biplane were used. The aeroplanes had neither been seen nor heard.

UNITED STATES. The winter quarters of the aviation school have been shifted from San Diego, Cal., to Guantánamo Bay, Cuba. Three aeroplanes, two Curtiss and one Wright, are in use; they are now supplied with hydro-planes. Eight officers have qualified as pilots.

Most of the "hydro-flying has been done at an altitude of about 500 feet. But, as scouting and reconnaissance work will require flying at an altitude of about 3000 feet, Lieutenant Ellyson has demonstrated that there will be no difficulty in flying the hydro-aeroplanes at 3000 feet or over." "There are seven different types of hydro-aeroplanes now in France, but American efforts have been confined chiefly to two distinct American types, the single boat with balancing pontoons, and the catamaran type with two pontoons. 'The Curtiss Flying Boat' is regarded as a decided advance in hydroplane design; and gives promise of extended usefulness in rough water. A simple and convenient self-starter is a practical necessity to the hydro-aeroplane before issuing it for ship use." In the navy aeroplane catapult, "compressed air is used for the power, as all ships carrying torpedoes are supplied with air compressors. The air is pumped into a receiver connected with a small cylinder located on deck." The piston of the cylinder has a stroke of about 40 inches; and the piston rod is connected with a small wooden car by means of a wire rope purchase which multiplies the travel of the piston to any desired extent, or to any limit fixed by the travel of the car on its tracks. The aeroplane rests on the car; and when a flight takes place, both are projected from the tracks together in about 1½ seconds, the pressure being automatically and gradually accelerated during the stroke. The car drops into the water when free from the tracks; and is hauled on board by a rope attached to it." The catapult has proved very successful.

AUSTRIA. Four airships will be purchased in the first half of 1913, each to cost about \$6,000,000. The budget for 1913 provides extra pay for aviators.

JAPAN. The Japanese navy has bought a Curtiss biplane in the United States; and a Farman biplane in France.

GENERAL PROGRESS

GREAT BRITAIN. The year 1912 was one of extraordinary effort in the British navy. The following are the most important developments: (1) Shooting became more practical. (2) Controlled gun fire became a reality. (3) Steaming power of the fleet increased. (4) The position of petty officers became secure and promotion better. (5) Pay of officers and men was increased. (6) Lieutenant rank was granted to a number of warrant officers. (7) The royal flying corps was established. (8) An admiralty war staff was created. (9) The fleet was reorganized; and redistributed. (10) The two-power standard was abandoned; and a standard of 60 per cent. superiority in dreadnoughts over Germany adopted. (11) A new type of ship, the light armored cruiser, was being built. (12) The rank of "mate," out of use since 1861, was revived. (13) The immediate reserve was established. (14) Work of the members of the board of admiralty was redistributed. (15) King's regulations relating to disciplinary matters in general and summary punishments in particular, were changed. (16) A royal commission was appointed to inquire into the whole question of the use of oil fuel for the naval service. (17) A remarkable parliamentary paper was issued in December, on naval defense, entitled "Memorandum on Naval Defense Requirements"; pre-

pared by the admiralty for the government of Canada. (18) The Canadian prime minister, on December 5, introduced a naval bill proposing to give the royal navy three first-class battleships at a cost of £7,000,000. See CANADA.

Mates. The title of "mate" has been revived for the warrant and petty officers taken from the lower deck for a course of training preparatory to being granted commissioned rank. A special title was desired to distinguish these men, who will rank with sub-lieutenants, from the commissioned warrant officers on one hand, and the sub-lieutenants from Osborne on the other.

The immediate reserve. The men eligible are those under thirty-two years of age now enrolled in B class of the royal fleet reserve. Most of these men have had twelve years' service and must therefore be at least thirty years old. They are to undergo twenty-eight days' training annually, usually in June and July; and the coöperation of their employers must be obtained.

Naval war staff. The war staff will be under the general authority of the board of admiralty. The war staff must work at all times directly under the first sea lord, who has the first lord over him as the delegate of the crown. There will be three divisions: The intelligence division, the operation division, and the mobilization division. These may be shortly described as dealing with war information, war plans, and war arrangements respectively. The divisions will be equal in status, and each will be under a director, who will usually be a captain of standing. The three divisions will be combined together under a chief of staff, a flag officer, who will be primarily responsible to the first sea lord. The creation of the staff added four executive officers to the personnel of the admiralty: One chief of staff, one director, two commanders (or lieutenants or accountant officers), and one marine officer (major or captain). A post of lieutenant-colonel of marines has been abolished.

Distribution of admiralty business. First lord: General direction of all business. First sea lord: Organization for war and distribution of the fleet. Second sea lord: Personnel. Third sea lord: Matériel. Fourth sea lord: Stores and transport. Civil lord: Works, buildings, and Greenwich Hospital. Additional civil lord: Contracts and dockyard business. Parliamentary secretary: Finance. Permanent secretary: Admiralty business.

The department formerly presided over by the controller is placed under the third sea lord and the additional civil lord. The third sea lord will have under his control a director of naval equipment, who will advise him on all naval professional questions relating to the construction of ships, whose designs have been approved by the board, and to repairs and alterations and additions to completed ships, and who will keep him informed of the progress of construction generally. He will be associated with the director of dockyards and with the superintendent of contract work in advising on questions involving considerations arising out of the building, alteration, or repair of ships. He will be responsible for the supervision of the equipment and fittings of his majesty's ships building by contract or in the dockyards.

Royal commission on the supply and use of oil fuel. This commission, under the presidency of admiral of the fleet, Lord Fisher, of

Kilverston, O. M., G. C. M. G., etc., has been appointed to inquire into the whole question of the use of oil fuel in the navy. It will take a long time for the commission to make a final report; but the admiralty will take advantage of its deliberations as they proceed, and as wisdom dictates. The first results will probably be the abandonment of coal as a steam generator in the new ships of the current programme.

Fleet reorganization, dating May 1, 1912, (extract from admiralty circular letter, dated March 29, 1912). "The home fleet will be divided into the first, second, and third fleets; and ships will be classed in these fleets according to the status of commission in which they are maintained by their lordships; ships in the first fleet being in permanent commission with full crews; ships in the second fleet being in commission with nucleus crews, and receiving full complements of active service ratings on mobilization; ships in the third fleet being in commission with reduced nucleus crews, or in 'matériel reserve' and requiring reserve men on mobilization. These fleets are therefore administrative and not tactical classifications.

"The home fleet thus divided into three fleets, will comprise eight squadrons. Each squadron will consist of a battle squadron and cruiser squadron and attached ships, numbered consecutively. Four squadrons will form the first fleet, two the second fleet, and two squadrons and three additional cruiser squadrons the third fleet, as follows: First fleet: The 1st and 2nd divisions of the home fleet and the Atlantic fleet, to be in future known as the 1st, 2nd, and 3rd squadrons. A 4th squadron will be constituted within this fleet at a future date. Second fleet: The present 3rd division of the home fleet formed into the 5th and 6th squadrons. Third fleet: The present 4th division of the home fleet formed into the 7th and 8th squadrons, and the 9th, 10th, and 11th cruiser squadrons.

"The administrative grouping of the ships of the second and third fleets will usually correspond with their ports of manning and repair so far as is practicable. Upon assembly they will at once assume their organization in squadrons.

"The commander-in-chief, home fleet, will have placed under his direct command such fleets and squadrons as their lordships consider proper. In normal circumstances his command will include the whole of the first, second and third fleets. The present 4th cruiser squadron will in future be known as the 'training squadron.' The present 6th cruiser squadron will in future be known as the 'Mediterranean cruiser squadron.' The 'eastern fleet' will comprise the China squadron, the Australia squadron, and the East Indies squadron.

"Other vessels on foreign stations will continue to be designated as at present, but the vessels employed in Newfoundland, the West Indies, and on the southeast coast of South America, will, if combined, be known as the 'West Atlantic squadron.'

"The organization of the destroyer flotillas will conform to the foregoing system. The present 1st, 2nd, and 7th flotillas will be reorganized into four flotillas, to be known in future as the 1st, 2nd, 3rd, and 4th flotillas. The present 3rd, 4th, and 5th flotillas (nucleus crews) will be also reorganized into four flotillas, to be known in future as the 5th,

6th, 7th, and 8th flotillas. The vessels composing the present 6th flotilla will in future be included in the home-port flotillas. The 1st, 2nd, 3rd, and 4th flotillas will, in normal circumstances, be under the orders of the commander-in-chief of the home fleets. The 5th, 6th, 7th, and 8th flotillas will form the command of a flag-officer, styled 'admiral of patrols.' This officer will be under the direct orders of the admiralty.

"The submarine sections in home waters will also, from May 1, be rearranged in nine sections. They will remain under the general control of the inspecting captain of submarines, who will be responsible to the commanders-in-chief of the home ports for those sections which are assigned to port defense, and will be responsible to the admiral of patrols for the remainder."

It will take 65 ships (the flagship of the home fleet will be out of the line) to carry out this programme; and this number will not be available until the latter part of 1914.

The Mediterranean. The battleships of the Mediterranean squadron were withdrawn; and the admiralty apparently intended to keep no battleships in the Mediterranean, leaving British interests to be protected by France. Such great home opposition developed that the eight "King Edwards" were sent on a three months' cruise in the Mediterranean, to return home in January, 1913; and the battleships withdrawn are to be replaced by the *Indefatigable*, *Inflexible*, *Invincible*, and *Indomitable*, with four of the most modern and largest armored cruisers.

Important Appointments. Soon after Mr. Winston Churchill became the first lord of the admiralty Admiral Sir Arthur Wilson retired from the post of first sea lord. He refused a peerage; but he was promoted to admiral of the fleet. He was succeeded by Vice-Admiral Sir Francis Bridgman-Bridgman; who in turn was succeeded in November, by Vice-Admiral Prince Louis of Battenburg. On the retirement on August 1, of Sir Philip Watts from the office of director of naval construction, he was succeeded by Mr. E. H. Tennyson d'Eyncourt, naval architect to the firm of Messrs. Sir W. G. Armstrong, Whitworth and Company (Ltd.). Sir Philip Watts has been retained as adviser on naval construction to the board of admiralty.

Memorandum on Naval Defense Requirements. This remarkable document prepared by the admiralty for the government of Canada, in December, 1912, recited in detail the comparative development of the German and British fleets. The main points were as follows: During the last fifteen years the development of the German fleet has been the most striking feature of the naval situation. Five successive laws, namely, the fleet laws of 1898, 1900, 1906, 1908, and 1912 covered a period up to 1920.

"Whereas in 1898 the German fleet consisted of 9 battleships (excluding coast defense vessels), 3 large cruisers, 28 small cruisers, 113 torpedo-boats, and 25,000 men, maintained at an annual cost of £8,000,000, the full fleet of 1920 will consist of: 41 battleships, 20 large cruisers, 40 small cruisers, 144 torpedo-boats, 72 submarines, and 101,500 men, estimated to be maintained at an annual cost of £23,500,000. These figures, however, give no real idea of the advance, for the size and cost of ships have risen continually during the period, and, apart from

increasing their total numbers, Germany has systematically replaced old and small ships, which counted as units in her earlier fleet, by the most powerful and costly modern vessels. Neither does the money provided by the estimates for the completed law represent the increase in cost properly attributable to the German navy, for many charges borne on British naval funds are otherwise defrayed in Germany; and the German navy comprises such a large proportion of new ships that the cost of maintenance and repair is considerably less than in navies which have been longer established."

This German expansion has not been provoked by British naval increases. The admiralty document goes on to show that Great Britain down to 1909 was proceeding at no such rate as to stimulate German competition. It then turns to the fifth German naval law, passed in the spring of 1912. Its main feature was not the increase of new construction, but of the striking force of ships of all classes. Instead of an active battle fleet of 17 battleships, 4 battle or large armored cruisers, and 12 small cruisers it would, in the near future consist of 25 battleships, 8 battle or large armored cruisers, and 18 small cruisers. It would not only be increased in strength, but rendered much more readily available. Ninety-nine torpedo-boat destroyers instead of 66 were to be maintained in full commission; 72 new submarines were to be built, and apparently it was intended to maintain 54 of these with full permanent crews. In short, nearly four-fifths of the entire German navy were to be maintained in full permanent commission instantly ready for war.

The first lord of the admiralty laid these facts before the House of Commons on July 22, 1912, and pointed out that in the spring of the year 1915, Great Britain would have 25 dreadnoughts and 2 Lord Nelsons to Germany's 17 dreadnoughts; and that each would have 6 battle cruisers; also that the reserve of strength would steadily diminish. Greater exertions would therefore be required by the British empire.

Light Armored Cruisers. The first lord of the admiralty, in describing the eight small armored cruisers now building, said: "They will, in fact, be the smallest, cheapest, and fastest vessels protected by vertical armour, ever projected for the British navy. They are designed for attendance on the battle fleet. They are designed to be its eyes and ears by night and day; to watch over it in movement and at rest. They will be strong enough and fast enough to overhaul and cut down any torpedo-boat destroyer afloat, and generally, they will be available for the purpose of observation and reconnaissance." It is supposed that they will displace about 4000 tons, make 30 knots speed; have a 5-inch armor belt, develop 40,000 horsepower, five of them with Parsons turbines (4 propellers) and three with Curtis turbines (2 propellers). They are to be completed in June, 1914.

GERMANY. Naval Amendment Law, 1912. The effect of this law is given in the British "Memorial on Naval Defense Requirements" quoted above.

Great secrecy is maintained about new material, inventions, equipment of the fleet, manoeuvres, and target practice. The press bureau has cautioned the newspapers about their indiscretions, calling attention to the fact, that,

U. S. BATTLESHIP "ARKANSAS"
IN COMMISSION 1912

11100

for some time, the characteristics of German submarines, which ought to remain secret, have been given. *Nauticus* (1912), issued by the naval information office, and the *Taschenbuch der Kriegsflootten* (1913), by Weyer, partly from official sources, omit all armor details concerning battleships later than the 1905 programme; and give no details at all about the battleships and battle cruisers of the 1911 and 1912 programmes, or of the battle cruiser *Seidlitz* of the 1910 programme. Weyer (1913), makes public, for the first time, the displacement (700 tons) of the destroyers of the 1910-11 and 1911-12 programmes. Neither book gives any details about submarines, of which there are now 18 completed.

Ordnance. Krupp now advertises 14, 15, and 16-inch guns, of 50 cal., using 1364, 1672, and 2024 pound shells, respectively. It is now generally believed that the claim of an unusually long life for Krupp guns is unfounded. The life of the German 11-inch (28cm.) gun is 30 per cent. greater than that of the 12-inch (30.5cm.). The life of the Krupp 14-inch gun is unofficially estimated at from 80 to 90 full charges. The improved British 13.5-inch gun fires a shell weighing 1400 lbs.; and is understood to have a life of from 80 to 90 full charges.

Triple Turrets. Germany has not adopted the triple turret for heavy guns, notwithstanding the example set by the United States, Austria, and Italy. An experimental triple turret for 12-inch guns proved unsatisfactory.

Destroyers. The new destroyers (700 tons) will carry two 30 cal. 3.5-inch (8.8cm.) guns; while the British destroyers of the 1911-12 programme (920 tons) and the 1912-13 programme (1200 tons) will each carry three 4-inch guns.

UNITED STATES. 14-inch Gun. The 14-inch 45 cal. gun for the *New York*, *Texas*, *Nevada*, *Oklahoma*, and *Pennsylvania* is far more powerful than the 12-inch 45 cal. gun on the *Dela ware* and *North Dakota*. Muzzle energy of 14-inch gun, about 66,000 foot-tons; that of 12-inch, 49,000 foot-tons. Weight of 14-inch shell 1400 lbs.; that of 12-inch, 850 lbs. The 14-inch shell carries a much larger bursting charge of high explosive.

Gun Mounts. The triple-turret mount is to be installed on the *Oklahoma* and *Nevada*; and for the four turrets of the new battleship *Pennsylvania*. The 14-inch Mark I. mount will be used on the *New York* and *Texas*, and in the two-gun turrets of the *Oklahoma* and *Nevada*.

Powders. The principal improvement of the year is one whereby the requisite amount of diphenylamine is incorporated in the powder without variation. No smokeless powder in which diphenylamine has been incorporated has as yet shown any signs of loss of stability, the oldest lot of powder containing this stabilizer being now four years old. With regard to the use of ozokorite to reduce erosion of guns, the disadvantages more than offset the advantages.

Torpedoes. Experiences with the two new type of long-range high-speed torpedoes show that the United States is at least abreast of all foreign countries in this respect.

DESTROYERS. The eight destroyers of the *Aylwin* type, 1040 tons, five 4-inch guns, 29½ knots, ordered last year, are the most heavily armed of their class, except the six large ocean-going destroyers of the *Tomé* type, 1430 tons, six 4-inch guns, 31 knots, now building for Chile.

The British *Daring* type (1912), 1200 tons, 32-33 knots, are armed with three 4-inch guns; but carry four 21-inch torpedo tubes, while the *Aylwin* carries three twin 18-inch tubes.

Submarines. *G 1 (ex-Seal)*, descended to a depth of 256 feet, and, with 12 men on board, stayed there 30 minutes 5 seconds, with no injury to the boat and no discomfort to the complement. Characteristics: length 161 ft.; beam, 13 ft.; displacement, 525 tons, submerged; 6 torpedo tubes; 10 torpedoes; speed, 14 knots on the surface, and 9.5 knots submerged.

FRANCE. New Construction. Chief Constructor Doyère submitted to the superior council three plans of 25,000-ton ships, 172 meters long, and 29 wide, speed, 21 knots, horsepower, about 33,000, the lines of which had been tested with success in the Paris trial-basin. Plan A provided for three quadruple turrets on the centre line; plan B, for two quadruple and two superposed twin turrets; plan C, for four quadruple turrets to contain 12-inch guns instead of 13.4-inch guns. It is claimed that the quadruple turret, in spite of its enormous weight (1500 tons) is superior to the triple turret, because it is better balanced, and can be divided into two separate and independent compartments by an armored bulkhead, which gives it the advantages of twin turrets with regard to ammunition supply and rate of fire. Owing to the weight and space saved, it permits an invulnerable armor protection. No decision has been officially announced; it seems certain that there will not be a return to the 12-inch gun. The probable design for these ships, the *L'Orient*, *Savoie*, *Gascoigne*, and *Normandie*, is: 25,387 tons, 21.5 knots speed, twelve 13.4-inch guns in quadruple turrets, and twenty-four 5.5-inch torpedo defense guns.

Submarines. France, in the *Gustave Zédé*, owns the largest submarine. Characteristics: Surface displacement, 797 tons; submerged displacement, 970 tons; surface speed, 16 knots; submerged speed, 10 knots; length, 239.5 ft.; beam, 19.6 ft.; number of torpedo tubes, 6; launched in 1912. But this type is not final, as a new design, *Q 102*, is under construction at Rochefort. Characteristics: Surface displacement, 520 tons; length, 198½ ft.; beam, 18 ft.; surface indicated horsepower, 2100; surface speed, 17½ knots; 8 torpedo tubes; complement, 3 officers and 26 men.

Redistribution of Fleet. The entire battle fleet has been concentrated in the Mediterranean; and there has been a reassignment of destroyers and submarines. Submarines are now attached to the battle fleet; though no real sea-going, so-called "squadron submarines" are yet available.

Manœuvres. This year's manœuvres have shown that superior use of gun power must be the aim of all tactics. Battle cruisers of the British *Lion* type are much favored. The attacks *en masse* by destroyers led separately against the battle line (both by day and night) would have had decisive results in warfare. Submarines were most successful; and are held to be perfect instruments of blockade, both for offense and defense. Little use was made of mines.

Powder. Large quantities of powder were destroyed and there was a time when the battle fleet was almost without powder. This critical condition no longer exists, according to the official statement of the French minister of marine.

JAPAN. Japanese finances are in no condition to permit any great naval expansion at present. The battleship *Fuso* was laid down at Kure on March 11, 1912; she is to be completed in the spring of 1916. Few details are known; probable characteristics: Displacement, 30,000 tons; speed, 22½ knots; turbines, 45,000 indicated horsepower; armament, ten 15-inch and sixteen 6-inch guns. The guns for vessels building in Japan will be made in Japan.

ITALY. *Battleship of the Future.* The eminent naval constructor, Colonel Cuniberti, in Jane's *Fighting Ships*, 1912, insists that the coming battleship will be armed with 16-inch guns; that the present armor protection of 10 to 12 inches is entirely inadequate; and will be displaced by armor perhaps 16 inches thick. The motto of the essay is: "Chi dura, vince."

Destroyers. Two destroyers of 800 tons, to be driven by Fiat heavy oil internal combustion engines of 12,000 horsepower each, are being built; also twelve turbine-driven oil fuel boats of 400 tons.

AUSTRIA. *12-inch Skoda Gun.* These guns are mounted in the four ships of the *Viribus Unitis* class. Weight of capped shell, 992 pounds; bursting charge, 55 pounds; powder charge, about 510 pounds, giving 2713 feet

initial velocity, and penetration of 27.75 inches of K. C. steel at the muzzle.

Submarines. Only six are complete. The two lake boats *U 1* and *U 2* are having heavy oil engines substituted for their gasoline motors.

Russia. *Submarine Mine Layer.* This vessel, now under construction at Nicolaieff, has a surface displacement of 500 tons, and a submerged displacement of 700 tons. She has two 18-inch torpedo tubes for offensive use as a submarine; length, 170½ feet; surface speed, 18 knots; will carry 60 mines; Curtiss motors for surface propulsion.

Mine Sweepers. Five, displacement, 150 tons; speed, 12 knots; have been launched at the Ijorski yard; and several others are said to be under construction at Vladivostok. See following table and table on page 449.

France	7	0	0	0	0	13
Japan (h)	1	4	0	9	0	5
Russia (i)	7	4	0	9	0	8
Italy	7	0	2	11	21	2
Austria	3	0	3	6	12	7

(a) Battleships having a main battery of all big guns (11 inches or more in calibre).

(b) Battleships of (about) 10,000 or more displacement, and having more than one calibre in the main battery.

(c) Armored cruisers having guns of largest calibre in main battery and capable of taking their place in line of battle with the battleships. They have an increase of speed at the expense of carrying fewer guns in main battery, and a decrease in armor protection.

(d) Includes all unarmored cruising vessels above 1500 tons displacement.

(e) Includes smaller battleships and monitors. No more vessels of this class are being proposed or built by the great powers.

(f) England has no continuing shipbuilding policy, but usually lays down each year 4 or 5 armored ships with a proportional number of smaller vessels.

(g) Germany has a continuing shipbuilding programme, governed by a fleet law authorized by the Reichstag. For 1912 there were authorized 1 battleship, 1 battle cruiser, 2 cruisers, 12 destroyers. Eventual strength to consist of 41 battleships, 20 armored cruisers, 40 cruisers, 144 destroyers, 72 submarines.

(h) \$78,837,591 authorized to be expended from 1911 to 1917 for the construction of war vessels.

(i) \$4,760,000 authorized for experiments and further construction.

(k) Includes vessels of colonies.

(l) Russian shipbuilding programme provides for the completion by 1918 of 4 battle cruisers, 8 small cruisers, 36 destroyers, and 18 submarines. The battle cruisers have been contracted for and are included in the above table.

The following vessels are not included in the tables: Ships over twenty years old from date of launch, unless they have been reconstructed and rearmament within five years; torpedo craft over fifteen years old; transports, colliers, repair ships, converted merchant vessels, or any other auxiliaries; vessels of less than 1500 tons, except torpedo craft; torpedo craft of less than 50 tons.

Note.—Vessels undergoing trials are considered as completed.

Table II. Includes vessels authorized but not yet laid down, as well as those actually under construction.

*Battleships having a main battery of all big guns. (11 inches or more in calibre.)

**Battleships of (about) 10,000 or more tons displacement, whose main batteries are of more than one calibre.

†Includes smaller battleships and monitors.

††Armored cruisers having guns of largest calibre in main battery and capable of taking their place in line of battle with battleships. They have an increase of speed at the expense of carrying fewer guns in main battery and a decrease in armor protection.

‡All unarmored warships of more than 1500 tons are classed as cruisers. Scouts are considered as cruisers in which battery and protection have been sacrificed to secure extreme speed. The word "protected" has been omitted because all cruisers except the smallest and oldest now have protective decks.

§Colonial vessels included.

The following vessels are not included in the tables:

Ships over twenty years old from date of launch, unless they have been reconstructed and rearmed within five years.

Torpedo craft over fifteen years old.

Those not actually begun or ordered, although authorized.

Transports, colliers, repair ships, torpedo depot ships, or other auxiliaries.

Vessels of less than 1500 tons, except torpedo craft.

Torpedo craft of less than 50 tons.

N. B.—Vessels undergoing trials are considered as completed.

NAVAL WAR STAFF. See NAVAL PROGRESSES.

NAVY YARDS. See UNITED STATES, Navy.
NEBRASKA. POPULATION. According to the Census Bureau statistics compiled during 1912 out of a total population of 1,192,214 in 1910, 175,865 were foreign-born whites, compared with 177,117 in 1900. The largest number, 57,220, came from Germany; from Austria, 24,521; from Sweden, 23,194; from Denmark, 13,648; from Russia, 13,072; from Ireland, 8,124; and from Canada, 6,592. In the city of Omaha, with a population of 124,096, the foreign-born population numbered 27,068. Of these 4841 came from Germany, and 3789 from Sweden. The negroes in the State in 1910 numbered 7689 and the mulattoes 208. In 1890 the negroes numbered 8913 and the mulattoes 2822.

AGRICULTURE. The acreage, value, and production of the principal crops in 1911 and 1912 are shown in the following table:

	Acreage.	Prod. Bu.	Value.
Corn1912	7,609,000	182,616,000	\$67,563,000
.....1911	7,425,000	155,925,000	85,759,000
Wheat1912	3,123,000	55,052,000	37,985,000
.....1911	3,098,000	41,574,000	36,169,000
Oats1912	2,275,000	55,510,000	16,653,000

.....1911	1,350,000	1,148,000	11,136,000
a Tons.			

MANUFACTURES. The Thirteenth Census included statistics relating to manufactures of the State. The results are given in the table below. These figures are for the calendar year 1909. While Nebraska is not preëminently a manufacturing State, its manufacturing interests have developed considerably in the last five years, as will be seen by this table. The industries in which the largest capital is involved and whose products have the largest value are those connected with slaughtering and meat-packing. Of these there were in 1909 eighteen establishments, employing 6015 wage-earners and manufacturing products valued at \$92,305,000:

	Number or Amount	
	1909	1904
Number of establishments	2,500	1,819
Persons engaged in manufactures	31,966	25,356
Proprietors and firm members	2,522	1,904
Salaried employees.....	5,108	3,192
Wage earners (average number)	24,336	20,260
Primary horsepower.....	64,466	46,372
Capital	\$ 99,901,000	\$ 80,235,000
Expenses	183,587,000	146,639,000
Services	19,439,000	14,097,000
Salaries	5,491,000	3,075,000
Wages	13,948,000	11,022,000
Materials	151,081,000	124,052,000
Miscellaneous	13,067,000	8,490,000
Value of products.....	199,019,000	154,918,000
Value added by manufacture (value of products less cost of materials)	47,938,000	30,866,000

EDUCATION. The total number of children of school age in the State in the school year 1911-12 was 379,028. The total enrollment in the public school was 283,602. The average

daily attendance was 197,990. The teachers numbered 10,968, with an average monthly salary of \$67.25. There were 7151 school houses in 7005 districts. Graduate schools numbered 543, normal training schools, 163, four-year high schools, 155, three-year high schools, 70. The total value of school district property was \$17,266,334. The expenses for the support of schools was \$8,045,027.

FINANCE. The report of the State treasurer for the biennial period ending November 31, 1912, showed a balance on hand on December 1, 1910, of \$801,290. The receipts for the biennial period amounted to \$10,862,142, and the disbursements to \$10,890,121, leaving a balance, November 30, 1912, of \$573,310. The principal receipts are from the general fund and the chief expenditures are for education and the support of State institutions.

POLITICS AND GOVERNMENT. There was no session of the legislature in 1912, as the sessions are biennial and the last was held in 1911. The next session convenes January 7, 1913.

Nebraska was freer from political turmoil in 1912 than most of the other western States. The Progressive party put no candidates in nomination for State offices, endorsing the Republican candidates chosen at the primaries, although they elected delegates on July 31, pledged to vote for Mr. Roosevelt at the National Progressive convention. The most interesting political event of the year was the presidential primary election held on April 10. In this Mr. Roosevelt received 46,795 votes, President Taft, 13,341, and Senator La Follette, 16,785. Champ Clark received the Democratic preferential vote. In this election Governor Aldrich was renominated by the Republicans and United States Senator Brown was defeated for renomination by Congressman Norris. The Democrats nominated J. T. Morehead, for Governor, and Ashton C. Shallenbarger for United States senator.

Considerable interest was attracted in April by the action of five Populists from Osceola in placing Woodrow Wilson's name on the primary ballot as a Populist candidate for President. This drew from Wilson a request that his name be withdrawn.

Mr. Bryan took no very active part in State politics during the year. His name appeared on the presidential primary ballot on January 30, but was withdrawn. The Republican electors chosen at the State convention were pledged to vote for Mr. Roosevelt in accordance with the presidential primary vote. On October 5 six Taft electors were placed on the presidential ballot by petition. These electors replaced those men who, although on the Republican ticket, insisted on supporting Mr. Roosevelt and refused to resign from the regular ticket. The election of November 5 resulted as follows: For President, Wilson received 109,008 votes, Roosevelt, 72,678, Taft, 34,216, Debs, 10,185, and Chafin, 3383. Governor Wilson's plurality was 36,394. The vote for governor was as follows: Morehead, Dem., 123,097; Aldrich, Rep., 114,075, Wright, Soc., 9959, Wilson, Prohib., 3662. For popular preference for United States senator George W. Norris received 126,022 votes, running on the Republican and Progressive tickets, and Ashton C. Shallenbarger had 111,946 running on the Democratic ticket. Mr. Norris was thus assured of election by the legislature at its regular session. The legislature is Democratic by a vote of 5 on joint ballot.

In this election several amendments to the constitution were carried. These included a provision for the initiative and referendum; another amendment provided for a board of commissioners for State institutions, and another for election of judges to the supreme court. By still another amendment cities of 5000 and over were given the privilege of framing their own charters, instead of going to the legislature; the right to adopt the commission form of government was granted by the legislature of 1911.

On January 17 the supreme court of the State issued an injunction against serving liquors of any kind in dining cars passing through the State.

STATE GOVERNMENT. Governor, James T. Morehead, Democrat; lieutenant-governor, S. R. McKahil, Republican; secretary of State, Addison Wait; treasurer, W. A. George; auditor, W. B. Howard; attorney-general, Grant G. Martin; superintendent of education, James E. Delzell; commissioner of insurance E. C. Pierce; commissioner of public lands, Frederick Beekman—all Republicans, except governor.

JUDICIARY. Supreme Court: Chief justice, Manoah B. Reese; justices, Charles B. Letton; Francis G. Hamer, Jacob Fawcett, William B. Rose, John B. Barnes, and Samuel H. Sedgwick; clerk, H. C. Lindsay—all Republicans.

STATE LEGISLATURE, 1913. Senate, Democrats 15, Republicans 18; House, Democrats 54, Republicans 46; joint ballot, Democrats 69, Republicans 64. Majority, Senate, Republicans 3; House, Democrats 8; joint ballot Democrats 5.

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

NEBRASKA, UNIVERSITY OF. A State institution for higher education at Lincoln, Neb., founded in 1869. The enrollment in all departments of the university in the year 1911-12 was 3091. Of these, 1556 were in the college of arts and sciences, 157 in the teachers' college, 384 in the college of engineering, 332 in the college of agriculture, 236 in the college of law, and 162 in the college of medicine. The total enrollment in the autumn of 1912 was 3220. The faculty numbered 383. There were no changes of great importance in the faculty during the year. The university is supported almost entirely by the State and there were no noteworthy benefactions received. The income from all sources in the year 1911-12 was \$911,840. The library contained about 100,000 volumes. President, Samuel Avery, Ph. D.

NECROLOGY. The following list contains the names of persons who died during 1912. An asterisk prefixed to a name indicates that there is a separate biography in proper alphabetical order, in the body of the book:

- * Adam, John Noble. American merchant.
- * Aehrenthal, Alois Lexa, Count von. Austro-Hungarian statesman.
- * Albert, Charles Stanley. American clergyman.
- Alexander, Thomas. United States commissioner. Died July 24; born, 1854.
- * Alger, Philip Rounseville. American naval officer.
- Allen, James Cameron. American jurist and former member of Congress from Illinois. Died January 30; born, 1822.
- * Allitsen, Frances. An English composer.
- * Alma-Tadema, Sir Laurence. English artist.
- * Andree, Richard. A German geographer.
- * Andrews, William Swain. American lawyer and public official.
- Angulo, Felipe. Former Colombian minister at London. Died, March.
- * Anshutz, Thomas Pollock. American artist.
- Anthony, Geraldine W. American author and scientist. Died October 20.
- * Arbuckle, John. American merchant and philanthropist.
- * Astor, John Jacob. American capitalist.
- Atwood, Charles Kellogg. Oldest graduate of Yale University. Died September 19; born, 1821.
- * Austin, Henry. American lawyer.
- Avery, George Alden. American architect. Died May 13; born, 1852.
- * Avery, Robert. American soldier and lawyer.
- * Aycock, Charles Brantley. Former governor of North Carolina.
- * Ayme, Louis Henri. American public official.
- * Bacon, Francis. American surgeon.
- * Bacon, Henry. American artist.
- Baird, Henry Carey. American publisher. Died December 31; born, 1825.
- * Bang, Hermann Joachim. Danish author.
- * Barr, Robert. English novelist.
- * Barton, Clara. American philanthropist.
- Batterman, Henry. American merchant. Died January 10; born, 1849.
- Beal, Frederick Earl. American physician and educator. Died August 8; born, 1868.
- * Beecher, Willis Judson. American theologian.
- * Beernaert, Auguste Marie François. Belgian public official.
- * Behrens, Siegfried. American musician.
- Beidler, Jacob A. Former member of Congress from Ohio. Died September 13; born, 1853.
- * Bent, Samuel Arthur. American lawyer.
- Beruete y Moret, A. de. Spanish artist and writer. Died, January; born.
- Bigelow, Charles A. American comedian. Died March 12; born, 1862.
- * Bingham, Henry Harrison. American public official.
- Bisson, Alexandre Charles Auguste. French playwright. Died January 28; born, 1849.
- Blackwood, William. English publisher. Died November 11; born, 1836.
- * Blair, Charles Austin. American jurist.
- * Blake, Edward. Canadian statesman.
- Blaustein, David. Jewish scholar and educator. Died August 28; born, 1864.
- Bleekman, George. American artist and writer on yachting. Died April 3; born, 1863.
- Block, Jan. Belgian composer. Died May 26; born, 1851.
- * Blodgett, John Taggart. American jurist.
- * Blyden, Edward Wilmot. American negro author.
- * Boas, Emil Leopold. American steamship director and philanthropist.
- Boen, Haldor. Former member of Congress from Minnesota. Died July 23; born, 1850.
- Boff, Felix M. Roman Catholic vicar-general. Died March 21; born, 1831.
- Bolsaudra, Francis Lecoq de. French physicist. Died, June; born, 1838.
- * Boise, Otis Bardwell. American music teacher.
- * Boller, Alfred Pancoast. American engineer.
- * Bonbright, Daniel. American educator.
- Bond, Frank Stuart. American railway official. Died February 26; born, 1830.
- Boniface, George C. American actor. Died January 4; born, 1824.
- Bonvoisin, Maurice. Belgian caricaturist known as "Mars." Died, March; born, 1849.
- * Booth, William. Commander-in-chief of the Salvation Army.
- Borden, Garrick Mallory. American art director and lecturer on art. Died May 24; born, 1875.
- Borden, Matthew Chaloner Durfee. American cotton manufacturer. Died May 27; born, 1842.
- * Bormann, Edward. German humorist and poet.
- * Bornet, Jean Baptiste Edouard. French botanist.
- * Boss, Lewis. American astronomer.
- Bostock, Frank C. American showman. Died October 8; born, 1862.
- * Bovey, Henry Taylor. English scientist.
- * Bowyer, John Marshall. Rear-admiral of the United States navy.
- * Bradley, John Edwin. American educator.
- * Bragg, Edward Stuyvesant. American soldier and public official.
- * Brastow, Lewis Orsmond. American theologian.
- * Brinkley, Frank. English editor.
- * Brisson, Henri. French statesman.
- * Brown, Justus Morris. American soldier.
- * Browne, William Hand. American writer.
- * Browning, Robert Wiedemann Barrett. Son of Robert Browning.
- * Brush, George Jarvis. American mineralogist.

- * Buchholz, Charles Waldemar. American engineer.
- * Buckhout, William A. American educator.
- * Bunn, Albert C. American medical missionary. Died December 24; born, 1845.
- * Burnham, Daniel Hudson. American architect.
- * Burt, Silas Wright. American soldier.
- * Burtzell, Richard Lalor. American Roman Catholic priest.
- * Butlin, Sir Henry Trentham. English physician.
- * Butt, Archibald Clavering. American soldier.
- * Byers, Margaret (Morrow). Irish educator.
- * Byrd, Adam Monrow. American public official.
- * Calahan, Edward A. American inventor. Died September 12; born, 1838.
- * Calhoun, David Samuel. American jurist. Died November 7; born, 1827.
- * Challice, Count. Austrian diplomat.
- * Cameron, Agnes Deans. American author and lecturer. Died May 13; born, 1863.
- * Canalejas y Mendez, José. Prime minister of Spain.
- * Carey, Asa Bacon. American soldier.
- * Carleton, Will. American poet.
- * Carlisle, Charles James Stanley Howard, Earl of. English nobleman and member of Parliament. Died January 20; born, 1868.
- * Carmichael, Alexander. Scotch scholar and student of folklore. Died June 6; born 1832.
- * Caro, Victor. Jewish rabbi and philanthropist. Died June 23;
- * Carrington, Henry Beebee. American soldier.
- * Carson, John M. American newspaper correspondent and soldier. Died September 29; born, 1828.
- * Cartwright, Sir Richard. Canadian statesman. Caventon, Eugene. French chemist. Died February; born, 1829.
- * Chetwood, Francis Barber. American clergyman and writer. Died January 14; born, 1832.
- * Childers, Hugh. English editor. Died August 81; born, 1862.
- * Chisholm, Hugh J. American capitalist.
- * Church, Alfred John. English clergyman and writer.
- * Churton, Edward Townson. Anglican bishop.
- * Clancy John. Irish Roman Catholic bishop.
- * Clark, Alvah A. Former congressman from New Jersey. Died December 27; born, 1840.
- * Clarke, William Newton. American scholar and educator.
- * Cleaves, Henry Bradstreet. American public official.
- * Clouston, Sir Edward Seaborne. Canadian financier.
- * Collins, Loren Warren. American jurist.
- * Collyer, Robert. Unitarian clergyman.
- * Coman, Henry Benjamin. American jurist.
- * Conlon, George. French public official. Died February 20; born, 1838.
- * Connell, Richard E. American public official.
- * Connors, Richard Stephens. American railway official. Died April 3; born, 1833.
- * Coolidge, John Bacon. American chemist and dentist.
- * Coolidge, Horace Hopkins. American lawyer and public official. Died February 5; born, 1832.
- * Cooper, Philip Henry. Rear-admiral, retired, of the United States navy.
- * Cooper, W. Harcourt. English engraver. Died, March; born, 1835.
- * Corbett, James Francis. Roman Catholic archbishop.
- * Coullé, Peter Hector. Roman Catholic cardinal.
- * Counterline, John Donnan. American clergyman.
- * Cox, Charles Finney. American scientist.
- * Craig, John. American horticulturist.
- * Crane, Richard Teller. American manufacturer.
- * Cromwell, Ellis. American public official, collector of internal revenue for the Philippine Islands. Died February 11; born, 1878.
- * Crothers, Austin Lane. American public official.
- * Cruise, Sir Francis. Irish physician and scholar. Died, February; born, 1835.
- * Crum, William B. United States minister to Liberia. Died December 7; born, 1858.
- * Cupples, Samuel. American manufacturer and philanthropist.
- * Currier, Mary Adams. American elocutionist and educator. Died May 2; born, 1832.
- * Cutting, William Bayard. American lawyer.
- * Dahlgren Charles Bunker. American soldier.
- * Dahn, Felix Sophus Julius. German historian, novelist, and poet.
- * Dale, Richard. American financier. Died September 18; born, 1828.

 - Thallman, Ernst. American banker. Died February 26; born, 1851.
 - Thoma, Ludwig F. American educator. Died June 22; born, 1847.
 - Thompson, Clifford. American soldier and editor. Died September 29; born, 1834.
 - Thompson, Fayette. American Methodist Episcopal clergyman. Died April 26.
 - Thompson, Frederick William. Canadian merchant and financier. Died, May; born, 1862.
 - Thurston, Gates P. American soldier and author. Died December 8; born, 1835.
 - Tilden, William S. American musician. Died May 16; born, 1830.
 - Tillinghast, Mary Elizabeth. American artist.
 - Tinel, Edgar. Belgian composer.
 - Torrey, Brandford. American naturalist and writer.
 - Torrey, Franklin. American sculptor.
 - Traeger, Christian Gottfried Albert. German writer and member of the Reichstag. Died, March; born, 1830.
 - Tristram, Thomas H. English jurist and church official.
 - Trotter, Lionel James. English lawyer and writer.
 - Tryon, James Rufus. Rear-admiral of the United States navy.
 - Tucker, Seth M. American lawyer and pioneer. Died January 4; born, 1830.
 - Twining, Louisa. English philanthropist. Died, September; born, 1820.
 - Ubinger, Johannes. German philosopher and educator. Died, March; born, 1855.
 - Varley, Henry. English evangelist. Died, March; born, 1836.
 - Vernon, Frédéric. French engraver.
 - Verrall, Arthur Woolgar. English scholar and educator.
 - Viebe, Herman Friedrich. German scientist. Died September 17; born, 1852.
 - Voltz, Ludwig. German painter. Died, January; born, 1826.
 - Wallis, Sir Frederick Charles. English surgeon. Died, April; born, 1860.
 - Wallot, Paul. German architect. Died August 10.
 - Walton, Clifford Stevens. American lawyer and public official.
 - Ward, John. English Egyptologist. Died, February; born, 1833.
 - Ward, Rowland. English taxidermist and hunter. Died December 28.
 - Warren, Henry White. American bishop.
 - Washburn, William Drew. American public official.
 - Weaver, James B. American soldier and political writer.
 - Webster, H. Daniel. American sculptor. Died March 20; born, 1879.
 - Weeden, William Babcock. American soldier.
 - Weimann, John. German editor and poet. Died January 27; born, 1843.
 - Welles, Benjamin Emory. American editor. Died January 4.
 - Wells, Almond Brown. American soldier.
 - Wells, Reuben. American inventor and locomotive builder. Died November 8; born, 1829.
 - Wendell, Oliver Clinton. American astronomer.
 - Wendt, Gustav. German classical scholar and educator. Died, March; born, 1847.
 - Wenlock, Beilby Lawley, Third Baron. An English administrator. Died January 16; born, 1849.
 - Wernher, Sir Julius. English capitalist.

• Wheeler, Charles Gilbert American chemist and mining geologist.
 • Wheelwright, Edmund March. American architect.
 White, Caroline. English authoress. Died September 2; born, 1811.
 • White, George Stuart. English field-marshal.
 White, Henry Kirk. American missionary. Died July 19.
 White, Maunsell. American metallurgist and inventor. Died October 22.
 • White, Trueman Clark. American jurist.
 • Wickliffe, Robert C. American public official.
 Widener, George D. American capitalist. Died at sea, April 15.
 • Wilson, John L. American newspaper proprietor and public official.
 • Wilson, Andrew. English journalist.
 Wieniawski, Joseph. Polish pianist. Died November 16; born, 1838.
 Wiley, Aquila. American brigadier-general, retired. Died June 5; born, 1832.
 Wiley, John McClure. Former member of Congress from New York. Died August 13; born, 1842.
 Willson, Sir Midway. English major-general. Died, March; born, 1848.
 Willis, Sir Alfred. English jurist. Died August 9; born, 1828.
 Winans, Ross Revillon. American capitalist. Died April 25; born, 1851.
 • Wines, Frederick Howard. American statistician and penologist.
 • Wing, Yung. Chinese statesman and scholar.
 Winkelmänn, Hermann. German dramatic tenor.
 • Wood, Henry Barnes. American educator.
 Wood, Oden. American artist. Died September 14; born, 1847.
 • Woodworth, William McMichael. American zoologist.
 Wright, Ammi Willard. American capitalist and philanthropist.
 • Wright, Sophie B. American philanthropist and educator.
 • Wright, Wilbur. American inventor and aeronaut.
 • Yeamans, Annie. American actress.
 • Young, Alfred Harry. English anatomist and educator.
 • Young, Lucien. Rear-admiral of the United States navy.
 • Zeal, Sir William Austin. Australian public official.

NEFF, STEWARD S. An American engineer, died July 12, 1912. He was born in Cincinnati, O., in 1859, and was first employed by the Pennsylvania Railroad as assistant engineer, afterwards serving under James J. Hill of the Great Northern. In 1892 he became superintendent of the Lake Superior and Ishpeming Railway. In 1895 he took charge of the famous loop at Chicago and two years later organized the system. In 1900 he entered the service of the Boston Elevated Railway as consulting engineer. He was afterwards consulting engineer of the Brooklyn Rapid Transit Railway Company. This post he resigned to accept a position as general manager of a system of electric railway lines in Mexico. He returned to the United States in 1906. He was most widely known as a transit engineer in the United States.

NEGRI SEMBILAN, THE (NINE STATES). A federation of states composing a state of the protected Federated Malay States (q. v.). The area is given as 2600 square miles; population, 130,201 (96,028 in 1901). The Malays number about 65,000 and are mainly engaged in agriculture in the Kuala Pilah and Tampin districts; the Chinese work in the tin mines. Area alienated (end of 1909) for mining, 26,677 acres; output, 4533 piculs tin and 43,537 tin ore. Area alienated for agriculture, 295,827 acres; area under rubber, (1910) 51,806 acres; rice, 33,876; cocoanuts, 19,246.

Seremban is the government headquarters.

Native affairs are administered by Tungku Mohamed, Yang di Pertuan of Sri Menati, and various chiefs; the British resident in 1912 was C. W. C. Parr (acting).

NEOCOLEMANITE. See **METEOROLOGY.**

NEON. See **PHYSICS.**

NEOSALVARSAN. This is a formaldehyde sodic sulphoxylate of dioxydamidoarsenobenzol. The arsenic content of three parts of neosalvarsan is approximately equal to two parts of salvarsan. Neosalvarsan is an orange-yellow powder, very unstable in the air and in solution, and readily soluble in water. Since it is merely a soluble compound of salvarsan, its actions and uses are the same as that drug. It is said to be tolerated better than salvarsan, and consequently may be employed in larger doses. Neosalvarsan may be administered by intravenous or intramuscular injection, preferably the former, but not subcutaneously. Solutions must be injected immediately after preparation. The drug is designed to replace salvarsan and to avoid the disagreeable and often dangerous by-effects of the latter remedy. Its limited trial during the short time which has elapsed since its introduction does not permit appraisal of its merits. See **SALVARSAN.**

NERVOUS DISEASES. See **GYNOVAL.**

NETHERLANDS, THE (or HOLLAND, KINGDOM OF). A constitutional monarchy of western Europe, lying between Germany and the North Sea. The Hague is the capital.

AREA AND POPULATION. The total area, including the rivers of Zeeland and South Holland, the Zuider Zee, the Dollart, and the Wadden (the shallows extending along the shores of Friesland and Groningen as far as the Dollart), based on a low-tide planimetric calculation, is 40,828.71 square kilometers (15,764 square miles). The land area by provinces, the population according to the census of December 31, 1909, the population as calculated December 31, 1911, and the density per square kilometer (1909 census) are given in the table below:

Provinces	Sq. kms.	Pop. 1909	1911	D.
North Brabant	4,972.84	623,079	639,507	125.30
Gelderland	5,024.40	639,602	654,319	127.30
South Holland	2,931.00	1,390,744	1,443,867	474.47
North Holland	2,762.01	1,107,693	1,138,421	401.05
Zeeland	1,831.75	232,515	235,007	126.93
Utrecht	1,363.21	288,514	294,930	211.64
Friesland	3,220.25	359,552	364,415	111.65
Overijssel	3,354.50	382,880	391,741	114.14
Groningen	2,283.52	328,045	333,217	143.66
Drenthe	2,662.09	173,318	178,561	65.11
Limburg	2,194.68	332,007	348,467	151.28
Total	32,600.25*	5,858,176	6,022,452	179.70

* 12,587 square miles.

Total number of males (1909) 2,899,125; females 2,959,050. According to nationality the population was divided as follows: Dutch, 2,788,193; Germans, 37,534; Belgians, 18,338; French, 2645; English, 2102; Austro-Hungarians 1223; others 3908; not indicated, 4152. The majority of the population are Protestants. 3,334,487. There were (1911) 43,030 marriages, 174,165 births, and 86,782 deaths, including still-births, 6638 still-births; excess of births over deaths, 86,383; emigrants, 2638.

A few of the great cities (communal population as calculated December 31, 1911) are Am-

sterdam (580,960), Rotterdam (436,018), The Hague (288,577), Utrecht (121,317), Groningen (77,221), Haarlem (69,988), Arnhem (64,634), Leiden (59,133), Nimeguen 57,116), Dordrecht (47,304), Bois-le-Duc (35,157), Delft (34,485), Schiedam (33,235), etc.

EDUCATION. The Dutch system of education is peculiar in that the state encourages and subsidizes private primary instruction in preference to maintaining public schools, though these are provided by local taxation in the districts where other schools are inadequate. Primary instruction is compulsory between the ages of seven and thirteen. The average attendance is 95 per cent. Secondary instruction is not free. A noteworthy feature is the excellence of the special agricultural and horticultural schools. There are universities at Amsterdam, Groningen, Leyden, and Utrecht, besides a small private institution.

PRODUCTION. The area (in hectares) and the production (in quintals) for two years, and the production per hectare in 1911, are as follows:

	Hectares		Quintals		Qa. ha.
	1911	1912	1911	1912	
Wheat	57,539	57,682	1,514,826	1,254,149	26.3
Rye	225,364	225,996	4,201,114	4,146,151	18.6
Barley	28,017	26,938	780,367	862,148	27.9
Oats	138,186	136,991	2,998,008	2,148,126	21.7
Flax	15,711	14,862	94,932†	98,197†	6.0†
Beets*	55,600	62,854	20,049,630	360.6
Tobacco	401	405

* For sugar. † Fibre.

The export (1910) of bulbs, trees, and shrubs was valued at 15,156,141 guilders; vegetables, 56,700,000; fruits, 2,546,000.

From the state coal mines (mostly in Limburg) 1,292,289 metric tons were raised, valued at 8,232,000 guilders. The fisheries products (North Sea) were valued at 11,654,951 guilders in 1910 exclusive of oysters (oyster catch, 3,210,614 kilos). Number of distilleries (1910), 464; breweries, 440; sugar refineries, 12; beet-sugar refineries, 27; salt works, 34; vinegar works, 73. Export of cheese (1910), 19,491,000 guilders.

COMMERCE. The Netherlands is practically a free-trade country. The total imports for consumption and exports of domestic produce are seen below for three years (precious metals included) in guilders (1 guilder=40.2 cents):

	1909	1910	1911
Imports...	3,137,400,000	3,265,200,000	3,333,200,000
Exports...	2,454,700,000	2,632,300,000	2,732,300,000

In the following table is given the trade in 1911 by great classes, in guilders:

	Imports	Exports
Foodstuffs	869,100,000	833,500,000
Raw materials	1,312,600,000	983,500,000
Manufactures	593,400,000	517,100,000
Miscellaneous	540,100,000	377,300,000
Total merchandise.....	3,315,200,000	2,711,400,000
Precious metals.....	18,000,000	20,500,000
Total	3,333,200,000	2,732,300,000

Countries of origin and destination follow, with values in millions of guilders:

	Imps.	Exps.		Imps.	Exps.
Germany	908.5	1,358.1	Brazil	26.8	3.6
D. E. Ind.	456.7	125.5	Sweden	45.7	20.8
Russia	366.5	17.5	Norway	39.3	16.7
U. K.	339.1	554.5	France	39.4	26.3
U. S.	330.6	105.0	Turkey	11.1	19.8
Belgium	323.6	318.9	Italy	11.1	22.7
Spain	88.5	7.5	Africa	8.5	21.0
Br. E. Ind.	88.1	5.0	Other	158.6	103.0
Rumania	82.6	7.9			
			Total....	3,333.2	2,732.3

Sailing vessels entered (1911) 1278 of 1,013,996 cubic meters capacity (of which 772, of 265,853M.³ Dutch) cleared, 1578 of 51,054,738M.³ (949, of 306,131M.³ Dutch). Steamers entered, 14,350, of 42,767,870M.³ capacity (3751, of 11,266,122M.³ Dutch); cleared, 14,332, of 42,462,831M.³ (2753, of 11,354,565M.³ Dutch). Merchant marine, January 1, 1912, 775 vessels, of 1,600,687M.³ (of which, 347 steamers, of 1,480,943M.³).

COMMUNICATIONS. On January 1, 1912 there were in operation 3234 kilometers of railway. The land is a network of canals and rivers. State telegraph lines, 7609 kilometers; wires, 37,867; receipts in 1911, 5,164,787 francs; expenditure, 8,729,184. Postoffices, 1511; receipts, 33,369,812 francs; expenditure, 28,025,206.

FINANCE. The 1913 budget is given below in detail:

Revenue	1000 gl.	Expenditure	1000 gl.
Excise	60,260	Internal adm....	41,083
Direct taxes.....	49,052	Interior (dept.)..	38,822
Stamps, etc.....	30,075	Public debt.....	38,027
Posts	17,535	War	33,364
Customs	14,826	Finance, etc.....	30,671
Telegraphs, etc..	5,237	Navy	20,130
Railways	4,188	Agriculture, etc..	11,992
Pilot dues.....	3,450	Justice	11,292
Domains	1,471	Colonial office...	2,681
Lottery	655	Foreign affairs..	1,377
Licenses	160	Civil list.....	945
Mine duties.....	20	Cabinet, etc.....	788
Miscellaneous ...	22,603	Miscellaneous ...	50
Total, 1913.....	209,531	Total, 1913.....	231,220
Total, 1912.....	202,068	Total, 1912.....	222,018
Total, 1910.....	199,499	Total, 1910.....	204,747

The total capital of the public debt stood (1912) at 1,156,258,450 guilders; interest, 32,504,430; amortization, 5,523,000. Between 1850 and 1911, the sum of 357,673,792 guilders has been devoted to the redemption of the public debt.

ARMY. The States-General on February 2, 1912, passed a new military law by which the total militia service was reduced from 8 to 6 years, with 5 years spent in the Landweer instead of 7, and enrollment up to the age of 40 in the Landsturm. The annual contingent of recruits was 23,000 men, and the militiamen were obtained by lot, there being variable periods of service from 4 to 18 months. The plan of organization was intended to provide a force available for ready mobilization, and the field army was organized into 4 divisions, each composed of 423 officers and 18,333 non-commissioned officers and men, with 2544 horses and 561 wagons. On a peace basis the establishment, which included the active army, the reserve cadres and the Landweer, would amount to 2900 officers and 165,000 men which could be raised to a war strength estimated at 200,000.

NAVY. The fleet (1912) included 9 armored

and 6 protected cruisers of 66,430 aggregate tons; 3 armored coast-defense vessels, of 6710; 3 river gunboats, of 1140; 12 gunboats (3 under construction), of 4000; 8 torpedo-boat destroyers (4 under construction), of 4000; 33 torpedo boats (4 under construction), of 4000; 4 mine layers (2 under construction), of 1880; 5 submarines (2 under construction), of 720.

The Dutch East India possessions contribute to the maintenance of the fleet. A bill for the construction of a new East Indian fleet was defeated in May, 1912, the proposals being considered inadequate by the majority. Upon the defeat of the bill followed the resignation of Vice-Admiral Wentholt, minister of marine. An expenditure of 12,000,000 guilders (a reduction from the 40,000,000 first proposed), was voted in July for coast-defense purposes, nearly half of which was intended for the fortifications at Flushing.

GOVERNMENT. The executive power is vested in the sovereign; the legislative, in a parliament (States-General) of two chambers acting jointly with the sovereign. Reigning sovereign in 1912, Queen Wilhelmina, born August 31, 1880; succeeded on the death of her father, November 23, 1890, under the regency of her mother; became of age and was enthroned, August 31, 1898; married, February 7, 1901, Henry, Duke of Mecklenbourg. Heiress-apparent, Princess Juliana, born April 30, 1909. The ministry, constituted February 12, 1908, was in 1912 composed as follows: Jhr. Dr. R. de Marees van Swinderen, foreign affairs; Dr. Th. Heemskerk, interior; Dr. E. R. H. Regout, justice; the minister of war, *ad int.*, marine; H. Colijn, war; Dr. M. J. C. M. Kolkman, finance; Dr. L. H. W. Regout, internal administration; A. S. Talma, agriculture, commerce, and industry; J. H. de Waal Malefijt, colonies.

HISTORY. An important debate in the spring concerned the proposals for a new fleet for the defense of the Dutch East Indies (see above, *Navy*). In September the minister of war proposed a change in the estimates that would enable him to hasten the execution of the coast-defense scheme. A preliminary credit of 1,500,000 florins was demanded. Besides the coast-defense measure, tariff reform continued to be one of the chief political issues of the year. In the speech from the throne, its necessity for the permanent increase of revenue, was specifically urged. On the day of the opening of the States-General, September 17 the Socialists, while endeavoring to force their way into the vicinity of the parliament building, came into conflict with the police, and several persons were injured, but none seriously. The queen and prince consort visited Paris in June, and Prince Henry visited London in April.

NEVADA. POPULATION. According to the Census Bureau statistics compiled in 1912, out of a total population in 1910 of 81,875, the foreign-born whites numbered 17,999, compared with 18,581 in 1900. Of these, the largest number, 2827, came from Italy; from Ireland, 1693; from England, 1793; from Germany, 1924; from Canada, 1057. Other European countries were represented by smaller numbers. The negroes in the State numbered 513 and the mulattoes 190. In 1890 the negroes numbered 242 and the mulattoes, 102.

AGRICULTURE. The acreage, value, and production of the principal crops in 1911-12 are shown in the following table:

	Acreage.	Prod.	Bu.	Value.
Corn	1912 1,000	30,000	\$	29,000
	1911 1,000	30,000		27,000
Wheat	1912 39,000	1,137,000		1,137,000
	1911 36,000	1,018,000		968,000
Oats	1912 10,000	400,000		208,000
	1911 8,000	360,000		223,000
Potatoes	1912 12,000	2,136,000		1,282,000
	1911 8,000	1,230,000		1,197,000
Hay	1912 227,000	a 681,000		5,925,000
	1911 254,000	a 864,000		8,208,000

a Tons.

MINERAL PRODUCTION. The gold production of the State in 1911 was \$18,193,397, compared with \$18,878,864 in 1910. The great bulk of the gold output came from dry or siliceous ores and from concentrates, the small remainder being derived almost wholly from copper ores, placer gravels, and lead ores. The silver output in 1911 was 13,184,601 fine ounces, compared with 12,479,871 fine ounces in 1910. The larger part was obtained from the siliceous silver-gold ores of Tonopah.

The production of blister copper in 1911 was 65,561,015 pounds, compared with 64,494,640 pounds in 1910. At the close of 1911 the State had produced 203,500,112 pounds. It ranks eighth in the total production of copper. The only important producing district is the Ely district in White Pine county.

MANUFACTURES. Statistics relating to the manufactures of the State were included in the Thirteenth Census taken in 1910. These figures cover the calendar year 1909. The results will be found summarized in the table below. The largest number of men in any one industry are employed in the car shops of railroad companies. These number 818.

The following table gives a summary of the results of the census for the calendar years 1909 and 1904, with per cent. of increase 1904-9:

	Number or Amount 1909	1904	In- crease
Number of establishments	177	115	53.0
Persons engaged in manufactures	2,650	1,016	160.8
Proprietors and firm members	137	108	26.9
Salaried employees..	256	160	141.5
Wage earners (average number).....	2,257	802	181.4
Primary horsepower.....	7,765	2,834	174.0
Capital	\$ 9,807,000	\$2,892,000	239.1
Expenses	11,082,000	2,632,000	321.0
Services	2,360,000	819,000	188.2
Salaries	378,000	126,000	200.0
Wages	1,982,000	693,000	186.0
Materials	8,366,000	1,628,000	413.9
Miscellaneous	356,000	185,000	92.4
Value of products....	11,887,000	3,096,000	283.9
Value added by manufacture (value of products less cost of materials)	3,521,000	1,468,000	139.8

POLITICS AND GOVERNMENT

There was no regular session of the legislature in 1912, but a special session was held at which a loan of \$200,000 was authorized, and provision was made for an annual State tax of sixty cents on each \$100. Aside from this, no measures of general importance were enacted. There was no election for State officers in 1912. Governor Oddie's term does not expire until 1914. The death of Senator Nixon in 1912 made it necessary for the governor to appoint his suc-

cessor. Governor Oddie first appointed George Wingfield, who declined the nomination, and he then appointed W. A. Massey, former chief justice of the Supreme Court of the State. The result of the election on November 5 was as follows: Wilson, 20,437; Roosevelt, 8347; Taft, 17,733; and Debs, 2859. Governor Wilson's plurality was 2704. The legislature is entirely Democratic.

STATE GOVERNMENT. Governor, T. L. Oddie; Lieutenant-Governor, G. C. Ross; Secretary of State, George Brodigan; Treasurer, William McMillan; Comptroller, Jacob Eggers; Superintendent of Public Instruction, J. E. Bray; Attorney-General, C. H. Baker—all Democrats, except Oddie, Eggers and McMillan, Republicans.

JUDICIARY. Supreme Court: Chief Justice, G. F. Talbot, Dem.; Justices, P. A. McCarran, Dem.; Frank Norcross Rep.; Clerk, Joe Josephs, Dem.

STATE LEGISLATURE, 1913. Democrats, Senate, 12; House, 31; joint ballot, 43. Republicans, Senate, 8; House, 19; joint ballot, 27. Progressives, Senate, 1; House, 1; joint ballot, 2. Socialists, Senate, 1; House, 1; joint ballot, 2. Democratic majority, Senate, 2; House, 10; joint ballot, 12.

The representatives in Congress will be found in the article UNITED STATES, section Congress.

NEVADA, UNIVERSITY OF. A State institution for higher education at Reno, Nev., founded in 1886. The students enrolled in the various departments of the university in the autumn of 1912 numbered 275. There were 45 members of the faculty. Three new men were added to the faculty in the department of agriculture during the year. The most notable benefaction was the endowment of the Mackay school of mines by Clarence H. Mackay, the income to be used for instruction in the school of mines. An electrical engineering building was completed during the collegiate year. Courses in dairying and soil physics were added to the curriculum and the university high school was abolished. The library contained 24,000 volumes. President, Joseph Edward Stubbs, D. D., LL. D.

NEWARK, N. J. See CITY PLANNING.

NEWBERRY, WALTER CASS. An American soldier, capitalist, and former member of Congress, died July 20, 1912. He was born in Waterville, N. Y., in 1835, and received an academic education. In 1861 he enlisted in the Civil War as a private in the 81st New York Infantry and rose successively to be captain and major of this regiment. In 1864 he became colonel and was brevetted brigadier-general in 1865 for services at Dinwiddie Court House, where he was severely wounded. After the war he settled in Petersburg, Va., and was mayor of the city in 1869. He built the reservoir water works of Richmond, Va. In 1876 he removed to Chicago, where he engaged in the mercantile business. He was postmaster of the city in 1888-89, and in 1891 was elected to the Fifty-second Congress.

NEW BRUNSWICK. A maritime province of the Dominion of Canada. Area 27,985 square miles. Population (census of June 1, 1911), 351,889, as compared with 331,120 in 1901. Fredericton, the capital, had 7208 inhabitants (7117 in 1901). The province is administered by a lieutenant-governor, Josiah Wood, appointed March 6, 1912. Premier in 1912, James K. Fleming. See CANADA.

The New Brunswick general elections gave the Conservatives a decisive majority in the assembly where, out of a membership of 48, only 2 Liberals were elected. In the House of Commons eight of the thirteen seats were retained by the Liberals. The issues were merely local, but the strengthening of the Conservatives was interpreted by the government as indicating an increasing strength of their party in the East.

NEW CALEDONIA. A French Melanesian colony. Area, with the Loyalty Islands, 19,823 square kilometers (50,680 inhabitants); of the dependencies Wallis Archipelago, 96 sq. kms. (4500); Fortuna and Alofi, 159 (1500); the Chesterfield Islands, 0.8 sq. km. Nouméa (6968 inhabitants) is the capital. Imports (1910), 12,689,000 francs (France, 5,875,000); exports, 9,732,000 (France, 3,880,000). The budget (1909) balanced at 3,588,000 francs, and the debt in 1910 was 10,361,000. Railways in operation, 16 kilometers; telegraph lines, 1042; wires, 1650. J. Richard was governor in 1912.

NEWCOMB, JAMES EDWARD. An American laryngologist, died August 27, 1912. He was born in New London, Conn., in 1857, and graduated from Yale College in 1880. He studied medicine at the College of Physicians and Surgeons, graduating in 1883. He began practice in New York City and continued this until the time of his death. He was lecturer on laryngology in the Cornell Medical College and was consulting laryngologist to Roosevelt Hospital. He contributed to many important medical works and edited the American edition of Grunwald's *Atlas of Diseases of the Mouth, Pharynx, and Nose*.

NEW CONSTRUCTION. See NAVAL PROGRESS.

NEWFOUNDLAND. See BERIBERI.

NEWFOUNDLAND. An island colony of Great Britain, on the northeast side of the Gulf of St. Lawrence. Area 42,734 square miles; population (as estimated December 31, 1910), 237,531. St. John's, the capital, has 31,501 inhabitants; Harbour Grace, 5184; Twillingate, 3542. Fishing, agriculture, mining, and lumbering are the chief industries. The settlements are largely on or near the coast. Paper and pulp mills have been established at Grand Falls and Bishop's Falls.

Imports (1909-10), \$12,799,696; exports, \$11,824,997; shipping entered and cleared, 2,099,698 tons; revenue, \$3,447,989; expenditure, \$3,137,775. Public debt, June 30, 1910, \$22,943,197. The Trepassay Railway, an extension towards Cape Race of the colony's system, was built to within 18 miles of its terminus during 1912. Governor (1912), Sir Ralph C. Williams (appointed 1909).

Attached administratively to Newfoundland is that part of the peninsula of LABRADOR comprehended between Hudson's Strait and Blanc Sablon, including the Hamilton basin. Labrador has a 600-mile coast-line and an area of about 120,000 square miles; population (estimated December 31, 1910), 4076. See UNITED STATES, *Foreign Relations*.

NEW GUINEA. The largest of the East Indian islands. See DUTCH EAST INDIES; GERMAN NEW GUINEA; PAPUA.

NEW HAMPSHIRE. POPULATION. According to the Census Bureau statistics compiled during 1912, out of the total population in

the State in 1910, 430,572, the foreign-born whites numbered 96,558, compared with 87,961 in 1900. Of these the largest number were from Canada, French, 40,752; from Canada, other, 16,930; from Ireland, 10,608; from Russia, 4337; from England, 4861. Other European countries were represented by smaller numbers. The negroes in the State in 1910 numbered 564 and the mulattoes 208; in 1890, the negroes numbered 614, and the mulattoes, 266.

AGRICULTURE. The acreage, value, and production for the principal crops in 1911 and 1912 will be found in the following table:

		Acreage.	Prod. Bu.	Value.
Corn	1912	23,000	1,058,000	\$ 794,000
	1911	23,000	1,035,000	849,000
Oats	1912	12,000	468,000	225,000
	1911	12,000	406,000	248,000
Potatoes	1912	17,000	2,380,000	1,452,000
	1911	17,000	2,125,000	1,849,000
Hay	1912	501,000	a 626,000	9,390,000
	1911	640,000	a 672,000	11,558,000
Tobacco	1912	100	b 170,000	31,000
	1911	100	b 170,000	27,200
a Tons. b Pounds.				

MANUFACTURES. The Thirteenth Census included statistics of manufactures in the State. These are for the calendar year 1909. The chief results are given in the table below. The greater number of the manufacturing establishments are located in the southern part of the State which possesses marked advantages for manufacturing, among which are an abundance of water power afforded by the Merrimac River, close proximity to the markets and business centres of New England, and excellent transportation facilities. The industry whose products had the largest value in 1909 was that which included boots and shoes with cut stock and findings.

	Number or Amount 1909	1904	In- crease
Number of establishments	1,961	1,618	21.2
Persons engaged in manufactures ..	84,191	69,758	20.7
Proprietors and firm members	2,014	1,726	16.7
Salaried employees	3,519	2,666	32.0
Wage earners (average number) ..	78,658	65,366	20.3
Primary horsepower	293,991	218,344	34.6
Capital	\$139,990,000	\$109,495,000	27.8
Expenses	149,215,000	112,888,000	32.2
Services	40,391,000	30,665,000	31.7
Salaries	4,191,000	2,972,000	41.0
Wages	36,200,000	27,693,000	30.7
Materials	98,157,000	73,218,000	34.1
Miscellaneous	10,667,000	9,007,000	18.4
Value of products ..	164,581,000	123,611,000	33.1
Value added by manufacture (value of produces less cost of materials)	66,424,000	50,395,000	31.8

FINANCE. The report of the treasurer shows receipts for the fiscal year ending August 31, 1912, of \$2,797,894. At the beginning of the fiscal year there was on hand a balance of \$293,987. The total disbursements during the fiscal year 1912 amounted to \$2,514,054, leaving a balance at the end of the fiscal year of \$567,827. The chief revenue was derived from taxes of various kinds, and the chief expenditures are for education, support of State institutions, and for the support of State officers. The net indebtedness of the State on September 1, 1912,

was \$1,387,038. The debt was decreased during the year by the payment of \$76,089.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions of the State included the various State prisons and county jails, the county almshouses and the following institutions: State Industrial School, State School for Feeble-minded, the New Hampshire Soldiers' Home, the New Hampshire State Sanatorium, and several private institutions, over which the State has supervision, including the New Hampshire Orphans' Home, the Manchester Children's Home, the Dover Children's Home, the Orphans' Home at Concord, and several others. The deaf, dumb, and blind of the State receive education in institutions in other States. These are the Maine School for the Deaf, the Clark School for the Deaf at Northampton, Mass., the Perkins Institution and Massachusetts School for the Blind in Boston, and the New England Industrial School for Deaf Mutes at Beverly, Mass. There is a juvenile court law in force in the State. This was enacted in 1907 and its results have been very satisfactory. The charitable and correctional institutions are under the control of the State board of charities and corrections.

POLITICS AND GOVERNMENT

The year 1912 was an important and interesting one in the political history of the State. Besides the presidential and State elections with their unusual results, a convention was held in June to recommend amendments to the constitution, for the consideration of the voters, a two-thirds affirmative vote being necessary for ratification. The convention was in session ten days and recommended 12 amendments. A proposition to extend full suffrage to women was defeated, as was another proposing the initiative, referendum, and recall.

CONSTITUTIONAL AMENDMENTS. The amendments submitted at the general November elections were: (1) To increase the senate from 24 to 36; (2) to decrease the house membership from 410 to about 325 by changing the basis of representation; (3) to permit the classification of property for taxation; (4) to permit a grading of the inheritance tax; (5) to permit the taxation of public service corporations on income basis; (6) to strike the word "Protestant" from the bill of rights; (7) to disqualify voters convicted of certain crimes; (8) to provide that officers should be elected by plurality vote; (9) removing pension limitation as to civil officers; (10) extending jurisdiction of police courts; (11) changing basis of councilor districts from property to population; (12) giving governor veto power on separate appropriation items. Only numbers 7, 8, 10 and 11 were ratified. The chief purpose in calling the convention had been to reform the method of taxing money at interest and growing wood and timber, the present requirement being that all property taxed should be at full value and at a uniform rate. For years the money-at-interest class had been ignored and forest growth undervalued until the abuse had extended to other property and the demand for rigid law enforcement as the remedy was adopted. There was much disappointment that Nos. 2 and 3 were not ratified and a strong movement arose to reconvene the convention to resubmit those

amendments, as they fell only a fraction under the necessary 66 2/3 per cent. in favor. The legislature of 1913 was to be asked to make an appropriation to meet the expense of reassembling.

CONVENTIONS AND ELECTIONS. Political activity was more than ordinarily intense throughout the year, largely through the action of Governor Bass in joining in the request made by seven Republican governors to Colonel Roosevelt to be a candidate for a third term in the presidency. Although the nomination of delegates to national conventions and the nomination of presidential electors were specifically excepted from the direct primary law of 1909, Governor Bass demanded a voluntary preferential presidential vote, which was granted without opposition by the Republican State committee. It was held April 23, at the same time delegates were chosen to the Republican State convention which assembled at Concord, April 30. An active campaign was waged, but Taft won by a strong majority, both in preferential vote and number of delegates. Taft delegates were chosen by a vote of 530 to 255 for Roosevelt delegates. The preferential vote was 16,000 for Taft to 12,000 for Roosevelt. The Democratic State delegate convention was held May 14, and a resolution was adopted declaring it to be the sentiment of the convention that they should vote for Champ Clark as long as there was any chance for his nomination. The Democrats made no attempt at a presidential preference vote.

The direct primary for the nomination of State officers was held September 3. Franklin Worcester, who had been identified with the Progressive wing of the Republican party, and Samuel D. Felker, Democrat, were the nominees, both unopposed. Subsequent to the primary, Governor Bass issued a public address stating that a Progressive party would be formed and put in nominees for electors and for governor, congressmen, and some other State offices. This was done by petition, Winston Churchill, who had unsuccessfully sought the Republican nomination by a spectacular campaign in 1906, becoming the gubernatorial nominee. A most aggressive campaign was conducted. The election of November 5 resulted as follows: For President, Wilson, 34,724; Taft, 32,961; Roosevelt, 17,695; Debs, 1981, and Chafin, 535; for Governor, Felker, Dem., 34,203; Worcester, Rep., 32,504; Churchill, 14,401; others, about 2000.

Under the unamended constitution a majority rather than a plurality was necessary for an election, and there was no choice by the people. The election was therefore thrown into the legislature of 1913. Eleven senators were elected on the Republican ticket and nine on the Democratic, with no choice in four districts, because of the majority rule above alluded to. For the house, 208 representatives were elected as Republicans, and 197 as Democrats. Following the election, the Progressive party State committee advanced the claim that about 30 of those elected on the Republican ticket were Progressives and would not be bound to support the Republican nominees.

STATE GOVERNMENT. *Governor _____; Secretary of State, _____; Treasurer, _____; Auditor, Frank A. Musgrove;

* State officers to be elected by legislature which convenes January 1, 1913; November, 1912, election not conclusive.

Adjutant-General, Herbert E. Tutherly; Attorney-General, J. P. Tuttle; Superintendent of Education, Henry C. Morrison; Commissioner of Agriculture, Nahum J. Bachelder; Commissioner of Insurance, R. J. Merrill—all Republicans.

JUDICIARY. Supreme Court: Chief Justice, Frank N. Parsons, Rep.; Associate Justices, Robert J. Peaslee, Dem.; Reuben E. Walker, Rep.; John E. Young, Rep.; George H. Bingham, Dem.; Clerk, A. J. Shurtleff, Rep.

STATE LEGISLATURE, 1913. Republicans, Senate 12; House, 210; joint ballot, 222. Democrats, Senate, 8; House, 195; joint ballot, 203. Republican majority, Senate, 4; House, 15; joint ballot, 19.

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

NEW HEBRIDES. A group of Melanesian islands jointly administered by France and Great Britain through the French and English high commissioners for the Pacific. There were resident-commissioners, in 1912—French, M. Repiquet; English, M. King. Vila, in the island of Efate, is the seat of government. A large proportion of the natives are cannibals, and the sale to them of arms, ammunition, and intoxicating liquors is prohibited.

NEW JERSEY. POPULATION. According to the Census Bureau statistics compiled during 1912, out of the total population, 2,537,167 in 1910, 658,188 were foreign-born whites, compared with 430,050 in 1900. The largest number of these 122,989, came from Germany; from Italy, 115,337; from Russia, 93,691; from Austria, 58,059; from England, 50,272; from Hungary, 46,006; from Ireland, 82,515; from Scotland, 17,493; and from Sweden, 10,544. Other European countries were represented by smaller numbers. In Jersey City, which had a total population of 267,779, there were 77,697 foreign-born whites. In Newark, with a population of 347,469, there were 111,658 foreign-born whites. In Paterson, with a population of 125,000 there were 46,398 foreign-born whites. The negroes in the State in 1910 numbered 89,760 and the mulattoes, 14,207. In 1890 the negroes numbered 47,638, and the mulattoes, 7202.

AGRICULTURE. The acreage, value, and production of the principal crops in 1911 and 1912 are shown in the following table:

		Acreage.	Prod. Bu.	Value.
Corn	1912	273,000	10,274,000	\$7,054,000
	1911	270,000	9,936,000	7,055,000
Wheat	1912	79,000	1,462,000	1,433,000
	1911	84,000	1,462,000	1,404,000
Oats	1912	67,000	1,849,000	814,000
	1911	71,000	2,024,000	1,012,000
Rye	1912	72,000	1,260,000	995,000
	1911	72,000	1,181,000	980,000
Potatoes	1912	92,000	9,936,000	6,558,000
	1911	84,000	6,132,000	6,439,000
Hay	1912	362,000	a 521,000	10,420,000
	1911	428,000	a 449,000	9,878,000

a Tons.

MINERAL PRODUCTION. The iron ore produced in the State in 1911 amounted to 359,721 long tons, valued at \$1,158,271, compared with a product in 1910 of 521,832 long tons, valued at \$1,582,213.

A considerable quantity of zinc is produced in the State from Sussex county. There were treated 306,168 short tons of ore and 67,896 tons of crude ore were shipped to the

smelters. Figured as metallic zinc, the total recoverable output was 154,890,900 pounds of spelter, valued at \$8,828,781.

MANUFACTURES. The Thirteenth Census statistics are for the calendar year 1909 and were compiled in 1912. New Jersey is preëminently a manufacturing State and it has shown a steady increase in each census taken. The increase in the five-year period, 1904-1909, was greater than in the previous five-year period, 1889-1904. From the following table it will be seen that there were in 1909, 8817 manufacturing establishments, which gave employment to an average of 371,265 persons:

	Number or Amount 1909	1904	P. C. of Inc. 1904-'09
Number of establishments	8,817	7,010	25.8
Persons engaged in manufactures...	371,265	296,262	25.3
Proprietors and firm members..	8,204	6,730	21.9
Salary'd employees	36,838	23,196	58.8
Wage earners (average number)	326,223	266,336	22.5
Primary horsepower	612,293	436,274	40.3
Capital	\$ 977,172,000	\$715,060,000	36.7
Expenses	1,032,698,000	694,128,000	48.8
Services	218,046,000	157,126,000	38.8
Salaries	48,336,000	28,957,000	66.9
Wages	169,710,000	128,169,000	32.4
Materials	720,033,000	470,449,000	53.1
Miscellaneous ...	94,619,000	66,553,000	42.2
Value of products..	1,145,529,000	774,369,000	47.9
Value of products less cost of materials	425,496,000	303,920,000	40.0

The largest number of wage-earners was employed in industries relating to the manufacture of silk and silk goods, 30,285; in foundry and machine shop production, there were 27,815; in the manufacture of woolen, worsted, and felt goods, 12,652; in the manufacture of electrical machinery, apparatus, and supplies, 11,099, and in dyeing and finishing textiles, 10,129. The greatest value of product was found in the smelting and refining industries, \$125,651,000. This was followed by silk and silk goods, \$65,430,000; foundry and machine shop products, \$65,398,000; slaughtering and meat-packing \$37,583,000; woolen, worsted, and felt goods, \$33,939,000. Other industries with a value of \$20,000,000 and over, were wire industries, leather industries, manufacture of electrical machinery, tobacco manufactures, chemicals, malt liquors, and bread and other bakery products. The total number of persons employed was 371,265, of whom 278,068 were male, and 92,297 female. The number of persons employed under 16 years of age was 7538. For the great majority of wage-earners the prevailing hours of labor ranged from 54 to 60 a week; 12.8 per cent. of the total were employed in establishments where the prevailing hours were less than 54 a week, and 4.8 in those where they were more than 60 a week. The largest number of wage-earners was found in Newark, 59,955; in Paterson there were 32,004; in Jersey City, 25,454; in Trenton, 18,583; in Passaic, 15,086; in Elizabeth, 12,737, and in Bayonne, 7519.

FINANCE. The report of the State treasurer for the fiscal year ending Octobe 31, 1912, showed a balance on hand November 1, 1911, of \$3,309,781. The receipts for the fiscal year amounted to \$9,857,366 and the disbursements

to \$7,696,475, leaving a balance at the end of the fiscal year of \$5,270,672. The chief sources of revenue are from taxes of various kinds and the chief expenditures are for education and the support of State institutions.

CHARITIES AND CORRECTIONS. The institutions under State control, with their populations in 1912, were as follows: State Hospital for the Insane, Morris Plains, 2302; State Hospital for the Insane, Trenton, 1543; State Home for Feeble-minded Women, Vineland, 247; New Jersey State Village for Epileptics, 392; New Jersey State Prison, 1527; New Jersey Reformatory, 505; State Home for Boys, 519; State Home for Girls, 226; Soldiers' Home, Kearny, 531; Soldiers' Home, Vineland, 348; Sanatorium for Tuberculosis Diseases, 189. The legislature of 1911 provided for the appointment of a convict labor commission to study the outdoor employment of prisoners, including those confined in county penitentiaries and jails. This commission was to make a report to the legislature of 1913. The prison labor commission charged with the organization of prison industries on the "State use" system had not yet been able to accomplish any definite results owing to the absence of any appropriation for the purpose. The prison contracts in force expire in 1914, and unless favorable legislative action with a sufficient appropriation is taken during the next session of the legislature, there will be almost a certain condition of enforced idleness for practically all the 1500 prisoners in the prisons of the State.

POLITICS AND GOVERNMENT

The position of Governor Wilson as one of the leading candidates for the Democratic nomination for the presidency up to the time of the Baltimore convention and his nomination at that convention made the political year in New Jersey one of great interest. Governor Wilson's term of office had been a successful one, although he had made many enemies among the active politicians. His candidacy for President was received with enthusiasm by the great bulk of the people of the State. This was shown in the presidential primaries which were held on May 27.

The Progressive policies, advocated by Mr. Roosevelt, had large support in the State, and this too was shown by the presidential election, the results of which are noted below. An aggressive campaign was made by both Mr. Roosevelt and President Taft previous to this election. This is described in the article **PRESIDENTIAL CAMPAIGN.**

The law providing for this election was similar in most respects to that of Massachusetts. The voter had the opportunity to express directly his preference for the presidential candidate, and at the same time to vote for delegates to the national convention. Each candidate for delegate was permitted to have opposite his name on the ballot the name of the presidential candidate he preferred. There was therefore the same possibility in New Jersey as in Massachusetts for a confused result from the preference vote cast for one candidate and the selection of delegates committed to another candidate. No such result, however, occurred in New Jersey. Mr. Clark, the chief opponent of Governor Wilson as Democratic candidate, on April 4 sent a communication to the Secre-

tary of State declining to allow his name to appear on the ballot. This he did out of courtesy to Governor Wilson. This action left the entire Democratic field to Governor Wilson, and was induced in some degree by the fact that Governor Wilson had made no attempt to secure delegates in Missouri.

The result of the preferential election was on the Republican side a pronounced victory for Mr. Roosevelt. He received 61,297 votes, and President Taft, 44,034. As a result, Mr. Roosevelt was given the entire 28 delegates in the national convention. The four Roosevelt delegates-at-large were elected by substantially the same plurality as in the preference vote. The vote in the State was light. Governor Wilson carried the Democratic vote by a large majority and received the Democratic delegates.

The Prohibition party on July 12 held its national convention at Atlantic City, nominating the Rev. Eugene W. Chafin of Tucson, Ariz., for President, and Aaron H. Watkins of Ada, O., for Vice-President.

After the Chicago convention the Progressive party held a convention on July 23. The platform adopted contains provisions favoring the nomination of party candidates for President and Vice-President by direct nomination; the abolition of the electoral college, and the election of President and Vice-President by popular vote; the direct election of United States senators; simpler and easier methods whereby the people may amend the constitutions of the State and the United States; the initiative, referendum and recall; the submission to the people of an amendment to the State constitution giving women the same right to vote as men; a national progressive income and inheritance tax; government ownership and operation of express, telegraph, and telephone service. The plank dealing with the tariff, called for a protective tariff limited to the difference in cost of production here and abroad, and demanding a downward revision of the present tariff. A solution of the trust problem by strict governmental regulation and control through a commission and by the abolition of all special privileges was declared for. The platform called for a revision of the patent laws and for laws providing for the government-ownership and operation of railways and all other public utilities in Alaska, together with the leasing of all coal, mineral, and timber lands in Alaska. The platform advocated a law authorizing the Interstate Commerce Commission to fix railway freight and passenger rates and to make a valuation of all physical property of railways. The establishment of a national bureau of public health was called for. The principle of the merit system of appointment to public office and the rigid enforcement and extension of the civil service laws now on the statute books was advocated, and the financial scheme of the monetary commission was opposed.

As there was no election of governor or other State officers in 1912, no nominations were made.

On September 24 senatorial primaries were held for the election of a senator to succeed Senator Briggs, whose term expires in 1913. Mr. Briggs was a candidate for renomination. The Democratic candidates were Judge William Hughes, who, a short time before, had resigned as representative in Congress, and former

United States Senator James Smith. Additional interest was given to the contest between these candidates from the fact that Mr. Smith had been the most aggressive opponent of Governor Wilson, and had attempted to reverse the verdict of the preferential senatorial primary two years before when Senator Martine was elected. Judge Hughes had the active support of the governor in his candidacy. The primaries resulted in the nomination of Judge Hughes by a plurality of more than 20,000. Senator Briggs was renominated by the Republicans.

The Democratic and Republican parties both held State conventions for the nomination of presidential electors and the adoption of State platforms on October 1. Both conventions were more or less perfunctory. Representatives of the woman suffrage movement appeared at both, and the Republicans inserted a plank in their platform declaring for woman suffrage. The Democrats omitted such a plank on the ground that the calling of a constitutional convention which their platform advocated would sufficiently cover the situation. The election on November 5 resulted as follows: Wilson, 178,289; Roosevelt, 145,410; Taft, 88,835. The legislature is Democratic, with a majority on joint ballot of 46.

OTHER EVENTS. On February 20, charges were made against Senator Richard Fitzherbert of Morris county, alleging that he had solicited \$5000 for his vote on certain bills abolishing the use of acetylene gas on passenger trains, and the manufacture of such gas. An investigation was held by the judiciary committee of the Senate. On March 7, by a strictly party vote of 11 Republicans and 9 Democrats, Senator Fitzherbert was adjudged guilty of conduct inconsistent with the trust and duty of a senator. In a vote taken in the Senate on March 13, the attempt to remove Senator Fitzherbert failed on account of the necessity of obtaining a two-thirds vote, which was not possible.

A remarkable condition of corruption was found in Atlantic City as a result of investigations carried on by detectives under the employ of William J. Burns. Five city councilmen confessed to taking bribes. Further investigation involved many other city officials and citizens.

Municipal elections were held in the State on May 14. The chief interest was in the vote of several cities under the commission form of government. Atlantic City voted to adopt this form of government by a majority of 122. The city of Elizabeth rejected the commission form of government by a vote of 4923 to 2829.

LEGISLATION. The legislature of 1912 enacted an unusually large number of important measures. Among these were the following: An act making provision for the sanitary condition of bakeries, and limiting the hours of service of adults as well as of children, and forbidding children under sixteen to work at night. This measure is similar to the one which was pronounced unconstitutional by the Supreme Court of the United States in the case of *Lochner vs. New York*. A measure was enacted providing for a pension for the widow of a governor, for her natural life. An important measure was enacted revising the law practice. A measure was passed forbidding the employment of any woman in any mercantile or manufacturing establishment, bakery, laundry, or restaurant working more than ten hours a day or

more than six days or sixty hours in any one week, with the proviso that this shall not apply to any mercantile establishment for a period shortly before Christmas or to canneries in packing perishable products such as fruits or vegetables. The power of inspection and regulation touching the composition, branding, and sale of concentrated feeding stuffs was given to the State chemists. Provision was made for the employment of inmates of penal and reformatory institutions on the State roads. A measure was enacted supplementary to the act defining motor vehicles and providing for their registration and license, regulating speed, etc. Further provision was made for the improvement and construction of State highways.

STATE GOVERNMENT. Governor, Woodrow Wilson, Dem. (to March 4, 1913); Secretary of State, D. S. Crater, Dem.; Treasurer, Daniel S. Voorhees, Rep.; Auditor, William E. Drake, Rep.; Comptroller, Edward I. Edwards, Dem.; Attorney-General, Edmund Wilson, Rep.; Adjutant-General, Wilbur F. Sadler, Jr., Rep.; Commissioner of Education, Calvin N. Kendall, Dem.; Commissioner of Insurance, G. M. LaMonte, Dem.; Commissioner of Agriculture, F. Dye, Rep.

JUDICIARY. Supreme Court: Chief Justice, W. S. Gummere, Rep.; Justices, Charles W. Parker, Rep.; T. W. Trenchard, Rep.; Samuel Kalisch, Dem.; C. G. Garrison, Dem.; James J. Bergen, Dem.; Willard P. Voorhees, Rep.; James F. Minturn, Dem.; F. J. Swayze, Rep.; Clerk, J. P. Tumulty, Dem.

STATE LEGISLATURE, 1913. Republicans, Senate, 9; House, 8; joint allot, 17. Democrats, Senate, 12; House, 51; joint ballot, 63. Democratic majority, Senate, 3; House, 43; joint ballot, 46.

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

NEW MEXICO. POPULATION. According to the Census Bureau statistics compiled in 1912, out of a total population in 1910 of 327,301, the foreign-born whites numbered 22,654, compared with 13,261 in 1900. Of these, 11,912 came from Mexico; from Italy came 1958; from Austria, 1244; from Germany, 1749; and from England, 1099. The negroes in the State in 1910 numbered 1628, and the mulattoes, 439. The negroes in 1890 numbered 1956, and the mulattoes, 986.

AGRICULTURE. The acreage, value, and production of the principal crops in 1911 and 1912 are shown in the following table:

	Acreage.	Prod. Bu.	Value.
Corn	1912 93,000	2,083,000	\$1,562,000
	1911 94,000	2,322,000	1,950,000
Wheat	1912 59,000	1,232,000	1,109,000
	1911 55,000	1,262,000	1,262,000
Oats	1912 53,000	1,839,000	828,000
	1911 48,000	1,862,000	1,061,000
Potatoes	1912 9,000	900,000	585,000
	1911 10,000	800,000	800,000
Hay	1912 187,000	a 436,000	3,706,000
	1911 221,000	a 575,000	7,475,000

a Tons.

MINERAL PRODUCTION. The production of blister copper in the State in 1911 was 2,860,400 pounds as compared with 3,784,609 pounds in 1910. The total production of copper since 1845 is 95,183,563 pounds. The principal production is from the districts in Grant county.

1912—30

The gold production of the State in 1911 was \$762,808, compared with \$482,424 in 1910. Siliceous ores from the entire State produced over 89 per cent. of the total gold output. The silver output in 1911 was 354,540 fine ounces, compared with 843,987 fine ounces in 1910. The greater part of the silver was produced in Socorro county.

The production of coal in the State in 1911 was 3,148,158 short tons, valued at \$4,525,925. In common with most of the States in the Rocky Mountain region, New Mexico showed a decrease in coal production in 1911. This was due to the unusually mild weather in the winter of 1910-11, the decreased consumption by railway locomotives, and the resumption of coal-mining in the southwestern and central States, following the six months' strike in 1910. The decrease in 1911 was 360,163 short tons. The number of men employed in the coal mines of the State in 1911 was 4007.

MANUFACTURES. The Thirteenth Census included statistics of manufactures. These are for the calendar year 1909. The most important general results of the census are given in the table below. The industry in which the largest number of wage-earners was employed was that connected with cars and general shop construction, and repairs by steam railway companies. The total number was 1489 and the value of the product of the industry was \$2,251,000. The only other considerable manufacturing industry in the State is that related to lumber and timber products. In this 1475 wage-earners were employed and the product was valued at \$2,162,000. The total number of wage-earners in the State in 1909 was 4143. Of these 66 were under 16 years of age and of these, 3 were women. The prevailing hours of labor were 60 a week, or 10 a day for the large majority of the wage-earners. The largest number of wage-earners was in the city of Albuquerque, 587. The industries in this city comprise 9.9 of the total industrial establishments of the State. The following table shows the increase in manufacturing in the five-year period 1904-1909:

	Number or Amount 1909	1904	P. C. 1904-'09
Number of establishments	313	199	57.3
Persons engaged in manufactures	4,766	3,891	22.5
Proprietors and firm members	288	189	52.4
Salaried employees	335	224	49.6
Wage earners (average number)	4,143	3,478	19.1
Primary horsepower	15,465	5,948	160.0
Capital	\$7,743,000	\$4,838,000	68.9
Expenses	7,049,000	5,081,000	38.7
Services	2,974,000	2,417,000	23.0
Salaries	383,000	264,000	45.1
Wages	2,591,000	2,153,000	20.3
Materials	3,261,000	2,236,000	45.8
Miscellaneous	814,000	428,000	90.2
Value of products	7,898,000	5,706,000	38.4
Value added by manufacture (value of products less cost of materials)	4,637,000	3,470,000	33.6

EDUCATION. The State, in 1912, contained 100,045 pupils between the ages of 5 and 21. The enrollment for the year 1911-12 was 57,436. The public school teachers numbered 1548. The total expenditure for maintaining schools for the one thousand school districts

of the State in 1911-12 was \$997,881. Of this amount \$265,765 was expended for new buildings and improvements. The first State legislature passed twelve important school laws at its session in 1912. The revenue bill made a state-wide levy of half a mill, the proceeds from which are to go into the reserve fund for the help of weak districts. The constitution of the State provided for a minimum school term of five months in each school district and this law enables compliance with such constitutional provision. Another important measure was the industrial education bill, which provides for the teaching of domestic science, manual training, and agriculture in the elementary schools, and for the appointment of a State director of industrial education. The third bill of importance was that creating county high schools and fixing a two-mill county levy for their maintenance. The sources of revenue for education in the State are proceeds from the sale of public lands and rental from lands rented. There are approximately eight and one-half million acres of public land to be administered in the interests of the common schools.

FINANCE. The report of the State treasurer for the fiscal year ending November 30, 1912, showed a balance in the treasury on November 30, 1911, of \$568,199. The receipts for the fiscal year were \$2,382,274 and the disbursements were \$2,295,098, leaving a balance in the treasury on November 30, 1912, of \$655,375. The chief expenditures were for education and for the support of State institutions. The principal sources of revenue were from taxation and from the income of the various funds.

CHARITIES AND CORRECTIONS. The institutions supported by the State include the Penitentiary at Santa Fé, the Asylum for the Insane at Las Vegas, the Reform School at Springer, the Deaf and Dumb Asylum at Santa Fé, and the Institute for the Blind at Alamogordo. The State also aids in the support of St. Vincent's Orphanage. There is as yet no organized department of charities and corrections in the State.

POLITICS AND GOVERNMENT

The legislature was in session in 1912 and the most important measures enacted will be found mentioned in the paragraph *Legislation* below. On January 6, New Mexico became the 47th State of the Union. On that date President Taft issued a proclamation providing for its admission. On January 15, W. C. McDonald was inaugurated governor of the State. The legislature on March 27 elected Albert B. Fall, Rep., and Thomas B. Catron, Rep., as United States senators. Senator Fall was elected for one year, while Mr. Catron received the full six-year term.

CONVENTIONS AND ELECTIONS. The Republican State convention for the choosing of delegates to the national convention met on March 9. The convention was controlled by the Taft wing of the party and eight uninstructed delegates. At the Chicago convention seven delegates voted for Taft and one for Roosevelt. The Democratic convention for the nomination of delegates instructed the delegates chosen to vote for Champ Clark for President. On June 6 Albert B. Fall was reelected United States senator after a sharp contest. The House of Representatives for a time refused to go into joint session, but finally did so. Twenty-two

members, however, refused to vote. These included all the Democrats and Progressive Republicans and three regular Republicans. The previous attempt to hold an election resulted in the arrest of four members of the House of Representatives, Julian Trujillo and J. P. Lucero of Rio Arriba County, and Manuel Cordova and Luis Montoya of Taos County. They were arrested on March 19, charged with having taken bribes of \$500 each. It was alleged that these men had agreed to vote for Senator Fall for \$500 each. When Senator Fall heard of this a trap was laid whereby the men were caught in the act of receiving money. An investigation was held by a committee of the House of Representatives and the accused men were exonerated.

The vote for President in the election of November 5 resulted as follows: Wilson, 20,437 votes, Taft, 17,733, Roosevelt, 8347.

LEGISLATION. The first legislative session of the State passed few measures of importance. Acts were passed relating to the bonding of the public debt and the disposition of a large body of land given to the State by the general government in the enabling act. A measure was passed providing for the prevention of corrupt practices in connection with elections, and another measure providing for the study of alcoholic drinks and their effect upon the human system.

STATE GOVERNMENT. Governor, William C. McDonald, Dem., Lieutenant-Governor, E. C. de Baca, Dem.; Secretary of State, Antonio Lucero, Dem.; Treasurer, O. N. Marron, Dem.; Auditor, W. G. Sargent, Rep.; Attorney-General, Frank W. Clancy, Rep.; Superintendent of Education, Alvan N. White, Dem.

JUDICIARY. Supreme Court: Chief Justice, Clarence J. Roberts; Associate Justices, Richard H. Hanna, and Frank W. Parker; Clerk, José D. Sena—all Republicans.

STATE LEGISLATURE, 1913. Republicans, Senate, 17; House, 33; joint ballot, 50; Democrats, Senate, 7; House, 16; joint ballot, 23; Republican majority, Senate, 10; House, 17; joint ballot, 27.

Representatives in Congress will be found in the section *Congress*, article **UNITED STATES**.

NEW SOUTH WALES. A state of the Commonwealth of Australia. Area, 310,372 square miles. Population (census of April 3, 1911), 1,648,448. Included in these figures are the area and population of the federal capital territory—about 900 square miles and 1714 inhabitants. The population figures do not include full-blooded aborigines. Sydney, the capital, is the largest city of Australasia; it had 112,921 inhabitants—with suburbs, 629,503. Governor in 1912, John Napier, Baron Chelmsford (appointed May 28, 1909); to be succeeded in March, 1913, by Sir Gerald Strickland. Premier in 1912, J. S. T. McGowen. See **AUSTRALIA**.

A government measure for maternity endowment involving an expenditure estimated at £60,000 annually was proposed in September.

NEW STARS. See **ASTRONOMY**.

NEW YORK. POPULATION. According to the Census Bureau statistics compiled in 1912 out of the total population of 9,113,614 in 1910, the foreign-born whites numbered 2,929,282, compared with 1,889,523 in 1900. The largest number, 588,319, came from Russia; from Italy, 471,910; from Germany, 437,866; from Austria, 249,853; from England, 146,386; from Canada,

97,829; from Hungary, 91,542; from Sweden, 53,684; from Rumania, 33,066; from Norway, 25,981; from Scotland, 39,408. In New York City, with a population of 4,746,883 the foreign-born whites numbered 1,927,713, of whom 483,580 came from Russia, and 340,524 from Italy. The negroes in the State in 1910 numbered 134,191 and the mulattoes, 30,608. In 1890 the negroes numbered 70,092 and the mulattoes, 15,240.

MINERAL PRODUCTION. The iron ore produced in the State in 1911 amounted to 1,057,984 long tons, valued at \$2,959,009, compared with a product of 1,287,209 long tons, valued at \$3,848,683 in 1910.

There were produced in the State in 1911 952,515 barrels of petroleum, compared with 1,053,838 barrels in 1910. Although the production remains comparatively constant year by year there has been a slight decline in the entire production for several years.

AGRICULTURE. The acreage, value, and production of the principal crops in 1911 and 1912 are shown in the following table:

		Acreage.	Prod. Bu.	Value.
Corn	1912	512,000	19,763,000	\$13,834,000
	1911	530,000	20,405,000	15,712,000
Wheat	1912	335,000	5,360,000	5,306,000
	1911	345,000	6,728,000	6,392,000
Oats	1912	1,192,000	36,714,000	15,420,000
	1911	1,310,000	38,645,000	19,709,000
Rye	1912	128,000	2,112,000	1,605,000
	1911	135,000	2,254,000	2,006,000
Potatoes	1912	360,000	38,160,000	22,133,000
	1911	375,000	27,750,000	24,975,000
Hay	1912	4,720,000	a 5,900,000	87,910,000
	1911	4,763,000	a 4,858,000	86,958,000
Tobacco	1912	4,000	b 5,200,000	655,000
	1911	3,800	b 5,054,000	525,616
a Tons. b Pounds.				

MANUFACTURES. The Thirteenth Census statistics are for the calendar year 1909 and were compiled in 1912. New York holds first rank among the States in manufacturing since the completion of the Erie Canal in 1825. It will be seen from the following table that in 1909 there were in the State 44,935 manufacturing establishments, which gave employment to an average of 1,203,241 persons.

	Number or Amount 1909	1904	P. C. of Inc. 1904-'09
Number of establishments	44,935	37,194	20.8
Persons engaged in manufac- tures	1,203,241	996,725	20.7
Proprietors and firm members	47,569	41,766	13.9
Sal. employees..	151,691	98,012	54.8
Wage earners (average num- ber)	1,003,981	856,947	17.2
Primary h. p.	1,997,662	1,516,592	31.7
Capital	\$2,779,497,000	\$2,031,460,000	36.8
Expenses	2,986,241,000	2,191,339,000	36.3
Services	743,268,000	541,160,000	37.8
Salaries	186,032,000	111,145,000	67.4
Wages	557,231,000	430,015,000	29.6
Materials	1,856,904,000	1,348,603,000	37.7
Miscellaneous	386,074,000	301,576,000	28.0
Value of products	3,369,490,000	2,488,346,000	35.4
Value of prod- ucts less cost of materials..	1,512,586,000	1,139,743,000	32.7

The largest number of wage-earners, 98,104, was found in the manufacture of women's cloth-

ing; in the manufacture of men's clothing, 91,363; in printing and publishing, 63,120; in foundry and machine-shop products, 64,066. The greatest value of products was in the women's clothing industry, \$272,518,000; in the manufacture of men's clothing, the product was valued at \$266,075,000; in printing and publishing, \$218,946,000; in foundry and machine-shop products, \$154,370,000; in slaughtering and meat-packing, \$127,130,000. Industries in which the product was valued at more than \$50,000,000 were bread, and other bakery products, malt liquors, tobacco manufactures; lumber and timber products; flour and grist-mill products, hoisery and knit goods, and electrical machinery. The total number of persons employed in manufacturing in the State was 1,203,241, of whom 869,434 were male, and 333,807 female. The wage-earners under 16 years of age numbered 7819. More than two-thirds of the wage-earners employed worked from 54 to 60 hours a week, while more than one-fourth were employed in establishments where the usual hours were less than 54 a week; and only 4.1 per cent. in establishments where more than 60 hours a week prevailed. The largest number of wage-earners was in New York City, 554,002; in Buffalo, 51,412; in Rochester, 39,108; in Troy, 20,020; in Syracuse, 18,148; in Schenectady, 14,931; in Yonkers, 12,711; in Utica, 13,103; and in Amsterdam, 10,284. The value of the industrial product of New York City was \$2,029,692,576.

FINANCE. The total resources of the State on September 30, 1912, amounted to \$171,820,570. Of this, there was included in the general fund, \$50,213,405; in the canal fund, \$72,677,838; in the canal debt sinking-fund, \$20,890,567; in the railway improvement fund, \$34,000,000. The remainder was in highway debt sinking fund, trust fund, Saratoga Springs State Reservation fund, and the Palisades interstate park fund. The balance in the State treasury at the close of the fiscal year was \$16,419,334. The chief expenditures during the fiscal year were for education, \$9,052,990; for curative purposes, \$7,357,972; for construction, \$4,534,463; for charitable purposes, \$3,038,516; for legislative, \$2,047,420; and for regulative, \$2,331,806. The total expenditures to September 30, 1912, were \$39,234,118 from the general fund. The unexpended balance of the general fund on that date was \$15,978,804.

POLITICS AND GOVERNMENT. The legislature met in 1912 and the most important measures passed will be found noted in the paragraph *Legislation* below. Governor Dix in his second annual message recommended many measures for enactment by the legislature. He placed especial emphasis on the need of more economy in the administration of State government and for provision for additional revenues. Among his recommendations were those providing for the making of vote-buying a felony, the repeal of the Frawley Boxing law, provision for inspection of bakeries, good roads, and a new State office building. He also placed emphasis on the importance of changes in the primary election law. He recommended that the date of the elections for the State committee be made uniform throughout the State and that the membership of the State committee be enlarged by law so as to include a representative from each assembly district. Among other changes which he suggested were several effect-

ing the tax laws of the State. Few of these measures were passed by the legislature.

On March 26 primary elections for delegates to the Republican State convention were held under the new primary law. In this election the Taft forces were successful and the New York delegation to the State convention was divided as follows: Taft, 83 delegates; Roosevelt, 7. On account of the size of the ballots and the difficulty of preparing them their delivery was greatly delayed and some districts in the city did not receive their supply until just before the polls closed. The delay was due in a measure to legal proceedings instituted by friends of Mr. Roosevelt in relation to the printing of names on the ballot. Samuel Koenig, chairman of the Republican county committee, was elected by a vote of 931 to 27. Mr. Roosevelt denounced the result of the election in campaign speeches made directly afterward. See **PRESIDENTIAL CAMPAIGN**.

CONVENTIONS AND ELECTIONS. At the Republican State convention for the election of delegates to the national convention, held at Rochester on April 9 and 10, the delegates were not instructed to vote for President Taft, but were urged in the platform to take such action. Dr. Nicholas Murray Butler, president of Columbia University, was the temporary chairman of the convention and his address was distinctly hostile to Mr. Roosevelt, although the latter's name was not mentioned. The platform declared for a "self-controlled representative democracy," the preservation of "national tradition," and the constitutional protection of citizens when "threatened by a temporary majority." It opposed the initiative, the compulsory legislative referendum, and the recall, either of public servants or judicial decisions, or "any device which impairs consistency and continuity in the expression of the popular will." The platform declared that the Sherman act should be supplemented by a definition of the offenses prohibited, and that there should be a board created to enforce the law. The platform stood for protection, holding that the duties should cover the difference in the production cost and should be adjusted upon facts ascertained by an impartial board. The Democrats were denounced for ignoring the report of the tariff board after professing to favor an inquiry by such a body. A recommendation was made for the creation of a national banking reserve association and it was declared that all justiciable international controversies should be referred to an international court of justice. The four delegates-at-large chosen were Senator Root, William Barnes, Jr., Edwin E. Merritt, Speaker of the Assembly, and William Berry.

The Democratic State convention for delegates to the national convention was held in New York City on April 11. Its work was very expeditiously done and the assembly was remarkable for its harmony. The greater part of the platform adopted related to the tariff. The Republican party and Mr. Taft were accused of grossly deceiving the people by their promises to make a fair revision. The four delegates-at-large chosen were Governor John A. Dix, Senator O'Gorman, Alton B. Parker, and Charles F. Murphy. See **PRESIDENTIAL CAMPAIGN**.

The Republican State convention for the nomination of State officers was held on September

27. The two prominent candidates for governor were James W. Wadsworth, Jr., and Job E. Hedges, a well-known lawyer and public speaker. Mr. Hedges received the nomination for governor and Mr. Wadsworth for lieutenant-governor. The State Democratic convention, held on September 2, nominated William Sulzer, a member of Congress from New York City, for governor. A strong effort was made previous to the meeting of the convention to bring about the renomination of Governor Dix, but this failed largely through the opposition of Charles F. Murphy, leader of Tammany Hall. Mr. Sulzer, although for many years a member of this organization, was known to be independent of its influences and was generally considered to have been the best choice under the circumstances. He had made a very creditable record in Washington in Congress and was, at the time of his nomination, chairman of the important committee on foreign affairs. The convention of the Progressive party met at Syracuse on November 5. Previous to the convention there were two conspicuous candidates for the nomination for governor, Comptroller Prendergast of New York City, and William Hotchkiss of New York City, who had had charge of the Progressive campaign in the State. The rivalry which developed between these two candidates and the bitterness engendered thereby made it impracticable for either of them to be nominated and a compromise was made by nominating Oscar S. Straus, who had been minister to Turkey for many years and was secretary of commerce and labor under President Roosevelt. Mr. Straus was permanent chairman of the convention at the time of his nomination. The campaign which followed these nominations was aggressive. All three candidates conducted speaking tours throughout the State.

The election on November 5 resulted as follows: Wilson 665,475; Taft, 455,428; Roosevelt, 390,021; Debs, 63,381; Chafin, 19,427; Reimer, 4251. For governor, Sulzer, 649,559; Hedges, 444,105; Straus, 393,183; McNicholl Prohibition, 18,990; Hall, Socialist-Labor, 4461. In New York City, including Manhattan and the Bronx, Sulzer received 159,699 votes, Hedges, 49,681, and Straus, 112,010. The entire Democratic State ticket was elected.

OTHER EVENTS. The progress of the State Barge Canal will be found noted under **CANALS**, and the work on the new Croton aqueduct will be found under **AQUEDUCTS**. In New York City the most important events of the year were concerned with the plans for new subways, which will be found discussed in the articles **RAPID TRANSIT** and **TUNNELS**, and in the graft exposures which resulted from the assassination of a gambler named Herman Rosenthal on July 16. Rosenthal, as a result of alleged persecution by the police, had declared his intention of making startling revelations which would affect the police administration of the city to the district attorney. On the night preceding the day on which he was to see the district attorney he was shot while coming out of a hotel. The murderers escaped in an automobile which, however, was soon traced. The chauffeur was captured and as a result of his confession and that of others connected with him, suspicion was directed to Charles Becker, a lieutenant of police, who had charge of the so-called "strong-arm squad" whose duty chiefly was the suppression of gambling and disorderly houses.

After skillful work on the part of the district attorney, Charles S. Whitman, Becker was indicted after a sensational trial in which startling revelations were made by gamblers and others as to police conditions. He was convicted of having instigated the murder. The actual murderers were shown to have been four notorious gamblers and "gunmen." These, after several weeks of search, were captured and were convicted and sentenced to death. It was shown at the trial of Becker that Rosenthal was in possession of valuable evidence which would have shown Becker guilty of persecution and blackmail.

As a result of these investigations and trials an aldermanic committee began an investigation into alleged conditions of corruption in New York. This had not terminated at the end of the year, but the evidence given before the committee showed corrupt conditions among the police and others connected with them.

An incident which attracted wide attention was the action of Governor Dix, of New York, in pardoning Albert T. Patrick, after what was probably the most remarkable flight ever made by a convict in the United States. Patrick was found guilty of the murder of William M. Rice in 1902 and was sentenced to death. After a series of legal proceedings which lasted for four years and seven months his sentence was commuted by Governor Higgins in December, 1906, to life imprisonment. At that time he was within three weeks of the execution of his sentence of death. Patrick devoted the years from 1906 to 1912 to efforts to secure his pardon. His case involved many difficult legal and medical complications, and Governor Dix was finally convinced that the verdict of guilty was wrongly given. Patrick was thereupon pardoned.

LEGISLATION. At the legislative session of 1912, there was passed an unusual number of measures, some of them of first importance. The laws relating to elections were amended. In this act provision was made for the election of members of the State committee of a party at the spring primary of the year when a President is to be elected, and for the election of successors the second year thereafter; also that members of the State, county, judicial, senatorial district, Congressional district, assembly district, city, borough, aldermanic district, and municipal court district, shall be elected at primary elections at the fall primary except in a year when a president is to be elected, when they shall be elected at the spring primary. It is provided that delegates to the national convention may be elected either at State conventions held by such party or from Congressional districts, or partly by State conventions and partly by Congressional districts. A commission on barge canal operation was created, as was also a commission to investigate the conditions under which manufacture is carried on in cities of the first and second class. Amendments were made to the banking law. An appropriation of \$30,000,000 to be expended in carrying out the purposes of the act for the improvement of the Erie Canal, the Oswego Canal, and the Champlain Canal was authorized. A comprehensive act amending the highway law of the State was passed. Amendments were made to the pure food law of the State. An important statute amending the act of 1891 providing for rapid transit railways in cities of

over 1,000,000 inhabitants was passed. This was designed largely for the city of New York to complete contracts for new subways. The code of criminal procedure was amended in relation to the court of appeals where the sentence is death. An appropriation for an amount not exceeding \$50,000,000 for the purpose of constructing State and county highways was authorized. This measure was dependent on the vote of the people at the general election. Important amendments were made to the laws relating to fish and game, and an appropriation of \$6,000,000 for the improvement of the Cayuga and Seneca canals was authorized. The labor law relating to fire prevention in factories was amended. The establishment of a State reformatory for misdemeanants was authorized and provision was made for their educational, industrial, and moral instruction and training. The labor law was amended and provision was made that no child under the age of 16 years shall be employed or permitted to work in any factory before eight o'clock in the morning or after five o'clock in the evening or for more than eight hours in one day or six days in one week. No male minor under the age of 18 years shall be employed or permitted to work in any factory for more than six days or 54 hours in any one week, nor between the hours of twelve midnight and four o'clock in the morning. No female under the age of 21, and no woman shall be employed or permitted to work in any factory before six o'clock in the morning or after nine in the evening or more than six days or 54 hours in any one week. There are, however, certain exceptions to these provisions. See **CHILD LABOR, and EMPLOYERS' LIABILITY.**

NEW YORK UNIVERSITY. An institution for higher education in New York City, founded in 1831. The attendance in all departments of the university, including the summer school, in the collegiate year 1912-13 was about 4500. The faculty numbered 381. An important event in the history of the university during the year was the opening of a department of government with Prof. J. W. Jenks as director, and Prof. F. P. Powell as assistant. No especially notable benefactions were received during the year. The productive funds of the university amounted at the end of the collegiate year 1911-12 to \$1,892,000. The library contains 105,000 volumes. President, Elmer Ellsworth Brown.

NEW ZEALAND, DOMINION OF. Three principal and several smaller islands in the South Pacific; an antonomous British dependency.

AREA AND POPULATION. Area of North Island, 44,468 square miles (563,729 inhabitants, census of April 2, 1911); South Island, 58,525 square miles (444,152); Stewart Island, 665 (325)—total, New Zealand proper, 103,658 square miles; total population (including 262 on Chatham and Kermadec islands), 1,008,468.

Annexed islands, 1093 square miles (12,340 inhabitants); making a total of 104,751 square miles and 1,021,066 inhabitants exclusive of 49,844 Maoris. Total population with Maoris, 1,070,910. Wellington had 64,372 inhabitants (with suburbs, 70,729); Auckland, 82,482 (102,676); Christchurch, 53,116 (80,193); Dunedin, 41,529 (64,237).

PRODUCTION. The area of land under occupation in 1910-11 was 40,238,126 acres. Area under cereals and pulse, 1,015,822; under green crops, 713,682—a total of 1,729,504 acres under crops. In sown grasses on plowed land, 5,000,226 acres; on land not plowed, 9,214,515; in native grass and unimproved land, 23,972,236; in fallow, 209,973; in plantations, orchards, and gardens, 110,892; in vineyards, 780. Under wheat (1910-11), 322,167 acres; yield, 8,290,221 bu.; oat crop, 10,118,917 bu. Livestock, census of 1911: 23,996,126 sheep (19,826,604 in 1891), 2,020,171 cattle (831,831), 404,284 horses (211,040), 348,754 swine (308,812), 3,691,957 fowls (1,790,070). Of the foregoing, Maoris owned 486,922 sheep, 61,300 cattle, 48,222 horses, 33,290 swine.

The wool export in 1910 was 204,368,957 lbs. (value, £8,308,410); wool production 1891, 111,537,546 lbs. Frozen meat takes second place among export products, the amount shipped in 1910 being 297,269,952 lbs. (value, £3,850,777), as compared with 110,199,082 lbs. in 1891. In addition, frozen fish (£13,220), preserved meat (£146,529), salt meats (£15,855), and smoked hams, etc. (£8876), were also exported in 1910. Dairy products also are exported.

New Zealand possesses great natural mineral resources. To December 31, 1910, gold to the value of £77,437,131 was obtained; silver, to the value of £1,618,522; coal, £16,709,820. Gold produced in 1910, 478,288 oz., valued at £1,896,328; silver, 1,711,235 oz., £171,562; coal, 2,197,362 tons, £1,219,737.

COMMERCE. The imports in 1910 amounted to £17,051,583—£10,498,771 from the United Kingdom and £3,967,053 from British colonies; exports, £22,180,209—£18,633,118 to the United Kingdom and £2,468,119 to British colonies. The period for which the trade statistics are compiled embraces part of two wool clips; they do not therefore show the full effect of the fluctuations for one season as compared with another. For the year ended March 31, 1911, the imports without specie were valued at £17,385,066 (£14,774,377 in 1910); specie, £328,119 (£581,580); exports, £21,437,205 (£21,467,657); specie, £46,695 (£24,152). Tonnage entered and cleared (1910), 2,756,238 (2,672,028 tons British).

COMMUNICATIONS. There were in operation March 31, 1911, 2761 miles of government and 29 of private railways, and 192 miles under construction. Revenue from government lines for 1910-11, £3,494,182; expenditure, £2,303,272; total expenditure to 1911, £29,606,546. New construction and extension are steadily progressing. Telegraph lines, 11,316 miles, with 37,212 miles of wire.

FINANCE. The revenue for the year ended March 31, 1911, amounted to £10,297,023 and the expenditure to £9,343,106. Gross public debt on March 31, 1911, £81,078,122; accrued sinking fund, £3,380,542; net public debt, £77,697,580. Customs revenue (1910-11), £3,027,829, exclusive of beer duty, £118,100.

The Governor in 1912 was Sir John Poynder

Dickson-Poynder, first Baron Islington, appointed 1910.

ARMY. By the terms of the defense act of 1909, the principle of compulsory military training was adopted and in this act and supplementary legislation provision was made for systematic military education and training, including junior cadets (12 to 14 years), senior cadets (15 to 18 years), and territorial recruits, so that eventually there would be developed a force of 65,000 men between the ages of 19 and 25 who would have had 16 days' training as recruits and yearly periods of 6 days. In 1912 the reorganization of the forces was proceeding vigorously and about 21,000 men had completed their first camp during the year. The aim was to improve the training and to secure greater uniformity with the military forces of Australia. There was to be a staff corps of 100 officers and New Zealand officers were being attached to the imperial forces for training. The territorial forces recruited from the cadet corps were to have a strength of 10,006 and were to undergo 16 days' training, 8 of which was in camp. The total peace establishment of the territorial force as projected was to number 1087 officers, 18,800 rank and file and 486 in the officers' training corps at the universities, making a total of 20,373. The rifle club movement was being actively fostered, both for the surplus men available for military training and for the youths not embodied in the territorial force. The defense estimates of 1912 carried an appropriation of £456,000, an annual item that by seven years would be reduced to a normal appropriation of £400,000.

NAVY. New Zealand is a party to the agreement between the Commonwealth of Australia and the imperial government which provides for the maintenance, by the British admiralty board, of a naval force in Australasian waters. New Zealand contributes £40,000 annually. Building for the imperial navy, at the cost of the dominion, is the armored battle cruiser *New Zealand*, laid down June 20, 1910, launched July 1, 1911, to be completed early in 1913.

HISTORY. Parliament was opened on February 16. The chief features in the government's programme were: Nationalization of the iron industry and perhaps of oil fields; free education; reduction of the old-age pension limit from 65 to 55 for widows and to 60 for other women; lower railway fares for children; reduced duties on tobacco and other articles used by the working classes. The elections of December, 1911, had returned an equal number of government and Opposition members, leaving the balance of power in the hands of a few Laborites and Independents. A "no confidence" vote on February 27 resulted in a tie and the premier, Sir Joseph Ward, resigned. Parliament was prorogued on March 1. At the end of March a new cabinet was formed under the premiership of Mr. Thomas McKenzie, who held the portfolio of minister of lands. It was styled the "stop-gap" ministry, as the strength of the Opposition made it clear that it would be short-lived. It resigned after a defeat on a want of confidence motion on July 5, and was succeeded by a reform ministry under Mr. George Massey. For twenty-one years the Liberal Labor party had been in control of the government and this complete overturn caused no small astonishment among the people at large. The new ministry was distinctly imperialist in spirit.

As to its domestic programme, the principal features were: A reform of the legislative council, providing for the election of its members by a proportional system of voting; financial economy with increased governmental supervision and stricter accounting; encouragement of land settlement; removal of the public service from political influences; amendment of the conciliation and arbitration act, etc. Soon after its accession to power the new ministry appointed Mr. McKenzie, the retiring prime minister, to succeed Sir William Hall Jones as high commissioner. On meeting, the house voted an adjournment till July 31. On the reopening of parliament the budget debate was brought to a close. The Opposition was still without a leader and was unable to check the government's policy. A public service bill was introduced aiming to remove the abuses of political patronage. It provided for a commissioner who should assume control of the principal executive departments and whose decisions were subject to review by a repeal board. In October the house passed resolutions in favor of the plan to place the elections to the council on the basis of proportional representation of large electoral districts. When the session ended on November 8 the following important measures had been passed: The public service act above mentioned; a land act bestowing on a large class of crown tenants the right to purchase; and an act readjusting and increasing the graduated tax on land. See also articles on STRIKES, MINIMUM WAGE, and ARBITRATION AND CONCILIATION.

NICARAGUA. A Central American republic. The capital is Managua.

AREA AND POPULATION. The area is estimated at 49,552 square miles, and the population, which is largely Indian and mestizo, at 600,000. Reported births in 1908, 23,828; deaths, 9598; marriages, 1261 (that is, 2522 persons married). Chief towns: León, estimated population, 63,000; Managua, 40,000; Granada, 25,000; Matagalpa, 16,000; Bluefields and Masaya, 15,000 each; Jinotega, 14,000; Chinandega, 13,000. The presidential message of November 14, 1911, reported 335 schools, 3 national institutes, and a normal school.

PRODUCTION AND COMMERCE. The principal crops are coffee, bananas, and sugar-cane. The latter is grown more or less throughout the country; the coffee plantations, which are controlled largely by Americans and Germans, are in the western districts; the banana lands are chiefly in the Bluefields region. Other crops are cacao, corn, beans, and tobacco. The number of cattle is stated at about 1,200,000. There is some exploitation of the forests, which contain cabinet and other valuable woods. The mineral resources are considerable, but mining is almost restricted to gold.

Recent commercial statistics are not available. Imports in 1907 are reported at \$3,224,173; 1908, \$2,958,878; 1909, \$2,583,257. Exports in the three years, \$3,363,522, \$3,647,984, and \$3,989,428 respectively. The leading imports are cotton fabrics, flour, and provisions. Coffee export in 1909, about 93,640 metric quintals, valued at \$1,546,919; gold, \$1,037,892; woods, \$415,575; rubber, \$229,871. In 1909, the United States furnished imports \$1,341,692 and received exports \$1,677,010; United Kingdom, \$625,668 and \$843,453; Germany, \$286,408 and \$423,579; France, \$131,826 and \$776,429.

COMMUNICATIONS. There are reported 171

miles of railway, which are included in one line; this connects the Pacific port Corinto with Chinandega, León, Managua, Masaya, and Diriamba. Steamers ply between Granada, on Lake Nicaragua, and San Juan del Norte, on the Caribbean. In 1911, the government again assumed the administration of the railroad and the national steamers, annulling a contract (in effect January 1, 1905) with a private company which the tribunal of justice decided was against public policy. In addition to the state line, there are about 20 miles of private railway on the Atlantic coast near the Rio Grande. A railway known as the Dos Bocas-Rama River was under construction in 1912. Telegraphs, 130 offices, with 3637 miles of wire; post offices, 135.

FINANCE. Revenue, in paper pesos: 1908, 13,119,503; 1909, 12,994,275; 1910, 15,182,852. Expenditure in the three years: 12,502,592, 18,630,308, and 34,573,125 pesos respectively. Of the 1910 expenditure, the sum of 12,052,848 pesos was ordinary, and 22,520,277 extraordinary, on account of the 1909 revolution. The paper peso has been worth about 16 cents, but in 1910 its value was only about 10 cents. Of the 1910 revenue, 9,793,717 pesos were derived from customs, 1,427,095 from liquor taxes, and 1,319,025 from tobacco taxes. In 1909, a loan for £1,250,000 was issued for railway construction, etc., and for conversion purposes. There is a French debt of 12,500,000 francs. Internal debt, December 31, 1910, 20,176,709 pesos paper. In 1911, a convention with the United States was signed, providing for the refunding of the foreign debt, the reform of the monetary system, and railway construction, by means of a loan to be made by American bankers and secured by a guarantee of 50 per cent. of the customs duties. Though approved by the Nicaraguan congress, the convention was not ratified by the American Senate. In 1912, Nicaragua adopted as a new monetary unit the gold córdoba, 1.67182 grams 900 fine, that is, equal in weight and fineness to the American dollar.

ARMY. Like other Central American republics the army in theory as regards its strength and organization differs materially from its actual condition and service. Nominally obligatory service is required from every male inhabitant between the ages of 17 and 55, and active service is restricted to one year with the aim of maintaining a standing army with a strength of between 2000 and 3500 in times of peace and contemplating a war strength of 40,000 on a war basis. Military affairs were in confusion in 1912 on account of the revolution.

HISTORY AND GOVERNMENT. The constitution of March 30, 1905, which was suspended (September 15, 1910) as a result of the 1910 revolution, was superseded by an instrument bearing date of March 1, 1912. On August 29, 1910, Gen. Juan J. Estrada assumed the duties of provisional president; he was the leader of the eventually successful faction in the civil war supervening upon the forced resignation of President José Santos Zelaya December 16, 1909. From September 15, 1910, to March 1, 1912, the country was administered under a provisional law promulgated by Estrada. On December 31, 1910, a national congress elected Estrada president for two years, and Adolfo Díaz vice-president. Díaz succeeded to the executive office May 11, 1911, upon the resignation of Estrada.

On October 7 following, the congress elected Gen. Luis Mena president for four years from January 1, 1913. This election was declared illegal. Mena, as secretary of war in the Díaz cabinet, refused the president's request to resign and on July 29, 1912, was deposed by force. He thereupon headed a revolt, which was suppressed with the assistance of American marines, to whom he surrendered September 25. On November 2, Díaz, as the unopposed Conservative candidate, was elected president. For further account of the revolution of 1912, see UNITED STATES, *Foreign Relations*.

NICHOLLS, FRANCIS TILLOU. An American soldier and public official, died January 5, 1912. He was born in Donaldsonville, La., in 1834, and graduated from the United States Military Academy in 1855. He took part with the 3d Artillery against the Seminole Indians and was on frontier duty in 1856. In the same year he resigned from the service and engaged in the practice of law until the outbreak of the Civil War. He served with the Confederate army throughout the war and rose to the rank of brigadier-general. He lost an arm at the battle of Winchester, Va., and a foot at Chancellorsville. After the close of the war he resumed the practice of law. He was elected governor of the State in 1887 and again in 1892. From 1893 to 1904 he was chief justice of the Supreme Court of Louisiana, and associate justice from 1904 to the time of his death.

NICHOLSON, EDWARD WILLIAMS BYRON. An English librarian, died March 17, 1912. He was born in 1849 in St. Helier, Jersey. He studied at Liverpool College and Tonbridge School and from the latter went to Trinity College, Oxford, in 1867. After taking his degree he was for a time schoolmaster, but his chief interest was in library work. On the death of H. O. Coxe, librarian of the Bodleian Library at Oxford, Mr. Nicholson was appointed to succeed him. He at once began efforts to improve the library, which continued throughout his administration. His chief aim was to make the famous collection of books more widely accessible, and before the end of his life he had the satisfaction of seeing some of his most cherished schemes carried out or inaugurated. Among these were a system of shelf classification and a subject catalogue. Beginning was also made on a revision of the general catalogue with a view to printing. The library was materially enlarged through his efforts. In addition to his interest in the library he was a strong opponent of vivisection and was an enthusiastic champion of woman suffrage. He was a prolific writer, and among his published works are: *A New Commentary on the Gospel According to Matthew* (1881); *The Bodleian Library in 1882-1887* (1888); *The Man With Two Souls, and Other Stories* (1898); *Keltic Researches* (1904); *Can We Not Save Architecture in Oxford?* (1910). He also wrote many songs and collaborated with Sir John Stainer on works relating to early Bodleian music in 1899-1902.

NIGER, MILITARY TERRITORY OF THE. A French West African territory. At the head of the administration is a commandant (1912, M. Scal) who is under the direct control of the lieutenant-governor for the Upper Senegal and Niger colony. On January 1, 1911, Zinder was made the capital, in compliance with an order (June 22, 1910) of the governor-general for

French West Africa, reorganizing the Military Territory. Other cities are Timbuktu (Tom-bouctou), with 5127 inhabitants; Goundam (3202), Dori (3430), Niamey, and Filingué (2768). No railways traverse the country. See UPPER SENEGAL AND NIGER and FRENCH WEST AFRICA.

NILSEN EXPEDITION. See POLAR EXPLORATION.

NISHI, KWANJIRO, BARON. A Japanese general, died March, 1912. He was born in 1846 at Satsuma and entered the army while still a youth. After rising through the several grades he was made a major-general in 1889. During the Japan-China War he commanded a brigade of the 1st Army Division and fought at Port Arthur under Marshal Oyama. For his services he was created a baron. In the Russo-Japanese War he commanded the 2d Army Division and took part in the Manchurian campaigns up to the battle of Shaho. He was made a general in 1904 and was appointed commander of the garrison of Liaotung. In 1905 he was appointed inspector-general of education.

NISHI, TOKUJIRO, BARON. A Japanese diplomat, died March, 1912. He was born in Satsuma in 1847 and early in life entered the diplomatic career. From 1866 to 1896 he was minister at St. Petersburg and in 1907-8 was minister of foreign affairs. He was Japanese minister at Peking on the occasion of the Boxer outbreak and was one of those who sustained the famous siege in that city.

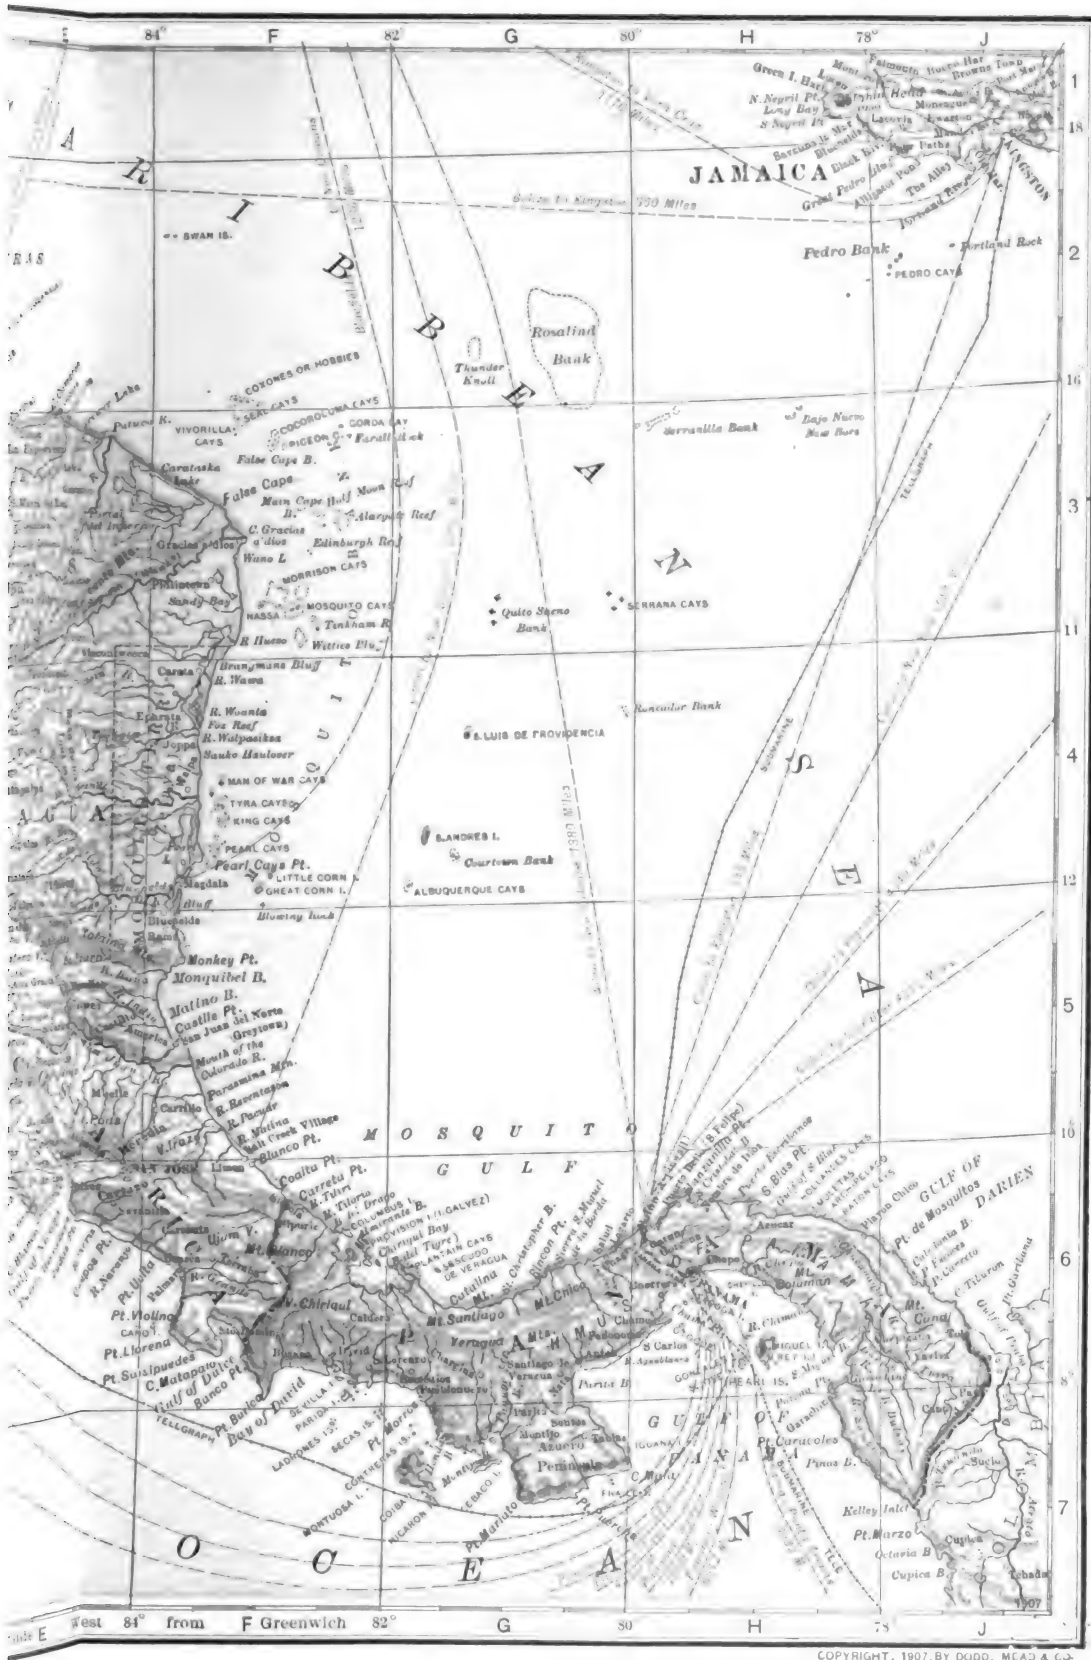

NISSEN, HEINRICH. A German archaeologist, died in March, 1912. He was born at Hadersleben in 1839 and after studying at the Universities of Kiel and Berlin he became professor of ancient history at Marburg (1869), Göttingen (1877), Strassburg (1879), and Bonn (1884). He devoted himself especially to the critical study of early Roman history. Among his published writings are the following: *Kritische Untersuchungen über die Quellen der vierten und fünften Dekade des Livius* (1863); *Das Templum* (1869); *Pompejanische Studien* (1877); *Italische Landeskunde* (1883), and "Griechische und römische Metrologie" (1887) in Iwan Müller's *Handbuch der Klassischen Altertumswissenschaft*.

NITRATES. See CHEMISTRY, INDUSTRIAL.

NITROGEN. See CHEMISTRY, INDUSTRIAL; FERTILIZERS.

NIXON, GEORGE STUART. United States senator from Nevada, died June 5, 1912. He was born in 1860 in Placer County, Cal., and was educated in the public schools of that State. In 1887 he removed to Nevada, where he engaged in mining and ranching enterprises. He became identified with the Lovelock Land and Development Company, which reclaimed 20,000 acres of desert land in Nevada. He was also interested in cattle and sheep raising. Mining property in Goldfield, Tonopah, and other places in which he had large interests proved very profitable and he accumulated a large fortune. In addition to his other interests he edited and published the *Daily Silver State* at Winnemucca. In 1891 he served in the Nevada legislature. He was elected to the United States Senate in 1904 to succeed William M. Stewart. He was renominated without opposition and was reelected by popular vote. The legislature, while Democratic by a majority of four, ratified his election at the primaries in 1911. In the Senate, where his term of service

107

1701

would have expired on March 3, 1917, he was chairman of the national banks select committee and was a member of the committees on coast defenses, irrigation, mines and mining, and the Philippines.

NIXON, WILLIAM PENN. American journalist, died February 20, 1912. He was born in Fountain City, Ind., in 1833, and graduated at Farmers' College, Ohio, in 1854, and from the law department of the University of Pennsylvania in 1859. He practiced law in Cincinnati until 1868. He was a member of the Ohio legislature from 1865 to 1868. In the latter year he entered journalism as business manager of the Cincinnati *Chronicle*. He remained in this position until 1872, when he became connected with the Chicago *Inter Ocean* as business manager, publisher, manager, and editor. He served in various public positions in Chicago. In 1896 he was delegate-at-large to the Republican national convention. He was appointed collector of the port of Chicago in 1897 and was reappointed in 1901.

NOBEL PRIZES. These prizes are awarded annually from an income of \$8,400,000 by the will of Dr. Alfred Bernhard Nobel. The interest from this fund is to be distributed annually to those persons that shall have contributed most materially to benefit mankind during the year immediately preceding." The value of each prize is approximately \$40,000, and is given for work in chemistry, physics, medicine, literature, and for the advancement of peace. The prizes awarded from the foundation of the fund, including those of 1912, are given in the table below:

No award.....	1912		

For the first time since the establishment of the prize there was no award for service in the cause of international peace in 1912, because the committee was unable to discover a person who "within the year has worked most or best for the fraternization of nations, the abolition or reduction of standing armies or the calling or propagating of peace congresses." It will be noted from examination of the awards for 1912 that with the exception of two, all those who received the awards are of French birth. It is probable that the winner of the prize for literature, Gerhart Hauptmann, is the only one whose name is widely known. He has been known for many years as a leader in the advanced German school of writers. M. Carrel, a biography of whom is given under his name in another portion of the YEAR BOOK, has been known for several years among scientific men as an investigator of remarkable skill. Gustaf Dalen is noted chiefly for his achievements as a gas engineer. Professor Grignard is a member of the faculty of Nancy University, and Professor Sabatier is of the faculty of Toulouse University.

NOBLE, JOHN WILLOCK. An American soldier and public official, died March 22, 1912. He was born in Lancaster, O., in 1831, and graduated from Yale University in 1851. He studied law at the Cincinnati Law School, taking a degree in 1852. In the year following he was admitted to the bar in Columbus. He practiced in that city and afterwards in St. Louis and Keokuk, Ia. He was city attorney in the latter city from 1859 to 1860. He enlisted in the Union army and served throughout the Civil War in the 3d Iowa Cavalry, rising to the command of this regiment. He was brevetted brigadier-general by act of Congress for service in the field in 1865. After the war he returned to St. Louis and was engaged in practice there until the time of his death. From 1867 to 1870 he was United States district attorney and in that capacity prosecuted the whisky and tobacco frauds. He was offered

the portfolio of solicitor-general by President Grant, but declined. From 1889 to 1893 he was Secretary of the Interior in the cabinet of President Cleveland. He was a member of many scientific and patriotic societies.

NOGI, (KITEN) MAROSUKE, General Count. A Japanese soldier, died by his own hand at the funeral services of the Mikado of Japan on September 13, 1912. He was born in Chosu, a few miles from Tokyo, in 1849. He came from the race of the Samurai, the old nobles of Japan. Details are lacking of his earlier years, but he fought as a captain in the civil war of 1877, and his experience as a soldier seems to have been sufficient to warrant his participating in the Chino-Japanese War as the commander of a brigade. He fought at the battles of Kinchow and Port Arthur in this war. In the first of these engagements his generalship came into prominence, and at Port Arthur he placed his troops with such skill that the city fell into the hands of the Japanese almost without a struggle. In return for his services in this war he was rewarded by a peerage and was promoted to be lieutenant-general with command of the second division. He served for a short time in 1896 as governor-general of Formosa, but proved to be too strict to be popular with his subordinates. He soon returned to Japan as commander of the 11th Division. This post he resigned in 1900 and retired to civil life, where he devoted himself to the study of war books and war maps, preparing for the struggle which he knew must come with Russia. He sent his two sons to the military college to prepare for this struggle. Both these sons were killed in the Russo-Japanese War. At the outbreak of the war Nogi was given command of the Third army and was ordered to attack Port Arthur. He had previously been promoted to the rank of full general. He landed his army corps on the Liaotung Peninsula on June 1, 1904. He was in command of the 1st and 11th divisions. He gradually separated himself from Oku's army corps and brought himself into a position to take up the march to Port Arthur. The city of Dalny fell without fighting and a month was spent in preparing a base of supplies at the harbor. Nogi then marched against the Russian outposts on June 26 and drove them from a strong position. He was, however, checked seven days later by a fierce counter-attack by Stoessel, the Russian commander. By the latter part of July Nogi was in the immediate neighborhood of Port Arthur. His army had already lost 8000 men, but on July 20 he attacked with a force about equal to that of the defenders. His siege train was inadequate and he had not been correctly informed as to the strength of the defenses. The siege continued until January 2, 1905, and was marked by fighting of the utmost severity. Two forts were taken by Nogi about the middle of August and an unsuccessful attack was made by Stoessel to retake them. The Japanese lost in three weeks 16,000 men, killed and wounded. By the middle of September the fighting concentrated at 203 Meter Hill, which commanded and was a part of the western defenses of the city. The attacks on this hill continued unsuccessfully until December 5, when the Japanese finally took it. The final ten days' fighting on the slopes of this hill cost the Japanese 10,000 men and the Russians about 5000. Nogi's elder son was killed during the attempt to capture this

hill. After the fall of Port Arthur Nogi led his army to take part in the final operations around Mukden, where General Kuropatkin had made his stand against the combined army corps of Japan. In the latter part of February, 1905, he enveloped the Russian right wing and was thereby instrumental in bringing about Kuropatkin's ultimate retreat and surrender. After the Peace of Portsmouth, General Nogi, at the command of the emperor, took the honorary presidency of a school for young peeresses. His direction of this institution was marked by great strictness. His chief endeavor for the rest of his life was to call back to Japan the old ideals of Spartan life from which he feared the people were falling away, and his death during the funeral of his master, the Mikado, was in strict accordance with the old traditions with which he was imbued. During time of war General Nogi gave himself entirely to military matters. His reticence was well known and his discipline was notably severe. In private he was said to have been frank and cordial.

NORTH CAROLINA. POPULATION. According to the Census Bureau statistics compiled in 1912, out of a total population of 2,206,287 in 1910, the foreign-born whites numbered 5942, compared with 4394 in 1900. The largest number of these, 1073, came from Germany. Other European countries are represented by smaller numbers. The negroes in the State in 1910 numbered 697,843 and the mulattoes, 144,123. In 1890 the negroes numbered 561,018 and the mulattoes, 77,201.

AGRICULTURE. The acreage, value, and production of the principal crops in 1911 and 1912 will be found in the following table:

		Acreage.	Prod. Bu.	Value.
Corn	1912	2,808,000	51,106,000	\$42,418,000
	1911	2,700,000	49,680,000	40,738,000
Wheat	1912	598,000	5,322,000	5,907,000
	1911	626,000	6,636,000	6,769,000
Oats	1912	204,000	3,794,000	2,352,000
	1911	219,000	3,614,000	2,277,000
Rye	1912	44,000	409,000	429,000
	1911	47,000	470,000	470,000
Potatoes...	1912	30,000	2,550,000	1,338,000
	1911	31,000	1,488,000	1,607,000
Hay	1912	293,000	a 331,000	6,363,000
	1911	161,000	a 169,000	2,873,000
Tobacco ..	1912	179,000	b 110,980,000	17,767,000
	1911	140,000	b 99,400,000	11,530,400
Cotton	1911	c 935,000

a Tons. b Pounds. c Bales.

MINERAL PRODUCTION. North Carolina holds first place among the eastern States in the production of gold. The amount recovered in 1911 was 3,399.89 fine ounces, valued at \$70,282, an increase over the production of 1910 of 108.21 fine ounces in quantity and \$2237 in value. The silver produced in the State is obtained in refining the gold produced. It amounted to 943 fine ounces in 1911, valued at \$500.

MANUFACTURES. The Thirteenth Census included statistics of manufactures in the State. These are for the calendar year 1909. The most important general results of the census are given in the table below. The industry in which the largest number of wage-earners was employed, and the value of the product was the greatest, was that related to cotton goods. In this the wage-earners numbered 47,231 and the

value of the product was \$72,680,000. In the manufacture of tobacco 8203 wage-earners were employed and the product was valued at \$35,987,000. In the manufacture of lumber and timber products, 34,001 wage-earners were employed and the value of the product was \$33,525,000. These are the only industries in the State in which the value of the product exceeded \$10,000,000. Those in which the value of the product was between \$5,000,000 and \$9,000,000 were oil, cotton seed and cake, flour-mill and gristmill products, furniture and refrigerators, fertilizers, leather, and hosiery and knit goods. The total number of wage-earners in the State was 121,473. Of these, 93,787 were male and 27,686 were female. The wage-earners under 16 years of age numbered 13,698 and of these 5903 were females. The prevailing hours of labor were 60 or more a week. The cotton industry is mainly on the basis of 11 hours a day or from 63 to 66 hours a week. In the tobacco manufactures the prevailing hours are more than 54, but less than 60 a week. The largest number of wage-earners was in the city of Winston, 6708; in Charlotte, 4199; in Durham, 3718. These are the leading manufacturing cities in the State. The following table shows the increase in manufacturing in the five-year period 1904 to 1909:

	Number or Amount 1909	1904	P. C. of Inc. 1904-'09
Number of establishments	4,931	3,272	50.7
Persons engaged in manufactures ..	133,453	93,142	43.3
Proprietors and firm members...	5,451	3,731	46.1
Salaried employees	6,529	4,072	60.3
Wage earners (average number)	121,473	85,339	42.3
Primary horsepower	378,556	216,622	74.8
Capital	\$217,186,000	\$141,001,000	54.0
Expenses	186,463,000	122,391,000	52.4
Services	41,259,000	25,170,000	63.9
Salaries	6,904,000	3,795,000	81.9
Wages	34,355,000	21,375,000	60.7
Materials	121,861,000	79,268,000	53.7
Miscellaneous	23,343,000	17,953,000	30.0
Value of products..	216,656,000	142,521,000	52.0
Value added by manufacture (value of products less cost of materials)	94,795,000	63,253,000	49.9

CHARITIES AND CORRECTIONS. The institutions under the control of the State, with their populations on November 30, 1912, are as follows: Hospital at Morganton (for insane), 1330; Hospital at Raleigh, 702; Hospital at Goldsboro (colored insane), 776; Dangerous Insane Department (at the penitentiary), 56; Epileptic Colony (State Hospital, Raleigh), 148; School for the Feeble-minded at Kinston; School for the White Blind, Raleigh, 186; School for the Colored Blind and Deaf, Raleigh, 178; School for the White Deaf, Morganton, 250; Soldiers' Home (Confederate), 135; North Carolina Tuberculosis Sanatorium, 23; Stonewall Jackson Manual Training and Industrial School (Reform School for White Boys), 59; Oxford Orphanage for White Children, Oxford, 312; Oxford Orphanage for Colored Children, 235. Besides the above, which gives the charitable institutions, there are the prisons of the State: State's Prison, 87; State Farm, 435; Railroad Work, 284. In the forty county camps misdemeanants and felons number 1494. The jail population in 89 of the 100 counties is 475.

The chief discussion relating to charities and corrections in the State was in regard to the future policy to be followed on prison questions. Measures will be introduced into the legislature strengthening the child labor law. Other measures provide for the registration of births and deaths and a law for compulsory education.

POLITICS AND GOVERNMENT

The State legislature was not in session in 1912 as the sessions are biennial and the last was held in 1911. The next session began January 8, 1913. It reflected the Hon. F. M. Simmons to the United States Senate.

CONVENTIONS AND ELECTIONS. Elections for State officers were held on November 5. The Republican party was divided into factions in North Carolina, and in March as the result of a disagreement of the two wings of the party in the State, President Taft withdrew from the Senate the nominations for ten federal officers. An attempt to harmonize the differences resulted in a conference held in Washington on March 15. This resulted in an agreement by which the leaders of the two factions agreed to support President Taft. In the State convention held on May 15, however, this agreement was upset as a result of the capture of the Republican State convention by the Roosevelt delegates. The administration of President Taft was severely attacked and the convention went on record as condemning him with "the withdrawal of appointments made, violating civil service traditions, and offering no excuse for it." The four delegates elected were pledged to vote for Mr. Roosevelt. The Democratic State convention for the choice of delegates to the national convention endorsed the candidacy of Governor Wilson. Strong effort was made to pledge the delegates to Mr. Underwood, but these failed. On September 3 primary elections for the nomination of State officers were held. These resulted in the nomination of Locke Craig by the Democrats, former Congressman Settle by the Republicans, and Iredell Mears by the Progressives. The election of November 5 resulted as follows: Wilson, 144,507; Roosevelt, 69,130; Taft, 29,139; Debs, 1025. Governor Wilson's plurality was 75,377. For governor, Craig, Democrat, received 149,975 votes, Settle, Republican, 43,625, Mears, Progressive, 49,930, and Hodges, Socialist, 944.

STATE GOVERNMENT. Governor, Locke Craig; lieutenant-governor, E. L. Daughtridge; secretary of State, J. B. Grimes; treasurer, B. R. Lacy; auditor, W. P. Wood; attorney-general, T. W. Bickett; superintendent of Education, J. Y. Joyner; commissioner of agriculture, W. A. Graham; commissioner of insurance, J. R. Young—all Democrats.

JUDICIARY. Supreme Court: Chief justice, Walter Clark, Democrat; justices, George H. Brown, Democrat; William A. Hoke, Democrat; William R. Allen, Democrat; P. D. Walker, Democrat; clerk, L. Seawell, Democrat.

STATE LEGISLATURE. 1913, Senate, Democrats 47, Republicans 1, Progressives 2; House, Democrats 104, Republicans 6, Progressives 12; joint ballot, Democrats 151, Republicans 7, Progressives 12. Democratic majority, Senate, 44; House, 98; joint ballot, 132.

The representatives in Congress will be found in the section *Congress*, article UNITED STATES. **NORTH CAROLINA, UNIVERSITY OF.** An

institution for higher education at Chapel Hill, N. C., founded in 1789. The students enrolled in the various departments of the university in the autumn of 1912 numbered 818. The faculty numbered 84. There were no noteworthy changes in the faculty during the year. The most noteworthy benefaction was the gift of \$40,000 for the school of education from the Peabody Educational Fund. The productive funds of the university amounted to \$250,000. The income in 1911-12 amounted to \$276,433. There were 65,000 volumes in the library. President, Francis P. Venable, Ph. D.

NORTH DAKOTA. POPULATION. According to the Census Bureau statistics compiled during 1912 out of the total population of 577,056 in the State in 1910, the foreign-born whites numbered 156,158, compared with 112,590 in 1900. Of these, the largest number came from Norway, 45,937; from Russia, 31,927; from Canada, 18,607; from Germany, 16,491; from Sweden, 12,155; from Denmark, 5352; and from Austria 5215. Other European countries are represented by smaller numbers. In 1910 the negroes in the State numbered 617 and the mulattoes 157. In 1890 the negroes numbered 373 and the mulattoes 220.

AGRICULTURE. The acreage, value, and production of the principal crops in 1911 and 1912 are given in the following table:

		Acreage.	Prod. Bu.	Value.
Corn	1912	328,000	8,758,000	\$3,766,000
	1911	290,000	7,250,000	4,350,000
Wheat	1912	7,990,000	143,820,000	99,236,000
	1911	9,150,000	73,200,000	65,148,000
Oats	1912	2,300,000	95,220,000	20,948,000
	1911	2,180,000	51,230,000	21,004,000
Rye	1912	48,000	864,000	406,000
	1911	36,000	598,000	454,000
Potatoes	1912	52,000	6,656,000	1,864,000
	1911	42,000	5,040,000	2,772,000
Hay	1912	364,000	a 510,000	2,805,000
	1911	192,000	a 211,000	1,477,000

a Tons.

MANUFACTURES. The Thirteenth Census included statistics of manufactures in the State. These are for the calendar year 1909. The most important general results of the census are given in the table in the next column. The industry in which the value of the product was the greatest was that connected with flour-mill and grist-mill products, \$11,685,000. In this industry were employed 435 wage-earners. In the manufactures related to printing and publishing 788 wage-earners were employed, and the product was valued at \$1,910,000. The only other industry in which the value of the product exceeded \$1,000,000 was that related to the manufacture of butter, cheese, and condensed milk. The value of these products was \$1,029,000. The total number of wage-earners in the State in 1909 was 2789, and of these 2538 were male. The wage-earners under 16 years of age numbered 57, and of these 8 were female. The table shows the increase in manufacturing in the five-year period 1904-1909.

EDUCATION. There were in the State in 1912 167,326 children of school age. The number enrolled in the schools was 139,361. The average daily attendance was 99,686. The teachers numbered 7569. The average monthly salary was \$55.08. The expenditures for education for the fiscal year ending June 30, 1912, were \$5,597,153.

FINANCE. The receipts for the fiscal year end-

	Number or Amount 1909	1904	P.C. of Inc. 1904-'09
Number of establishments	752	507	48.3
Persons engaged in manufactures ...	4,148	2,545	63.0
Proprietors and firm members	723	494	46.4
Salaried employees..	636	296	114.9
Wage earners (average number)	2,789	1,755	58.9
Primary horsepower..	13,196	9,873	33.7
Capital	\$11,585,000	\$5,704,000	103.1
Expenses	17,290,000	8,895,000	94.4
Services	2,416,000	1,289,000	82.4
Salaries	629,000	258,000	143.8
Wages	1,787,000	1,031,000	73.3
Materials	13,674,000	7,096,000	92.7
Miscellaneous	1,200,000	510,000	135.3
Value of products...	19,138,000	10,218,000	87.3
Value added by manufacture (value of products less cost of materials).	5,464,000	3,122,000	75.0

ing November 1, 1912, amounted to \$4,651,256, and the expenditures for the same period to \$4,611,880. The balance on hand at the end of the fiscal year was \$840,663, which includes a balance left at the beginning of the fiscal year. The chief sources of income are taxes and the chief expenditures for schools.

POLITICS AND GOVERNMENT

The legislature did not meet in 1912, as the sessions are biennial and the last was held in 1911. The present session began January 7, 1913. Politics in the State became of national interest during the year. The first presidential primary election ever held in the State occurred on March 19. Senator LaFollette had made a very aggressive campaign in the State previous to the election and largely as a result of this he received a plurality in the votes cast, which were as follows: LaFollette, 34,123; Roosevelt, 23,669; Taft, 1876. The Democratic candidate in the primary was Governor Burke, and there was no name in opposition to his on the Democratic ballot. The total vote cast in the primary was 59,668, compared with the vote in the presidential election of 1908, which was 57,680. Primaries for the nomination of State officers were held on June 27. Congressman Louis B. Hanna won the nomination for governor on the Republican ticket. Warden Frank O. Hellstrom of the State penitentiary won the Democratic nomination for governor. The Progressives on September 7 nominated Dr. C. C. Creegan, president of Fargo College, for governor, who declined, as he had not resided in the State five years as required by the State constitution. W. D. Sweet, mayor of Fargo, was then named as the Progressive candidate. The vote of the election on November 5 was as follows: Wilson, 29,516; Taft, 22,802; Roosevelt, 25,629; Debs, 6740; Chafin, 1090; Wilson's plurality, 3887; for governor, Hanna, 39,779; Hellstrom, 31,500; Sweet, 9342; Hanna's plurality, 8397.

STATE GOVERNMENT. Governor, L. B. Hanna; lieutenant-governor, A. T. Kraabel; secretary of State, Thomas Hall; treasurer, Gunder Olson; auditor, C. O. Jorginson; attorney-general, Andrew Miller; superintendent of education, E. J. Taylor; commissioner of agriculture, W. C. Gilbrath; commissioner of insurance, W. C. Taylor—all Republicans.

JUDICIARY. Supreme Court: Chief justice, B. F. Spalding; justices, Charles J. Fisk, E. T.

Burke, E. B. Goss, A. A. Bruce; clerk, R. D. Hoskins—all Republicans, except Fisk.

STATE LEGISLATURE, 1913. Senate, Republicans 44, Democrats 6; House, Republicans 104, Democrats 7; joint ballot, Republicans 148, Democrats 13. Republican majority, Senate, 38; House, 97; joint ballot, 135.

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

NORTH DAKOTA, UNIVERSITY OF. A State institution for higher education at Grand Forks, N. D., founded in 1883. The total enrollment in the autumn of 1912 was 995. Of these, 14 were in the graduate department, 189 in the college of liberal arts, 125 in the school of education, 99 in the school of engineering, 31 in the school of medicine, 89 in the law school, 134 in the model high school, and 308 in the summer session. The faculty numbered 105. Among the notable changes was the resignation of Dean A. A. Bruce, who was appointed a justice of the supreme court, and Prof. L. A. Birdsell, to become chairman of the State tax commission. The university is supported almost entirely by the State, and there were no benefactions received during the year. The amount of productive funds was \$1,800,000. The income amounted to \$365,000. There were 44,390 volumes in the library and 23,000 pamphlets. President, Frank L. McVey, Ph. D., LL. D.

NORTHERN BAPTIST CONVENTION. See BAPTISTS.

NORTHERN NIGERIA. A British protectorate (255,700 square miles) in western Africa. An estimate of the population made in 1911 returns 9,269,000. The Hausa population of the Fulani empire (the most densely populated region in Africa) numbers roughly eight millions. They are a highly developed Mohammedan tribe, ruled by the sultan of Sokoto. Pagan tribes are distributed along the Niger and through the Kabba country. Lokoja, the chief station, is situated at the junction of the Niger and the Benue; Zungeru is the administrative headquarters; Jebba (the capital till 1902) is the point at which the railway bridge crosses the Niger. The first train was run on the Baro-Kano Railway into Kano March 29, 1911. The line is 356 miles long and connects, through a branch to Zungeru, with the Lagos line, making a continuous route from Lagos to Kano. By means of this line the large foreign trade heretofore carried on from Kano, through French territory, by caravan to Tunis, will be diverted to Lagos, on the coast of Southern Nigeria. A branch from Zaria connects with the Buachi tin mines. The Niger valley furnishes the palm oil and palm kernels, which form a large proportion of the exports, but the climate is unhealthy. The products of higher ground are rubber, hides, ground nuts, shea butter, ivory, chillies, and medicinal plants. Tin is mined. Duties are levied on imports only; these are collected at the coast by Southern Nigeria, which contributes to the Northern Nigerian revenue. Imports and exports via Idah (returns of commercial firms only) in 1910-11, £258,600 and £308,700 respectively (£175,870 and £309,742 in 1909-10). Government returns for the calendar year 1910 give £330,506 for all imports, as compared with £1,215,084 for the previous year, attributing the decrease to the cessation of importation of railway material; imports of bullion and specie (included in the foregoing), £211,250 (£208,-

200 in 1909); exports, £120,652 (£406,722 in 1909). The local revenue amounted (1910-11) to £274,989; grant-in-aid, £275,000; contribution from Southern Nigeria, £70,000. Expenditure, £565,760. Sir Frederick J. D. Lugard was transferred in 1912 from the governorship of Hongkong to be governor of both Northern and Southern Nigeria.

A Scottish engineer, Mr. Campbell, who was prospecting in the Ninkada District, was murdered by natives of the tribe of Mada, who were said to be cannibals, and a punitive expedition was dispatched against them.

NORTHERN TERRITORIES. See GOLD COAST.

NORTHERN TERRITORY. See AUSTRALIA.

NORTHWESTERN UNIVERSITY. An institution of higher education at Evanston, Ill., founded in 1851. The enrollment in all departments of the university in the autumn of 1912 was 4475. The faculty numbered 410. Among the important changes in the faculty were the following: Dr. Arthur I. Kendall was appointed professor of bacteriology in the medical school. He will have charge of the research work to be conducted under the Patten fund, the gift of Mr. James A. Patten, to advance scientific investigation of the cause and prevention of contagious diseases, with special attention to tuberculosis. Dr. Horace Secrist, formerly statistician for the Wisconsin industrial commission, was appointed professor of economics to succeed Prof. Murray S. Wildman, who went to Stanford University. Dr. Harlan Updegraff was appointed professor of education. Dr. Updegraff was for three years chief of the Alaska division in the United States Bureau of Education. There were no benefactions received during the year. The income was \$750,000. There were 171,770 bound volumes in the libraries of the university and 92,310 pamphlets. President, A. W. Harris, LL. D.

NORTHWEST TERRITORIES. That part of Canada which is not included in any province or in Yukon Territory. Estimated area, 1,921,685 square miles. The census of June 1, 1911, returned a population of 17,196, as compared with 20,129 in 1901. The above area includes the portions of the territories annexed to the provinces of Quebec, Ontario, and Manitoba in 1912. Commissioner, Lieut.-Col. F. White.

NORWAY. A constitutional monarchy of northern Europe, occupying the western portion of the Scandinavian Peninsula. Christiania is the capital.

AREA AND POPULATION. The area and population, present (*de facto*), according to the census of December 31, 1910, are given below by amter (prefectures)—first the land area, second the total area, including fresh waters; in the third column is given the total population, and in the last the density per square kilometer:

Of the above total population, 1,123,160 were males and 1,234,630 were females. The total resident or legal population (*de jure*) numbered 2,391,782 (1,155,673 males, 1,236,109 females); in 1900, 2,240,032; in 1890, 2,000,917; in 1860, 1,608,653.

In the following list of cities the *de facto* population is given with the *de jure* population

Amter.	Sq. kil.	Sq. kil.	Pop.	D.
Smaalenene ..	3,869.51	4,144.14	150,690	38.9
Akershus	4,903.11	5,235.30	129,323	26.4

Total	309,633.22*	322,908.82†	2,357,790	7.61

* 119,549 sq. miles. † 124,675 sq. miles.

in parentheses: Christiania, 242,850 (241,834); Bergen, 75,888 (76,867); Trondhjem, 46,256 (45,335); Stavanger, 36,621 (37,261); Drammen, 24,937 (24,895); Fredrikstad, 15,481 (15,597); Christiansand, 15,408 (15,291); Christiansund, 15,891 (13,201); Aalesund, 14,785 (13,858); Skien, 12,099 (11,856); Fredrikshald, 12,023 (11,992); Sarpsborg, 10,018 (9846).

The marriages in 1910 numbered 14,566; births, 61,461; deaths, 31,856; emigrants, 18,912.

The majority of the people are Lutherans (2,329,229 in 1910 belonging to the state church and 15,287 to the Free Lutheran church); Methodists are next in numbers (10,986). All creeds are tolerated, Jesuitism excepted.

EDUCATION. Primary schools are maintained by local taxation assisted by state grants. Instruction therein is compulsory between the ages of six or seven and fourteen. There are state, communal, and private secondary schools, and special technical and industrial institutions; and a university at Christiania.

PRODUCTION. Only about one-thirtieth of the total area is cultivable; about one-third is under forest; the remainder is uncultivated pasture, barren table-lands, and uninhabitable mountains. The crops raised are not sufficient for home consumption, and the import of cereals and meats is large. Below are seen areas devoted to main crops and yield for two years, with yield per hectare in 1911:

	Hectares		Quintals		Qs.
	1911	1912	1911	1912	ha.
Wheat	5,021	5,021	73,513	75,147	14.6
Rye	15,056	15,056	240,615	201,930	16.0
Barley	35,916	35,916	584,024	712,846	16.3
Oats	106,279	106,279	1,479,373	1,640,170	13.9

The fisheries products are important, the total catch in 1910 being valued at 89,753,000 kroner. Mineral production is increasing. Export of forest produce (1910), 80,339,000 kroner (wood pulp, 39,473,000).

COMMERCE AND COMMUNICATIONS. In the table below are seen imports and exports in the 1911 trade, values in millions of kroner (1 krone=26.8 cents):

	Imps.	Exps.		Imps.	Exps.
Cereals	66.6	4.0	Metal mfrs...	29.7	2.8
Col. prods...	40.6	0.7	Wood mfrs..	5.2	47.5
Animals	16.0	107.4	Leather mfrs.	1.5	0.5

Metals	27.2	10.8			
Hides, etc...	19.3	19.7	Total 1911	495.7	325.4
Yarns, etc...	13.7	0.7	Total 1910	429.3	309.7
Wood	12.3	34.2	Total 1909	386.6	264.3
Textiles	49.4	1.7			

Countries of origin and destination follow, with value of 1911 trade in millions of kroner:

	Imps.	Exps.		Imps.	Exps.
Germany ...	148.1	67.2	France	11.9	11.6
U. K.	127.4	87.2	Spain	4.2	10.4
Sweden	57.8	20.0	Italy	3.8	9.4
Russia	35.4	11.7	Portugal	1.5	6.7
U. S.	31.1	28.5	Other	23.8	41.8
Denmark	22.1	7.6			
Netherlands..	16.6	11.6	Total	495.7	325.4
Belgium	12.5	11.8			

Vessels entered in the 1910 trade, 12,083, of 4,966,859 tons; cleared, 11,773, of 4,974,157. Merchant marine January 1, 1911, 3047, of 1,526,156 tons (steamers 1842, of 895,869).

Lines of railway in operation in 1911, 3085 kilometers; of state telegraph lines, 11,013; of wires, 21,127.

FINANCE. In the table below is given in detail the budget for 1910-11:

Revenue	1000 kr.	Expenditure	1000 kr.
Finance *	77,243	Public works.....	43,926
Public works.....	37,399	Defense	21,287
Instruction, etc..	3,765	Finance	21,049
Justice, etc.....	2,012	Instruction	15,108
Agriculture	1,458	Justice, etc.....	8,428
From loans.....	4,872	Agriculture	3,346
Defense	551	Commerce, etc...	2,220
Commerce, etc...	416	Council of state..	1,868
Foreign affairs...	389	Foreign affairs...	1,145
Various	64	Civil list.....	747
Total	128,280	Storthing	709
		Miscellaneous ...	240
		Total	120,108
		Extraordinary.....	798

* Customs, 50,967,393 kroner; direct taxes, 8,170,852.

The total capital of the national debt stood March 31, 1911, at 355,452,820 kroner.

ARMY. The reorganization of the army of Norway continued in 1912, following out the plan adopted by the Storthing in 1909. There was maintained a Ligne for the service of 12 years, the Landvaern with 8 years' service, and the Landstorm with enrollment up to the age of 50. The army is recruited from volunteers and men who serve compulsorily for from 72 days in the infantry to 126 days yearly in the artillery. In 1912, the contingent of recruits was increased, the infantry alone receiving 8000 men. The guard corps was being suppressed on the grounds of economy. The mountain artillery was being armed with Ehrhardt guns during the year.

NAVY. The active fleet included (1912) the following: 4 coast-defense vessels (16,300 tons), 2 monitors (3500), 3 first-class gunboats (3250), 8 second-class gunboats (2270), 2 torpedo-boat destroyers (1100), 1 torpedo dispatch boat (410), 10 first-class torpedo boats (1020), 27 second-class torpedo boats (1840), 1 third-

class (30), 1 submarine (200)—all built. Building: 2 coast defense vessels, 1 torpedo-boat destroyer, 4 submarines. Personnel, about 3400.

GOVERNMENT. The king is the executive, acting through a council of state, whose members are responsible heads of departments. The legislative body is the representative Storting, made up of the Lagthing and the Odelsting. Reigning sovereign (1912), Haakon VII., son of the late king Frederick VIII. of Denmark. Heir-apparent, Prince Olaf. The council as constituted February 19, 1912, was as follows: J. Bratlie, president of the council and minister of state; J. Irgens, foreign affairs; E. Liljedahl, worship and instruction; F. Stang, justice and police; A. Lindvig Hovendak, commerce, navigation, and industry; E. Enge, agriculture; N. Hovdenak, public works; Fr. Konow, finance and customs.

HISTORY. A cabinet crisis occurred in the middle of February, and on February 19, the Konow ministry having resigned, a cabinet was formed under M. Bratlie, who assumed the portfolio of minister of defense. The crisis arose from a speech outside parliament by M. Konow, declaring his approval of the movement to introduce the old Norwegian language. In January the Storting passed the bill admitting women to judicial and other public offices, except the government, state church, army, navy, and diplomatic and consular services. The October elections greatly strengthened the Left, who secured a large majority of seats.

NORWEGIAN EXPOSITION. See **EXPOSITIONS.**

NOVA SCOTIA. A maritime province of the Dominion of Canada. Area, 21,428 square miles. Population (census of June 1, 1911), 492,338, as compared with 459,574 in 1901. Halifax, the capital, had 46,619 (40,832 in 1901). The province is administered by a lieutenant-governor, James Drummond McGregor, appointed October 18, 1910. Premier in 1912, George H. Murray. See **CANADA.**

NOVELS. See **FRENCH LITERATURE, GERMAN LITERATURE, and LITERATURE, ENGLISH AND AMERICAN.**

NUTRITION STUDIES. See **FOOD AND NUTRITION.**

NYASSALAND PROTECTORATE. A British protectorate extending from German East Africa to Portuguese East Africa, between Rhodesia and Nyasa Lake, and having an area, according to the most recent survey, of 39,801 square miles. Population (March 31, 1910), 970,430: 766 Europeans, 481 Asiatics (exclusive of Sikh troops), 969,183 natives. The administrative headquarters are at Zomba; the chief town is Blantyre, in the Shire Highlands. The cultivation of coffee has declined, that of cotton increased, 392 tons being exported in 1910-11. Total imports (1910-11), £199,710; exports, £168,911; local revenue (1909-10), £94,980; grant-in-aid, £31,451; expenditure, £112,369. There is a railway (113 miles) from Blantyre to Port Herald, to which extensions are contemplated. There are steamers on Lake Nyasa and on the rivers. Sir W. H. Manning (appointed February, 1911) was governor in 1912.

OATS. Owing to the record crops of oats in the United States and Russia, the world's production in 1912 was above the average, as these immense yields more than made up for crop shortage in other countries. In European countries, excepting Russia, the season was

very unfavorable to the production of oats. Continued heavy rains through August and September interfered extensively with the harvest of the crop and much of the grain was not only discolored but even sprouted and rotted in the fields before it could be garnered. In some sections the grain did not fill out properly and was consequently light in weight. The yield and quality of the straw, which are very important items in the culture of the crop, were also largely reduced. Practically every country in Europe, except Russia and France, recorded a reduced acre-yield. In England the yield was more than 6.5 bushels under the 10-year average. Unlike her neighbors, Italy suffered from a severe drought, and among the cereal crops oats was most affected, the production being about 30 per cent. less than the crop of 1911. Russia produced in 1912 a crop of 1,067,584,650 bushels, or over 209,000,000 bushels more than the year before. Other yields, mainly estimated, were as follows: Hungary, including Croatia and Slavonia, 76,893,000 bushels; Rumania, 21,359,000 bushels; France, 375,642,000 bushels; Algeria, 12,287,000 bushels; Tunis, 2,067,000 bushels; Italy, 28,306,000 bushels; Spain, 24,461,000 bushels, and Bulgaria, 12,058,000 bushels. The crops of Argentina and Australia, harvested early in 1912, amounted to 79,924,000 and 35,828,000 bushels, respectively. Canada produced 381,502,000 bushels, an increase of more than 10,000,000 bushels over the yield of 1911.

In the United States the weather everywhere was most favorable for the crop, but at harvest time rainy weather in a number of the central States reduced the quality to some extent by staining the grain. The crop made a remarkable record and stood far above other years in total production and average acre-yield. The crop of 1912 was 1,418,337,000 bushels, or about 52 per cent. greater than the average of the preceding five years and over 40 per cent. above the crop of 1909, the largest previously produced. The area devoted to the crop was 37,917,000 acres, or 154,000 acres more than in 1911, and never before equaled. The price paid farmers December 1, 1912, was 31.9 cents per bushel, as compared with 45 cents December 1, 1911. While the price declined as a consequence of the enormous production, still the total value of the crop has never been surpassed. This value amounted to \$452,469,000 and was about 16 per cent. above the average of the preceding five years. The crop ranks fifth in order of value, being within \$103,000,000 of the worth of the wheat crop and of more than half the value of the entire cotton crop. The largest yields by States were as follows: Iowa, 217,818,000 bushels (a record yield for the State); Illinois, 182,726,000 bushels; Minnesota, 122,932,000 bushels; North Dakota, 95,220,000 bushels; Ohio, 93,280,000 bushels, and Wisconsin, 84,746,000 bushels. Among these States Iowa ranked first in average yield per acre with 44.2 bushels, while Idaho led all States with 48.9 bushels. The average yield per acre for the entire country was 37.4 bushels.

OBERLIN COLLEGE. An institution for higher education at Oberlin, O., founded in 1833. The total enrollment in all departments of the college for 1911-12 was 1733, divided as follows: college of arts and sciences, 998; theological

seminary, 71; conservatory of music, 400, and academy, 284. The faculty numbered 153. The noteworthy changes in the faculty during the year included the retirement of Prof. F. F. Jewett of the chair of chemistry and head of that department, after 32 years of service, and the appointment of Prof. Alan W. C. Menzies of Chicago University as his successor. Professor Jewett retired under the Carnegie Foundation. The productive funds of the college amounted in 1911-12 to \$3,754,400. The library contained 120,000 bound volumes, and 125,000 pamphlets. President, Henry C. King, D. D.

OCCUPATIONAL DISEASES. The marked attention which has been given recently to the subject of diseases incident to employment in certain trades continued during 1912. Though the volume of legislation was necessarily smaller than in 1911 owing to the fewness of State legislative sessions the success of the campaign for the protection of workers against industrial diseases was in some respects more striking. Especially noteworthy was the passage of the Esch bill, placing a tax on poisonous matches. (For legislation see LABOR LEGISLATION.) This campaign has been carried on by the American Association for Labor Legislation and its State branches. It has succeeded in inducing eight States to require physicians to report all cases of certain occupational diseases. Illinois has required medical examinations of workmen in a few employments where occupational diseases are most frequent. This association has also prepared reports on industrial poisoning from lead and mercury. The United States Bureau of Labor has translated the list of industrial poisons prepared by the International Association for Labor Legislation.

The second national conference on industrial diseases under the direction of the association was held at Atlantic City, in June, being attended by physicians, public health officers, medical factory inspectors, manufacturers, efficiency engineers, insurance experts, labor leaders, social workers, economists, and statisticians. At the same time the first industrial hygiene exhibit was displayed. At this conference Prof. W. Gilman Thomson of the Cornell University Medical College, classified occupational diseases and harmful substances as follows: (1) Harmful substances, as metallic poisons, toxic gases, fumes, and fluids, irritant dusts and fibres, and organic germs. (2) Harmful conditions of environment, as compressed and rarified air, excessive humidity, extreme heat or cold, and excessive light. (3) Occupational injuries, as injuries to nerves, muscles, and bones, due to strain, fatigue, cramp, blows, vibrations or pressure, injuries to eyes, to ears, to nose and throat, and to skin. Mr. John B. Andrews, secretary of the American Association for Labor Legislation, made a much more simple classification: Trades menaced (1) by specific industrial dusts, fumes, gases, vapors, and acids; (2) by compressed or rarified atmosphere; (3) by improper light; (4) by extremes of temperature and humidity; (5) by excessive strain. He laid down as the programme for advance, first, the prevention of all preventable occupational diseases; second, the reduction to a minimum of all those which we do not yet know how to prevent, and third, the compensation by some system of insurance of victims of occupational diseases. Thus the methods would be absolute prohibition, specific regulation for specific causes,

such as white phosphorus in the match industry, and general regulation, such as the best sanitary conditions, and insurance against injury and compensation therefor. The conference included discussions on compressed air illness, occupational skin diseases, occupational nervous and mental diseases, occupational eye diseases, industrial poisoning, compulsory reporting of such cases by physicians, sanitary and health problems of modern industry, and the promotion of industrial hygiene by State legislation and education.

PLUMBISM. Since September 1, 1911, New York State has had a law requiring physicians to report cases of disease due to occupation, such as caisson disease, anthrax, and poisoning by lead, mercury, and arsenic. The reports are to be sent to the Department of Labor, which is charged with the duty of investigating processes or conditions which may cause industrial disease, and the administration of preventive measures to remedy such conditions. The importance of the law is shown by the reporting of a single case of lead poisoning in an employee of the Brooklyn Navy Yard. Investigation showed that this man was employed as a laborer in "scaling" lead paint in the double bottoms of battleships. Twenty men were found at the navy yard who had suffered from lead poisoning caused by work in double bottoms. Almost half the men employed on this work have been affected at one time or another by the lead; many of them had lost much time from their work on this account, and two had died. It was found that men were working in compartments four or five feet square in an atmosphere densely impregnated with dust, composed principally of red oxide of lead.

Dr. Alice Hamilton, of Chicago, has made an exhaustive study of the prevalence of industrial poisoning in the United States, the results of which were published in the *Journal of the American Medical Association* for September 7, 1912. She calls attention to the circumstance that plumbism in the United States, commonly supposed to be negligible as compared with the amount found in European countries, is really much greater here. A few comparisons may be quoted to show this. In an English white and red lead factory employing 90 men there was not one case of lead poisoning in five successive years. In an American white and red lead factory employing 85 men, 35 cases occurred in six months. Another English factory, employing 182 men, did not have a case of lead poisoning last year. An American factory, with 170 men, had 60 poisoned during this same year. Out of a group of 85 dippers, 13 men had had 16 attacks of lead poisoning in a pottery town in Ohio in one year. The English factory inspection report for 1910 states that in the Staffordshire potteries, among 786 male dippers, there were 12 cases of lead poisoning, exactly the same number as among our 85 dippers. In other words, in Staffordshire one dipper in 60 or 61 suffered from acute plumbism during one year; in Ohio, one dipper to 6 or 7.

As to the relative poisonous qualities of different lead compounds much stress is laid on dustiness as a factor. English experts believe that a less soluble lead salt may be actually more dangerous than one which is more soluble but less easily powdered. For instance,

lead acetate is very soluble, but it has a disagreeable taste, so that the workman cannot swallow it unawares, and it is sticky, not powdery, so that in handling it he is not exposed to dust-laden air. On the other hand, the oxide, the basic carbonate, the chromate, sulphate, and monosilicate, are all dusty and some of them very light and fluffy. They are also almost tasteless, and the workman who handles them dry inhales into his mouth and swallows quantities without noticing it. Therefore the English authorities—Oliver, Goadby, and Legge—regard the lead salts as dangerous in proportion to their dustiness. They concentrate their efforts on the abolition of dust—and with amazing practical success. The worst of the lead compounds is probably Pb_3O_4 , the suboxide, which forms on the surface of melted lead and is given off in fumes at high temperatures (Saeger). It is this oxide which causes poisoning in lead smelters, zinc smelters, brass molders, workers in the typographic trades, and the men employed in making lead pipe and wire, sheet lead, solder, shot and all the multitude of articles made from metallic lead. Men who handle these objects after they are made may also become poisoned, because the oxides forming on the surface of the lead rub off on their hands.

The second place would be assigned by some to the higher oxides, PbO (litharge) and Pb_2O_3 , or Pb_3O_4 (red lead), or by others to the basic carbonate, white lead. The latter is decidedly more soluble and, dose for dose, more poisonous, but it is not so light and fluffy as are the oxides, and therefore Etz places it lower in the scale of industrial poisons. White lead, classed as the most dangerous of all by Lehmann, is the best known of the lead salts and probably responsible for more industrial plumbism than any, for it is white lead that poisons the majority of painters, and it is white lead that is used in the potteries and manufactured in white-lead works. The oxides, litharge and red lead, are used by makers of storage batteries; they enter into the composition of rubber, glass, varnish, certain kinds of pottery glaze, the enamel used on sanitary ware, and the paint used to cover iron and steel. Authorities are not agreed as to the size of the daily dose required to produce symptoms of lead intoxication, estimates varying from 1 mg. to 20 mg., or even more. There is a wide difference in individual susceptibility, certain workers being apparently immune, while others succumb in a few weeks. The avenue of entry is the alimentary tract, the dust being swallowed with the saliva, but absorption through the capillaries of the lungs has been experimentally proved.

SHUTTLEMAKERS' DISEASE. Shuttlemakers' disease is a rather baffling ailment found among workmen engaged in the manufacture of shuttles in Lancashire and Yorkshire, England. Numerous cases of illness among those handling the wood in these factories led to the belief that the timber used possessed a property injurious to health; and the impression went abroad that the sickness was due to some poison given off by the wood during the process of manufacture of shuttles. The symptoms complained of were "headache, sleepiness, running of the nose and eyes, chronic sneezing, giddiness, faintness, loss of appetite, shortness of breath, nausea, etc." The patients exhibited a pale, yellowish or greenish color of the skin,

accompanied by a peculiar "camphor" or "Turkey rhubarb" odor from the breath and skin. Deaths were reported as due to "cardiac asthma" and cardiac incompetence. An inquiry into the details of the industry developed the fact that various woods have been used for the manufacture of shuttles, namely, Persian box, persimmon, cornel. These timbers have certain peculiarly suitable properties as cabinet woods and are capable of taking on a high polish. More recently certain other imported woods, known under the names of West African boxwood, South African boxwood, West Indian boxwood, and East London boxwood, have entered into use because of technical advantages and comparative cheapness. The sickness was most prevalent among those men who were exposed to the fine smoke-like dust given off by the saws or lathes where the inhalation of the dust or absorption in other ways was almost unavoidable, especially as the men are lightly clad and often naked from the waist up. An examination of the sawdust of supposedly toxic wood showed that an alkaloid present in the West African boxwood is a cardiac poison, inducing experimentally a gradual slowing of the heart-beat, with a cumulative effect after long exposure to its influence. The alkaloid is very soluble and probably easily absorbed. Further examinations disclosed the fact that the toxic wood variously termed West African or East London boxwood is not boxwood (i. e., a species of *Buxus*) and is not identical with the South African or West Indian boxwood. It is a native of the Congo basin and the Kamerun; and Professor Gibson has at length identified it as a species of *Gonioma* which belongs to a poisonous order of tropical or subtropical plants. Thus, joint clinical, chemical, physiologic, and botanical investigations have made obvious the means of relief from a most objectionable industrial danger.

BIBLIOGRAPHY. A special bibliography on industrial hygiene has been prepared by the co-operation of the International Association for Labor Legislation, the Library of Congress, and the United States Bureau of Labor; the New York Department of Labor has published various reports on this subject, as has also the New York Factory Investigating Commission; the United States Bureau of Labor *Bulletin* number 95 contains Thomas Oliver's "Industrial Lead Poisoning"; the same *Bulletin*, number 100, publishes the list of industrial poisons and other substances injurious to health found in industrial processes, prepared by the International Association for Labor Legislation; the *American Labor Legislation Review*, Vol. II., No. 2, June, 1912, contains all papers presented at the conference above mentioned.

OCEAN DEPTHS. See **EXPLORATION.**

OHIO. POPULATION. According to the Census Bureau statistics compiled during 1912, out of a total population of 4,767,121 in 1910, the foreign-born whites numbered 597,245, compared with 457,900 in 1900. The largest number came from Germany, 175,130; from Austria, 73,162; from Russia, 48,752; from England, 43,365; from Italy, 41,581; from Ireland, 40,056; from Hungary, 34,657; from Canada, 21,068; from Sweden, 10,916; and from Scotland, 10,704. Other European countries contributed smaller numbers. In the city of Cincinnati, with a population of 364,463 in 1910, there were 56,792 foreign-born whites. Of these, 28,425 came

from Germany. The city of Cleveland, with a population of 560,663, had a foreign-born population of 195,703. Of these, 41,310 came from Germany; 41,942 from Austria, and 25,499 from Russia. There were in the State in 1910, 111,452 negroes and 39,249 mulattoes. In 1890 the negroes numbered 87,113 and the mulattoes, 37,035.

AGRICULTURE. The acreage, value, and production of the principal crops in 1911 and 1912 are given below:

		Acreage.	Prod. Bu.	Value.
Corn	1912	4,075,000	174,410,000	\$74,484,000
	1911	3,900,000	150,540,000	\$7,313,000
Wheat	1912	1,220,000	9,760,000	9,565,000
	1911	2,265,000	36,240,000	32,978,000
Oats	1912	2,120,000	93,280,000	30,782,000
	1911	1,700,000	54,570,000	24,556,000
Rye	1912	57,000	884,000	663,000
	1911	60,000	930,000	790,000
Potatoes	1912	186,000	20,832,000	11,041,000
	1911	190,000	12,350,000	10,374,000
Hay	1912	2,960,000	a 4,026,000	52,338,000
	1911	2,556,000	a 2,505,000	47,344,000
Tobacco ...	1912	86,200	b 79,300,000	7,217,000
	1911	88,000	b 81,400,000	6,186,000

a Tons. b Pounds.

MINERAL PRODUCTION. The production of coal in the State in 1911 was 30,759,986 short tons, valued at \$31,810,123. The conditions affecting the industry in 1911 were in marked contrast to those prevailing in 1910, when the production was stimulated as a result of the strike in other States. The production in that year was 34,209,668 short tons, which is the record tonnage produced in the coal-mining history of the State. There were labor troubles in 1911, and 9530 men were on strike at one time or another during the year.

The iron ore mined in the State in 1911 amounted to 16,697 long tons, valued at \$30,549, as compared with 22,320 long tons, valued at \$35,866 in 1910.

The production of petroleum in 1911 was 8,817,112 barrels, which was a considerable decrease from the production of 1910, which was 9,916,370 barrels. The decrease was almost entirely in the Lima fields, which are a part of the Lima-Indiana oil field.

MANUFACTURES. The Thirteenth Census statistics are for the calendar year 1909, and were compiled in 1912. Ohio is largely a manufacturing State and the growth of the industries has been rapid and substantial. From the following table it will be seen that there were in 1909, 15,138 manufacturing establishments, giving employment to an average of 523,004 persons. The largest number of wage-earners was employed in the manufacture of foundry and machine-shop products, 64,817; in the iron industries were employed 38,586; in industries connected with railways, 20,728; in the manufacture of pottery and clay products, 16,519; in printing and publishing, 15,756. The largest value of product was in the iron and steel industries, \$197,780,000. The value of the product of the foundry and machine shops was \$145,837,000; of industries connected with iron and steel, \$83,699,000; slaughtering and meat-packing, \$50,804,000; flour mill and grist mill products, \$48,093,000. Other industries whose product was valued at more than \$25,000,000 were printing and publishing, automobiles, lumber and timber products, boots and shoes, tobacco manufactures, industries connected with railways, and malt liquors. The total number

of persons employed in the manufactures was 523,004. Of these, 439,811 were male and 83,193 female. Those employed under 16 years of age numbered 5244. The prevailing hours of labor among the great majority of wage-earners ranged from 54 to 60 a week; only 13.7 per cent. of the total being employed in establishments where the prevailing hours were less than 54 a week and only 7.6 per cent. in establishments where they were more than 60 a week. The largest number of wage-earners was in the city of Cleveland, 84,728. The value of the manufacturing product in this city was \$271,960,833. In Cincinnati the wage-earners numbered 60,192, with a product valued at \$194,515,692. Other cities whose product was over \$25,000,000 were Youngstown, Akron, Toledo, Dayton, Columbus, Lorain, and Canton. The following table gives a summary of the results of the census for the calendar years 1909-1904:

	Number or Amount 1909	1904	Of Inc. 1904-'09
Number of establishments	15,138	13,785	9.8
Persons engaged in manufactures	523,004	417,946	25.1
Proprietors and firm members	14,719	13,657	7.8
Sal'd employees	61,351	39,991	53.4
Wage earners (average number)	446,934	364,298	22.7
Primary h. p.	1,583,155	1,116,932	41.7
Capital	\$1,300,733,000	\$856,989,000	51.8
Expenses	1,282,845,000	856,206,000	49.8
Services	317,597,000	225,864,000	40.6
Salaries	72,147,000	43,435,000	66.1
Wages	245,450,000	182,429,000	34.5
Materials	824,202,000	527,637,000	56.2
Miscellaneous	141,046,000	102,705,000	37.3
Value of products	1,437,936,000	960,812,000	49.7
Value of products less cost of materials	613,734,000	433,175,000	41.7

EDUCATION. The total daily attendance in the schools of the State in 1911-12, was 651,746. Of these, 325,986 were boys and 325,760 were girls. The total number of men teachers was 8239, and of women teachers, 18,125. The average monthly salary in elementary schools for men was \$58, and for women, \$47; in high schools, for men, \$88, and for women, \$67. The total expenditures under the common school system of the State in 1911-12 were \$30,054,779. A law requiring the teaching of agriculture in the elementary schools of the State has greatly added to the value of school work. This law makes the State commissioner of schools State superintendent of agriculture, and gives him the appointment of four deputy supervisors of agriculture. This law has created a great interest in the subject, and it will largely increase the value of farms and farm products in Ohio. New laws for certification and teachers' pensions were passed in the legislature of 1911-12. Two normal schools, one at Bowling Green and one at Kent, were established during 1912.

FINANCE. The receipts for the fiscal year ending November 15, 1911, were \$13,037,293, and the expenditures for the same period were \$12,932,343. The balance on hand at the end of the year, including the balance at the beginning of the fiscal year, was \$3,768,116. The chief sources of income are from the liquor tax, county tax settlement, excise tax, public utilities, the annual fees of corporations, and fees

and taxes from insurance companies. The chief expenditures are for State institutions, for education and for State government. There is no State debt.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions of the State included the Athens State Hospital, Cleveland State Hospital, Columbus State Hospital, Dayton State Hospital, Longview Hospital, the Massillon State Hospital, the Toledo State Hospital, the Ohio Hospital for Epileptics, the Madison Home, the Ohio Soldiers' and Sailors' Home, the Ohio Soldiers' and Sailors' Orphans' Home, State School for the Blind, State School for the Deaf, Institution for Feeble-minded, State Sanitarium, State Penitentiary, State Reformatory, Boys' Industrial School, Girls' Industrial School, and the Lima State Hospital, also several State farms. The juvenile court law is enforced in the State and its operation has been very satisfactory.

POLITICS AND GOVERNMENT

There is never a lack of political interest in Ohio, and the situation in the State in 1912, resulting from a number of unusual conditions, made the political history of the State during the year one of the most interesting and eventful in recent years. As President Taft is a native of the State, unusual interest centred in his campaign. Governor Harmon was, up to the time of the Democratic national convention, one of the three leading candidates for the nomination. More important than the political campaign in its lasting results was the constitution convention, which prepared an entirely new constitution for the State. This is noted at length below.

CONVENTIONS AND ELECTIONS. The Republican campaign began on the first day of the year with the organization at Columbus of the Ohio Progressive Republican League. This league was ostensibly formed to forward the nomination of Senator La Follette, but the meeting resolved itself finally into a non-committal stand for Mr. Roosevelt. This was largely due to the efforts of Gifford Pinchot, James R. Garfield, and other friends of Mr. Roosevelt. The delegates finally refused to endorse any particular person for the nomination, although the friends of Senator La Follette made an aggressive fight to have his name endorsed as the candidate of the league. The resolution to endorse Senator La Follette was defeated by a vote of 52 to 32.

On February 21, Mr. Roosevelt made his famous and long-awaited address before the constitutional convention. A summary of this is given in the article **PRESIDENTIAL CAMPAIGN**. Several weeks before this Governor Harmon addressed the convention. In contrast to Mr. Roosevelt he declared against the initiative and referendum, which he said were merely experiments in government, and he advised those who were making the new constitution to observe how the innovations worked in other commonwealths before adopting them. Governor Wilson was invited to address the convention, but he declined on the ground that he would not invade the territory of the State while its governor was a rival candidate for the nomination.

The first test of the relative strength of Mr. Roosevelt and President Taft in the State came in the primary election held on May 21. This,

although called a presidential primary election, was not, strictly speaking, an election for the choice of the voters for President. On the ballots there appeared the name of no candidate for the presidential nomination. The voters of each party expressed their choice by voting for district delegates favorable to one candidate or another. The delegates-at-large were not voted for at this primary, but at the State convention. The campaign preceding this election was bitter and aggressive. Both President Taft and Mr. Roosevelt took part on the Republican side, while Mr. Bryan made speeches bitterly opposing Governor Harmon. The election resulted in an overwhelming victory for Mr. Roosevelt. His delegates received 165,809 votes, while those of President Taft received 118,362, and those of Senator La Follette 15,570. The total vote cast was 299,741, which may be compared with the Republican vote in the election of 1908, 572,312. The only delegates carried by President Taft were the four from Cincinnati and Mr. Roosevelt had abstained from making addresses in this city. This election may be considered the climax of the Republican campaign. The result was a bitter disappointment for President Taft, who had caused it to be understood that he would accept as conclusive the verdict of his own State.

The overwhelming victory of Mr. Roosevelt did not give him the control of the State convention. The machinery of this convention was in the hands of the Taft leaders. The convention met on June 4 and by a vote of 393½ to 359½ endorsed President Taft. The convention was riotous, and strong efforts were made to defeat the Taft majority. These failed, however, and the six delegates-at-large were given to President Taft. The action of the President in accepting these delegates after the verdict of the voters was severely criticised during the campaign. The Republican convention for the nomination of State officers was held on July 2. Edmund B. Dillon of Columbus, judge of common pleas, was nominated for governor. It was well known that Judge Dillon was favorably inclined toward Mr. Roosevelt, and he had in fact declared that he would not accept the nomination for governor. He finally consented, however, to be a candidate. After a careful study of the situation for nearly a month, Judge Dillon declined to run and resigned as a candidate. His action was not a surprise, as it was known that if the Roosevelt Republicans insisted on nominating a third candidate, or demanded that he should take a stand in favor of Mr. Roosevelt for President, he would decline to run. The State committee, in whose hands lay the selection of a new candidate, met on August 10 and nominated Gen. R. B. Brown of Zanesville, who had previously been the nominee for lieutenant-governor. Walter F. Brown, chairman of the State committee and leader of the Progressive party in the State, resigned, following the nomination of General Brown. He was followed by eight other Roosevelt men on the committee. In the following week the committee nominated other candidates for State offices. The Progressive party held a convention on September 4 and nominated Arthur L. Garfield for governor, and other State officers. James R. Garfield was temporary chairman.

The Democratic campaign, while not so spec-

tacular as the Republican, had features of great interest. The attacks made upon Governor Harmon by Mr. Bryan are referred to above. To these attacks Governor Harmon replied at length. He declared that although he had been the candidate of his party for five years, he had never yet disappointed it. He declared that, although Mr. Bryan had predicted certain defeat in November if he (Harmon) should be nominated for the presidency, he did not think Mr. Bryan had the qualifications for picking a successful candidate.

Mr. Harmon carried the primary election on May 21, winning a majority of the district delegates to the national convention though Mr. Wilson polled a heavy vote and was generally successful in northern Ohio. The State convention was controlled by Governor Harmon, elected six delegates-at-large in his interest, and then after a bitter fight, voted to apply the unit rule to the Ohio delegation as a whole. That was to make it impossible for the Wilson district delegates to support the New Jersey man in the Baltimore convention. The Wilson adherents, however, refused to abide by the decision of the State convention, took their fight to the floor at Baltimore and won. See **PRESIDENTIAL CAMPAIGN.**

The Democrats on July nominated Congressman James M. Cox for governor. The result of the election on November 5 was as follows: For President, Wilson received 423,152 votes, Taft 277,066; Roosevelt 220,327, Debs 89,930, Chafin 11,459, and Reimer, Socialist Labor, 2623. Governor Wilson's plurality was 146,086. For governor, Cox, Democrat, received 439,323 votes, Brown, Republican, 272,500, Garford, Progressive, 217,903, Ruthenberger, Socialist, 87,709, Poling, Prohibitionist, 16,607, and Kircher, Socialist Labor, 2689. The legislature is Democratic by a majority of 72 on joint ballot.

CONSTITUTIONAL CONVENTION. The fourth constitutional convention of the State concluded its reports on June 7, 1912. It prepared forty-two amendments to the constitution, which were submitted to the people on a single ballot, and arranged in the order in which they would appear, if adopted, in the constitution, except the amendment relating to the liquor traffic, which was placed by itself on the ballot.

This constitutional convention met primarily as a result of the desire of the State board of commissioners to replace the general property tax with classification of property. The efforts of this board to bring about the convention were seconded by the liquor interests, which believed that through a convention they might succeed in securing a license clause in the organic law of the State. These two bodies of advocates were joined by the friends of the initiative and referendum, who wished to make the State thoroughly progressive by placing legislative power in the hands of the people. The three proposals advocated by these various bodies occupied nearly one-third of the time of the entire session of the convention.

The agitation for a change in relation to taxes was brought about by the fact that for sixty years the State has had a general property tax. In 1905, by amendment to the constitution, municipal bonds were exempted from taxation, this being the only exemption for individuals, except personal property to the extent of \$200 for each person. The proposal adopted by the convention restores State, city, village, county, and township bonds issued after

the going into effect of the proposal, if it should be ratified by the people, to taxation, but increases the \$200 exemption to \$500. It also gives to the legislature authority to provide for inheritance taxes, income taxes, excise, and franchise taxes, and taxes upon the production of coal, oil, gas, and other minerals. It prohibits any indebtedness of the State or a political subdivision of the State, unless provision is made for payment of part of the principal together with the interest each year. The proposal was considered by many of the delegates too conservative. But the fact that a 1 per cent. tax law was passed by the State legislature in 1911 and had been found to work satisfactorily brought about the result that most of the people, particularly the farmers, felt favorably toward the general property tax.

Second in importance were the measures relating to the liquor traffic. The State had been a no-license State since 1851, the date of the adoption of the constitution. That instrument contains this paragraph: "No license to traffic in intoxicating liquors shall hereafter be granted in this State; but the General Assembly may, by law, provide against the evils resulting therefrom." Under the latter part of this provision a body of laws was passed at various times by the legislature. The liquor proposal adopted by the constitutional convention provides for license and it safeguards all the liquor laws previously on the statute books. It further provides that license shall be granted only to persons of good moral character, who are interested in the business nowhere else and who are citizens of the United States. It also provides that applicants for license must be the only persons interested in the business for which the license is asked, that conviction for a second offense against the liquor laws of the State shall revoke a license, and that licenses shall be limited to one for every 500 population in townships and municipalities. Under municipal home rule, municipalities will have the right to restrict further the number of saloons within their corporate limits.

The measures relating to the initiative and referendum resulted in one of the bitterest fights of the convention. The delegates were divided into those who were opposed to the initiative and referendum altogether or unless well safeguarded; those who favored the indirect initiative with reasonably high percentages, being bitterly opposed to the direct initiative in any form; and those who favored only the direct initiative with low percentages. The proposal passed was a compromise. It provides for the direct initiative for constitutional amendments only, with a requirement of 10 per cent. of the electors on petition, and the indirect initiative for all laws, with a requirement of 3 per cent. of the electors on petition. If a proposed law is ignored by the General Assembly or is passed in its original or in an amended form it is subject to the referendum, though it can be referred only on a petition signed by a supplementary 3 per cent. of the electors, which petition shall state the form of the law asked to be referred, whether the original or an amended form. Laws proposed by the initiative petition shall not be subject to the veto power of the governor.

Important proposals were passed having to do with Congress and judicial procedure. These provided that in civil cases the General Assembly may authorize the rendering of a verdict

by not less than three-fourths of the jury. Provision was also made for the removal of occasions for the law's delay, making the administration of the law less expensive to litigants and the State. Other measures provided for the regulation of the use of expert witnesses and expert testimony in criminal trials and proceedings.

Proposals relating to labor were important. Nearly all the proposals asked for by the labor delegates were granted. These included measures authorizing the legislature to pass laws regulating the hours of labor, limiting a day's work to eight hours, and a week's work to 48 hours on all public work of the State, establishing a minimum wage, providing for the comfort, health, and safety of employees, providing for workmen's compensation, providing that no injunction shall issue in any controversy involving the employment of labor, except to preserve property from injury or destruction, and securing for persons charged with violating an injunction in such controversy a trial by jury as in criminal cases. (See EMPLOYERS' LIABILITY.) A measure was passed providing that prison labor and prison-made goods shall not enter into competition with other labor and goods, and the limit on the amount of damages recoverable for death by wrongful act or neglect of another, was removed. Mechanics, artisans, laborers, and material men were secured by a direct lien upon property upon which they have bestowed labor or furnished material. A proposal was passed providing for a bond issue of \$50,000,000 to build an inter-county system of wagon roads. An important proposal was that relating to conservation of national resources and the conservation of the water power of the State. A woman suffrage proposal was passed, as well as a proposal authorizing the appointment of women to positions in those institutions of the State where the interests of women and children are involved. The word "white" was eliminated from the elective franchise article of the constitution, by request of the negroes of the State.

Important proposals providing for the removal from office of officers for misconduct involving moral turpitude or other causes were passed, and provision was made for primary elections, except in villages and townships of less than 2000 population. A civil service provision for the State and all subdivisions was passed.

Two important proposals relating to education were passed. One of these made the superintendent of public instruction an appointive office. The other provided for the organization, administration, and control of the public school system of the State, giving each city school district powers, by referendum vote, to determine for itself the number of members and the organization of its board of education.

Perhaps the most radical proposal adopted by the convention was that giving home rule to municipalities. This proposal provides that municipalities may choose their own form of government and exercise all powers within their corporate limits that are not prohibited by the general laws of the State. It provides further that municipalities may acquire public utilities and may operate them, and sell, without the corporate limits, the product of service of the utilities to the extent of 50 per cent. of the product or service of the utilities used within the corporate limits, or that they may acquire property beyond their needs and sell the excess.

Municipalities are also permitted by a vote of two-thirds of the council or on petition of 10 per cent. of the electors, to create a charter commission of 15 members, who shall prepare a charter to be submitted to the people, which is to go into effect on the approval of the electors.

Capital punishment was abolished.

The convention consisted of 119 delegates, divided politically into 65 Democrats, 48 Republicans, 3 Independents, and 3 Socialists. Several important addresses were delivered from time to time by distinguished men. These included Judge Lindsay of Denver, who spoke on the initiative and referendum. President Taft delivered a short address. Governor Harmon addressed the convention, and frankly stated his ideas on a number of subjects. He expressed his disapproval of the initiative and referendum, and recommended that a clause licensing the liquor traffic be embodied in the constitution. The address of President Roosevelt is noted in full in the article PRESIDENTIAL CAMPAIGN. Governor Johnson of California advocated the initiative and referendum, the recall of judges, and woman suffrage. William J. Bryan also advocated these reforms and included the guarantee of bank deposits. Senator Burton and former Senator Foraker delivered forcible addresses against the initiative and referendum.

The 42 amendments were voted on at a special election on September 3, 34 being adopted and 8 defeated. Among the lost amendments was one establishing woman's suffrage, another to abolish capital punishment, and another to encourage good roads through a \$50,000,000 State bond issue. On the other hand, the 34 amendments adopted establish what is generally considered one of the most progressive constitutions in the Union. They accept the initiative and referendum in a mandatory form, permit the adoption of minimum wage legislation, broaden the workingmen's compensation laws, establish the eight-hour day on all public work, facilitate the removal of State officials, radically modify the judicial system of the State, limit the veto power of the governor, compel State-wide primaries and State-wide civil service, establish a "blue sky" law, and greatly broaden the freedom of local municipalities to govern themselves as they choose. The new legislature to meet in January will have as its chief duty the carrying out of the mandates of the new constitution. Already in several cities of the State steps have been taken to revise their forms of government for the establishment of home rule.

For the decision of the Supreme Court on control of sewage disposal and water-supplies by State boards of health, see SANITATION.

OTHER EVENTS. The trial of members of the legislature indicted for bribery in 1911 was continued during 1912. On March 13, Senator L. R. Andrews was convicted of accepting a bribe for legislative favors. On May 23, Senator Isaac E. Huffman was convicted. On December 4, Senator G. K. Cetone was found guilty. All are now in the penitentiary. On October 9, Representative George B. Nye pleaded guilty to the charge of soliciting a bribe of \$1000. He subsequently made confession of everything that he knew of the legislative graft to Attorney-General Hogan. Proceedings were at once begun looking towards the indictment of persons and corporations mentioned in this confession.

STATE GOVERNMENT. Governor, J. M. Cox; Lieutenant-Governor, Hugh L. Nichols; Secre-

tary of State, Charles H. Graves; Treasurer, J. M. Brennan; Auditor, V. Donahey; Attorney-General, Timothy S. Hogan; Adjutant-General not appointed; Commissioner of Insurance, Edmond H. Moore; Superintendent of Education, Fank W. Miller—all Democrats.

JUDICIARY. Supreme Court: Chief Justice, John A. Shauck, Rep.; Associate Justices, James G. Johnson, Maurice H. Donohue, J. F. Wilkin; O. Newman—all Republicans; R. M. Wanamaker, Ind.; Clerk, Frank McKean, Republican.

STATE LEGISLATURE, 1913 Republicans, Senate, 7; House, 32; joint ballot, 39. Democrats, Senate, 26; House, 88; joint ballot 114. Progressives, House, 3; joint ballot, 3. Democratic majority, Senate, 19; House, 53; joint ballot, 72.

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

OHIO RIVER DAM. See DAMS.

OHIO STATE UNIVERSITY. The students enrolled in all departments of the university in the autumn of 1912 were 3608. The faculty numbered 274. During the year a graduate school was organized with Prof. William McPherson, Ph. D., as dean. Henry Adam Weber, professor of agricultural chemistry, died July 14, 1912. Dr. Frederick Arps, Ph. D., of the University of Illinois, was appointed professor of psychology, and Forrest Kizer Pence was appointed professor of ceramic engineering. The productive funds of the university at the end of the collegiate year 1911-12 amounted to \$950,004, and the income to \$1,029,958. There were in the library 118,654 bound volumes, and about 10,000 pamphlets. President, W. O. Thompson, D. D., LL. D.

OHIO UNIVERSITY. An institution of higher learning at Athens, O., founded in 1804. The total enrollment in all departments of the university in the autumn of 1912 was 1832. The faculty numbered 75. There were no noteworthy benefactions received during the year. Among the additions to the faculty made during the year were the following: C. M. Doubt, director of indoor athletics; Clinton N. Makinnon, assistant professor of English, and Elizabeth H. Bohm, principal of the school of domestic science. The income of the university is about \$252,000 annually. The library contained 41,000 volumes. President, Alston Ellis, Ph. D., LL. D.

OHIO WESLEYAN UNIVERSITY. An institution for higher education at Delaware, O., under the auspices of the Methodist Episcopal Church, founded in 1842. The enrollment in all departments of the university in 1912 was 1041. The faculty numbered 65. There were no noteworthy changes in the faculty during the year and no notable benefactions. The productive funds amounted to \$555,000, and the gross income to about \$200,000. The library contained 63,000 volumes. President, Herbert Welch, D. D.

OIL ENGINES. See INTERNAL COMBUSTION MOTORS.

OKLAHOMA. POPULATION. According to the Census Bureau statistics compiled during 1912, out of the total population, 1,657,155, in the State in 1910, 40,084 were foreign-born whites, compared with 20,390 in 1900. Of these, the largest number, 10,084, came from Germany; from Russia, 5850; from Austria, 3908; from Canada, 2498. Other European countries were represented by smaller numbers. The negroes in

the State in 1910 numbered 137,612, and the mulattoes 39,342. In 1890 the negroes numbered 21,609 and the mulattoes 817.

AGRICULTURE. The acreage, value, and production of the principal crops in 1911 and 1912, are given below:

		Acreage.	Prod. Bu.	Value.
Corn1912	5,448,000	101,878,000	\$41,770,000
	1911	5,675,000	36,888,000	25,822,000
Wheat1912	1,570,000	20,096,000	15,072,000
	1911	1,122,000	8,976,000	8,258,000
Oats1912	936,000	23,494,000	7,988,000
	1911	909,000	8,181,000	3,927,000
Rye1912	4,000	48,000	42,000
	1911	4,000	38,000	40,000
Potatoes	...1912	29,000	1,740,000	1,618,000
	1911	30,000	540,000	670,000
Hay1912	385,000	a 481,000	3,559,000
	1911	310,000	a 648,000	5,184,000
Cotton1911	c 915,000

a Tons. c Bales.

MINERAL PRODUCTION. There were produced in the coal mines of the State in 1911, 3,074,242 short tons, valued at \$6,291,494. This is a considerable gain over the figures of 1910, 2,646,226 short tons, valued at \$5,867,947. It did not, however, equal the tonnage mined either in 1909 or 1907, which was less than the average production of the preceding eight years. The decrease in the production is largely due to the competition of fuel oil and natural gas from the Louisiana and mid-continent fields, and of coal from other States where mining conditions are more favorable. There were 27 men killed by accidents in the coal mines of the State during 1911.

The production of lead and zinc for 1911 was valued at \$812,190, a decrease of \$132,506, compared with the production in 1910. The production of lead was 2501 short tons, and of zinc, 5150 short tons, compared with a production of 288 short tons of lead and 6394 tons of zinc in 1910.

Petroleum. The State ranks second in the production of petroleum, being surpassed only by California. The production has shown a steady increase for several years. In 1911 it was 56,069,637 barrels, compared with 52,028,718 barrels in 1910. The most significant factor in the increase of 1911 was the development of the Barnsdall and Sinclair pools near Osage Junction where wells of 1000 to 3000 barrels in daily yield kept the production of the pool in the neighborhood of 20,00 barrels a day. The value of the product in 1911 was \$26,451,767, compared with a value of \$19,922,660 in 1910. In 1911 there were 4087 wells completed, of which 3294 produced oil.

MANUFACTURERS. The Thirteenth Census statistics are for the calendar year 1909 and were compiled in 1912. The manufacturing industries in the State have increased rapidly in importance, although many are still in their infancy. From the table on the next page it will be seen that in 1909 there were in the State 2310 manufacturing establishments, giving employment to 18,034 persons.

The largest number of wage-earners was found in industries connected with lumber and timber, 3175; in printing and publishing were employed 1698; in flour and gristmill products, 842; and in the manufacture of brick and tile, 730. The greatest value of product was in the flour and gristmill manufactures, \$19,144,000. The product of oil, cottonseed, and cake manufactures was \$5,187,000; lumber and timber

	Number or Amount 1909	1904	P. C. of Inc. 1904-'09
Number of establishments.....	2,310	1,123	106.7
Persons engaged in manufactures....	18,034	7,456	141.9
Proprietors and firm members...	2,698	1,187	127.3
Salaried employees	2,193	813	169.7
Wage earners (average number)...	13,143	5,456	140.9
Primary horsepower	71,139	29,608	140.3
Capital	\$38,873,000	\$16,124,000	141.1
Expenses	47,216,000	21,383,000	120.8
Services	9,285,000	3,517,000	164.0
Salaries	2,045,000	718,000	184.8
Wages	7,240,000	2,799,000	158.7
Materials	34,153,000	16,394,000	108.3
Miscellaneous	3,778,000	1,472,000	156.7
Value of products..	53,682,000	24,459,000	119.5
Value of products less cost of materials	19,529,000	8,065,000	142.1

products, \$4,439,000. The total number of persons engaged in manufactures was 18,034. Of these, 17,071 were male and 963 female. The prevailing hours of labor for the majority of the wage-earners was 60 or more a week; 56.3 per cent. were employed in establishments where those hours prevailed, and 43.7 per cent. in establishments where less than 60 hours a week prevailed. The largest number of wage-earners was found in Oklahoma City, 1398; in Shawnee were 1014; in Tulsa, 462; in Muskogee, 381, and in Chikasha, 364.

EDUCATION. The total number of pupils of school age in the State in 1911 was 556,852. Of these, 509,577 were white and 47,275 were colored. The white males numbered 261,730 and the white females 247,847. The colored males numbered 23,634 and the colored females 23,641. The total enrollment in the schools of the State was 443,227. Of these, 405,873 were white and 37,354 colored. The average daily attendance was 260,018. The teachers numbered 10,020. The number of schools taught during the year was 5981. The total amount of money spent on the public schools was \$6,759,412. The total number of school-houses was 6222.

POLITICS AND GOVERNMENT

The legislature did not meet in 1912 as the sessions are biennial and the last was held in 1911. The next session was scheduled to convene January 7, 1913.

There was no election for governor or other State offices in 1912, as the term of Governor Cruce does not expire until 1913. Interest therefore centred in the presidential campaign. The first Republican congressional district convention held in the country was convened at Colgate on January 23. This convention endorsed President Taft. The Republican State convention for the election of delegates to the national convention was held at Guthrie on March 14. It was controlled by the Progressives and the ten delegates were instructed to vote for Mr. Roosevelt. The Oklahoma delegates were among the most aggressive partisans of Mr. Roosevelt at the Republican national convention.

The Democratic State convention met at Oklahoma City on February 23. The delegates were divided, ten each being given to Woodrow Wilson and Champ Clark. An attempt to en-

dorse Champ Clark was defeated by 314 votes to 289. These delegates each had half a vote, and if their candidate withdrew from the convention they were instructed to cast all their votes for the remaining candidate. Roosevelt electors did not appear on the ballots, therefore all the Republicans in the State voted for President Taft. The result of the election was as follows: Wilson, 119,156 votes; Taft, 90,786; Debs, 42,262; Chafin, 2185. Governor Wilson's plurality was 28,370. The legislature is Democratic by a majority of 89 on joint ballot.

STATE GOVERNMENT. Governor, Lee Cruce; Lieutenant-Governor, J. J. McAlester; Secretary of State, Benjamin F. Harrison; Treasurer, Robert Dunlop; Auditor, Leo Meyer; Attorney-General, Charles West; Commissioner of Insurance, P. A. Ballard; Commissioner of Education, R. H. Wilson; President Board of Agriculture, G. T. Bryan—all Democrats.

JUDICIARY. Supreme Court: Chief Justice, John B. Turner; Associate Justices, Mathew J. Kane, Robert L. Williams, Jesse J. Dunn and Samuel W. Hayes; Clerk of the Court, W. H. L. Campbell—all Democrats.

STATE LEGISLATURE, 1913. Republicans, Senate, 8; House, 17; joint ballot 27. Democrats, Senate, 36; House, 80; joint ballot, 116. Democratic majority, Senate, 28; House, 61; joint ballot, 89.

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

OLCOTT, GEORGE N. An American classical scholar and educator, died March 1, 1912. He was born in Brooklyn, N. Y., in 1869, and graduated from Columbia University in 1893. After pursuing post-graduate studies he was, in 1897-8, fellow of the American School of Classical Studies in Rome. From 1898 to 1904 he was lecturer on Roman archaeology at Columbia University. From 1901 to 1904 he was assistant in Latin at the same institution, and from 1905 to the time of his death was professor of Latin. He contributed many articles on numismatics to the *American Journal of Archaeology* from 1898 to 1905. He was the author of *Studies in the Word Formation of the Latin Inscriptions* (1898); *A Dictionary of the Latin Inscriptions in Rome* (1904).

OLD-AGE PENSIONS. During the past few years, old-age pensions have been established by governmental action in England, France, Australia, and New Zealand, and Germany has recodified her insurance and pension laws. There were no new foreign developments in 1912. In Great Britain the cost of about a million pensions exceeded \$60,000,000. In the United States, old-age pensions thus far have been provided, either by the traditional form of insurance annuities, by fraternal societies, by trade unions, or by the corporations. Few American unions have developed this policy. The corporation schemes are now very numerous, all the principal railroads and the leading industrial trusts have introduced them and recently leading banks of New York have taken up the idea. State action thus far has been limited to civil service employees. Twenty-six of the leading railroads now have their own systems of retirement pensions. Twenty-three of these roads, employing more than 850,000 workers, had about 8500 pensioners in 1912. The most extensive system is that of the Pennsylvania Railroad, which had 2505 pen-

sioners and which makes an annual appropriation of \$850,000 to its pension fund.

In addition, the Pennsylvania lines west of Pittsburgh had 875 pensioners and appropriated \$222,500. The New York Central, with 800 pensioners, appropriated \$450,000; the Chicago and Northwestern with 521 pensioners \$200,000; and the Southern Pacific with 503 pensioners, \$191,326. As a rule these pensions are based on wages and length of service. Usually, at least ten years of consecutive service are required, but in some cases fifteen or twenty years are required, and on the Pennsylvania Railroad even thirty years' continuous service are required. The pension system is usually accompanied by an age limit for new employees. This is most frequently forty-five years, though a number of roads refuse to take men more than thirty-five years of age. Retirement is optional, customarily at the age of sixty-five, but in a number of cases at the age of sixty or sixty-one, and on the Grand Trunk at the age of fifty-five. Retirement is usually compulsory at the age of seventy, but in a few cases at the age of sixty-five or even sixty. These corporation schemes are, in nearly all cases, non-contributory. Thus the cessation of service by an employee for any reason destroys his claim upon the pension fund. This is vigorously objected to by some labor leaders on the ground that after an employee has worked a number of years he is literally "tied to his job" by the prospective benefits of the retirement system; this prevents his striking for better conditions.

For a complete account of schemes in force in this country, see Squier's *Old-age Dependency in the United States*.

LEGISLATION. There was very little legislation in the United States relating to old-age pensions. The Maryland legislature passed a joint resolution urging Congress to appoint a national commission to investigate the subject. In Massachusetts, where the investigation of this subject was begun in 1907, where a law of 1910 provided for the establishment of voluntary retirement pension systems by the co-operation of private employers and employees, and for the establishment of similar pensions for their civil service employees by cities and towns, and where an act of 1911 established a system of retirement pensions for State civil service employees, a new law authorized cities and towns, other than Boston, to retire and pension laborers. If the voters of any city or town approve, the local authorities may retire and pension laborers who have been in their employ not less than twenty-five years, are at least sixty years of age, and have become physically or mentally incapacitated for labor; they may also similarly pension laborers who have been employed for not less than fifteen years and have become incapacitated because of injuries received while at work. If the law is approved the retirement of laborers who have been employed for as many as twenty-five years and have reached the age of sixty-five is made compulsory. New Jersey established a pension scheme for employees of penal institutions and reformatories who have been employed for twenty years and have become incapacitated. The pension is to equal one-half the salary at the time of retirement but may not be less than \$50 per month.

THE BREWING INDUSTRY. One of the most liberal and comprehensive compensation

schemes yet instituted by private initiative in this country was that begun by the employers and union workers in the brewing industry, effective January 1, 1913. (See **EMPLOYERS' LIABILITY**.) Their plan provides that pensions should be paid out of a fund to which employers contribute three-fourths and employees one-fourth. Any man of the age of 60 who has served 25 years may retire on a weekly pension equal to one-half his average weekly wage during the six months preceding. A man may be retired at any time on a similar pension if he is incapacitated. The scheme provides that cessation of work for 12 months for any cause will not interfere with a man's record of continuous employment; furthermore, a man may change from one brewery to another without spoiling his record. A general board of award is to be composed of three representatives of the Brewers' Association and three from the Brewery Workers' Union. There will also be local boards of award. On the employers' side fully two-thirds of those engaged in the industry in the United States are included, and their workers number about 70,000.

BANK PLANS. Shortly before Christmas the National City Bank announced the introduction of a non-contributory pension system for its 450 employees beginning January, 1913. The first important financial institution to undertake the payment of pensions and death benefits was the First National Bank of New York City, which introduced its system in January, 1911. Its plan was contributory, the employees subscribing sums amounting to 3 per cent. of their salaries. Both of these plans provided for retirement pensions equal to 2 per cent. of the average salary during the preceding two or three years, multiplied by the number of years of service. The maximum pension was to be \$5000 per year; moreover, no pension could exceed 60 per cent. of the average salary for three years before retirement in the case of the National City Bank plan, nor 35/50ths of the average salary for two years preceding in the First National Bank plan. Both plans provided death benefits for both employees and pensioners. The beneficiaries of employees would receive two years' salary and those of pensioners twice the annual pension. It was stated that several other banks were expecting to introduce similar systems at once.

For the American Telephone and Telegraph scheme, see **WORKINGMEN'S INSURANCE**.

OLDENBURG. See **GERMANY**.

OLIVE OIL. See **HORTICULTURE**.

OLIVER, PAUL AMBROSE. An American soldier and manufacturer, died May 18, 1912. He was born at sea on his father's ship in 1831 and was educated in Germany. He was appointed second lieutenant in the 12th New York Infantry in 1861 and in 1864 became captain of that regiment. In the same year he was transferred to the 5th New York Infantry. In 1865 he was brevetted brigadier-general of volunteers. He was awarded the Congressional medal of honor in 1892 for gallantry in service. From 1870 until the time of his death he was a powder manufacturer.

OLYMPIC GAMES. The fifth Olympiad was held at Stockholm, Sweden, from July 6 to 15 and resulted in an overwhelming triumph for the United States athletes. Through funds raised by popular subscription the American

team was taken to Stockholm in a specially chartered steamer, the *Finland*, and thus had an opportunity to do considerable training aboard ship during the trip. The Americans, with the exception of the Marathon runners, also lived on the vessel during the games. Although the scope of the Olympiad was most broad, including practically every test in which athletic skill counts, the track and field events attracted the greatest interest. It was in this department that the Americans showed marked superiority, scoring more than twice as many points as any other nation. Finland's athletes finished second, and those representing the British empire took third place. Sweden ranked fourth. The points scored by each of the various countries on track and field follow: United States, 85; Finland, 27; British empire, 24; Sweden, 21; Greece, Germany, and France, 4 each; Norway, 2; Hungary and Italy, 1 each. Twenty-seven countries in all were represented in the games. Of the points scored by the British empire, Canada and South Africa contributed one-half of the total.

A large number of new Olympic and world's records were made in the track and field events, the Americans showing up especially well in this regard. The most import of these were: 100-meter dash, trial heat, D. Lippincott (United States), 10% seconds, equaling world's record and establishing new Olympic record; 800-meter run, J. E. Meredith (United States), 1 minute, 51 9-10 seconds, new world's and Olympic record; 1500-meter run, A. N. S. Jackson (Great Britain), 3 minutes, 56% seconds, new Olympic record; 5000-meter run, H. Kolehmainen (Finland), 14 minutes, 36% seconds, new world's and Olympic record; 10,000-meter walk, G. Goulding (Canada), 46 minutes, 28% seconds, new Olympic record; 400-meter run, trial heat, J. E. Meredith (United States), 48 seconds, new world's and Olympic record; Marathon run, K. K. McArthur (South Africa), 2 hours, 36 minutes, new Olympic record; running high jump, A. W. Richards (United States), 6 feet 3% inches, new Olympic record; 16-pound shot, best hand, P. McDonald (United States), 50.32 feet, new world's and Olympic record; javelin, best hand, E. Lemming (Sweden), 198.4 feet, new world's and Olympic record; javelin, both hands, J. J. Saaristo (Finland), 358.11 feet, new world's and Olympic record; pole vault, H. S. Babcock (United States), 12 feet, 11% inches, new Olympic record; running broad jump A. L. Gutterson (United States), 24 feet, 11 inches, new Olympic record; javelin, both hand, J. J. Saaristo (Finland), 148 feet, 1% inches, new world's and Olympic record; hammer throw, M. J. McGrath (United States), 180 feet, 5 inches, new Olympic record.

A full summary of the track and field events follows:

100-meter Dash—R. Craig (U. S.), winner; A. T. Meyer (U. S.), second; D. Lippincott (U. S.), third. Time, 10 4-5.

400-meter Run—C. R. Reidpath (U. S.), winner; H. Braun (Ger.), second; E. F. Lindberg (U. S.), third. Time, 48 1-5.

200-meter Dash—R. Craig (U. S.), winner; D. Lippincott (U. S.), second; W. R. Applegate (G. B.), third. Time, 21 7-10.

800-meter Run—J. E. Meredith (U. S.), winner; M. Sheppard (U. S.), second; I. N. Davenport (U. S.), third. Time, 1:51 9-10.

1500-meter Run—A. N. S. Jackson (G. B.), win-

ner; A. R. Kiviat (U. S.), second; N. S. Taber (U. S.), third. Time, 3:56 4-5.

5000-meter Run—H. Kolehmainen (Fin.), winner; J. Bouin (Fr.), second; E. W. Hutson (G. B.), third. Time, 14:36 3-5.

10,000-meter Run—H. Kolehmainen (Fin.), winner; L. Tewanima (U. S.), second; Staurroos (Fin.), third. Time, 31:20.

8000-meter Cross-country—Sweden, winner; Finland, second; Great Britain, third. Team race.

10,000-meter Walk—G. Goulding (Can.), winner; E. J. Webb (G. B.), second; F. Altmani (It.), third. Time, 46:28 2-5.

110-meter Hurdles—F. W. Kelly (U. S.), winner; J. J. Wendell (U. S.), second; M. W. Hawkins (U. S.), third. Time, 15 1-10.

400-meter Relay—Great Britain, winner; Sweden, second. Time, 42 4-10.

3000-meter Team Race—United States, winner; Sweden, second; Finland, third.

1600-meter Relay—United States, winner; France, second; Great Britain, third. Time, 3:16 3-5.

Marathon Run—K. K. McArthur (S. Afr.), winner; G. W. Gitsaw (S. Afr.), second; G. Strobino (U. S.), third. Time, 2:36.

Pentathlon—J. Thorpe (U. S.), winner; F. R. Bie (Nor.), second; A. Brundage (U. S.), third. Five events.

Decathlon—J. Thorpe (U. S.), winner; H. Wieslander (Swd.), second; C. Lomberg (Swd.), third. Ten events.

Running High Jump—A. W. Richard (U. S.), winner; Lische (Ger.), second; G. L. Horine (U. S.), third. Height, 6 ft. 3% in.

Standing Broad Jump—C. Tsiclitiras (Gr.), winner; P. Adams (U. S.), second; B. Adams (U. S.), third. Distance, 11 ft. 7-10 in.

Sixteen-pound Shot (best hand)—P. McDonald (U. S.), winner; R. Rose (U. S.), second; L. A. Whitney (U. S.), third. Distance, 50.32 ft.

Sixteen-pound Shot (both hands)—R. Rose (U. S.), winner; P. McDonald (U. S.), second; E. Niklander (Fin.), third. Distance, 90 ft. 5% in.

Javelin (best hand)—E. Lemming (Swd.), winner; J. J. Saaristo (Fin.), second; M. Kovacs (Hung.), third. Distance, 198 4 ft.

Javelin (both hands)—J. J. Saaristo (Fin.), winner; Sukanlomi (Fin.), second; Peltonen (Fin.), third. Distance, 358 ft. 11 in.

Running Broad Jump—A. L. Gutterson (U. S.), winner; C. D. Bricker (Can.), second; G. Aberg (Swd.), third. Distance, 24 ft. 11 in.

Pole Vault—H. S. Babcock (U. S.), winner, 12 ft. 1% in.; M. S. Wright (U. S.) and F. T. Nelson tied for second place at 12 ft. 10 in.

Discus (best hand)—A. R. Taipale (Fin.), winner; R. L. Byrd (U. S.), second; J. H. Duncan (U. S.), third. Distance, 148 ft. 1% in.

Discus (both hands)—A. R. Taipale (Fin.), winner; E. Niklander (Fin.), second; Magnusson (Swd.), third. Distance, 271 ft. 9% in.

Standing High Jump—P. Adams (U. S.), winner; B. Adams (U. S.), second; C. Tsiclitiras (Gr.), third. Distance, 5 ft. 4 in.

Hammer Throw—M. J. McGrath (U. S.), winner; D. Gillis (Can.), second; C. C. Childs (U. S.), third. Distance, 180 ft. 5 in.

Hop, Step and Jump—Lindblom (Swd.), winner; G. Aberg (Swd.), second; Almlolf (Swd.), third. Distance, 48 ft. 5 1-10 in.

Of the track and field contests, the Marathon and the all-around events—the pentathlon and decathlon—proved the most popular. The United States had an unusually good squad of distance runners entered in the Marathon and it was confidently expected by those who had looked after the training of these athletes that victory was assured. South Africa, however, upset America's hopes by capturing both first and second places, McArthur, the winner, also succeeding in establishing a new record. The United States athletes had to be content with third place, but at the same time among the first fifteen runners to finish the United States was represented by more than all other countries combined.

James Thorpe of the Carlisle Indian School (United States) was the hero of the games. He won both the pentathlon and the decathlon

against a big field by a wide margin and stamped himself the greatest athlete of all time. The king of Sweden gave him special audience, complimenting him on his athletic prowess, and calling him "the most wonderful athlete in the world."

Taking the Olympic events of every sort into consideration, Sweden scored more points than any other nation, the United States ranking second, and Great Britain third. A summary of the total number of points made by each country follows: Sweden, 133; United States, 129; Great Britain, 76; Finland, 52; Germany, 47; France, 32; Denmark, 19; Hungary, Norway, and South Africa, 16 each; Italy, Australia, and Canada, 13 each; Belgium, 11; Russia and Austria, 6 each; Greece, 4; Holland, 3.

OMAN. A Mohammedan state (independent) in southeastern Arabia. Area, about 82,000 square miles; population about 500,000. Muscat (25,000 inhabitants) is the capital. Dates are the chief food of the people; also the main article of export, besides pearls, limes, mother-of-pearl, fruits, fish, hides and skins. Imports and exports in 1910-11, Rs. 5,917,238 and Rs. 4,065,512 (dates, 1,978,115) respectively. The Indian government subsidizes the sultan (1912, Seyyid Feysal bin Turki) and retains a political agent (1912, Maj. S. G. Knox) at his court, with power to restrain the cession of territory to any power other than Great Britain.

GUN-RUNNING. For years past the illicit trade in arms on the Persian coast between Mekran and Muscat has occasioned the British authorities much concern, and has continued in spite of measures for its suppression. In the spring of 1912, however, Admiral Slade, to whom the duty of suppressing the gun-running was entrusted, succeeded in carrying out what proved to be effective measures. The guns were designed for the troops on the north-eastern frontier of India, who employed them against their British rulers. They were brought in by way of Muscat, where the trade was protected under a commercial treaty of long standing between the French government and the sultan of Oman. France refused to give up her treaty right and there seemed no way of preventing the trade, but in 1912 the sultan decided that all imports of arms should be stored in a bonded warehouse, not to be released until certificates as to their destination were received, and no certificates were to be issued from the region of Mekran. The sultan's regulations were issued on June 4 and were to come into effect after September 1. Soon after the latter date a shipload of arms consigned to a French firm was confiscated. The French consul thereupon protested.

ONTARIO. A province of the Dominion of Canada. Area, 260,862 square miles. Population (census of June 1, 1911), 2,523,274, as compared with 2,182,947 in 1901. Toronto, the capital and, excepting Montreal, the largest city of Canada, had 376,538 inhabitants (208,040 in 1901). The province is administered by a lieutenant-governor, Col. Sir John Morison Gibson, appointed September 22, 1908. Premier in 1912, Sir James P. Whitney. The area stated above does not include the portion of the Northwest Territories annexed in 1912. The northwestern part of the province now extends to Hudson Bay. See CANADA.

OPERA. See MUSIC.

OPIUM TRADE. See CHINA.

ORANGE FREE STATE, THE. One of the four original provinces of the Union of South Africa (q. v.). Bloemfontein, the seat of the provincial government, had, according to the census of 1911, 26,925 inhabitants (14,720 whites); Jagersfontein, 9019; Harrismith, 6799; Kroonstad, 5700; Ladybrand, 3323. In 1910 the white pupils enrolled at town and country schools numbered 19,131; the mission schools had about 10,000 native scholars. For area, population, production, and trade, see SOUTH AFRICA, UNION OF. Public revenue for the eleven months ended May 30, 1910, £952,890; expenditure, £957,741; customs revenue, £342,337; public debt, May 30, 1910, £1,250,000. Administrator (1912), Dr. A. E. W. Ramsbottom.

OREGON. POPULATION. According to the Census Bureau statistics compiled during 1912, out of the total population of 672,765 in 1910, 103,001 were foreign-born whites, compared with 53,861 in 1900. The largest number of these came from Germany, 17,904; from Canada, 11,149; from Sweden, 10,099; from Norway, 6841; from Italy, 5520; from England, 7902, and from Austria, 5249. Other European countries were represented by smaller numbers. In the city of Portland, with a population of 207,214, the foreign-born whites numbered 43,780, compared with 17,734 in 1900. The largest number of these came from Germany, 7466. The negroes in the State in 1910 numbered 1492 and the mulattoes 434. In 1890 the negroes numbered 1186 and the mulattoes 629.

AGRICULTURE. The acreage, value, and production of the principal crops in 1911 and 1912 are given below:

		Acreage.	Prod. Bu.	Value.
Corn	1912	20,000	630,000	\$472,000
	1911	20,000	570,000	456,000
Wheat	1912	842,000	21,018,000	15,132,000
	1911	796,000	18,726,000	12,545,000
Oats	1912	369,000	13,714,000	5,623,000
	1911	359,000	12,457,000	5,481,000
Rye	1912	22,000	352,000	246,000
	1911	18,000	351,000	316,000
Potatoes	1912	65,000	10,075,000	3,123,000
	1911	46,000	5,980,000	4,007,000
Hay	1912	790,000	1,738,000	14,425,000
	1911	452,000	949,000	9,110,000

a Tons.

MINERAL PRODUCTION. The gold production of the State in 1911 was \$633,407, compared with \$679,488 in 1910. The silver output was 45,221 fine ounces, compared with 35,978 fine ounces in 1910.

The value of the mining product of gold, silver, and copper of 1911, according to the United States Geological Survey, was \$669,016, compared with a value of \$700,676 in 1910. The production of gold decreased from \$679,488 in 1910 to \$633,407 in 1911. The value of the silver production increased from \$19,428 in 1910 to \$23,967 in 1911. The copper ore shipped to smelters in 1911 amounted to 4205 tons, yielding 93,136 pounds of copper, valued at \$11,642.

MANUFACTURES. The Thirteenth Census statistics are for the calendar year 1909 and were compiled in 1912. Although Oregon is increasing in importance as a manufacturing State, the growth of its manufacturing industries during the past sixty years has not kept pace

with that of its population. It will be seen from the following table that in 1909 there were 2246 manufacturing establishments, which gave employment to an average of 28,750 wage earners.

	Number or Amount 1909	1904	P. C. of Inc. 1904-'09
Number of establishments	2,246	1,602	40.2
Persons engaged in manufactures....	34,722	22,018	57.7
Proprietors and firm members...	2,499	1,726	44.8
Salaried employees	3,473	1,769	96.3
Wage earners (average number)...	28,750	18,523	55.2
Primary horsepower	175,019	81,348	115.1
Capital	\$89,082,000	\$44,024,000	102.3
Expenses	82,124,000	48,360,000	69.8
Services	23,949,000	13,577,000	76.4
Salaries	4,047,000	2,133,000	89.7
Wages	19,902,000	11,444,000	73.9
Materials	50,552,000	30,597,000	65.2
Miscellaneous	7,623,000	4,186,000	82.1
Value of products..	93,005,000	55,525,000	67.5
Value of products less cost of materials	42,453,000	24,928,000	70.3

The greatest number of wage earners was employed in the manufacture of lumber and timber, 15,066; in printing and publishing, 1459; in foundry and machine-shop products, 1055. The value of the lumber and timber products was \$30,200,000; of flour and grist-mill products, \$8,891,000; of slaughtering and meat-packing, \$5,880,000; printing and publishing, \$5,041,000. The total number of persons engaged in the manufacturing industries in 1909 was 34,722, of whom 31,849 were male and 2873 female. The number of persons under 16 years of age employed in the manufacturing industries was 98. The prevailing hours of labor for the majority of wage earners averaged from 54 to 60 a week; only 14.5 per cent. of the total being employed in establishments where less than 54 a week prevailed, and only 6.3 per cent. employed in establishments where the hours of labor were more than 60 a week. Portland and Salem are the only cities in which there are extensive manufactures. In Portland there were 12,214 wage earners and in Salem 597. The value of the product in Portland was \$46,860,767 and in Salem \$2,208,031.

EDUCATION. The total enrollment in the public schools of the State in 1912 was 112,057. The total number of persons of school age between 4 and 20 years was 189,425. The teachers employed in 1912 numbered 5189, of whom 4190 were female and 999 male. The average salary of male teachers per month was \$82.11 and of female teachers \$50.96. The total value of school property in the State was \$12,389,307. The total amount of school funds was \$8,643,700.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions under the control of the State, with their populations in 1912, are as follows: Oregon State Tubercular Sanatorium, 48; Oregon School for the Deaf, 93; Oregon Institute for the Blind, 30; Oregon School for the Feeble-minded, 191; Oregon State Training School, 101; Oregon State Insane Asylum, 1735; and Oregon State Penitentiary, 720.

POLITICS AND GOVERNMENT

The legislature did not meet in 1912, as the sessions are biennial and the last was held in

1911. The next session convenes on January 13, 1913. There was no election for governor or any of the principal State officers, as their terms do not expire until 1915. The chief political interest in the State centred in the presidential primary held on April 19, which was the first presidential primary held in the State. At the same time votes were cast for the nomination of United States senator. Senator Bourne was the Republican candidate for the nomination. He was opposed by Ben Selling, a merchant of Portland. The presidential primary election resulted as follows: Roosevelt, 28,905; Taft, 20,517, and La Follette, 22,491. The total vote cast was 71,913, which may be compared with the vote cast at the Republican national convention in 1908, 62,530. Senator Bourne was defeated for the Senate. Governor Wilson was given the Democratic presidential primary vote and Harry Lane received the Democratic senatorial nomination. The delegates to the Republican and Democratic national conventions therefore were pledged to vote for Mr. Roosevelt and Governor Wilson. The vote for President on November 5 resulted as follows: Wilson, 47,064; Roosevelt, 37,600; Taft, 34,673; Debs, 13,329, and Chafin, 4360. Governor Wilson's plurality was 9464. Several important constitutional amendments were voted for at this election. The most conspicuous of these was one providing for equal suffrage for women. This was carried by a vote of 61,265 for, to 57,104 against. Other amendments relating to taxation were passed. Another amendment gave the railway commission power to regulate all public service corporations in the State. Other amendments related to matters of local interest.

OTHER EVENTS. On February 19 the United States Supreme Court refused to declare the provisions of the initiative and referendum in the Oregon constitution unconstitutional. The decision did not discuss the question which was raised as to whether the organic law of the State established not a republican form of government as guaranteed by the constitution but a pure democracy. The Supreme Court simply denied jurisdiction, asserting that the question was political, not judicial. The decision ended the long litigation carried on by the Pacific States Telephone and Telegraph Company against the State of Oregon.

STATE GOVERNMENT. Governor, Oswald West, Dem.; secretary of State, Ben W. Olcott, Rep.; State treasurer, Thomas B. Kay, Rep.; superintendent of public instruction, L. R. Alderman, Rep.; adjutant-general, W. E. Finzer, Dem.; attorney-general, A. M. Crawford, Rep.; commissioner of insurance, J. W. Ferguson, Dem.

JUDICIARY. Supreme Court: Chief justice, Robert Eakin; justices, Thomas A. McBride, Frank A. Moore, Henry J. Bean, and George H. Burnett; clerk, J. C. Moreland—all Republicans.

STATE LEGISLATURE, 1913. Republicans, Senate, 28; House, 48; joint ballot, 76. Democrats, Senate, 2; House, 5; joint ballot, 7. Republican Progressive, House, 6; joint ballot, 6. Democrat Progressive, House, 1; joint ballot, 1. Republican majority, Senate, 26; House, 36; joint ballot, 62.

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

OREGON, UNIVERSITY OF. A State institution of higher learning at Eugene, Ore., founded in 1876. The enrollment in all departments of

the university in the autumn of 1912 was 1260. The faculty numbered 116. The only noteworthy change in the faculty during the year was the appointment of Fred C. Ayer, Ph. D., to succeed Dr. C. J. C. Bennett as head of the department of education. The annual income of the university was about \$150,000. The library contained about 40,000 volumes. President, Prince L. Campbell, B. A.

O'REILLY, ROBERT MAITLAND. An American physician and soldier, died November 3, 1912. He was born at Philadelphia in 1845 and graduated from the medical department of the University of Pennsylvania in 1866. He was appointed medical cadet in the United States army in 1864. In 1867 he became assistant surgeon and was promoted through various grades until in 1902 he became brigadier-general and surgeon-general of the United States army. He retired with the rank of major-general in 1909. During the Spanish-American War he served with the volunteers as lieutenant-colonel and chief surgeon. He was a close friend and the medical adviser of Grover Cleveland, whose companion he was on many hunting and fishing trips.

ORNITHOLOGY. **PURCHASE OF MARSH ISLAND.** The most important ornithological event of the year was the purchase as a bird reservation of Marsh Island, La., by Mrs. Russell Sage, at a cost of \$150,000. The island is on the Gulf coast, southwest of New Orleans; is about 18 miles long and 9 miles wide, and contains about 75,000 acres. It has long been famous as a winter feeding ground for ducks and geese and has been one of the most popular resorts for market hunters in the South. Mrs. Sage proposed to maintain this island as a breeding ground for birds, but the details of the plan had not been published at the end of the year. According to Hornaday, 4,265,585 game birds were officially reported as having been killed in Louisiana during the year 1909-1910, and this does not take into consideration the number of robins and other song-birds killed by negroes and poor whites for food.

FOOD OF BIRDS, ETC. The United States Biological Survey published during the year a number of bulletins dealing with the food of birds, especially of woodpeckers. According to their conclusions, woodpeckers in general are beneficial, but the sapsuckers do much damage by boring holes in trees. They may be killed by the application of arsenic to the trees, either by putting it in the holes already made, or by smearing various arsenical mixtures around the bark of the trees just above the upper rows of holes. Around orange groves, however, other woodpeckers may do much damage by puncturing the fruit in order to get the juice. Contrary to the usual supposition, humming-birds live largely on an insect diet.

William Brewster recorded observations on the flight of herring gulls, which off the coast of Ireland kept pace with the progress of a steamship without any apparent movement of their wings, though headed almost directly into a wind blowing approximately thirty-five miles an hour. The only conclusion he could reach was that their movement was a resultant of the force of gravity and the force of the wind acting on the long flight quills and thus keeping the bird in motion. Forbush investigated the starling, which is getting a strong foothold

in the eastern United States, and decided that it does much more harm than good, because it drives away the house wrens, bluebirds, etc., by appropriating their nesting places, and that it does no compensating good to the farmer. Hodge and others continued the offer of a reward for the discovery of an undisturbed nest of the passenger pigeon, but no announcements were made of the discovery of any birds. Julian Huxley reported to the London Zoological Society concerning the courtship of the red-shank, *Totanus solidris*. While only one male courted any one female, in fully 90 per cent. of the cases the male was rejected and flew away.

OSIREION. See **ARCHAEOLOGY.**

OSTEN-SACHEN, NICOLAI DMITRI JEVITCH VON DER, Count. A Russian diplomat, died May 22, 1912. He was born in 1831 and entered the diplomatic service in 1853. He remained in Sebastopol throughout the Crimean War and was created a count for gallantry displayed during the siege. He was appointed successively to The Hague as secretary of the legation, to Madrid as chargé d'affaires, and to the legations of Bern (Switzerland) and Turin, capital of the Kingdom of Piedmont. Before the Franco-German War he was appointed Russian minister-resident in Darmstadt, where he remained until transferred to Munich, eleven years later. After two years in that city he returned to Russia, and for two years served in the Foreign Office, afterwards returning to Darmstadt and Munich as minister. In 1895 he was appointed Russian ambassador to the German Empire and retained that post for seventeen years, in spite of a paralytic stroke in 1909.

PAINE, JOHN ALSOP. An American archaeologist, died July 23, 1912. He was born in Newark, N. J., in 1840, and graduated from Hamilton College in 1859. He studied theology at Andover Theological Seminary, graduating in 1862. In 1867 he was ordained to the Congregational ministry. From 1862 to 1867 he was employed by the Board of Regents to enlarge the flora of the State of New York. From 1867 to 1869 he was professor of natural science at Robert College, Constantinople. In 1870-71 he was professor of natural history and German at Lake Forest University. In the following year he acted as associate editor of the *Independent*. He was archaeologist for the first expedition of the Palestine Exploration Society East of the Jordan and Dead Sea from 1872 to 1874. From 1882 to 1884 he edited and published the *Journal of Christian Philosophy*. In 1888 he was a member of the staff of the *Century Dictionary* and from 1890 to 1906 was curator at the Metropolitan Museum of Art. He was the author of *Catalogue of Plants Found in Oneida County and Vicinity* (1865); *Handbook of Sculptural Plaster Casts and Bronze Reproductions in the Metropolitan Museum of Art*, and contributed many articles on Oriental and scientific subjects to magazines.

PAINTING. **MURAL DECORATION IN THE UNITED STATES.** During 1912 a series of decorations was completed for the Wisconsin State capitol at Madison. These are by Edwin H.

Copyright, 1911, by C. Y. Turner

Blashfield, Kenyon Cox, and Hugo Ballin. A series of panels for the Hudson County Court House at Jersey City, N. J., have been executed by C. Y. Turner. The designs by Will H. Low have been accepted for thirty-two panels in the rotunda of the Department of Education at Albany. Albert Herter has completed decorations for the Library and Supreme Court Building at Hartford.

The principal awards for painting have been as follows: National Academy of Design, eighty-seventh annual exhibition—Clarke prize to Charles Bittinger, for "Getting Ready for the Ball"; Inness gold medal to Albert L. Groll, for "Lake Louise"; Saltus medal to Bruce Crane, for "The Hills"; Shaw memorial to M. Jean McLane, for "Portrait Group"; first Hallgarten prize to Charles Rosen, for "A Rocky Ledge"; second, to Everett L. Warner, for "Along the River Front"; and third, to Ben Ali Haggin, for "Girl in Black Gown." Pennsylvania Academy of the Fine Arts—Temple gold medal to Emil Carlsen, for "Open Sea"; Seanan medal to Willard L. Metcalf, for "Spring Fields"; Beck medal to Joseph de Camp, for "Portrait of Francis I. Amory"; Mary Smith prize to Elizabeth Sparhawk-Jones, for "In the Spring"; Lippincott prize to Edward W. Redfield, for "The Laurel Brook." Carnegie Institute of Pittsburgh—Medal of the first class and \$1500 to Charles Sims, for "Pastorella"; medal of the second class and \$1000 to Paul Dougherty, for "A Freshening Gale"; third class and \$500 to Henri Martin, for "Portrait of My Son." The special exhibit of the year consisted of thirty-five pictures by John Lavery. Corcoran Art Gallery, Washington—Clark gold medal and \$2000 to Childe Hassam, for "A New York Window"; silver medal and \$1500 to Daniel Garber, for "Wilderness"; third and \$1000 to Gardner Symons, for "The Dragging of the River Ice"; honorable mention and \$500 to Carl J. Nordell, for "Femme Nue." Art Institute of Chicago—The most important of the prizes awarded at the annual exhibition of American paintings and sculpture were the Potter Palmer gold medal and \$1000 to Daniel Garber, for a landscape, "Towering Trees"; the Norman Wait Harris silver medal and \$500 to John C. Johanson for the painting, "The Village Rider"; and the same donor's bronze medal with \$300 to Margaret F. Richardson, for "Portrait of Asa H. Paige." At the annual exhibition of works by Chicago artists prizes were awarded to Anna L. Stacey, Frank C. Peyraud, and Charles Francis Browne for painting, and to Nellie V. Walker for sculpture.

ART SOCIETIES IN THE UNITED STATES. The American Federation of Arts, with headquarters at Washington, D. C., has grown during the past year from 120 chapters to 171. These chapters consist of art societies, each one being entitled to send delegates to the annual convention which is held during May in Washington.

The Michigan State Federation of Art was organized in October, 1912, in which the following cities were represented: Grand Rapids, Saginaw, Jackson, Kalamazoo, Alina, and Muskegon. The special purpose is to arrange a circuit of art exhibitions for the State.

In New York City three new societies came into existence during 1912: The Association of American Painters and Sculptors, which will hold a large international exhibition of modern paintings in the 69th Regiment Armory, open-

ing February 17, 1913. The National Association of Portrait Painters held its first exhibition in New York in March, and the pictures were shown later in Chicago. The Museum of French Art, organized with the coöperation of the Institute de France, held an exhibition at the American Fine Arts Building in May, 1912; in October it opened permanent rooms, where art magazines and treasures of French art are available for the use of members and students; an exhibition of the work of Albert Besnard will be held early in 1913. The American Institute of Arts and Letters and the American Academy of Arts and Letters were incorporated by act of Congress during December, 1912. Art commissions were established in the cities of Pittsburgh, Philadelphia, and Milwaukee.

FOREIGN ART—IN THE UNITED STATES. In addition to the international exhibition held in Pittsburgh, a group of paintings by members of the Société des Peintres et des Sculpteurs was circulated in the large cities, appearing first in Buffalo. The exhibition of Scandinavian art, organized by the American Scandinavian Society, was shown in New York in December, and went thence to Buffalo and other large cities.

FRANCE. The Luxembourg received a bequest from Edmond Davis of fifteen pictures by modern British painters, to form the nucleus of a British room. The following are the principal awards made at the Paris Salon: Medal of honor to Paul Chabas, for "Matinée de Septembre" and "Portrait de Mme. Aston Knight"; medals of the first class to Monchablon and to Roganeau; 10,000-franc prize to Pierre Gourdault. The Rome scholarship was awarded to M. Girodon.

LONDON. The winter exhibition of the Royal Academy contained twenty-two paintings by Reynolds and works by the Italian, Dutch, and French masters and English painters of the eighteenth century. The central hall and three large galleries were devoted to a memorial exhibition to Edwin A. Abbey, the American painter. A memorial exhibition of the work of Alma-Tadema forms the special exhibition during the winter of 1912-13. Works by the late Alphonse Legros, the naturalized Englishman, were shown at the Tate Gallery for three months.

HOLLAND AND BELGIUM. A memorial exhibition of the work of Jozef Israëls was held at The Hague under the auspices of the Artists' Association. An important exhibition of miniatures was opened in Brussels March 5, 1912, and continued for three months.

PAINTINGS AT AUCTION. During the year ending October, 1912, 3634 paintings were sold at auction in the United States for \$1,160,119, according to the records published in the *American Art Annual*. Of this number, 2265 brought \$50 or over. The highest price was \$85,000, paid for "Lake Nemi," by Corot, in the Newcomb sale, January 24, 1912. Among the important sales in Paris was the Doucet sale, which brought over \$2,750,000; the Roussel sale brought over \$200,000; the Rouart sale over \$900,000. In Berlin the collection of Edward P. Webber was sold for over \$1,125,000, and included the "Virgin and Child" by Andrea Mantegna, which brought \$150,000, the highest price for a single picture during the year. The most important sale in London was that of Charles Wertheimer, for a total of more than \$500,000.

ART CONGRESSES. An International Art Congress was held in Paris, June 14-16. The Congress of Decorative Arts was held at Dijon, France, in August. The International Congress of the History of Art was held in Rome, October 16-21. The Fourth International Congress on Art Education was held in Dresden, August 12-18.

PAHANG. A state (the easternmost) of the protected Federated Malay States (q. v.). It has an area of 14,000 sq. miles. The figure (approximate only) for population in 1911 was 117,933 (84,113 in 1901). Tin and gold are mined; agriculture is carried on. Output (1909), 11,654 piculs tin and 31,490 tin ore; gold, 14,887.6 ounces. Area planted to rubber (1909), 20,271 acres; to rice, 36,793; to cocoanuts 15,735; tapioca, 2262. A line of railway from Gemas in the Negri Sembilan to Kuala Semantan in central Pahang (70 miles) was completed in June, 1911, and is being extended to the Kelantan frontier. Roads are in process of construction. State revenue (1910), 1,017,801 dollars; expenditure, 1,755,128. Kuala Lipis is the administrative headquarters. The sultan (Ahmad Ma'atham Shah bin Almerhum Ali) resides at Pekan, as does also the regent, The Tungku Besar. British resident, E. J. Brewster.

PALESTINE. See **ARCHÆOLOGY.**

PANAMA. A republic on the Isthmus of Panama, formerly a department of Colombia. It declared its independence November 4, 1903. Capital, Panama.

AREA AND POPULATION. Estimated area, 33,776 square miles. A boundary dispute with Costa Rica has been submitted to the arbitration of the chief justice of the United States. By the treaty of November 18, 1903, the United States guaranteed the independence of Panama, and the latter granted to the United States, in perpetuity and with sovereign rights and powers therein, a strip of land (the Canal Zone) extending to a width of five miles on either side of the centre of the Panama Canal. The area of the Canal Zone is 474 square miles. Population of the republic (1911), 336,742, of whom 191,933 mixed bloods, 48,967 negroes, 47,606 Indians, and 46,323 whites. There were reported 267,736 Roman Catholics, 26,829 Protestants, 2088 Buddhists, 505 Jews, and 36,096 pagans. The population of the Canal Zone, not included above, was about 75,000. The city of Panama was reported to have 37,505 inhabitants, and Colón 17,748. These cities are not included in the Canal Zone, but in both of them and in their harbors complete jurisdiction is granted to the United States in respect of sanitation and quarantine. For the town of David were reported 15,079 inhabitants; Bocas del Toro, 9759. Movement of the population in 1910: 1299 marriages, 5876 births, 5177 deaths, 28,215 immigrants, 14,910 emigrants.

Public schools are reported to number 294, with 18,645 pupils. In 1911 the National Institute (high school, college of commerce and language and normal school) was opened in the city of Panama.

PRODUCTION, COMMERCE, ETC. Only a small part of the country is under cultivation. The leading crop is bananas, and other products include sugar-cane, cacao, coffee, rice, corn, yams, and sweet potatoes. Mining is little developed.

Imports, exclusive of non-dutiable supplies for the Panama Canal, and exports are shown

below. The figures are for calendar years, except those for 1911, which are for the fiscal year ended June 30; the trade for the last six months of 1910 is included under both 1910 and 1911.

	1908	1909	1910	1911
Imps.	\$7,806,812	\$8,756,308	\$10,056,994	\$10,020,070
Exps.	1,827,050	1,502,475	1,769,330	1,754,050

Principal classified imports in fiscal year 1911: Vegetable products, \$2,836,568; textiles, \$1,766,459; animal products, \$1,623,932; mineral products, \$919,080; liquors (including mineral waters), \$858,955; drugs and chemicals, \$406,839; machinery and apparatus, \$274,224. Of the exports, bananas were valued at \$1,030,885; bar gold, \$119,830; ivory nuts, \$118,408; cocoanuts, \$112,827; rubber, \$111,143. Imports from the United States amounted to \$5,652,653, and exports thither \$1,508,422; United Kingdom, \$2,166,989 and \$165,273; Germany, \$966,151 and \$93,669; France, \$307,982 and \$1966.

The Panama Railway crosses the isthmus from Colón to Panama, 48 miles; branch to Balboa, three miles. Light railways in the territory about Bocas del Toro, principally for the banana industry, 151 miles. Telegraph and post offices, about 40 and 100, respectively.

FINANCE. The unit of value is the balboa, equivalent to the American dollar. The republic has \$6,300,000 invested in the United States. Revenue in 1909, \$2,846,297; in 1910, \$3,370,511; in 1911, \$3,366,470. Expenditure in 1911, \$3,359,588. Import duties in 1911, \$1,785,866; liquor licenses, \$161,377; lotteries, \$122,800; interest, \$335,505. Disbursements in 1911 were as follows, by departments: Interior and justice, \$1,087,259; fomento, \$908,379; public instruction, \$684,744; treasury, \$438,309; foreign affairs, \$240,897; total, \$3,359,588. In 1913 Panama will receive the first annual payment of \$250,000 from the United States on account of the construction of the Panama Canal.

GOVERNMENT. The president is elected by popular vote for four years and is assisted by a cabinet of five members. The legislative body is the unicameral National Assembly (32 members). Three *designados* are elected by the assembly to succeed, in order, to the residency in case of vacancy. José Domingo de Obaldía, president for the term ending October 1, 1912, died March 10, 1910. He was succeeded by Carlos Antonio Mendoza, the second *designado* (the first *designado* having died in 1909). On September 14, 1910, the assembly elected as first *designado* Pablo Arosemena, who thus became acting president for Obaldía's unexpired term. In the summer of 1912 the Liberal candidate, Dr. Belisario Porras, was elected president; he was inaugurated October 1, for the four-year term. *Designados*: Rodolfo Chiari, first; Ramón Valdez, second; Aristides Arjona, third.

PANAMA (City), MUNICIPAL IMPROVEMENTS IN. See **PANAMA CANAL.**

PANAMA, AIDS TO NAVIGATION. See **LIGHT-HOUSES.**

PANAMA CANAL. Public interest in the Panama Canal in 1912 was concerned more with the future of the great enterprise than with the actual work of construction being carried on. From the statements of the chief engineer, it was evident that the canal would be open to navigation in 1913 and that its

completion at that time was merely a matter of routine of construction and excavation. This fact made it imperative that Congress should pass laws relating to the navigation of the canal and such laws, as will be noted below, were passed. The President in November issued a proclamation fixing the tariff tolls on vessels passing through the canal. This also is noted in the paragraphs below.

THE CANAL BILL. The prospective completion and opening of the Panama Canal some time in 1913 brought about the necessity of passing laws providing for its operation and a declaration of the general policy of the United States in regard to its own rights and the rights of foreign countries in the canal. President Taft repeatedly urged the passage of such laws, but positive action was not taken by Congress until May, 1912. On May 23 the Panama Canal bill was passed by the House of Representatives. That bill admitted American-owned ships to free passage in the canal and fixed a toll of not more than \$1.25 per net registered ton on foreign ships. (Compare, however, paragraph on *Canal Tolls* below.) It debarred entirely vessels owned directly or indirectly by railroads from using the canal. The bill then went to the Senate, and on July 11 that body received a protest from Great Britain against the provisions of the bill which permitted American ships to use the canal free of tolls. The British government declared that such measures were in direct contradiction of the terms provided in treaties between the governments of United States and Great Britain. This contention was based on the interpretation given by the British government to articles contained in the Clayton-Bulwer treaty of 1850 and the Hay-Pauncefote treaty of 1902, which superseded the Clayton-Bulwer treaty. Article 1 of the Clayton-Bulwer treaty read as follows: "The governments of the United States and Great Britain hereby declare that neither the one nor the other will ever obtain or maintain for itself any exclusive control over the said ship canal; agreeing that neither will ever erect or maintain any fortifications commanding the same, or in the vicinity thereof, or occupy, or fortify, or colonize, or assume or exercise any dominion over Nicaragua, Costa Rica, the Mosquito Coast, or any part of Central America; nor will either make use of any protection which either affords, or may afford or any alliance which either has or may have, to or with any state or people for the purpose of erecting or maintaining any such fortifications."

When it became evident that the United States, on the failure of the French company, intended itself to build the canal, Great Britain waived the rights set forth in the Clayton-Bulwer treaty and bound itself by the terms of a new treaty made in 1902 and known as the Hay-Pauncefote treaty. Section 1 of article III. of this treaty reads as follows: "The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules, on terms of entire equality so that there will be no discrimination against any such nation, or its citizens or subjects, in respect of the conditions or charges of traffic, or otherwise. Such conditions and charges of traffic shall be just and equitable." Upon this section Great Britain based its objection to the discrimination in favor of American-owned ships contained in the bill passed by the House

of Representatives, and upon this point turned the course of the debates in the Senate during the discussion of the bill. The senators who insisted that a strict interpretation of the Hay-Pauncefote treaty meant an absolute identity of the treatment of the vessels of all nations, including the United States, included Senators Root of New York and Burton of Ohio, and these senators made strong speeches urging their conviction as to this interpretation.

The senators who favored the admission of American ships free of toll claimed that the section under the Hay-Pauncefote treaty should read as applying to the ships of all nations except those of the United States. They argued that the United States is the absolute owner of the canal and of the Canal Zone, and could therefore make whatever rules she wished for the administration of the canal provided that they did not discriminate between vessels of other countries. They pointed out also the custom of foreign countries to pay in the form of subsidies the tolls of vessels passing through the Suez Canal and that these governments were prepared to undertake the same measures for vessels passing through the Panama Canal. If, therefore, the United States required tolls from American vessels, they would be placed at a disadvantage with the vessels of other countries, the tolls for which had been paid or would be paid by these governments. Advocates of this interpretation of the Hay-Pauncefote treaty insisted that the action of Great Britain resulted from protests made by Canadian ship-owners, who claimed that they would suffer if American coastwise vessels were allowed to pass through the canal free.

The other point in the treaty most warmly debated in the Senate was that relating to the admission or exclusion of vessels owned by railroads, and it was finally decided that such vessels should not be admitted for passage through the canal. On August 7 the Senate refused to strike from the bill the provision exempting American coastwise ships from the payment of tolls, and two days later passed the bill. It was at once signed by the President. The most important features of the bill in its final form are as follows: The President is authorized when, in his judgment, the construction of the canal shall be sufficiently advanced toward completion to render the further service of the Isthmian Canal Commission unnecessary, to discontinue the commission and to complete, govern, and operate the canal and the Canal Zone through a governor of the Panama Canal and such other persons as he may deem competent to discharge the duties. If any of the persons employed for these duties shall be in the military or naval service of the United States, the amount of the official salary paid to him shall be deducted from the amount of salary or compensation provided under the terms of this act. The governor of the Panama Canal is to be appointed by the President, by and with the advice and consent of the Senate. He is commissioned for a term of four years and is to receive a salary of \$10,000 a year. All other persons needed for the completion, care, and management of the canal are to be appointed by the President or by his authority and are removable at his pleasure. He has power to fix salaries, but they shall not in any case exceed by more than 25 per cent. the salary paid for the same or similar services to persons employed by the govern-

ment in continental United States. The President is authorized to prescribe and from time to time to change the tolls which shall be levied by the government of the United States for the use of the Panama Canal. Six months' notice, however, must be given of such change. No toll shall be levied upon vessels engaged in the coastwise trade of the United States. The rate of tolls is not to exceed \$1.25 per registered net ton.

The President is authorized to cause to be erected, maintained, and operated, subject to the international convention and the act of Congress to regulate radio communication, at suitable places along the canal and the coast adjacent to its two terminals, such wireless telegraph installations as are found necessary. He is also authorized to establish, maintain, and operate dry docks, repair shops, yards, and such other facilities as are found necessary for the repairing of vessels passing through the canal. Money received in payment for such repairs or for actual purchases at the canal on which a profit is made is to be expended and reinvested for such purposes without being covered into the treasury of the United States. The governor of the canal is given exclusive control and jurisdiction over the Canal Zone and is to perform all duties in connection with the civil government of the Canal Zone, which is to be held, treated, and governed as an adjunct of the Panama Canal. The President is authorized to determine or cause to be determined what towns shall exist in the Canal Zone and subdivide and from time to time resubdivide the Canal Zone into subdivisions, to be designated by name or number. Provision is made for the setting up in each town such courts as are necessary, and for other agents of civil government. The governor is given the right, after the canal has been completed and opened for operation, to make such rules and regulations, subject to the approval of the President, as are necessary to establish the right of any person to remain upon or pass through any part of the Canal Zone.

Section XI., which has for its object the exclusion of vessels owned by railroad companies through the canal, reads as follows: "From and after the 1st day of July, 1914, it shall be unlawful for any railroad company or other common carrier subject to the act to regulate commerce to own, lease, operate, control, or have any interest whatsoever (by stock ownership or otherwise, either directly, indirectly, through any holding company, or by stockholders or directors in common, or in any other manner) in any common carrier by water operated through the Panama Canal or elsewhere with which said railroad or other carrier aforesaid does or may compete for traffic or any vessel carrying freight or passengers upon said water route or elsewhere; and in case of the violation of this provision each day in which such violation continues shall be deemed a separate offense."

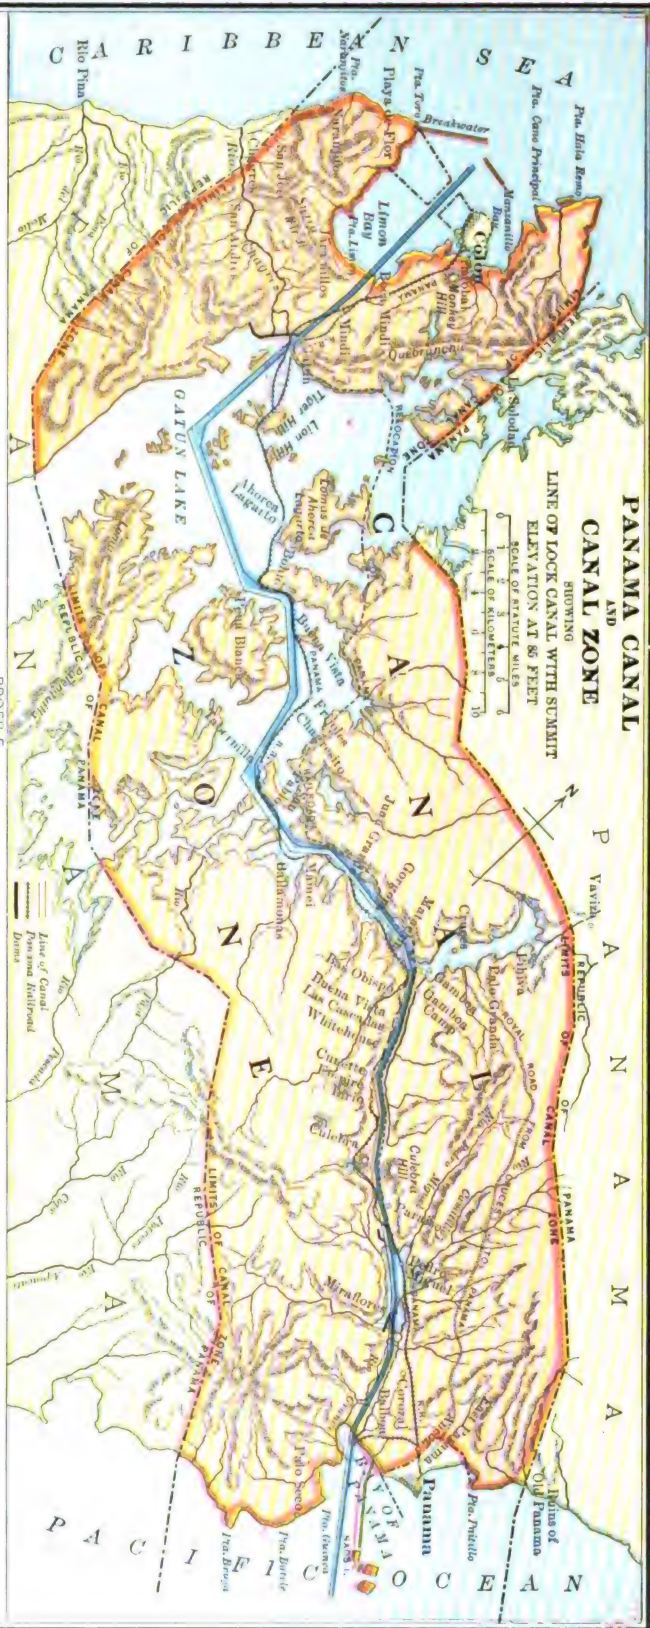

Jurisdiction is conferred on the Interstate Commerce Commission to determine questions of fact as to the competition or possibility of competition, on the application of any railroad company or other carrier. The paragraph further reads: "No vessel permitted to engage in the coastwise or foreign trade of the United States shall be permitted to enter or pass through said canal, if such ship is owned, char-

tered, operated or controlled by any person or company which is doing business in violation of the provisions of the act of Congress approved July 2, 1890, entitled 'An act to protect trade and commerce against unlawful restraints and monopolies,' or the provisions of sections 73 to 77, both inclusive, of an act approved August 27, 1894, entitled 'An act to reduce taxation, to provide revenue for the government, and for other purposes,' or the provisions of any other act of Congress amending or supplementing the said act of July 2, 1890, commonly known as the Sherman Anti-Trust act, and amendments thereto, or said sections of the act of August 27, 1894. The questions of fact may be determined by the judgment of any court of the United States of competent jurisdiction in any cause pending before it to which the owners or operators of such ships are parties. Suit may be brought by any shipper or by the Attorney-General of the United States."

The Interstate Commerce Commission is given jurisdiction over the transportation of all property from point to point in the United States by rail and water through the Panama Canal or otherwise, when the transportation is made by a common carrier and not entirely within the limits of a single State. It is also given power to establish physical connection between the lines of the rail carrier and the dock of the water carrier by directing the rail carrier to make suitable connection between its line and a track or tracks which have been constructed from the dock to the limits of its right of way, or by directing either or both the rail and water carrier individually, or in connection with one another, to construct and connect with the lines of the rail carrier a spur track or tracks to the dock. The commission was also given authority to determine the terms and conditions upon which these connecting tracks when constructed, shall be operated. It is also given power to establish through routes and maximum joint rates between and over such rail and water lines, and to establish maximum proportional rates by rail to and from the ports to which the traffic is brought, or from which it is taken by the water carrier, and to determine to what traffic and in connection with what vessels and upon what terms and conditions such rates will apply.

These paragraphs of section XI., which were designed to eliminate from the canal vessels owned by railroad companies and to establish competition between railroad companies and steamship companies where, on account of monopolies or otherwise, it has ceased to exist, are in the form of amendments to the act of February 4, 1887, which was an act to regulate commerce.

Section XIII. of the law provides: "That in time of war in which the United States shall be engaged, or when, in the opinion of the President, war is imminent, such officer of the army as the President may designate shall, upon his order, assume and have exclusive authority and jurisdiction over the operation of the Panama Canal, including the entire control and government of the Canal Zone, and during a continuance of such condition the governor of the Panama Canal shall, in all respects and particulars as to the operation of the canal, and all duties, matters and transactions affecting the

1400

Canal Zone, be subject to the order and direction of such officer of the army."

On August 24 the President signed the Panama Canal bill after a long conference with members of his cabinet. At the same time he sent to Congress a statement of his views in relation to the controverted features of the bill. He said: "After full examination of the treaty and of the treaty which preceded it, I feel confident that the exemption of the coastwise vessels of the United States from the tolls, and the imposition of tolls on vessels of all nations engaged in foreign trade, is not a violation of the Hay-Pauncefote treaty, but distinguished lawyers in the House and Senate differ from this construction and the Secretary of State has received an informal protest from the British government that the contemplated legislation is a violation of her treaty rights. I am sure that it is not the intention of Congress to violate the Hay-Pauncefote treaty or to enact anything inconsistent with its provisions, and that it certainly is not its purpose to repeal by subsequent enactments, the treaty, in so far as it represents the law of the land. It is of the highest importance, however, that this attitude should be made clearly known to the nations of the world, and that we should avoid any apparent justification for criticism." In order to make clear the position of Congress and the government, the President recommended that Congress pass an addition to the act or a supplementary resolution declaring that nothing in the act shall be deemed a violation of the treaty or an impairment of any rights under the treaty, and that any alien who considers the charging of tolls a discrimination can bring suit against the United States in the United States courts, with appeal to the Supreme Court. Congress took no action on these suggestions.

The President also issued a public statement defending his action in signing the bill. In this statement he argued that there was nothing in the treaty which prevented Great Britain and other nations from extending such favors to their own ships passing through the canal as they see fit. He said: "The British protests lead to the absurd conclusion that this government in constructing the canal, maintaining the canal and defending the canal, finds itself shorn of its right to deal with its own commerce in its own way, while other nations using the canal in competition with American commerce enjoy that right and power unimpaired. The British protest, therefore, is a proposal to read into the treaty a surrender by the United States of its right to regulate its own commerce in its own way and by its own methods, a right which neither Great Britain herself nor any other that may use the canal has surrendered or proposes to surrender. While the bill here in question seems to vest the President with discretion to discriminate in fixing tolls in favor of American ships and against foreign ships engaged in foreign trade within the limitation of the range from 50 cents a ton to \$1.25 a net ton, there is nothing in that to compel the President to make such a discrimination. The policy of exempting coastwise trade from all tolls really involves the question of granting a government subsidy for the purpose of encouraging that trade in competition with the trade of the transcontinental railroads. I approve this policy. It is in accord with the historical

course of the government in giving government aid to the construction of transcontinental roads. It is merely giving government aid to a means of transportation that competes with these transcontinental roads. I believe the bill to be one of the most beneficial that has passed this or any other Congress, and I find no reason in the objection made to the bill which should lead me to delay until another session of Congress provisions that are imperatively needed now in order that due preparation by the world may be made for the opening of the canal."

On December 9, James Bryce, the British ambassador, presented to the Secretary of State a formal demand from the British government that the government of the United States either repeal the act of Congress granting free passage through the Panama Canal to American ships engaged in the coastwise trade or submit the matter to arbitration. The statement, which was signed by Sir Edward Grey, was an amplification of the original note of protest presented on July 8. It endeavored to establish by argument the soundness of the British contention that the legislation favoring American ships is in violation of the treaty rights of Great Britain with regard to the Panama Canal. The note gave warning that another protest would be forthcoming from Great Britain if it was held by the government of the United States that the disbarment from the use of the canal of ships in which any railroad under the jurisdiction of the Interstate Commerce Commission has an interest and ships whose owners may be adjudged guilty of violating the Sherman anti-trust law, applies to British ships. The note states that the British government assumes that these two clauses do not apply to or affect British ships.

In regard to arbitration the note stated that the British government had taken cognizance of the fact that many persons of note in the United States "whose opinions are entitled to great weight" hold that the act of Congress in question does not infringe the treaty obligations of the United States and therefore it is declared that the British government is perfectly willing to submit the question to arbitration if the United States prefers. This sentence was added: "Such arbitration would be rendered unnecessary if the government of the United States should be prepared to take such steps as would remove the objections to the act which his majesty's government have stated."

Sir Edward Grey in the note denied that the British government is attempting to deny the right of the United States to grant subsidies to its shipping and thus deprive it of the rights enjoyed by other nations which will send subsidized vessels through the Panama Canal. It was carefully stated, however, that the British government does not concede the right of the United States to favor by subsidy a special class of American shipping in such a way as to place such shipping at an advantage in the use of the canal as compared with British shipping. The British arguments rested chiefly on the interpretation of the Hay-Pauncefote treaty and the Clayton-Bulwer treaty and upon the argument that if any American ships are granted the free use of the canal, British ships using the canal will be forced to bear more than a proper share of the burden of the cost

of the upkeep of the canal and interest charges on the cost of construction. This, it is claimed, is in violation of the Hay-Pauncefote treaty, which declares that all charges made by the United States for the use of the canal shall be just and equitable.

TOLL RATES. On November 13 President Taft issued a proclamation announcing the rates to be paid by ships passing through the canal. The basis of these rates was a report submitted by Professor Emory R. Johnson of the University of Pennsylvania, who, as a special commissioner, devoted a year to the task. The rate fixed by the President is \$1.20 per net ton for passenger vessels carrying cargo or passengers or both, each 100 cubic feet of earning capacity to be counted as a ton; 40 per cent. less, or 72 cents per ton for vessels in ballast, without passengers; 50 cents for each displacement ton of warships; \$1.20 per net ton for army or navy transports, colliers, hospital ships, and supply ships. There is no per capita charge for passengers carried on vessels. The rates declared by the President are practically the same as the rates which went into effect on the Suez Canal on January 1, 1913. The former rates on the Suez Canal were \$1.25 per ton. Professor Johnson's estimates of the financial results of the operation of the canal were as follows: The estimated cost is \$375,000,000, which includes the payment to the French company and the Republic of Panama. Thus, to make the canal self-supporting, a revenue of about \$19,250,000 annually will be required, to be divided as follows: Operation and maintenance, \$3,500,000; sanitation and government of the zone, \$500,000; annual payment to Panama, \$250,000; interest on the investment, at 3 per cent., \$11,250,000; 1 per cent. in a sinking fund for ultimate amortization, \$3,750,000. Professor Johnson estimates that the toll revenue will rise from about \$12,000,000 in the first year to about \$20,000,000 in 1925. In his report he opposed the exemption of American coastwise shipping on the ground that this shipping does not need such aid; that if it should pay tolls the steamship and railroad rates would not be appreciably increased. He declared that there is already an American monopoly of coastwise trade and that this trade will be increased by the canal. Such subsidies, he said, as are giving to the American merchant marine should be paid to vessels in the foreign trade. President Taft in his proclamation, however, did not recommend a repeal of the act exempting coastwise shipping.

SUMMARY OF CANAL WORK. As the completion and opening of the canal are assured in 1913, it may be of interest and value to present a general résumé of the chief features of gigantic task which is probably the greatest engineering feat of which there is a record in history.

The elevation of the summit of the canal is 85 feet above sea level. The summit will be reached by a flight of three locks located at Gatun on the Atlantic side and by one lock at Pedro Miguel, and a flight of two locks at Miraflores on the Pacific side. These locks are all made in duplicate, that is, they have two chambers side by side. The usable length of each lock will be 1000 feet and its width 110 feet. The summit level of the canal which extends from Gatun to Pedro Miguel, about

31.5 miles, is regulated between 82 and 87 feet above sea level by means of the spillway in the dam at Gatun. The Gatun Lake, which has an area of 164.23 square miles, is maintained by earth dams at Gatun and Pedro Miguel. Into this lake empty the Chagres River and other streams. Another small lake about two miles in area, with a surface elevation of 55 feet has been formed between Pedro Miguel and Miraflores, the valley of the Rio Grande being closed by an earth dam on the west side and a concrete dam with a spillway on the east side at Miraflores. The approaches from deep water to the Gatun locks on the Atlantic side and from deep water to the locks at Miraflores on the Pacific side are sea level channels about seven and eight miles in length respectively, and each 500 feet wide.

From deep water in the Caribbean Sea to deep water in the Pacific Ocean the canal is about 50 miles in length. The distance from deep water to the shore line in Limón Bay on the Atlantic side is about $4\frac{1}{2}$ miles, and from the Pacific shore line to deep water, about 4 miles. The total length of the canal from shore to shore, therefore, is approximately $41\frac{1}{2}$ miles. The channel from the beginning of the canal in the Caribbean Sea to the north end of the Gatun locks, about 7 miles, is 500 feet wide; from the south end of Gatun locks to a distance of $23\frac{1}{4}$ miles it is 1000 feet wide; for the next three miles, 800 feet wide; for the next half mile, 700 feet wide; for the next four and a quarter miles, 500 feet wide, and from this point to Pedro Miguel lock, about 8 miles, is 300 feet wide. From the Pedro Miguel locks to Miraflores locks and from Miraflores locks to deep water in Panama Bay, it is 500 feet wide. The average width of the canal is 649 feet and its minimum width is 300 feet. It has a minimum depth of 41 feet. The most spectacular feature of the canal, without doubt, is the Gatun dam which holds in place the waters of Gatun Lake and the Chagres, and other rivers. This dam is about 800 feet long, including the spillway, and is 2100 feet wide at its greatest width. The crest of the dam is at an elevation of 115 feet above sea level, or 30 feet above the normal level of Gatun Lake, and is 100 feet wide. Its width at the normal level of the lake, that is, 85 feet above sea level, is about 388 feet. The central part of the dam was filled by hydraulic process, protected by rock toes on both sides. The upper slope on the lake side is further protected by a 10-foot thickness of rock. The other parts were filled with available material from canal excavation.

The course of a vessel entering the canal from the Atlantic side is as follows: It will pass from deep water in Limón Bay to Gatun locks, a distance of 6.9 miles, through a channel 500 feet wide. Passing into the locks which are .78 of a mile in length the ship will be carried to an elevation of 85 feet above sea level in three lifts to the level of the water in Gatun Lake; thence for a distance of 16 miles the channel will be 1000 feet or more in width. This carries the vessel about 24 miles into the canal. Passing into the Pedro Miguel lock, which is .37 of a mile in length, the vessel will be lowered to the level of Miraflores Lake, 55 feet above mean tide to Miraflores locks, which is 41.72 miles from the Atlantic opening of the canal. Through the two Miraflores locks,

PANAMA CANAL

which are .58 of a mile in length, the vessel will be lowered to tide level and proceed through a channel 500 feet wide to deep water in the Pacific, a distance of 50.5 miles from the beginning of the journey on the Atlantic side. It is estimated that the time required for the passage of a ship of medium size through the entire length of the canal will be from $9\frac{1}{4}$ to 10 hours, and for larger vessels, from $10\frac{1}{4}$ to 11 hours.

WORK ON THE CANAL IN 1912. Progress in excavation and in the construction of the locks and dams continued uninterruptedly in 1912. Detailed plans were made for the operation and maintenance of the canal after its opening. Work was also carried on on the fortifications, for which \$2,000,000 was appropriated by Congress in 1911. On January 1, 1912, the work on the fortifications was consolidated and placed in charge of Col. George W. Goethals, chief engineer.

The work of the canal is in four divisions, all under the authority of the chief engineer.

The first division, under Colonel H. F. Hodges, has charge of the design of the locks, dams, regulating works, and accessories; the design and construction of aids to navigation; and the inspection of the manufacture and erection of the lock gates, operating machinery, etc. During the year in this division the general plans for the lower portion of the lower locks at Gatun and Miraflores were completed, and work was carried on on the rising stem gate valves. During the year the drawings for all the different heights of gates were completed and approved. On June 30, 1912, the work of erecting the gates on the Isthmus was in progress on 23 gates, or exactly half the total number on the canal. The general features of lock illumination, both exterior and interior, were fixed during the year. For exterior lighting, concrete lamp standards will be erected on the coping of the locks approximately 100 feet apart, throughout the entire length of each wall. The work of erecting the lock machinery was carried on during the year. To enable the pilot of a vessel to keep his course up to the turning point it is necessary to have a range of two lights at each end of the longer tangents in prolongation of the sailing line. It was necessary for the prolongation of these tangents to cut down heavy growths of brush and timber during the year. A total of 809.85 acres was cleared. Construction work was carried on on the range towers at the Pacific entrance during the year. These towers, which are of concrete, are constructed by means of steel forms. Eleven towers were completed at the end of the fiscal year. In these towers will be placed powerful lights for the guidance of navigators.

The Atlantic division, which embraces the construction of the locks and dam at Gatun, the quarry at Porto Bello, the excavation between the locks and deep water in the Caribbean, the municipal improvements in Colón and the various settlements, is in charge of Lieut.-Col. William L. Sibert. During the year the work of construction of Gatun dam went forward steadily. Work on the upper or south approach pier was continued throughout the year. The total amount of masonry, which includes concrete and large stone laid during the year, was 451,025 cubic yards. Plans which were prepared for the hydroelectric power plant below the spillway in

the dam were approved, and excavation work was started in May, 1912. The total amount excavated during the year was 72,119 cubic yards. In the channel between Gatun locks and the Atlantic Ocean excavation in the dry was continued through the Mindi Hills and, with the exception of the dike separating the cut from the French canal, was completed in February, 1912. Work was carried on in the breakwater extending out from Toro Point, which is intended for the protection of the harbor and the shelter of vessels against northern winds. During the year 5514 lineal feet of double track and 48 lineal feet of single track trestle were completed, making a total length of trestle on July 14, 1912, of 10,927 feet.

The Central division embraces all the excavation between the Gatun dam and Pedro Miguel locks. It also includes the construction of the Naos Island breakwater and municipal improvements in the various settlements included within the division limits, and such sanitary engineering work in the same area as is prescribed by the sanitary department. The work is in charge of Lieut.-Col. D. D. Gailard. The Culebra cut is included in this division. During the fiscal year 16,476,769 cubic yards of material were removed from this cut and from estimates 11,863,540 cubic yards remain to be removed in order to complete this section of the canal. Several slides occurred during the year which involved a considerable amount of extra labor. The total amount of material due to slides during the work removed up to the end of the fiscal year was 16,671,000 cubic yards, and about 4,000,000 cubic yards remained to be removed. The Naos Island breakwater extends from the shore of East Balboa to Naos Island, a distance of 3.29 miles. It is constructed for the purpose of cutting off silt-bearing currents from the excavated channel in the Pacific, thereby reducing the cost of maintenance and making the navigation of the channel easier by eliminating the cross currents. In constructing the breakwater a pile trestle was driven towards the island from which material was dumped. During the year this trestle was extended 1360 feet, giving a total length of 16,051 feet, or about 3 miles at the end of the year.

The work on the Pacific division includes the construction of the locks and dam at Pedro Miguel, the locks and dams at Miraflores, and sanitary work which comes within its boundaries. The excavation necessary to prepare for work on the division, including coaling stations, dry docks, and machine shops, is also included in the work of this division. The work is in charge of Mr. S. B. Williamson. The excavation for the Pedro Miguel locks was practically completed at the end of the fiscal year 1911, and at the beginning of the fiscal year 1912 the construction plant was removed to Miraflores. The total amount of concrete laid during the year at Pedro Miguel was 182,870 cubic yards. At Miraflores 624,747 cubic yards were excavated from the lock pit. The total amount of concrete placed in the Miraflores lock at the end of the year was 751,540 cubic yards. The total amount of concrete laid in the Pacific division locks at the end of the fiscal year 1912 was 1,874,029 cubic yards. There remained to complete the locks, 51,150 cubic yards at Pedro Miguel and 386,729 cubic yards at Miraflores. Excavation of the channel by

steam shovels between Pedro Miguel and Miraflores, and south of the latter was continued during the year and 864,475 cubic yards were removed.

MUNICIPAL IMPROVEMENTS IN COLÓN AND PANAMA. These improvements are carried on in accordance with a treaty made between the United States and Panama in 1906. The sum of \$800,000 was authorized in 1909. This was to be defrayed by water rents from the two cities. A large number of water mains and sewer pipes were laid during the year at Colón. In Panama plans were made for developing new districts of the city and for laying water mains and sewer pipes.

LABOR. At the end of the fiscal year 1912 there were approximately 45,000 employees on the isthmus on the rolls of the commission and of the Panama Railroad Company. Of these about 5000 were Americans. On September 25 there were 35,861 men actually employed. Of the 29,571 men working for the commission, 4166 were on the gold roll, which includes mechanics, skilled artisans, clerks, and higher officials, the remainder on the silver roll, which includes common laborers. These are practically all foreigners.

COSTS AND APPROPRIATIONS. The total estimated cost of the canal is \$325,201,000, which includes \$20,053,000 for sanitation and \$7,382,000 for civil administration. These figures do not include the \$50,000,000 paid to the French Canal Company and to the Republic of Panama. It is therefore estimated that the total cost of the canal to the United States will approximate \$375,000,000. The total appropriation for the construction of the canal, for the administration of the civil government, and for the purchase of canal rights to June 30, 1912, including collections and salvage, was \$304,336,744. In addition \$3,000,000 was appropriated for fortifications. The disbursements in all departments of the work to the end of the fiscal year 1912 amounted to \$275,435,971, leaving a balance available on June 30, 1912, of \$28,900,802.

FORTIFICATIONS. The project for the defense of the canal contemplates: Strong fortifications at each terminus; adequate submarine defense; construction of defensive line of field fortifications for the protection of the more vulnerable portions of the canal from injuries by raiding parties; the necessary filling, clearing, and drainage to secure healthful surroundings for the troops detailed for the defense of the canal; and the establishment of the necessary communications for the prompt employment of the mobile garrison against any force which may land at a distance from the coast fortifications. Plans for most of the batteries of the primary armament have been completed; the excavations or foundations of over 50 per cent. of these have been undertaken and the concrete construction of about one-half was already under way. The armament for these batteries is being manufactured, and the first delivery of guns and carriages is expected in June, 1913.

RECORD OF EXCAVATION. Excavations to January 1, 1913, are recorded in the next column. On that date there remained to be excavated in the Culebra cut 5,351,419 cubic yards, and in the entire canal proper 24,223,826 cubic yards.

PAPER. See CHEMISTRY, INDUSTRIAL.

PAPER. The paper industry in the United States, while fairly prosperous, was in a rather abnormal condition during the year 1912, due to uncertainty and anxiety regarding tariff and other legislation. This industry represented capital amounting to over \$400,000,000, and gave employment to 80,000 or more people, to whom wages exceeding \$40,000,000 were annually distributed. The yearly production amounted in value to almost \$300,000,000. In 1912 the increase in production of previous years was maintained in the news print, book paper, and writing paper divisions, which represent the greater part of the paper industry. In news print the entire year's total was stated at 1,426,921 tons, compared with 1,366,609 tons for 1911 and 1,278,002 tons for 1910. The imports from Canada were 84,630 tons in 1912 and 54,484 tons in 1911. The total production of book paper for 1912 was 1,387,568,000 pounds, or greater than that of 1911 by 84,428,000 pounds. In 1912 the total production of writing and other fine paper was 348,118,000 pounds, as against 324,240,000 pounds in 1911. During the year there was a certain amount of labor trouble, as at Kalamazoo, Mich., floods and other difficulties, but in the main the political situation was largely responsible for the feeling of uncertainty. Paper manufacturers claimed that while the tariff on paper had been lower there had been no corresponding reduction of the import duty on the supplies required, which put other manufacturers, especially those of Canada, at a distinct advantage. In fact, the paper and pulp industry during 1912 was in a somewhat singular condition owing to developments that had followed the tariff legislation of the previous year. It will be recalled that in the act passed July 26, 1911, it was provided that irrespective of the acceptance of the reciprocity agreement by Canada that wood pulp of all kinds, news print paper, and other paper and pulp to the value of 4 cents per pound, would be admitted into the United States free of

PEDRO MIGUEL LOCKS, BIRDSEYE VIEW FROM HILL ON EAST BANK, JULY 28, 1912

PANAMA CANAL

Digitized by Google

duty, but only such pulp and paper were to be so admitted upon which there were no export restrictions or duties. This measure was duly passed by Congress, but the reciprocity agreement was rejected by Canada, so that the owners of private woodland in Canada secured a decided advantage in the markets of the United States, while those whose supplies of pulp were obtained from the crown forests were correspondingly handicapped. This led to serious dissatisfaction in Canada as well as in the United States, and throughout the year the entire situation was canvassed actively. With changed political conditions alterations in the tariff were anticipated. Toward the end of the year the British government removed the export restrictions from certain forests in Quebec, while from the western part of the Dominion pulp from crown lands imported into the United States was made a subject of controversy in the collection of duties, and the case was being argued before the general board of appraisers, with a strong probability of review by the courts. Furthermore, the importers of pulp from Europe claimed that they were being discriminated against under the most favored nation clause of the treaties which their governments enjoyed with the United States, and they accordingly made claim for the admission of their product on the same terms as the Canadian. This the United States government declined to concede, and the position was sustained in a decision by the board of general appraisers handed down on April 23. The decision was appealed to the Customs Court, but the hearing set for October was postponed.

The question, as in previous years, resolved itself into a contest between the newspaper publishers on the one side and the paper men on the other, and it was anticipated that in the tariff legislation of 1913 the paper and pulp schedules would be vigorously discussed.

The result of the passage of the McCall bill in July, 1911, was seen in increased activity in Canada, and not only were existing plants extended, but new ones were constructed, and during 1912 an increased amount of paper made its way into the United States so that at the end of the year 1912 the rate of importation from Canada was estimated at about 125,000 tons per year, of which 75 per cent. paid no duty. It was remarked by *The World's Paper Trade Review*, of London, in an editorial:

"Should the present tariff system existing between Canada and the United States continue, the outlook for the Canadian export trade is very rosy. United States paper men are pointing with alarm to the fact that between January and September 75,000,000 pounds of paper came into the Republic from Canada, free of duty; it is certain that every month of the coming year will only render this condition more pronounced."

In the United States Department of Agriculture at Washington, laboratory experiments in connection with the testing and investigation of paper and pulp materials were continued during the year. Greater standardization than ever was effected in the specifications for the paper used by the government and new processes were being studied. R. E. Doolittle, active chemist of the Department of Agriculture, in his annual report referring to the utilization of the waste long leaf pine for the making of paper and the recovery of wood tur-

pentine, resin oil, and wood creosote, stated that the results so far obtained confirmed the opinion previously expressed by the bureau that the waste pine lumber of the South from the cut-off land could be utilized with profit, and would furnish one of the most promising fields of industrial development for the future.

PAPER TRUST. See TRUSTS.

PAPUA, TERRITORY OF (formerly British New Guinea). Part of the island of New Guinea, forming, with a number of small islands lying mostly to the southeast, a dependency of the Commonwealth of Australia. The area of the dependency is 90,540 square miles. The population, June 30, 1911, numbered 1032 (771 adult males); colored (other than Papuans), 450; half-castes, 280. The native population is estimated at between four and five hundred thousand. Port Moresby is the capital. The local industries are not numerous, but they are becoming more diversified. The soil is favorable to agriculture. On March 31, 1911, there were 167 plantations, with 9513 acres under cocoanuts, 2889 under rubber, 2332 under sisal hemp, 132 under coffee, and 1015 under various crops. The six government plantations cover 229 acres. About 350,000 acres have been planted to cocoanuts under the ordinance which obliges the natives to plant for food supply. About 400,000 superficial feet of log timber were exported to Australia in 1910-11. Pearl-fishing is followed; export of pearl-shell (1910-11), £1445; beche-de-mer, sandal wood, rubber, copra, etc., are produced for export. Gold-mining is the chief occupation of the European population; yield (1910-11), 18,497 ozs. (£68,803). Pearl exports (1909-10), £4290. Imports (1910-11), £202,910; exports, £117,410; shipping entered and cleared, 300,244 tons. Revenue (1910-11), £45,972; expenditure, £70,699. J. H. P. Murray was lieutenant-governor in 1912. See ANTHROPOLOGY.

PARAGUAY. A South American republic bounded by Bolivia, Brazil, and Argentina. The capital is Asunción.

AREA AND POPULATION. The estimated area is 97,722 square miles. There is an unsettled boundary dispute with Bolivia. Population, census of 1899, 643,852; estimate of December 31, 1908, 715,841. An estimate of 1910 is 752,000, but it is not unlikely that this figure is too high; some authorities believe that on account of political disturbances, the population has decreased since 1904. The population is largely a mixture of Spanish, Guarani, and negro. The larger towns: Asunción, about 84,000 inhabitants; Villa Rica, 30,000; Concepción, 25,000; Carapeguá, 15,000; Luque, 15,000. Immigrants in 1909-10, 634; in 1910-11, 418.

In 1911 there were 485 public schools, with 861 teachers and about 45,000 pupils, and 57 private schools. The state religion is Roman Catholicism.

PRODUCTION AND COMMERCE. Paraguay is a country of exceptional natural resources, but internal conflicts have retarded progress. Unfortunately also much of the land has been alienated to foreign capitalists and syndicates. Stock-raising has become an important industry; the number of cattle probably exceeds 5,500,000. The leading agricultural products include yerba, maté, tobacco, corn, alfalfa, beans, manioc, and various fruits, especially oranges. The quantity of domestic tobacco

marketed in 1909 is reported at 10,694,371 lbs.; in 1910, 12,396,031 lbs.; in 1911, 14,187,395 lbs. Promising industries are the cultivation of cotton and sugar. See AGRICULTURE.

Imports and exports have been valued as follows in gold pesos (worth 96.5 cents); 1906, 6,267,194 and 2,695,139; 1909, 3,787,951 and 5,136,639; 1910, 6,067,459 and 4,744,826. Leading exports in 1909 and 1910, in thousands of pesos: Hides, 1135 and 1178; timber, 980 and 1038; quebracho extract, 634 and 782; tobacco, 534 and 572; yerba maté, 554 and 522. Imports and exports by countries in 1910, in thousands of pesos: United Kingdom, 2601 and 15; Germany, 1101 and 873; Argentina, 672 and 2758; Italy, 333 and 83; France, 286 and 25; United States, 308 and 2; Uruguay, 44 and 513; other, 720 and 476.

COMMUNICATIONS. In 1911 there were 373 kilometers (232 miles) of railway. Asunción is connected with Encarnación, which is on the Paraná River opposite the Argentine town Posadas. Formerly the journey from Asunción to Buenos Aires, by river steamer, required about five days; it is now made by rail in about 53 hours. Telegraph, over 60 offices, with nearly 2500 miles of line; post offices, 385.

FINANCE. Revenue in 1910, 1,480,615 pesos gold and 22,002,226 pesos paper; estimated expenditures, 710,552 pesos gold and 27,094,948 paper. (The gold peso is valued at 96.5 cents, and the paper between 7½ and 8 cents.) For 1911, estimated revenue, 2,738,000 pesos gold and 9,190,500 paper; estimated expenditure, 999,412 pesos gold and 32,687,228 paper. On December 31, 1910, the English funded debt amounted to 3,920,717 pesos gold; floating debt, 600,000 gold; paper money (1908), 35,000,000.

GOVERNMENT. The constitution provides for the election of a president and vice-president by indirect vote for four years. Five members constitute the cabinet. The congress consists of the Senate and the Chamber of Deputies, members of both houses being elected directly.

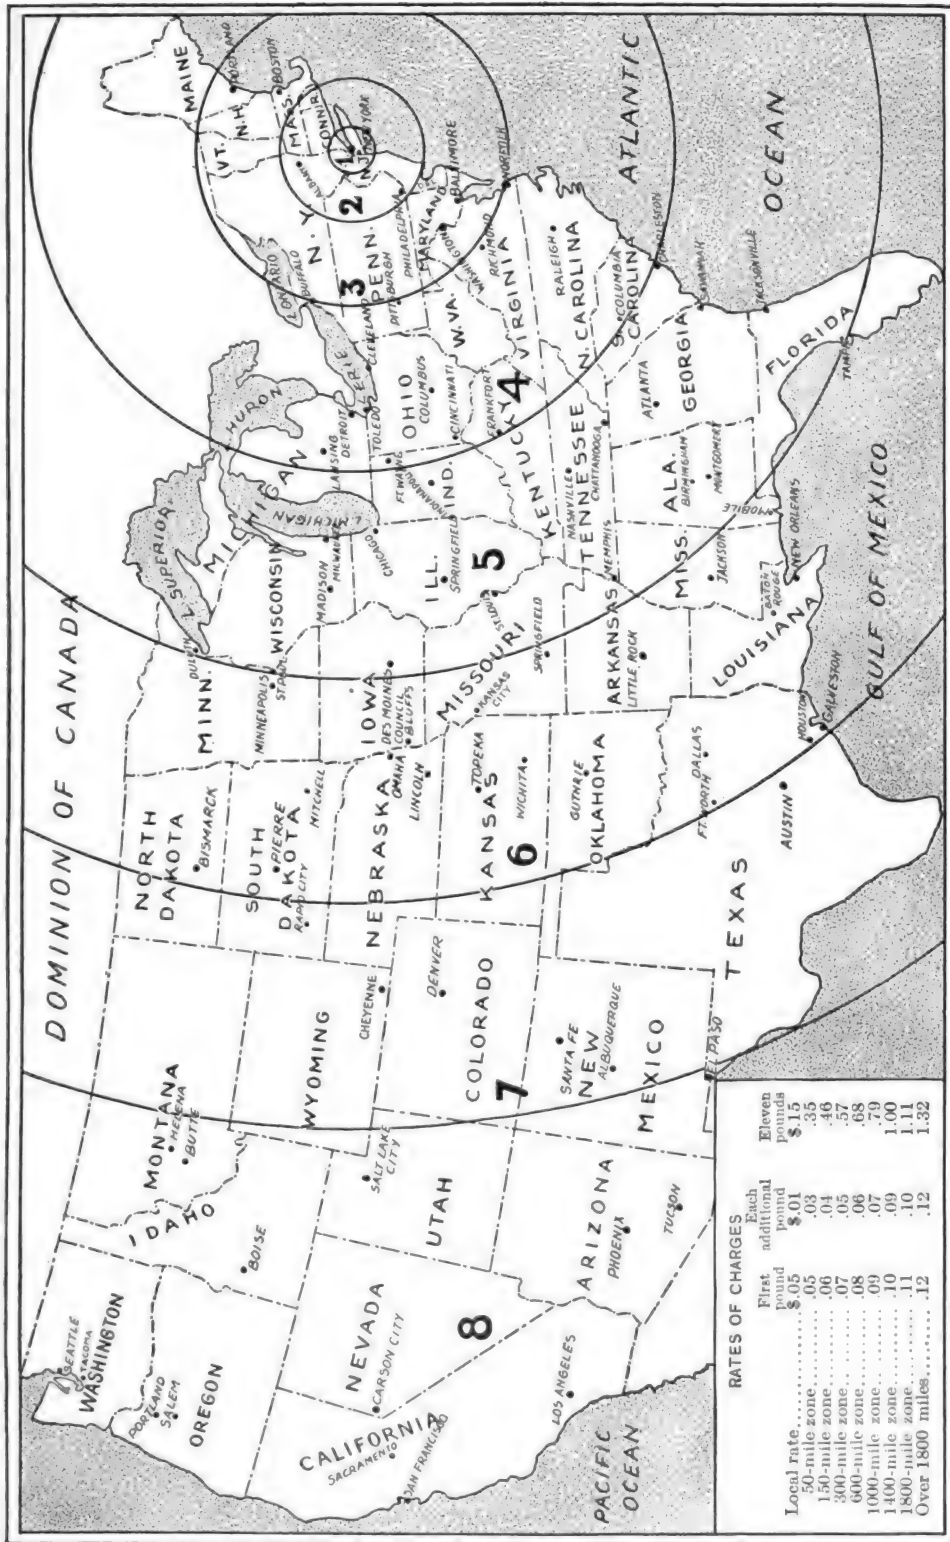

HISTORY. In December, 1910, Manuel Gondra was inaugurated president. He was forced to resign in the following month, and Col. Albino Jara, the minister of war, assumed office as acting president. On July 5, 1911, Jara was seized by officers of the garrison at Asunción and compelled to resign, and on the next day Liberato Rojas, president of the Senate, was elected provisional president by the congress. Disturbed political conditions, amounting at times to civil war, continued for many months. In succession to Rojas, Pedro Pena assumed the presidency March 1, 1912. On the 22d of the same month revolutionists captured Asunción, Pena and his cabinet took refuge on foreign war vessels. On the 25th Emiliano González Navero became provisional president. The latter served as president in 1908-10; he was elected vice-president for the term beginning in 1906, but in 1908, as the result of a revolutionary movement, he superseded the president, Gen. Benigno Ferreira. On April 27, 1912, civil war was renewed. The revolutionists suffered defeat near Asunción on May 13, and on July 19 Eduardo Schaerer was elected president and Pedro Bobadilla vice-president for the four-year term beginning August 15, 1912. Ministry: J. Montero, interior; Eus. Ayala, foreign affairs; Jer Zubizarretta, finance; F. Paiva, justice, worship, and public instruction; Manuel Gondra, war.

PARCEL POST. For a considerable number of years there has been in the United States a general demand that the government establish a parcel post as an integral part of the post office department. The political parties have approved the establishment of such a system in their party platforms for more than a decade, but public opinion solidified slowly. There were a variety of proposals and time was needed to effect general agreement as to the wisest plan of procedure. Among the proposals were the following: The extension of the rural free delivery service, making possible the sending of parcels weighing up to eleven pounds; the purchase of the express companies by the government and their unification into a single public-owned and operated system; the organization of a government fast-freight system; and the introduction of a general system of parcel post such as is found in most European countries. One of the strongest arguments for the establishment of such a system was found in the high express rates and other causes of dissatisfaction with the express service. Comparison between the cost of transporting parcels of moderate weight in this country and in England and Germany showed the American cost to be five to ten times greater. The chief opposition to the introduction of the system was found in various trade and merchants' associations and the country storekeepers, who were feeling the competition of the retail mail-order houses of Chicago, New York, Philadelphia, and other large cities. The political power of the express companies was also a serious block to progress of the movement.

So strong, however, was the public demand for a general system that a bill establishing it was passed in Congress with almost no debate on the principle; indeed the press of the country for the most part, contented itself with explaining the provisions of the proposed law. As finally enacted in August the bill provided for the plotting of the country into units fifty miles square. The rates were to be determined by weight and distance, the country being divided into eight zones. The maximum weight allowed is eleven pounds. For city and suburban rural route delivery the rate will be five cents for the first pound and one cent for each additional pound, making a total charge of fifteen cents for the maximum weight of eleven pounds. Otherwise the zones and charges are as follows:

	First pound	Each additional pound	Eleven pounds
50-mile zone	\$.05	\$.03	\$.35
150-mile zone06	.04	.46
300-mile zone07	.05	.57
600-mile zone08	.06	.68
1000-mile zone09	.07	.79
1400-mile zone10	.09	1.00
1800-mile zone11	.10	1.11
Over 1800 miles12	.12	1.32

The law provided that the parcels to be received should include all fourth class mail matter and "all other matter, including farm and factory products not now included in other classes of mail matter"; but no parcels should include matter likely to perish before the normal time required for delivery, or that might injure postal employees or damage other

PARCEL POST RATE ZONES FROM NEW YORK CITY

THE UNITED STATES IS DIVIDED INTO DISTRICTS EACH FIFTY MILES SQUARE FROM THE CENTRE OF WHICH A SIMILAR ARRANGEMENT OF ZONES IS ESTABLISHED

mail matter. Articles excluded include intoxicants; poisons, other than medicinal; poisonous animals; inflammable articles, as matches and benzine; revolvers; live or dead animals, except stuffed specimens. Moreover, the size of the package was limited to seventy inches in length and girth combined. The law provides that the Postmaster-General may change zone boundaries; and a congressional committee will keep special oversight of the operation of the system during its first year. Special red stamps for all fourth class matter and parcels are to be used as a means of determining the volume of business done. These stamps, labeled "U. S. Parcel Post," will be in twelve denominations ranging from one cent to one dollar. Special green postage due stamps are also provided. Parcels will not be received at drug store stations, but will be handled through central and branch offices, and sub-stations. A parcel may be insured against loss to the amount of \$50 for ten cents.

Members of the Postal Progress League, which was largely instrumental in securing the passage of the law, were disappointed with the complicated system of charges. They declared that several country post offices must become the centre of an almost endless system of book-keeping; that large maps differing for each zone would have to be provided; and that the post office officials would make numerous mistakes and cause many delays through the difficulty of understanding the system. In answer to this it was declared by prominent postal authorities that any parcel post rate could be determined in a few moments. During the last two months of the year extensive preparations were made for establishing the system on an efficient and nation-wide basis on January 1. Postmasters everywhere were given thorough-going instructions as to the rules and the organization of the system and united in gathering information as to the probable extent of its use. While the system was expected to prove of great advantage to the great mail-order houses, the zone system was expected to protect the smaller local merchants and even to increase their trade. It was estimated that about twenty million people who do not now have the services of any express company would be reached by the parcel post. Department stores planned to make extensive use of the system.

Of special interest in connection with the establishment of the parcel post was the issuance of an order early in the fall by the Interstate Commerce Commission ordering the thirteen express companies of the country to show cause why they should not adopt a new schedule of charges. The commission had made an extensive inquiry covering 600,000 different express rates and an equal number of waybills and receipts. The order contained an elaborate system of proposed charges whereby the whole country was divided into blocks of fifty miles square, all the points in each block to be common, except as to adjacent blocks, rates to be scaled according to weights from one to 100 pounds, as well as distance, and to be posted in each office. Rates in general were directed to be reduced, and the companies were ordered to send packages by the most direct route. The same order also endeavored to meet complaints of over-charges and especially of duplicate charges by providing vari-colored waybills,

receipts, and labels. These latter suggestions were at once adopted. Postmaster-General Hitchcock on December 28 declared that in his view the introduction of the parcels system would force the express companies to offer themselves for sale to the government. He favored such a purchase on a fair basis just as soon as the new system was well started. He pointed out that the rates established while higher than would probably be necessary were lower than express rates and would force a reduction in the latter. At the same time the parcel post rates were based on the principle of averages, so that they were quite low for long hauls but relatively high for short hauls. Government ownership of the express companies would make possible a new scale of short-distance rates.

PARKS, JAMES LEWIS. An American Protestant Episcopal clergyman, died February 18, 1912. He was born in New York in 1838 and graduated from the General Theological Seminary in 1871. He was ordained to the priesthood in 1872 and served as rector in Oakland, Cal.; Middletown, Conn., and Philadelphia, and from 1896 to 1910 in Calvary Church, New York City.

PASSY, FRÉDÉRIC. A French economist and peace advocate, died June 12, 1912. He was born in Paris in 1822. He was educated as a lawyer, but entered the government service as auditor of the Council of State. From 1881 to 1889 he was a member of the Chamber of Deputies. During the same period and until his retirement in 1902 he was professor of political economy in several colleges. He always took a profound interest in the cause of general peace and was one of the founders of the International and Permanent League of Peace, which was organized in 1867. He became permanent secretary of the society. In 1888 with M. W. Randal-Cremer he founded the Interparliamentary Union for Arbitration and Peace. He was also a member of the International Bureau of Peace at Bern, Switzerland. In 1901 he received the Nobel peace prize and was the first recipient of that prize. He was commander of the Legion of Honor and a member of the Moral and Political Science Academy of the French Institute. He wrote several books on economics and philosophy and also published a volume of verse.

PEABODY MUSEUM OF HARVARD UNIVERSITY. An institution for anthropological and archaeological research, founded in 1866 by George Peabody. The most important event in the history of the museum in 1912 was the appointment, by the Corporation of Harvard University, of a committee to raise money for the completion of the University Museum Building. This one remaining section

of the building will belong to the Peabody Museum and will give the much-needed space and facilities for the proper development of the museum. Several important explorations were carried on under the direction of the museum. During the year, Dr. Charles Peabody, in charge of the European section, gave to the museum a very important collection of bone and stone objects from the Cavern of Espélugues, at Lourdes, France. Dr. Peabody was in Europe during the summer of 1912, and represented the museum at several European anthropological congresses, and also carried on investigations in prehistoric archaeology of England and France. Explorations were also carried on for the museum in the Delaware Valley by the continuation of the extended research of Mr. Ernest Volk for traces of glacial man in America; in the southwest by Mr. A. V. Kidder, among the ruined pueblos and cliff-houses, where he continued his special study of types of pottery and their distribution; in the Charles River Valley, Massachusetts, where Mr. S. J. Guernsey discovered and examined several rock shelters and caches of stone implements; at Martha's Vineyard, where Mr. Guernsey located prehistoric burial places, village sites, and shell heaps; and in Douglas County, Nebraska, where Mr. F. H. Stearns explored several prehistoric habitation sites with interesting results. The Central American Expedition was in the field in 1911-12 and a number of ancient sites were discovered in Southern Yucatan, north of the Rio Hondo.

In the Division of Anthropology, Assistant Professor R. B. Dixon was granted leave of absence in the year 1912-13 to travel in the Far East. He is carrying on researches in the ethnology and linguistics of the Hill tribes of India. A new course on the Ethnography of Asia has been added to the courses in this division. The officers of the museum in 1912 were: President, Abbott Lawrence Lowell; honorary curator, Frederic W. Putnam; librarian, Roland B. Dixon; secretary, Frances H. Mead.

PEACE, INTERNATIONAL, CARNEGIE ENDOWMENT FOR. For the establishment of this endowment Mr. Andrew Carnegie gave in 1911 \$10,000,000. Its general purpose, as its title indicates, is the promotion of international peace. For administrative purposes the work is divided into three divisions: Division of Intercourse and Education, directed by Nicholas Murray Butler, president of Columbia University; Division of International Law, directed by Dr. James Brown Scott; and Division of Economics and History, directed by Professor John Bates Clark. The president of the executive committee is Elihu Root. The most important event in connection with the endowment in 1912 was the world tour made by Dr. Charles W. Eliot, formerly president of Harvard University. The general purpose of Dr. Eliot was to test the sentiment in foreign countries as to the best methods for the solution of the problem for the amelioration of which the endowment was organized. During his visit in Ceylon, Dr. Eliot was ill for some time with appendicitis but fortunately recovered. Under the auspices of the endowment Dr. Inazo Nitobe, of Japan visited the United States in 1912.

The endowment has financial charge of the American branch of the Association for Interna-

tional Conciliation, of which Dr. Butler is the American head and Baron D'Estournelle de Constant is president-general.

PEARL HARBOR DRY DOCK. See **DOCKS AND HARBORS.**

PEARSONS, DANIEL KIMBALL. An American physician and philanthropist, died April 27, 1912. He was born in Bradford, Vt., in 1820, and was educated in the public schools of that State. His first days were spent on a farm and he was prevented by poverty from obtaining a college education. He spent one year at Dartmouth College, but was unable to continue. After several years spent in saving he studied at the Medical School at Woodstock, Vt., and received his degree in 1842. Until 1857 he practiced medicine in Chicopee, Mass. In that year he removed to Illinois and ultimately settled at Hinsdale, near Chicago. He saw profits in real estate investment, and giving up the practice of medicine engaged in the business of buying and selling land. He was successful at this and later removed to Chicago. After the Chicago fire he accumulated a large fortune. In 1873 he retired from active business, but remained the director in several financial institutions. He was greatly interested in the work of the American colleges and, as he had no relatives, he resolved to distribute his fortune to such of these institutions as needed and deserved assistance while he was still alive. He continued this distribution until within a year of his death, when he had practically given away his entire fortune. He is known to have given assistance to forty-four colleges, and in addition to a dozen or more societies and other institutions. The amounts given were, for the most part, comparatively small. His largest benefaction was \$600,000. This was to Beloit College, Wisconsin. His total donations to colleges and charities aggregated over \$4,000,000. These included \$280,000 to the Chicago Theological Seminary, \$150,000 to Mount Holyoke College, and \$100,000 to Lake Forest University. With each gift was coupled the requirement that a larger sum must be raised from other sources before his gift became available. The colleges which he assisted were chiefly in the Middle West, the South, and the Far West. The larger universities did not receive help from him, as he declared they were abundantly provided for from other sources.

PEAT. See **CHEMISTRY, INDUSTRIAL.**

PEEL, ARTHUR WELLESLEY, Viscount. An English public official, died October 24, 1912. He was born in 1829, the youngest son of the famous Sir Robert Peel. He was educated at Eton and Balliol, Oxford, taking his degree in 1852. In 1865 he began his career of thirty years in the House of Commons as Liberal member from Warwick. He represented that town until 1885, and from 1885 to 1895 the joint boroughs of Warwick and Leamington. In 1886, when Mr. Gladstone formed his first ministry, which remained in power for more than five years, Peel served as parliamentary secretary to the Poor Law Board, as secretary to the Board of Trade, and as patronage secretary to the Treasury. The last position is the official title of the "whip" of the party. Except for a few months of office in 1880 as under secretary to the Home Department, these were his only official appointments. In 1884

he was nominated speaker of the House of Commons to succeed Sir Henry Brand and he was unanimously elected. The speech which he delivered on the occasion of his election was a memorable one in the modern history of the House of Commons.

He assumed the duties of speaker at a time when, as a result of disturbances created by Irish members, the speakership was invested with powers and duties that had not formerly accompanied that office. He was three times reelected speaker and retired in April, 1895. The eleven years of his speakership covered an exciting and eventful period. They saw the end of the Gladstone government of 1880, the beginning and the end of Lord Salisbury's administration, the last administration of Gladstone, and the whole of Lord Randolph Churchill's official career. They also included special commission debates, the beginning and end of two home rule bills, and the disruption of the Liberal party. On his retirement in 1895 Mr. Peel became Viscount Peel. After his retirement as speaker he held several civic offices. He was chairman of the British commission to the St. Louis Exposition.

PEFFER, WILLIAM. Former United States senator from Kansas and founder of the Populist party, died October 7, 1912. He was born in Cumberland County, Pa., in 1831. He taught school when he was fifteen years of age and between terms worked on his father's farm. At the age of twenty-one he removed to the West and in the second year of the Civil War enlisted as a private in the 83d Regiment of Illinois Volunteers. He served throughout the war and was mustered out with the rank of lieutenant. After the close of the war he removed to Clarksville, Tenn., and there began the practice of law. Soon after he removed to Kansas, where he lived for the rest of his life. He established two country newspapers and in 1874 was elected to the State Senate. He was Republican presidential elector in 1880. In 1891 a wave of Populism arose in the West, and Peffer was elected to the United States Senate as a Populist. Seven years later, when he had retired from the Senate, he was Prohibition candidate for governor. From that time until his death his time was occupied in writing. Senator Peffer was one of the first persons in public life to attack Wall Street. He fought "intrenched capital" and "vested interests" with the greatest vigor. He was a striking figure in the Senate during his period of service. His beard, which covered his face and extended half way to his waist, became famous throughout the country and furnished abundant material for cartoonists and humorists. He introduced many bills covering the contentions of Populism while he was in the Senate, but none of these were passed. For some time before his death he had been engaged upon a history of Populism, which was to have been kept in the archives of the Kansas State Historical Society. In order that he might live long enough to complete this work he suffered the amputation of a leg a few months before his death. He wrote, in 1900, *The Rise and Fall of Populism in the United States*, and he contributed several articles on the subject to magazines.

PEKING. See CHINA.

PELLAGRA. The National Association for the study of pellagra held its triennial meeting at Columbia, S. C., October 3 and 4, to

discuss the disease, which has become a subject of grave concern, particularly in the South. While its exact etiology is still undetermined and no definite form of treatment has been devised, the tendency of opinion is toward a hopeful prognosis when treatment is begun before the disease is too far advanced. After 200 years of study in European countries, the pellagra problem still awaits elucidation.

Three theories have been advanced as to the cause of the disease: (1) The zeistic theory of Ballardini, dating from 1845, giving corn poison from excessive use of corn products as the cause, supplanting the old theory of faulty metabolism; (2) the cotton seed products poison theory of Mizell, in 1911, and (3) the sand-fly theory of Sambon, dating from 1910. The first two rest on malnutrition, the last on the action of a parasite. Sambon's investigations were made in Italy and his conclusions were so well grounded that, the spoiled-maize theory having failed to find sufficiently strong supporting evidence in this country, attempts were made to substantiate Sambon's findings here. The grounds on which Sambon based his conclusions may be outlined as follows: (1) The endemic centres of pellagra in Italy have remained the same since the disease was first described; (2) the pellagra season coincides with the season of the appearance of the full-fledged sand-fly, even to the extent that if the spring is early or late the sand-fly is early or late in appearing, and pellagra cases are correspondingly early or late in their appearance; (3) in centres of pellagra infection whole families are attacked simultaneously; (4) in non-pellagrous districts the disease does not spread with the advent of a pellagrin from a pellagrous district; (5) where a family has removed from a pellagrous to a non-pellagrous district the children born in the former districts are pellagrins, while the children born subsequent to removal do not develop the disease; (6) the disease is not hereditary, although infants a few months old may become infected, especially if taken to the fields where their mothers work during the sand-fly season; (7) pellagra is not contagious, but is transmitted to each individual by an infected sand-fly.

As noted in the last YEAR BOOK, Roberts, of Georgia, found conditions in his section of the country similar to those described by Sambon in Italy. A like investigation in Kansas was later undertaken by Prof. S. J. Hunter, whose work is not yet completed, but the evidence thus far obtained points to the sand-fly as a probable cause. The only species of sand-fly found in Kansas thus far is *Simulium vittatum*. *Simulium reptans* is the species referred to by Sambon, reported on this continent from Greenland only. *Simulium vittatum* is distributed in Kansas along Turkey Creek, a tributary of the Kaw, in Wyandotte County; along the Marais des Cygnes in Franklin County; along the Neosho and its tributaries in Labette County, and along the Arkansas in Sedgwick County. Cases of pellagra have been reported in Allen, Chautauqua, Labette, Meade, and Montgomery counties. All are in the sand-fly territory. None of the patients have been out of the State, so it seems that the cause is local.

BIBLIOGRAPHY. *A Preliminary Study of Kentucky Localities in Which Pellagra Is Prevalent. Having Reference to the Conditions of*

the Corn Crop and to the Possible Presence of an Insect or the Other Agent by Which the Disease Spreads (Bulletin 159, Kentucky Agricultural Experiment Station of the State University); *Pellagra, an American Problem*, by George M. Niles, M. D. (Philadelphia, 1912), and *Pellagra*, by E. J. Wood, M. D. (New York, 1912).

PENANG. See STRAITS SETTLEMENTS.

PENNSYLVANIA. POPULATION. According to the Census Bureau statistics compiled in 1912, out of the total population in 1910, 7,665,111, the foreign-born whites numbered 1,438,719, compared with 982,543 in 1900. The largest number, 252,083, came from Austria; from Russia, 239,262; from Italy, 196,040; from Germany, 194,829; from Hungary, 122,471; and from England, 109,172. All the other countries of Europe contributed to the foreign-born white population. In Philadelphia, with a population in 1910 of 1,549,008, the foreign-born white population numbered 382,578. Of these, 89,094 came from Russia; 83,073 from Ireland, and 61,235 from Germany. In Pittsburgh, with a population of 533,905, the foreign-born whites numbered 140,436. Of these, 29,438 came from Germany and 26,271 from Russia. The negroes in the State in 1910 numbered 193,919 and the mulattoes 37,154. In 1890 the negroes numbered 107,596 and the mulattoes 25,710.

AGRICULTURE. The acreage, value, and production of the principal crops in 1911 and 1912 are given in the table below:

		Acreage.	Prod. Bu.	Value.
Corn	1912	1,449,000	61,582,000	\$38,797,000
	1911	1,435,000	63,858,000	43,423,000
Wheat	1912	1,240,000	22,320,000	21,204,000
	1911	1,289,000	17,402,000	16,010,000
Oats	1912	1,099,000	36,377,000	14,915,000
	1911	1,121,000	31,724,000	15,862,000
Rye	1912	282,000	4,935,000	3,800,000
	1911	285,000	4,304,000	3,443,000
Potatoes ..	1912	265,000	28,885,000	16,464,000
	1911	270,000	15,120,000	14,062,000
Hay	1912	3,173,000	a 4,537,000	70,777,000
	1911	3,148,000	a 3,148,000	62,960,000
Tobacco	1912	44,200	b 64,090,000	5,448,000
	1911	46,000	b 65,320,000	6,205,400

a Tons. b Pounds.

MINERAL PRODUCTION. The production of iron ore in 1911 was 514,929 long tons, valued at \$539,553, compared with 739,799 long tons produced in 1910, with a value of \$911,847.

The production of anthracite coal in the State in 1911, according to the United States Geological Survey, broke all previous records except the maximum output in 1907. The returns for 1911 showed a total production of 80,732,015 long tons, valued at \$174,852,843. This was an increase over the output of 1910 of 5,298,607 long tons in quantity and \$14,577,541 in value. The greater production of anthracite in 1911 was probably due to the increased activity in anticipation of a possible coal strike in April. The extremely severe weather of the winter 1910-11, however, practically exhausted any accumulated coal before the termination of the three-year period of wage agreements on March 31, 1912.

The production of bituminous coal in the State in 1911 was 144,721,303 short tons, valued at \$146,311,930. This was a decrease of 5,800,223 short tons from the production of 1910. The decrease was almost entirely in that portion of the product used for the manufac-

ture of coke. Except for this the coal trade in 1911 was well maintained and indicates that general industrial conditions were satisfactory. The number of men employed in the coal mines of the State in 1911 was 341,126, of whom 168,541 were engaged in soft coal mining.

The total production of petroleum in the State in 1911 was 8,247,728 barrels, compared with 8,794,662 barrels in 1910. The production in the State has shown a decrease for several years. In 1907 it was approximately 10,000,000 barrels. Several new wells were drilled with successful results in 1911, but the increase resulting from these was not sufficient to prevent a decrease in the production of the State.

MANUFACTURES. The Thirteenth Census statistics are for the calendar year 1909 and were compiled in 1912. Pennsylvania is one of the leading States in manufacturing. It holds second place, being surpassed only by New York. The growth of manufactures has been steady since their beginning in 1849, when the first authoritative census was taken. From the following table it will be seen that in 1909 there were in the State 27,563 manufacturing establishments, which gave employment to an average of 1,002,171 persons.

	Number or Amount 1909	1904	P. C. of Inc. 1904-'09
Number of establishments	27,563	23,495	17.3
Persons engaged in manufactures	1,002,171	855,392	17.2
Proprietors and firm members	29,743	26,029	14.3
Sal'd employees	94,885	66,081	43.6
Wage earners (average number)	877,543	763,282	15.0
Primary h. p.	2,921,547	2,302,398	26.9
Capital	\$2,749,006,000	\$1,995,837,000	37.7
Expenses	\$2,355,385,000	\$1,751,440,000	34.5
Services	566,524,000	441,230,000	28.4
Salaries	110,897,000	73,269,000	51.4
Wages	455,627,000	367,961,000	23.8
Materials	1,582,560,000	1,142,943,000	38.5
Miscellaneous....	206,301,000	167,267,000	23.3
Value of products	2,626,742,000	1,955,551,000	34.3
Value of products less cost of materials	1,044,182,000	812,608,000	28.5

The largest value of products was in manufactures of iron and steel, \$500,344,000; foundry and machine-shop products were valued at \$210,746,000; iron and steel blast furnaces, \$168,578,000; leather, \$77,926,000; woolen, worsted, and felt goods, \$77,447,000. Other manufactures in which the value of the product was more than \$50,000,000 were industries connected with railways, printing and publishing, silk and silk goods, lumber and timber products, petroleum, slaughtering and meat-packing, manufacture of coke, and tobacco manufactures. The total number of persons engaged in manufactures in the State in 1909 was 1,002,171. Of these, 802,548 were male and 199,623 were female. The number of persons under 16 years of age employed was 29,107. The prevailing hours of labor for the majority of wage earners ranged from 54 to 60 a week; only 12.3 per cent. of the total being employed in establishments where less than 54 hours a week prevailed, and only 11.4 per cent. in establishments where the hours of labor were more than 60 a week. The largest number of wage earners was in Philadelphia, 251,884; in Pitts-

burgh, 67,474; in Reading, 24,145; in Scranton, 12,851; in Allentown, 11,481, and in Johnstown, 10,574. The value of the products in Philadelphia was \$746,075,659, and in Pittsburgh \$243,453,693.

EDUCATION. There were on June 30, 1912, 1,322,254 pupils of school age in the State. The average number of pupils in daily attendance was 1,061,673. There were 36,945 teachers employed, of whom 8154 were males and 28,791 females. The average salary of male teachers per month was \$65.04 and of female teachers \$48.41. There were 35,719 schools, with 15,207 schoolhouses. The first-grade high schools numbered 155, the second-grade high schools 259, and the third-grade high schools 442. The expenditure for teachers' wages was \$21,137,685. For schoolhouses there was expended \$7,309,527. The total expenditures amounted to \$42,557,986.

FINANCE. The report of the State treasurer showed a balance in the treasury at the beginning of the fiscal year 1912 of \$12,923,370. The total receipts for the fiscal year ending December 31, 1912, amounted to \$32,374,890 and the total disbursements to \$35,516,410, leaving a balance in the treasury on December 1, 1912, of \$9,781,850. The principal receipts are from taxes on corporations, taxes on personal property, and taxes on collateral inheritance. The chief disbursements are for State institutions, for public schools, and for the maintenance and construction of highways. The total public debt at the end of the fiscal year was \$659,160. The sinking fund assets amounted to \$785,510, leaving a net surplus in the sinking fund of \$126,350.

CHARITIES AND CORRECTIONS. The charities and corrections of the State are under the control of the Board of Public Charities. During 1912 two new State institutions for the care of the insane were established. These were the Homœopathic State Hospital for the Insane at Rittersville and the State Hospital for the Criminal Insane at Farview. There were also two new State hospitals, the State Hospital of Coaldale in Schuylkill County and the State Hospital of Nanticoke in Luzerne County. These hospitals were private institutions prior to 1912.

POLITICS AND GOVERNMENT

The political year in Pennsylvania was one of the most remarkable in the history of the State. The Republican party was rent into factions and nominally, a new State leader was created. The State, always strongly Republican, had for years given its support to the Republican candidate for President under the guidance of the party machine, controlled by Senator Penrose, which, till the rise of the Progressive wing of the party in the State, had been considered invulnerable. In the case of the Democratic party, too, the old order was changed and the party went through a "reorganization" led by antagonists of James M. Guffey, who had previously held the predominating power over the Democratic party in the State.

Among the first advocates of the candidacy of Mr. Roosevelt for a third term was E. A. Van Valkenburg, editor of the *Philadelphia North American*. He was joined in his efforts by William Flinn, for twenty years known as the political "boss" of Pittsburgh. An aggressive campaign throughout the State was carried on by these leaders and others in

behalf of the Progressive element of the party prior to the primary election for delegates to the national and State conventions, held on April 13. The result of this primary was a surprise even for those who had been confident of the success of the election of Roosevelt delegates. Out of the total number of 76 national delegates, which included 12 delegates-at-large, 67 were elected by Mr. Roosevelt's supporters. Aside from its national significance the most important result of the election was the wresting of control of the Republican organization from Senator Penrose, who since the death of Senator Quay had been the Republican leader of the State. The election apparently placed Mr. Flinn in almost absolute power as political dictator of the State.

The Republican State convention held at Harrisburg on May 1, instructed the delegates-at-large of the State to vote for Mr. Roosevelt for President, indorsed his policies, nominated the anti-Penrose State ticket, and practically turned the party machinery over to Mr. Flinn and Mr. Van Valkenburg. The rout of the old Republican organization was complete. The only roll call was on the office of State treasurer and this, by a vote of 244 to 208, nominated the candidate of the Progressive wing. The followers of Senator Penrose made no other efforts to stand against the heavy odds and the prearranged programme of the Roosevelt wing went through without change. The State officers nominated at this convention were Robert K. Young for State treasurer and Archibald W. Powell for auditor-general. The convention also nominated four congressmen-at-large. The platform adopted was a radical one. Among its demands were direct presidential primaries, direct election of United States senators, a definition of the purposes for which money may be contributed and spent in general and primary elections and a limit for total expenditure, the public utilities law, employers' liability and workmen's compensation act, and immediate State appropriations for the Lake Erie and Ohio River ship canal. Declaration was also made for the recall of judges and similar plans advocated by Mr. Roosevelt.

The victory of the Roosevelt faction in the primary and in the State convention gave rise to complications. Taft and Sherman being nominated by the Republican national convention, their names were to stand at the head of the Republican column on the ballot to be voted at the general election in November. The electors-at-large nominated by the State convention and the district electors chosen at the primary by the Roosevelt-Flinn wing declared they would vote for Roosevelt and Johnson in the electoral college, despite the fact that Roosevelt and Flinn both had betaken themselves out of the Republican party and had joined in forming the Progressive party. Republicans demanded that the Progressive electors withdraw from the Republican ticket, permitting them to nominate for electors men who would support Taft in the electoral college. The Progressives, meantime, had filed nominations under three party titles—Bull Moose, Roosevelt Progressive, and Washington party—the last named being the designation officially chosen by the leaders of the new organization. The Progressives persisting in their determination to keep their electors in the Republican

column though declaring their intention to vote against Taft, a plan was proposed by Philadelphia Republicans that the regular Republicans place a ticket of their own in the field with a view to defeating the Progressive State ticket. This division of the Republican forces might have given the Democrats the control of the State. The Roosevelt wing was anxious to avoid such a possibility. A proposal was made by Mr. Flinn that the electors should vote for Mr. Taft or for Mr. Roosevelt, their action depending upon the popular majority cast for one or the other. Mr. Roosevelt refused to consider this suggestion and declared that he would not assent to any agreement which recognized Mr. Taft as a candidate of the Republican party. He said: "I claim that in every primary State where the primaries were carried for me and where electors have been nominated, that as a matter of the highest moral obligation these men are bound to vote for me, for I am the nominee of the overwhelming majority of the rank and file of the Republican party, and Mr. Taft's nomination represents nothing but the successful dishonesty of the Barnes-Penrose-Guggenheim machine and is not binding on any honest Republican. In certain of these primary States, as I understand it, there is now a contest on in the primaries to see whether my name or that of Mr. Taft was to be put on the regular ticket instead of being nominated by petition, it being the intention of the party beaten in the primary to nominate its electors by petition. This is all right and proper; but so far as I have any say in the matter, I shall not assent to any arrangement by which, under any circumstances, my supporters, or electors supported by them, shall cast their votes for Mr. Taft." After a consultation between the leaders of the Progressive and Republican campaigns a compromise was finally arrived at by which the 27 presidential electors who were for Mr. Roosevelt withdrew from the Republican ticket and the Republican State committee replaced their names with 27 Taft men. At the same time it was agreed that no new party ticket should be put in the field.

In the Democratic primary held on April 13, Governor Wilson had practically no opposition. Both the old organization under the control of James M. Guffey, and the reorganization faction of the party indorsed him for the presidential nomination. In the Democratic State convention held on May 7, the control of the party machinery, as noted above, was wrested from Mr. Guffey and his associates by a combination headed by Congressman A. Mitchell Palmer, George W. Guthrie, former mayor of Pittsburgh, and Vance C. McCormick, former mayor of Harrisburg. As a result of these conditions Mr. Palmer was elected national committeeman to succeed Mr. Guffey. William H. Berry was nominated for State treasurer and Robert E. Cresswell for auditor-general. Four nominees for congressman-at-large were also nominated. Twelve delegates-at-large were elected to the national convention and were instructed to vote for Woodrow Wilson as long as his name should be before the convention. The platform adopted contained a plank calling for an immediate referendum in the State on the subject of votes for women. The platform declared that the three great issues of the day are the restoration of representative government, the restrain-

ing of the judiciary to its proper office, and the revision of the tariff. The initiative and referendum were indorsed and also the separation of judicial and legislative functions "so that courts shall cease their interfering with the legislature in the exercise of the police power and shall be relieved of all executive functions."

The election on November 5 resulted as follows: Wilson, 305,619; Roosevelt, 447,426; Taft, 273,305; Debs, 80,915; Chafin, 19,533; and Reimer, 704. The Republicans and Progressives combined elected the four congressmen-at-large the State treasurer, and auditor-general. The State legislature is Republican on joint ballot by a majority of 65.

OTHER EVENTS. In June Mayor Blankenburg of Philadelphia appointed a committee of 21 prominent residents, four of whom were women, to make an investigation concerning vice in Philadelphia. On September 25 there was celebrated at Altoona a semi-centennial of the meeting of the fourteen loyal governors who pledged to President Lincoln their support. President Taft was present and took part in the ceremonies.

STATE GOVERNMENT. Governor, John K. Tener; lieutenant-governor, John M. Reynolds; secretary of the commonwealth, Robert R. McAfee; treasurer, C. F. Wright; auditor-general, A. E. Sisson; adjutant-general, Thomas J. Stewart; attorney-general, John C. Bell; superintendent of public instruction, N. C. Schaeffer; insurance commissioner, C. Johnson; commissioner of agriculture, N. B. Critchfield—all Republicans, except Schaeffer, Democrat.

JUDICIARY. Supreme Court: Chief justice, D. Newlin Fell; associate justices, J. Hay Brown, William P. Potter, John Stewart, Robert Von Moschzisker, S. L. Mestrezat, and John P. Elkin—all Republicans, except Mestrezat. Prothonotary, eastern district, James T. Mitchell; prothonotary, middle district, William Pearson; prothonotary, western district, George Pearson.

STATE LEGISLATURE, 1913. Democrats, Senate, 15; House, 56; joint ballot, 71. Republicans, Senate, 34; House, 127; joint ballot, 161. Progressives, Senate, 1; House, 24; joint ballot, 25. Republican majority, Senate, 18; House, 47; joint ballot, 65.

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

PENNSYLVANIA STATE COLLEGE.

An institution of higher learning at State College, Pa., founded in 1855. The enrollment in all departments of the university in the autumn of 1912, was 1914. The faculty numbered 190. The position of dean of the faculty was created at the beginning of the collegiate year 1912-13. Dr. Arthur Holmes of the University of Pennsylvania was appointed to fill this position. Other new chairs were those of biblical literature, which was filled by Rev. Robert Rush Reed of Princeton, and that of music, to which Prof. C. C. Robinson of Oklahoma University was elected. Dr. J. A. Moyer was appointed professor of mechanical engineering; and W. H. Tomhave, professor of animal husbandry. The only noteworthy benefaction during the year was a legacy of \$8000 to the college Y. M. C. A. The productive funds amount to \$567,000, and the total income to \$725,596. The library contained 46,188 volumes.

PENNSYLVANIA, UNIVERSITY OF. The

enrollment in all departments of the university in the autumn of 1912 was about 5100. The faculty numbered 549. A radical change in the faculty and curriculum of the university was made in September, 1912. Under this readjustment the Wharton School of Finance and Commerce was given self-government, and James E. Young, formerly director, was replaced by Roswell Cheney McCrea, formerly of the New York School of Philanthropy. Dr. McCrea had previously been teaching in the university for about five months. The Towne scientific school was placed in charge of all the technical courses of the university, and Dr. John Frazer was made dean. Dr. Arthur Hobson Quinn was made dean of the college department, embracing the departments of arts and science, with the summer and post-graduate courses. Robert Heywood Fernald was placed at the head of the mechanical engineering course. In the medical school, Dr. William Pepper was appointed dean to succeed Dr. Allen J. Smith, who will devote his time to his professorship in pathology. Two new professors to fill the vacancies caused by the deaths of Dr. Thomas H. Montgomery, professor of zoölogy, and Dr. Henry M. Spangler, professor of mechanical engineering, were appointed. These were Dr. Clarence E. McClung, to succeed Dr. Montgomery, and Dr. Robert H. Fernald, to succeed Dr. Spangler. Dr. Eric Doolittle was appointed professor of astronomy to succeed his father, who resigned on account of advanced age. Prof. Clarence D. Childs was appointed to fill the chair of English comparative philology, made vacant by the resignation of Dr. Morton W. Easton. Prof. David W. Amram was appointed to fill the vacancy in the chair of practice in the law school, made vacant by the resignation of John W. Batton, and William G. Lloyd and Ralph Baker were appointed assistant professors of law. There were, in addition, many minor changes in the faculty. The provost is Edgar F. Smith, Ph. D.

PENOLOGY. Concurrently with the shift of emphasis in social theory from individual responsibility to social responsibility there have gone on changes in theories of criminology and in theories of punishment. Coördinated with the theory that the individual was solely responsible for a criminal act was the theory that society should take revenge on the individual for his unsocial conduct. With the development, however, of the doctrine that the criminal is due largely to bad social conditions there has grown up the theory that he should not be punished in a revengeful manner, but put through a process of character reconstruction. Consequently old types of prisons with dark cells, excessive isolation of the prisoner, and ingenious methods of inflicting torture are being replaced by new types of prisons with more open and brighter cells, and new methods of management, designed to reform the character, build up self-respect, and raise the economic efficiency of the convict. Along with the reformatory, with its new ideas of prison labor, have come the systems of parole and probation. These are designed to place the convict who is deemed worthy on his own responsibility in society, but under the temporary guidance of skilled official advisers. The indeterminate sentence also is being widely adopted on the ground that society desires not to punish the

convicted person, but rather to restore in him normal social traits and to protect itself from abnormal conduct. Not only are modern prisons made sanitary and wholesome humane treatment with provision for recreation introduced, but prison schools with cultural and vocational training are being developed. In Oregon, Washington, Oklahoma, Kansas, Arizona, and some other States prisoners have been placed upon their honor in greater and greater numbers. This policy has been applied not only to prisoners within the walls, but also increasingly to the larger numbers now being employed in the building of highways and public institutions. In Canada, and also now in the United States, prison farms are coming to be extensively used. Moreover, in the more advanced prisons the inmates are now paid moderate sums for their labor, these wages being sent to his family, if he be married, or saved for him until his release. Released convicts are being assisted by various bodies to regain a normal social status. One of the most important movements is that for the reform of the county jail in the United States and the local prisons in Europe. This involves the separation of the sexes; and special facilities and methods for the treatment of delinquent boys and girls. Special courts and reform institutions are being developed for wayward girls and women. Very recently about eight States have assented to the principle of sterilization of certain classes of congenital criminals.

STATISTICS. The latest general statistics of prisoners in the United States showed that on January 1, 1911, there were in American prisons 113,579 persons. The total number of commitments during the preceding year was 479,763. This number included persons convicted of every class of offense, from vagrancy to murder in the first degree. The number of prisoners per 100,000 population was 125; it ranged from 48 in South Dakota to 353 in Nevada. The number of commitments per 100,000 population ranged from 123 in North Carolina to 2992 in Arizona. The differences were explained as due primarily to differences in laws and in the vigor of police enforcement and not as indicating differences in degrees of criminality in the population.

PRISON LABOR. Probably the most important question of penology in 1912, in the United States dealt with the best method of utilizing the labor of convicts. Methods found in this country may be classed as private management or State management systems. The systems of private management include the lease and contract systems; the others, the public account and State use systems. The convict lease system was, until recently, extensively employed in the southern States, but has been almost eliminated. By it convicts are leased or hired to contractors, who work them in mines, quarries, lumber camps, or otherwise under conditions mainly prescribed by the contractors. The per capita price to the State was small, but often aggregated a considerable addition to State income. In practice, however, this system amounted to a form of peonage or slavery in many respects much worse than that preceding 1860. The contract system, while often much superior, is often even worse. By this system the contractor is supplied at the prison with factory room, storage facilities, heat,

light, and power. He hires the prisoners on a per head per diem basis, usually of 40 to 60 cents, or at a piece price rate. Here again the prisoners become the contractor's slaves. They are employed in the manufacture of hollow-ware, shirts, overalls, chairs, boots and shoes, brushes, mats, and brooms. Their product thus competes with the product of free labor in the open market; and the prisoner usually does not learn a trade which provides him a secure economic status when released. He often is forced to compete with the women and children of the unskilled class while a prisoner; and he continues to compete with these persons and with prisoners after release. During the year considerable rivalry developed between the governors of Arkansas and South Carolina in pardoning convicts because of the unwholesome conditions in the prison factories of those States. See ARKANSAS and SOUTH CAROLINA. Everywhere control by the State is replacing the systems of private lease or contract. Under the State account and State use systems prisoners may be employed in manufacturing articles to be used by the State or its minor civil divisions or in highway and park construction and the building of State institutions.

A special committee of the American Prison Association, after a year's investigation, reported itself as strongly in favor of the State use and State account systems, and in opposition to the other systems. It declared that the private contract system involves the use of State power to encourage unfair competition with law-abiding citizens; moreover, the State loses control over the reconstructive agencies that should surround the prisoner and over his economic training and the quality of his work. It reported that in the Minnesota binder-twine plant the prisoners earned from 10 to 50 cents per day, but the profit to the State had exceeded \$1,600,000 in 20 years. It declared the State use system was possible in every State with a population of 2,000,000 or more. In New York alone, investigation had shown that \$20,000,000 worth of goods needed by State and city departments and charitable and correctional institutions could be made by State prisoners. At least \$35,000,000 worth of such goods could be used in all the States. The committee believed it possible under this system to fit the work to the qualifications of the prisoners, some being employed at farm work, some at road-building or other outside work, and others in various kinds of manufacturing. The committee contended that the prisoner has a right to work. It reported that the Maryland penitentiary has a well-developed contract system, under which the inmates in 24 years have earned about \$500,000,000 annually. About 93 per cent. of all the prisoners were on contract, only 7 per cent. being employed in the upkeep of the institution, as compared to 10 per cent. to 20 per cent. where the State use system prevails. It condemned the contract system on account of the lack of restrictions as to hours, the absence of sanitation, and other normal conditions of work. Other investigations of Maryland penal institutions showed that they were not only hot beds of tuberculosis, but also were undoubted sources for the spread of contagious disease.

LEGISLATION. The tendency which has been very noticeable during the past few years for

the States to discard the convict leasing and other systems for the private employment of State prisoners and to extend the State use system continued during 1912. Kentucky authorized the submission of a constitutional amendment allowing the employment of convict labor on public roads and bridges. Maryland provided that prisoners in the county jail of Garrett county, committed for less than one year, may be sentenced to hard labor on county roads under official direction for not more than ten hours per day. Massachusetts required prison commissioners to so organize prison industries that articles and materials used by the public offices and institutions, State, county, cities and towns, shall be produced by prison labor. In Mississippi the convicts on the penitentiary farms in four counties who are between 18 and 50 years of age may be required to work on county roads 15 days per year. New Jersey authorized the appointment of a convict commission to devise a scheme for the employment of convict labor on public roads, in public parks, forestry, and otherwise not in competition with free labor. The law also makes it possible for counties to secure prisoners for work on roads by application to this commission. New Mexico increased by ten days per month the extra good-record time granted to mechanics acting as foremen or trustees in the penitentiary. New York authorized the conservation commission to employ prisoners in propagating trees. Virginia established a convict time board for the employment of prisoners in quarrying limestone and oyster shells. This board is given full authority to establish a complete industry and dispose of the product.

One of the most important legislative advances of the year was the passage by the House of Representatives of the Booher bill. This declared that all convict-made goods transported into any State or Territory should upon arrival become subject to the laws of such State or Territory regulating the disposition of goods similarly manufactured. The States of New York, Illinois, Iowa, Louisiana, South Dakota, and perhaps other States which have adopted exclusively the State use system and prohibit the sale of any goods made in their own prisons in the open market still received convict-made goods from other States. In this way the manufacturers and free labor are still subjected to the competition of prison workers and convict labor. It is believed that the enactment of this law would encourage many other States to prohibit the sale of convict goods in the open market.

The National Committee on Prison Labor, organized in 1910, aims particularly to establish better conditions of prison labor. It has made numerous investigations and revelations, and has been active in stimulating advanced legislation. During the year its secretary, E. Stagg Whitin, published *Penal Servitude*, an authoritative work dealing with the entire subject.

PENROSE, BOIES. See **PRESIDENTIAL CAMPAIGN CONTRIBUTIONS.**

PENSIONS. See **UNITED STATES, Pensions.**

PENSIONS, OLD-AGE. See **OLD-AGE PENSIONS.**

PEPTIDS. See **CHEMISTRY.**

PERAK. A state (the most northerly) of the Federated Malay States protectorate (q. v.).

Area, 7900 square miles, population (1911), 494,123. Tin was discovered in Larut about 1850 and the mines have become the chief source of wealth in the country. The chief mining districts are Larut, Kinta, Batang Padang, and Klian Intan (in Reman). In 1909 the output was 115,376 piculs tin and 346,289 tin ore. Gold output, 1279 ounces. Rubber is an important product. In 1909 the area under rubber was 68,278 acres; under rice, 75,346; under cocoanuts, 63,225; under sugarcane, 7000.

The state is traversed by the main line of railway from Penang. Length of metalled roads, 750 miles; unmetalled, 66; paths, 843. Taiping is the government headquarters, Ipoh the commercial centre. The sultan is (1912) Idris Mersid-el-Aizam Shah, and the British resident H. C. Belfield.

PERCEPTION. See **PSYCHOLOGY**.

PÉRE HYACINTHE. See **BOYSON, CHARLES**.

PERFUMERY. See **CHEMISTRY, INDUSTRIAL**.

PERIM. A dependency of Aden (q. v.).

PERKINS, GEORGE W. See **PRESIDENTIAL CAMPAIGN CONTRIBUTIONS**.

PERKINS, REECE WILMER. An American Baptist clergyman and educator, died July 2, 1912. He was born at Brandywine Summit, Delaware County, Pa., and graduated from Bucknell University in 1872. He studied theology at the Crozier Theological Seminary and was ordained to the Baptist ministry in 1877. He filled pastorates in Camden, N. J., and Lock Haven, Pa., until 1901, when he was chosen president of Leland University, New Orleans. He was founder of the Lock Haven Hospital and the Lock Haven Chorus. He was a member of several historical and theological societies.

PERSIA. An Asiatic monarchy (constitutional) extending from the Caspian Sea to the Gulf of Oman. Capital, Teheran.

AREA AND POPULATION. Area (estimate), 1,645,000 square kilometers (635,135 square miles); population, about 9,500,000, of whom about 2,500,000 are nomads. Population of Teheran, 280,000; Tabriz, 200,000; Meshed, 130,000; Ispahan, 70,000.

PRODUCTION AND COMMERCE. The agricultural products include cereals, cotton, sugar, opium, and tobacco. The country possesses valuable mineral resources—petroleum, coal, iron, copper, and lead; but exploitation on a considerable commercial basis is hindered by lack of transportation facilities. Silk and carpets are manufactured. The trade by countries for 1910-11 is shown in the next column in thousands of krāns, the krān being equal in that year to about 9 1/6 cents.

Vessels entered at Persian gulf ports, 4492, of 1,443,838 tons (1096, of 1,151,822 tons, British); at Caspian ports (all Russian), 2755, of 718,765 tons.

COMMUNICATIONS The Russo-German convention of August 19, 1911, binds Germany to seek no railway, road, navigation, or telegraph concessions north of an imaginary boundary drawn from Kasri-Shirin to the Afghan border. Russia was to seek a concession to build a railway from Teheran to Khanikin, to be begun two years after the completion of the Sadidje-Khanikin line and to be finished within four

* Cottons, 139,076,000 krāns; sugar, 120,596,000; silver, 42,467; tea, 24,822,000; cotton yarn, 11,145,000; woolens, 9,725,000; iron manufactures, 7,061,000; petroleum, 6,998,000.

† Raw cotton, 70,380,000 krāns; fruits, 62,607,000; carpets, 46,693,000; rice, 29,210,000; skins, 21,349,000; silk and cocoons, 17,601,000; opium, 13,170,000; gums, 11,959,000; wool, 10,483,000.

years. Other agreements concern international traffic on the projected Khanikin-Teheran and the Khanikin-Bagdad lines, and the facilitation of extensions under construction. A Belgian light railway extends south from Teheran about six miles. A branch of the Transcaspien Railway, to run from Askhabad to Meshed, is projected. Trade is carried on over the great caravan routes. These are infested with brigands with whom the Persian government is powerless to deal adequately, and the danger and uncertainty incident to transportation have given rise to protest and threats of intervention by Great Britain in the south and Russia in the north.

ARMY. The plan of reorganization adopted in 1905, was still the underlying basis for the reform and organization of the army, whose peace strength was estimated at 115,000, exclusive of the irregular cavalry. In 1912 the reorganization of the gendarmerie was proposed.

FINANCE AND GOVERNMENT. The revenue (about half of which is derived from taxes levied in kind or in cash upon the laboring classes) fluctuates between seventy and one hundred million krāns; no statement of expenditure can be made, except that it regularly exceeds the revenue. The Russian debt of 1900 amounts to 22,500,000 rubles at five per cent., payable in 75 years and guaranteed upon the customs receipts other than those of the province of Fars and of the Persian Gulf ports; debt of 1902, 10,000,000 rubles at 5 per cent. British loan of 1911: £1,250,000, at 5 per cent. Floating debt, 104,870,000 krāns; annuities, 14,000,000 krāns. See *History* below.

The country is divided into thirty-three provinces administered by governors-general appointed by the shah; but the nomad tribes are ruled by their own chiefs so far recognized by the central government as to be held responsible for the collection of the tribal revenue.

The long-existing conflict between Russia and Great Britain for supremacy in Persia has resulted in complete financial demoralization and obstruction of transportation and other progress. Persia became a party in 1912, to the Anglo-Russian convention of August 31, 1907, by which each of the two contending powers agrees to confine its political and commercial operations to definite regions not overlapping; Persia agrees to respect these rights and to reorganize her army to suit the two powers. The Mejliss (a national assembly provided for in the constitution of June, 1909) was dissolved in December, 1911, and no elections has since been held. The ruler in 1912 was Ahmed Shah Kajar (born 1898); regent, Abou'l Kassim

Khan Nasr-el-Mulk. The heir-presumptive is the shah's second brother, Mohammed Hassan Mirza (1899).

HISTORY

MR. SHUSTER'S CRITICISMS. Mr. W. Morgan Shuster, whose administration as financial adviser had involved him in difficulties with Russia and Great Britain during 1911, and made him a conspicuous figure on the stage of international politics, left Teheran on January 11. His successor was M. Mornard, a Belgian. The criticism of Russia on the strength of Mr. Shuster's representations continued and gave much offense to friends of the government at St. Petersburg. The latter complained that the critics, forgetful of the enormous common frontier of Russia and Persia and the preponderance of Russian interests in Persian trade, did not appreciate that good government in Persia was more important to Russia than to any other country. According to the Russian view the dispatch of troops was necessary to protect her own interests. The reports of cruelties perpetrated by the Russian troops were characterized as calumnious. The attacks on the Russian military ignored, they said, the fact that the Turks were systematically advancing in Urumiah, thus turning the flank of the Caucasus defenses.

Upon arriving in the United States, Mr. Shuster repeated his charges against the Russian and British policy in Persia. He pronounced the condition in Persia to be one of anarchy and said that the country was in the control of seven Persian officials, who were without character or honesty, and who were despised by the people. Their continuance in power was, he said, wholly due to the support of the British and Russian governments. He held that Great Britain had made a serious mistake in not holding Russia to the promise of the Anglo-Russian agreement, as that would have checked Russia's action and might have prevented the serious trouble that now threatens the country. England alone, he said, could check the encroachment of Russia. On the other hand, on behalf of Great Britain, it was said that its policy was necessarily one of conciliation. It was argued that the British government could not intervene in particular disputes which concerned Russia and Persia alone, for its general policy was to prevent Russian influence, which had for a long time existed in the north of Persia, from being extended in directions prejudicial to India.

In a later speech of Mr. Shuster's, delivered in London toward the end of January, he said, after reviewing the incidents of his administration in detail, that there was only one of two conclusions to be reached, either that the Russian and British governments, especially the former, must have meant through their consular officials in Persia to follow out a plan that would destroy all hope of Persia's regeneration through the efforts of the people themselves; or that those two governments must have been constantly and grossly misinformed as to what was happening. He said that in certain quarters he had been charged with a lack of *finesse* and with failing to understand that diplomatic agreements did not always mean precisely what they seemed to mean. His reply to this was that if the agreements between the countries concerned con-

tained such inner meanings he should have been informed of the secret code by which they were to be translated. He said he was constantly in communication with the legations and in the pleasantest relations with their members. He sympathized with the movement in Great Britain to get fair treatment for Persia and he declared that it was his hope that the meeting which he was addressing marked the awakening of interest in Great Britain to the needs of the "weakened, war-cursed country of Persia." There was much criticism of the British policy in Persia during the year and no small part of it came from the government's supporters. It will be found briefly summarized, along with the government's explanation, in a succeeding paragraph.

ANGLO-RUSSIAN LOANS. Negotiations were carried on between the Russian and British governments after the December crisis for the purpose of developing a joint policy for the restoration of settled conditions in Persia in order that the British and Russian troops might safely be withdrawn. One object of the negotiations was to arrange a joint loan to strengthen the Persian finances. M. Mornard, the new treasurer-general, reported that the finances were in great disorder. He complained of "foreign machinations" and called the attention of the Belgian government to the injurious effects of what he described as "the English campaign." The British and Russian governments sent a joint note to the Persian government saying that Russia would require the ex-shah to leave Persia provided Persia would grant him a pension and his followers amnesty.

The terms of the Anglo-Russian note as to the joint loan to Persia were made public on February 19. It was provided that the British and Russian governments should each loan Persia £100,000, for immediate expenses, which sum was to be disbursed under the supervision of the treasurer-general with the approval of the British and Russian legations. In return the Persian government was to undertake to conform to the principles of the Anglo-Russian convention, to dismiss the irregular troops and the fedais from the army as soon as the ex-shah left Persia, and to confer with the legations as to the organization of the regular effective army and finally to make arrangements for the departure of the ex-shah and for a pension to him and an amnesty to his followers. It was stated that the British loan was to be mainly applied to the restoration of order on the southern routes. Persia accepted the loans on the attached conditions in March. Another joint loan to an equal amount was announced on September 4.

THE RUSSIAN OCCUPATION. Toward the close of 1911, Russian troops advanced as far as Kazvin and reinforcements were pushed forward toward the Persian frontier. There was fighting between Russians and the tribesmen at Tabriz, Resht, and Enzeli. In January, 1912, the Russian troops were in force throughout the province of Azerbaijan and in north-eastern Khorassan. Inquiries and protests on this subject were frequent among the British partisans of the liberties of Persia. The Russians were charged with the commission and permission of the grossest cruelties, and the British government was blamed for its subservience to Russian influence. The charges of

1701

cruelty were denied by the Russian government, which furthermore protested that it had no designs on Persian independence and declared the troops would be withdrawn as soon as order was restored. On February 14, Mr. Asquith stated that a considerable part of the troops had already been withdrawn and that the government understood that the removal of the rest would soon follow.

SIR EDWARD GREY'S EXPLANATION. The policy of the British government toward Persia was outlined by Sir Edward Grey in the course of a debate on the Anglo-Russian agreement on February 21. He declared that the strategic interests of Great Britain had not been injured in any way by Russia. The dispatch of troops was not intended as a permanent occupation, and some of the troops had already been withdrawn. He drew attention to the fact that Russia was entitled to take steps to defend her interests against Turkish troops, which had been concentrated on the frontier. As to the ex-shah, the government had taken a strong position and would not recognize him again. In general, the policy of Great Britain toward Persia involved the principle that British intervention must be based on British interests; that the British government could not act as arbiter when disputes arose between other countries; that the foreign minister ought not to be expected to pronounce judgment from day to day on the events that took place in the north of Persia. While the situation was difficult and would continue to be so, the Anglo-Russian agreement tended to remove difficulties in the way of restoring order. Without it the situation would be aggravated by jealousies and suspicions. "If there had not been confidence between Russia and Great Britain we might have been forced to assert our authority in Persia in order to safeguard our Indian frontiers. Then indeed, we should have come near to the partition of the country."

THE INTERNAL SITUATION. On March 11, Mohammed Ali, the ex-shah, left Persia for Russia, arrangements having been made for paying off his followers. He proceeded to Odessa to rejoin his family. His chief supporter, Salar-ed-Dowleh, remained, and gave the government much concern. His violent course at Kermanshah, where he was reported to have closed the banks and other business houses and executed prisoners, led to protest, and finally he was requested through the British and Russian consuls to leave the country. This he refused to do. He also rejected the offer of a pension and persisted in claiming authority over western Persia in the name of the shah. Upon the entry of the government troops at Kermanshah he took to flight, but continued to cause trouble throughout the year. Reports in the summer indicated that the internal situation was far from promising. The regent resigned on June 11, leaving the way open to new rivalries and intrigues. The government was disorganized and it was feared that the ex-shah, who still had many supporters in Persia, would take advantage of the confusion to renew his attempts. Meanwhile it was alleged that conditions on the southern trade routes, which had been the subject of the British note of October, 1910, threatening intervention, had not improved. A body of

troops under Yar Mohammed sent out by Prince Firman Firma, governor of Kermanshah, on an expedition to Senna in August mutinied and demanded the revival of the Mejliss. They deserted to Salar-ed-Dowleh, who promised to restore constitutional government. These troops were routed near Fermanshah on October 7, and Yar Mohammed was killed. Meanwhile the affairs of government were in great confusion. The regent, Nasr-el-Mulk, remained in Paris and showed no intention of returning. With a boy ruler on the throne, a regent who refused to govern, ministers who shirked responsibility, and provisional governors who would not enforce their authority, the administration seemed to have completely broken down, and lawless bands of the tribesmen were harrying the country.

ANGLO-RUSSIAN POLICY. The friends of the new régime in Persia feared that Russia would take advantage of these disturbed conditions to advance her interests, that in fact she was already preparing a more aggressive course in Persia on the assumption that the constitutional experiment was a failure and that the strong hand was necessary. Many of the British Radicals took the government to task for in-ertness in the matter. On July 17, Sir Edward Grey announced in answer to a question that the Russian troops in Persia numbered about 12,000, most of them being in Azerbaijan and Khorassan. M. Sazonoff, the Russian foreign minister, visited London on September 20 mainly for the purpose of discussing Persian affairs with the British foreign office. His visit was the occasion of a pronouncement of the British Persian committee against what it called the present British government's "policy of drift," which would surely lead to a coterminous frontier with Russia in Persia. They objected to the proposal that British troops be sent into southern Persia to "restore order" on the southern routes, these routes being in the neutral sphere, for they held that this policy would lead to the partition of that neutral region and would equally bring about a coterminous Russo-British frontier. They blamed Russia for the present disorganization in Persia, especially for its interference with the recent efforts of Mr. Shuster, which gave promise of success. They accused the British government of disregarding its pledge that Persia should have a chance to work out her own salvation, and they urged a loan of £5,000,000 to Persia for the increase of its present gendarmerie and for the establishment of a small army. It was feared that M. Sazonoff's visit aimed at new understanding still more unfavorable to the constitution aspirations of Persia. From the official account, however, it appeared that instead of seeking a new arrangement in regard to Persia, the interview aimed at finding some means of restoring order in the country in conformity with the spirit of the Anglo-Russian agreement, that neither power had any desire for partition, and that they were both considering how to strengthen the Persian government in maintaining order and safety with a view to expediting the withdrawal of the foreign troops.

TRANS-PERSIAN RAILWAY PROJECT. The creation at Russia's instance of a commission known as the Société d'Études to study the question of a trans-Persian railway led to

much comment in the British press and the British government was blamed for not opposing the scheme by many who regarded it as a dangerous departure from the policy hitherto pursued for the defense of India. The government, on the other hand, denied that it had committed itself to any such scheme and declared that it had merely not imposed an absolute veto on the investigation of the subject by the Société d'Etudes.

PERSIMMONS. See **HORTICULTURE**.

PERU. A republic of South America, on the Pacific coast south of Ecuador and Colombia. The capital is Lima.

AREA AND POPULATION. Estimates vary considerably in respect of both the territorial extent of Peru and the number of its inhabitants. There are boundary disputes with Ecuador and Colombia. The area given by the Lima Geographical Society is 1,769,804 square kilometers (683,335 square miles); this figure does not include the area of Tacna department, which appears to be definitely attached to Chile. (In 1912 Peru agreed to postpone the plebiscite on the Tacna question for twenty-one years.) An estimate of 1896 placed the population at 4,559,550, but it is believed that this figure was too high, and probably remains too high, since there seems to be some doubt as to whether the population of Peru is increasing. About one-half of the population is Indian, and most of the remainder mestizo. The larger towns include Lima (estimated population about 141,000), Arequipa (35,000), Callao (34,500), Cuzco (30,000), Ayacucho (20,000), and Iquitos (20,000).

EDUCATION. Primary instruction, though nominally free and compulsory, is received by only a minority of the children. Few recent statistics are available, but the number of public primary schools reported at the beginning of 1909 was 2339, with 3105 teachers and 162,298 pupils. In 1911, there were 27 national "colleges," with 4674 students enrolled, of whom 2077 were in the preparatory and 2597 in the higher courses. In 1910 the University of San Marcos (founded 1551) at Lima was enlarged, and the university at Cuzco, for a time inactive, was reopened. The state religion is Roman Catholicism. The fact that the public exercise of other religious forms is unlawful became prominent when, in the summer of 1912 it was proposed in England and the United States to establish a Protestant mission in the region of the Putumayo River, the scene of most infamous atrocities practised on the Indians by agents of a British rubber company. See *History* below.

PRODUCTION AND COMMERCE. Peru's extensive mineral deposits have been its chief source of wealth. Copper and silver are the most important metals worked, and to some extent gold, lead, coal, and petroleum are exploited. The leading agricultural products are sugar-cane, cotton, rice, and coffee. Some coca and cacao are produced, and rubber has become a valuable product in the northeast. The production of wool, from sheep, alpacas, and llamas, is a developing industry.

Imports and exports are reported as follows, in soles: 1909, 42,986,270 and 64,926,700; 1910, 49,806,970 and 70,740,760; 1911, 63,713,880 and 74,220,280. The leading imports are cotton and woolen goods, and machinery and

metal wares. Principal exports in 1909 in thousands of soles: Minerals and metals, 16,380; cotton, 12,460; sugar 11,600; rubber, 11,370; rice, 5990; wool, 3940; spirits, 3790; guano, 1550. In the foreign trade the United Kingdom is first, the United States second, and Germany third.

COMMUNICATIONS. Railways in operation at the beginning of 1911, 2665 kilometers (1656 miles). Reported length in operation September 24, 1912, 2766 kms. (1719 miles). Several extensions and new lines have been surveyed, and on some of them construction was in progress in 1912. The construction of the Ucayali railway was begun in 1912; that of the Madre de Dios railway was contracted for; and the survey of the branch line to Puerto Wertheimann was completed. About three-fourths of the mileage is operated by the Peruvian Corporation, Ltd. This corporation owns and operates a line of steamers on Lake Titicaca, by which, together with the Guaqui-La Paz railway in Bolivia (bought by the corporation in 1910), direct communication is maintained between La Paz and the corporation's line which reaches the coast at Mollendo.

Telegraphs at the end of 1910, 254 offices and 11,381 kilometers of line; during 1911, 733 kms. of line were added. Wireless telegraph stations have been established at Callao, Lima, and Iquitos; operation of the Lima-Iquitos service (across the Andes) was begun June 16, 1912. Post offices, 664.

FINANCE. The monetary standard is gold, and the unit of value the libra, which is equivalent to the British sovereign (\$4.86656) and is divided into ten soles. In 1910, revenue and expenditure amounted to 27,957,750 and 28,853,220 soles respectively. Customs receipts were 12,435,720 soles, and taxes 10,507,450 soles; of the ordinary expenditure, war and marine required 5,438,310 soles, administration 5,134,720, finance and commerce, 4,126,490, and justice and public instruction, 3,745,210. Estimated revenue for 1911, 32,274,170 soles; estimated expenditure, 32,410,850; for 1912, 32,092,370 and 28,799,240 soles respectively. Reported foreign debt, £1,200,000 at 5½ per cent. interest (amortization, £37,240). The internal debt, in July, 1911, stood at 26,606,450 soles at one per cent. interest and 11,425,850 soles without interest.

ARMY. Under the direction of Colonel Clément and other French officers, the reorganization of the Peruvian army was undertaken, and there were maintained 6 battalions of infantry, numbering about 160 officers and 23,000 men; 6 squadrons of cavalry, 72 officers and 750 men; 3 batteries of artillery armed with Schneider guns; an independent section and a mixed battalion of foot artillery, including 50 officers and 800 men. An army of 24,000 men could be mobilized, it was believed, and in addition, reserves and a territorial force with but little military training and discipline.

GOVERNMENT. The president is elected by direct vote for four years, and is ineligible for the following term. Responsible to him are the members of his cabinet, six in number. There are two vice-presidents. The legislative body consists of the senate (52 members), and the house of representatives (116), all members being elected directly. For the term ending September 24, 1912, the president was

Agusto B. Leguia. He was succeeded on that date by Guillermo Billinghurst; first vice-president, Roberto Leguia; second vice-president, Miguel Echenique. Premier and minister of the interior, El Malpartida.

HISTORY

THE PUTUMAYO ATROCITIES. For two years past there had been rumors that conditions resembling those which prevailed in the Congo under the late King Leopold existed in the Putumayo rubber industry, especially in the region exploited by the Peruvian Amazon Company. The British government made it the subject of an official investigation, appointing Sir Roger Casement for that purpose. The latter's report, published on July 13, fully confirmed these rumors, declaring that the rubber traders forced the Indians into bondage and treated them with the utmost cruelty. Floggings, he said, were the least of the tortures inflicted. For failing to bring in the required amount of rubber, Indians were mercilessly flogged and any attempt at flight was followed by still more brutal punishment or even murder. The region in which this condition prevailed was wider than the Putumayo and part of it was in dispute between Colombia and Peru. The investigation was conducted with thoroughness and the testimony of many eyewitnesses was taken. The United States government declared itself ready to cooperate with Great Britain in securing reform, and communications on the subject passed between the governments of Great Britain, and United States, and Peru, during 1911 and 1912. Sir Roger Casement's report was at once sent to the Peruvian government. A judicial investigation appointed by the Peruvian government substantiated its findings, but though Peru made frequent promises of reform, little was accomplished.

The force of the long-established usage in the rubber regions, their remoteness and the consequent difficulty in enforcing the law were the chief obstacles. In the summer of 1912 a plan of reform submitted to the Peruvian government by the Peruvian commissioner was under consideration. The publication of the British report and the comments of the press upon it, gave occasion to expressions of ill-will on the part of certain German journals which declared the atrocities to be the work of white employees on the rubber plantations, mostly Englishmen. A United States special agent was dispatched to the rubber country in July to ascertain how far Peruvian promises to remove the abuses had been redeemed. This report confirmed Sir Roger Casement's findings and was submitted to the United States Congress. In his message to the Peruvian congress toward the end of July, President Leguia announced that a commission had been appointed to investigate the conditions in the rubber districts, to bring offenders to justice, and to prepare a plan of reform. Early in August the Peruvian commissioner of Putumayo and the Peruvian minister to the United States issued a joint statement to the effect that the Peruvian Amazon Company was to blame for the atrocities. In England the four English directors were subjected to sharp criticism on the ground that they had delayed investigation when the charges were brought to their atten-

tion and that their negligence had permitted the outrages. It was also pointed out that the present liquidator of that company, Señor Julio Cesar, Arana, had been the original employer of the rubber gatherers and the organizer of the inhuman system. The Anti-Slavery Aborigines Protection Society issued an appeal to stockholders of the company for his removal.

In August a sharp controversy took place between the English directors of the company and Canon Hensley Henson, who, in a sermon on August 4, had charged them with being "guilty of unknowing connivance" at the crimes. They characterized his statements as slanders and absolute untruths, but he declined to withdraw them. In September the Peruvian Chamber of Deputies passed a resolution protesting against the attitude of the United States and British governments and demanded an investigation of the alleged atrocities and the punishment of the guilty. At the same time the prefect of the Putumayo district informed the United States minister to Peru that the abuses had been removed and that the Indians were receiving protection and proper wages. On December 17 the arrest of Arana was ordered and other arrests were reported.

OTHER EVENTS. It was announced in November that friendly relations between Peru and Chile, long interrupted by the dispute over the provinces of Arica and Tacna, had been resumed. The special arbitral tribunal of The Hague decided in favor of Peru in the Canevaro case. See ARBITRATION, INTERNATIONAL.

PETROLEUM. The marked increase in the production of petroleum which has characterized the industry from 1906 was continued in 1911, when the production of the previous year was increased by 10,892,143 barrels, or more than 5 per cent. The total production in 1911 was 220,449,391 barrels compared with 209,557,248 barrels in 1910. The increase was caused chiefly by the gain in California where, in spite of efforts to limit the production, which is more than the present demand, the consumption increased to 81,134,391 barrels, compared with 73,010,560 barrels in 1910. Increased supplies also came from Louisiana. The field of high-grade oil at Electra in northern Texas became important at the end of the year, and new discoveries substantially increased production in the mid-continent field. The increases in this field, however, were offset by declines in Illinois and States farther east. As a whole, it may be said that fuel oil has increased in production and refined oil has declined. It will be seen from the table below, which gives the production and value of the oil-producing States, that California not only led in quantity of product but produced nearly half as much again as Oklahoma, the second State in rank. Omitting the mid-continent field, California produced as much oil as all the rest of the United States put together, and omitting the United States, it produced more oil than any other nation. California, Illinois, and Oklahoma form a class by themselves in the production of oil. These three States produce three-fourths of the entire output. The second division is formed by Louisiana, West Virginia, Texas, Ohio, and Pennsylvania. In 1911, Louisiana passed to the head of the second division, surpassing the production of West Virginia, Texas, and Ohio, which in previous

years had led Louisiana. The table below shows the rank of the States in the production of petroleum and the quantity and value of the production in 1911:

State	1910		1911	
	Quantity	Value	Quantity	Value
Cal.	73,010,560	\$35,749,473	81,134,391	\$38,719,080

FUEL OIL. The most important feature developed by the oil industry of 1911 was the realization of a supply of fuel large enough to be reckoned on as a national asset in power production. Prophecies made during 1910 that fuel oil in sufficient quantity existed on the Pacific coast to justify great trade and manufacturing expansion were justified. Oil has been already adopted as fuel on the northern transcontinental railways for considerable portions of their lines. The introduction of oil as fuel as far north as Alaska, without bringing the consumption up to the level of the present production, has given assurance of permanency of the supply sufficient for the industrial needs of the whole Pacific slope. The bringing about of similar conditions on the Atlantic Coast was made probable by the great development of oil supplies in Mexico. The quantity of oil which Mexican fields are now ready to furnish is estimated at from 6,000,000 to 12,000,000 barrels a month. Improvements in engines, which make it no longer necessary to convert the oil into power by burning it under boilers, have greatly raised the efficiency of oil for power. These engines are of the Diesel type, and in them a great variety of oils can be injected directly into the cylinders of the internal combustion engine. The quantity of oil consumed by railways in 1911 was 27,774,821 barrels, and this included most of the important railways in the north and southwest of the United States. Large quantities of oil are also used as fuel in manufacturing and other industries. Experience with fuel oil in the United States navy has been so satisfactory that its use will be extended as rapidly as is permitted by considerations of supply and cost. During 1911 the navy used 15,000,000 gallons of fuel oil, and it is estimated that in 1912 21,000,000 gallons of fuel oil were used. A considerable quantity is also used in the merchant marine for fuel.

The chief foreign countries producing petroleum are Canada, Mexico, Russia, Austria, and Rumania. The production of the oil wells of the world for 1907-1911 will be found in the table in the next column.

The production in Russia, which is second to the amount produced in the United States, showed a decline in 1911. This decline occurred

Country	1907	1910	1911
United States...	166,095,335	209,557,248	220,449,391
Russia	61,850,734	70,336,574	66,183,691
Mexico	1,000,000	3,332,807	14,051,643
Dutch E. Indies	9,982,597	11,030,620	12,172,949
Rumania	8,118,207	9,723,806	11,101,878
Gallicia	8,455,841	12,673,688	10,485,726
India	4,344,162	6,137,990	6,451,203
Japan	2,010,639	1,930,661	1,658,903
Peru	756,226	1,330,105	1,398,036
Germany	756,631	1,032,522	995,764
Canada	788,872	315,895	291,096
Italy	59,875	42,388	71,905
Other (estimated)	30,000	30,000	200,000
Total	264,249,119	327,474,304	345,512,185

in the fields of Baku, and although fields in other parts of the country showed an increase it was not sufficient to make up for the loss in the Baku fields. In Rumania, where a considerable amount of oil is obtained, the highest point of production ever known was reached in 1911, 11,101,878 barrels.

The production of crude petroleum in the United States in 1912 is given in the table below, as estimated by the *Engineering and Mining Journal*. The figures indicate a slight increase in California and the smaller producing States was sufficient to offset the declines in the mid-continental and Illinoian fields:

Field	In barrels of 42 gal.	Field	In barrels of 42 gal.
California ...	84,823,992	Mid-cont'tal	52,771,603
Colorado	200,000	Ken.-Tenn.....	500,000
Gulf-Texas... 11,778,324		Appalachians.	26,000,000
—La. ... (a) 9,791,896		Wyomings....	500,000
Illinois	28,400,000	Others	5,000
Lima-Indiana. 1,200,000			
—Ohio.... 3,000,000		Total	218,970,815

¹ Kansas and Oklahoma. ² Pennsylvania, New York, West Virginia, and eastern Ohio. ³ Includes Utah. ⁴ Includes Marion County, Texas.

PHARMACY, SCHOOLS OF. See **UNIVERSITIES AND COLLEGES.**

PHILIPPINE ISLANDS. AGRICULTURE. Dr. George E. Nesom, director of agriculture, resigned on September 13, 1911, and Mr. Frederick W. Taylor was appointed to fill the vacancy.

During 1912 the islands were visited by a prolonged drought which affected the growth of all staple crops and caused suffering and want in localities where the people depend for their welfare upon the success of a particular product. The long, dry season was accompanied by unusually large swarms of locusts and other pests, because of the failure of their customary food. It was particularly severe in its effect on the rice crop, which was probably 40 per cent. less than that of the preceding year. The failure of the rice crop resulted in a large increase in corn planting. See **AGRICULTURE.**

On October 15 a severe typhoon passed over the island and City of Cebu and adjacent places, with casualties estimated at about 500, and doing damage to some two and one-half million dollars' worth of property. In addition to the loss of life and the wreckage of property, great damage was done by the storm to the sugar, rice and hemp crops. It was reported that various vessels were sunk in the harbor and hundreds of small craft were driven to shore by a great tidal wave, the damage being

such as to leave possibly one-half of the population homeless.

COMMERCE. The commerce throughout the islands showed steady advancement during the year. The value of imports and exports amounted to \$104,869,816 as compared with \$89,612,351 in 1911, an increase of 17 per cent. The increase of the exports of \$10,541,207 was largely due to copra. For the first time since American occupation, copra was at the head of the list of exports, and hemp, which heretofore has always held first place among exported articles, dropped into second place. The sugar exports were 128,926 tons, valued at \$7,144,755 in 1911, while during the year 1912, the exports were 161,783 tons, valued at \$9,142,833. The slump in the cigar trade with the United States seems to have ended and 63,808,000 cigars were shipped into the United States as compared with 42,472,000 in 1911. The customs receipts amounted to \$9,347,647.50.

During the fiscal year 1912, the value of imports amounted to \$54,549,980, an increase of \$4,716,258 over that for 1911, due largely to the increased importation of rice, which amounted to \$4,009,319. The export trade amounted to \$39,778,629 as compared with \$39,778,629 for 1911.

RAILROADS. The total length of railroad lines authorized by law to be constructed in the Philippine Islands is 1785.9 kilometers; of this 1034.9 kilometers have been constructed and are in operation, 16.3 kilometers constructed but not in operation, leaving about 734.7 kilometers to be constructed. Contracts have been signed with the Manila Railroad Company for the construction of a line to Baguio, to be built within two years. Construction work has been commenced.

POSTS AND TELEGRAPHS. There were 587 post offices in the Philippines on June 30, 1912. Free delivery letter carrier service was established at 101 additional post offices outside of the city of Manila, making a total of 397 offices at which such service is in operation. Money order service was established at 46 additional post offices and closed at 2, leaving a total of 253 money order offices. The value of money orders issued was \$7,425,173.70. The total amount of money sent out of the islands by means of money orders was \$1,832,972.85.

The total length of telegraph and cable lines was 9010.84 kilometers. The number of telegraph offices, 267. A Telefunken wireless station was erected at Davao, Moro province, and opened for business on March 6, 1912, and construction work was begun on wireless stations at Cuyo and Puerto Princesa, Palawan. On June 30, 1912 the bureau of posts operated wireless stations at 4 points: Davao, Jolo, Malabang, and Zamboanga, all in the Moro province.

The business of the postal savings banks continued to grow and showed an increase in both the number of offices and depositors. The total number of accounts on June 30, 1912, were 35,802, an increase of 6998, or 24 per cent. Of these, 29,555, or 82.55 per cent., were Filipinos. The amount on deposit was \$2,388,986.42. The number of banks in operation was 437, an increase of 23.

On October 1 the inter-island parcel post went into effect. The maximum weight allowed for a package is 11 pounds.

PUBLIC WORKS. Roads and Bridges. There was expended for the construction, maintenance, and improvement of roads and bridges during the past 12 months, \$2,193,523.21. There are now about 2000 kilometers of hard-surfaced road in the islands. There was constructed during the year 291.4 kilometers of first-class roads, 101 kilometers of second-class, 95 kilometers of third-class, and 40 kilometers of trail.

WATER SUPPLY. One of the most important projects executed during the year was the water-supply system for the city of Cebu, which has been named in honor of the speaker of the Philippine Assembly. The construction work was commenced on February 17, 1911, and finished February 19, 1912, with a cost of \$263,000. Its storage reservoir has a capacity of 330,000,000 gallons and its distributing reservoir a capacity of 4,000,000 gallons. The main pipe system is 51.2 kilometers long, and the total length of pipe in the distributing system within the city is 21 kilometers.

EDUCATION. At the close of the schools in the month of March, 1912, there were in operation 3364 primary, 283 intermediate, and 38 secondary public schools, with 664 American and 7696 Filipino teachers. During the year 529,655 pupils were enrolled, with an average daily attendance of 329,073.

Some industrial instruction is now given in practically all schools. In February, 216,290 boys and 125,203 girls, representing 91 per cent. of the monthly enrollment, were engaged in industrial work, such as regular manual training and trade work, school gardening and farming, housekeeping, lace-making and embroidery, the making of hats and mats, and the study of basketry. The finished product which is turned out by the children of the public schools is remarkable both for its quality and diversity. The dainty laces and embroideries, beautiful baskets, hats, pottery, furniture and other products were eagerly sought for at the exhibit held by the bureau of education in connection with the carnival in February.

The school of household industries was opened during the year with an attendance of some 150 women, who are receiving a thorough training in lace-making and embroidery.

Arrangements have also been made to give a course in seamanship in the Philippine School of Arts and Trades and a practical training on inter-island steamships.

There were 1400 students registered in the University of Porto Rico, a gain of 180 over last year. Students from all provinces in the islands are taking courses in the colleges of agriculture and forestry.

The first class to complete the entire medical course was graduated this year and a member of it was a Filipino woman, the first to secure a degree of M. D.

Athletics play an important part in the work of the public schools. There is hardly a school in the islands which does not have a baseball team. A great many field meets were held during the past year which were attended by large and enthusiastic crowds. During the carnival an interscholastic meet was held in Manila, at which the provinces which had won the interprovincial meets were represented. The crack Waseda University team of Tokyo was

brought to Manila for the carnival, and was defeated by some of the local amateur organizations.

HEALTH AND SANITATION. Although the health conditions in China and other surrounding countries have been very unsettled and they have been suffering from epidemics of plague and cholera, which have seriously threatened the islands, the health conditions are better than at any time since American occupation. Cholera has been generally absent; smallpox, through the vigorous vaccination campaign of the health officers, has been largely reduced, and but two cases of plague were reported. Since the opening of the new water supply for the city of Manila there has been a decrease of more than 60 per cent. in the number of cases of dysentery. Owing to the efficient quarantine and the well-organized district health service the scourges of Asiatic cholera, bubonic plague and smallpox have been successfully combated, and generally speaking, eradicated. The new Southern Islands Hospital at Cebu was completed in 1912, but owing to the failure of the legislature to pass an appropriation bill, no provisions have been made for its maintenance. In the mountain province a fine hospital, with dispensaries in the near-by districts, was opened and is doing much good. The demand for better water by drilling artesian wells and constructing municipal water systems continues to gain strength. Nearly 700 successful wells have already been drilled, and this pure water movement is followed by a wonderful decrease in the mortality statistics of the districts affected. The collection and segregation of lepers continue. Since the leper colony was founded in 1905, almost 7000 lepers have been collected.

A modern 30-bed hospital of brick, with ample facilities for the treatment of outpatients, has been opened at Bontoc, among the wild tribes. This institution has been doing wonderful work among people who, prior to the American occupation, were absolutely without medical or surgical assistance of any kind. See BERIBERI.

POLITICS AND GOVERNMENT

ELECTIONS. Heretofore elections have been held on the first Tuesday after the first Monday in November, the day when federal elections are held in the United States, but by act of Congress approved February 15, 1911, the term of office of delegates to the Philippine Assembly was made four years, beginning October 16, 1912, and the legislature was given the right to fix the date of its annual sessions. The legislature selected October 16 as the date and also fixed the date for future elections as the first Tuesday in June, every four years. By the same act the terms of office of elective provincial and municipal officers were made the same as those of delegates.

Elections were held on June 4, 1912, for delegates to the Philippine Assembly, and provincial and municipal elective offices in all the regularly organized provinces and for two members of the municipal board in the city of Manila. The election passed off quietly and peaceably.

OTHER EVENTS. In response to a resolution sent by Congress to the President in July asking for a statement of expenditures on ac-

count of the Philippines, President Taft sent in a special message in which he said that the islands had actually paid for themselves, and that there was a balance in their favor in all items except in the increased cost of the army and the navy, which could not be accurately determined. The direct expenditures for the islands, he said, amounted to \$3,451,925, and against this was \$4,975,747 expended out of Philippines revenue in the execution of the military purposes of the United States, for which the islands had not been reimbursed. The President said: "Aside from the direct appropriation of Congress, the expenditures incident to military and naval operations and the support of the United States forces in the archipelago, the Philippine Islands have been in no way a charge against the United States treasury. In other words, the Philippines government has been entirely self-supporting. Moreover, it has been throughout self-supporting in a larger sense than any other territorial possession of the United States. All expenses attached to the collection of revenues, to the administration of the Post Office Department, and of course to the survey of the islands, to the conservation of their resources, and to the improvement of their rivers and harbors, and to all similar works which elsewhere, as in Porto Rico, Alaska, and the Hawaiian Islands are a charge against the national treasury, are, and have been paid from the revenue of the Philippine Islands."

There was a notable demonstration in Manila on November 11 in celebration of the election of Mr. Wilson to the presidency. In a parade in which 10,000 Filipinos took part, banners were carried bearing the words "immediate independence" and a mass meeting was attended by 20,000 persons. Addresses were made by Manuel Quezon, delegate to Congress, Speaker Osmena and Emilio Aguinaldo, former leaders of the insurgent forces. The speakers expressed their confidence in the fulfillment of the promises made in the Democratic platform for the immediate independence of the Philippines.

LEGISLATION. The second regular session of the second Philippine legislature convened October 16, 1911, and continued in session until February 1, 1912. A special session was called by proclamation of the governor-general which lasted from February 2 to 6 inclusive.

The legislature again failed to pass the appropriation bill for current expenses of the government for the fiscal year 1913, so it was necessary to pay the expenses of the government in accordance with the provisions of section 7 of the organic act.

Among the more important acts passed were an act authorizing the purchase of rice for sale to prevent its price rising above a reasonable rate. This action was prompted by the shortage of the crop, not only in the Philippines, but throughout the Orient. The legislature also passed an act affecting the gold standard fund; it granted a franchise to form a mortgage bank with a capital of \$2,000,000; it amended the charter of the Spanish Filipino Bank, and passed an act amending the distribution of the internal revenue between municipal, provincial, and the insular governments.

Changes were also made in the corporation law, and there was passed an act to regulate

the issuance of warehouse receipts, another governing water rights and irrigation projects, and \$250,000 was appropriated for a Philippine exhibit at the Panama-Pacific Exposition.

The assembly at its last session passed a bill postponing the use of the English language as the official language of the courts until January 1, 1917. The Philippine commission amended the bill leaving to the discretion of the court whether the English or Spanish language should be used in making up its record after January 1, 1913, until January 1, 1917. The bill as amended failed in conference, so the English language remains the official language of the courts after January 1, 1913, as provided by law.

PHILLIPS, THOMAS W. An American capitalist, former member of Congress from Pennsylvania, died July 21, 1912. He was born in Mount Jackson, Pa., in 1835. In 1861 he engaged in the petroleum industry and became one of the largest individual producers in the United States. He was interested in philanthropic work and was a member of various benevolent and religious boards. He took an interest in State and local politics and was the originator of the campaign text book, which was first used in the Garfield campaign of 1880. He was elected to the Fifty-third and Fifty-fourth Congresses and introduced the bill which created the Industrial Commission. He was a member of this commission and presided at most of its meetings as vice-president. At the conclusion of the report of the commission in 1902 he made a supplementary report which attracted wide attention and from which was evolved the law creating the bureau of corporations.

PHILLPOTTS, EDEN. See LITERATURE, ENGLISH AND AMERICAN.

PHILOLOGY, MODERN. In this department of linguistics relatively little of far-reaching importance was done in 1912. As has generally been the case in recent years, the attention of modern philologists was directed chiefly to the editing of texts and to the investigation of special linguistic phenomena; and perhaps the most interesting studies have been those of the modern dialects. As in former YEAR BOOKS, the present review will include such books as appeared too late to be recorded in the previous year.

GERMANICS. The most important work here is the continuation of the *Reallexikon der Germanischen Altertumskunde*, edited by J. Hoops, of which two fascicles have thus far appeared. The difficult problem of the weak preterite receives fresh light in H. Collitz's *Schwaches Präteritum und seine Vorgeschichte* (Göttingen, 1912) and S. Krüger's *Der Bindervokal und seine Fuge im schwachen deutschen Präteritum bis 1150* (Berlin, 1912), while B. Delbrück discusses the position of the verb in the second part of his *Germanische Syntax* (Leipzig, 1911). Here, too, may be placed F. Kluge's *Wortforschung und Wortgeschichte* (Leipzig, 1912), A. Schirmer's *Zur Geschichte der deutschen Kaufmannssprache* (Leipzig, 1911), and R. Kleinpaul's *Ortsnamen im Deutschen* (Leipzig, 1912).

OLD AND MIDDLE HIGH GERMAN. The sole contribution of general interest in Old High German was J. Schneiderhan's *Roſoitha von Gandersheim, die erste deutsche Dichterin*

(Paderborn, 1912); while studies of specific problems in Old High German authors were contributed in E. Och's *Lautstudien zu Notker von St. Gallen* (Freiburg, 1911), and F. Köhler's *Zur Frage der Entstehungsweise der Althochdeutschen Tatianübersetzung* (Leipzig, 1911).

Among the general treatises dealing with Middle High German special mention should be made of C. von Krauss's *Mittelhochdeutsches Übungsbuch* (Heidelberg, 1912), the second part of G. Brockstedt's *Von mittelhochdeutschen Volksepen französischen Ursprungs* (Kiel, 1912), F. Konziella's *Volkstümliche Sitten und Bräuche im mittelhochdeutschen Volksepos* (Breslau, 1912), and H. Mangold's *Studien zu den ältesten Bühnenverdeutschungen des Terenz* (Halle, 1912). Considerable interest was evinced in the editing of texts, these including two volumes of *Mittelhochdeutsche Novellen* by L. Pfannmüller (Bonn, 1912), *Konrad von Megenberg's Deutsche Sphaera* on the basis of Munich manuscript by O. Matthaei (Berlin, 1912), *Wernher der Gartenaere's Meier Helmbrecht* by F. Panzer (Halle, 1911), the German version of the *Seven Wise Masters* on the basis of two Heidelberg manuscripts (Jena, 1912), and the poetical version of *Daniel* edited from the Stuttgart manuscript by A. Hübner (Berlin, 1911) as the third volume of the *Dichtungen des deutschen Ordens* in which latter connection it may be noted that the language of the documents of the Teutonic Knights was studied by A. Weller in his *Sprache der ältesten deutschen Urkunden des deutschen Ordens* (Breslau, 1911). Turning to more restricted themes, we may note K. Herold's *Der Münchener Tristan: Ein Beitrag zur Ueberlieferungsgeschichte und Kritik des Tristan Gottfrieds von Strassburg* (Strassburg, 1911), H. G. Klinkott's *Ulrich von dem Türlin als Nachahmer Wolframs von Eschenbach* (Griefswald, 1911), P. Claus's *Rhythmik und Metrik in Sebastian Brandts Narrenschiff* (Strassburg, 1911), E. Dornfeld's *Textkritische, sprachliche und metrische Untersuchungen zu Gottfried Hagens Reimchronik der Stadt Köln* (Marburg, 1911), F. Stütz's *Die Technik der kurzen Reimpaare des Pamphilus Gengenbach* (Strassburg, 1912), R. Koenig's *Stilistische Untersuchungen zur Braunschweigischen Reimchronik* (Halle, 1911), and A. Weller's *Die frühmittelhochdeutsche Wiener Genesis nach Quellen, Uebersetzungsart Stil, und Syntax* (Berlin, 1912).

MODERN GERMAN DIALECTS. This branch contains, in some respects, the most permanently valuable results of Germanic philology in 1912. The great German dialect dictionaries continued to make steady progress, the *Siebenbürgisch-sächsisches Wörterbuch*, edited by A. Schullerus and F. Hofstädter reaching the second fascicle of the second volume the *Schweizerisches Idiotikon* its seventieth fascicle, H. Fischer's *Schwäbisches Wörterbuch* its thirty-eighth, and K. Müller-Fraureuth's *Wörterbuch der obersächsischen und erzgebirgischen Mundarten* its fifth, while K. Henrich issued a *Wörterbuch der nordwestthüringischen Mundart des Eichfeldes* (Göttingen, 1912). Among grammatical treatises on modern German dialects were F. Wenzel's *Studien zur Dialektgeographie der südlichen Oberlausitz und Nordböhmens* (Marburg, 1911), P. Meynen's *Ueber die Mun-*

dart von Homberg-Niederrhein (Leipzig, 1911), H. Batz's *Lautlehre der Bamberger Mundart* (Erlangen, 1911), B. Capesius's *Die Vertreter des alten \ddot{a} \ddot{u} im Siebenbürgisch-Sächsischen* (Berlin, 1912), A. Schwaederle's *Vorgermanische Fluss- und Bach-Namen im Elsaß* (Colmar, 1912), E. Beck's *Enleitung zu einer Grammatik der oberen Markgräfer Mundart* (Heidelberg, 1911), K. Schlemmer's *Die Ortsnamen der Kreise Kolberg-Körlin und Griefenberg in Pommern und ihre Bedeutung für die Heimatkunde* (Treptow, 1912), E. Döring's *Beiträge zu einer Laut- und Wortlehre der Sondershauser Mundart* (Sondershausen, 1912), and T. Schörnborn's *Das Pronomen in der schlesischen Mundart* (Breslau, 1912). Finally, in his little *Deutsche Mundarten* (Leipzig, 1912), H. Reis has given the first preliminary survey of the modern German dialects as a whole.

NORSE, ANGLO-SAXON, AND ENGLISH. In Norse philology the only important contribution was the first two parts of A. Kock's *Umlaut und Brechung im Altschwedischen* (Lund, 1911-12). Studies of Anglo-Saxon culture were put forth in H. Jacob's *Namen der profanen Wohn- und Wirtschaftsgebäude und Gebäude-teile im Altenglischen* (Kiel, 1911); and the relations between Anglo-Saxon and Old High German received attention in C. Leydecker's *Ueber Beziehungen zwischen althochdeutsche und angelsächsische Glossen* (Bonn, 1911), and in H. Michaels's *Altenglisches in den altheutschen Glossen* (Bonn, 1911), and *Ueber englische Bestandteile altheutscher Glossenhandschriften* (Bonn, 1912).

In Middle English K. Roskopf edited for the first time the Cambridge manuscript of the *Cassamus*, a fragment of the cycle of Alexander the Great (Munich, 1911) and T. Spira reprinted the fifteenth century *Maistre d'escole anglois* (Halle, 1912), while A. Müller wrote upon *Mittelenglische geistliche und weltliche Lyrik des dreizehnten Jahrhunderts* (Halle, 1911). H. Price was the author of *A History of Ablaut in the Strong Verbs from Cañton to the end of the Elizabethan Period* (Bonn, 1912), and Middle English dialects were considered in J. Sixtus's *Sprachgebrauch des Dialekt-Schriftstellers Frank Robinson zu Bowness in Westmoreland* (Berlin, 1912). G. Wendt contributed the first part of a *Syntax des heutigen English* (Heidelberg, 1911), dealing with morphology.

LOW GERMAN. The principal monument of Old Saxon was discussed in J. Jostes's *Heimat des Heliand* (Münster, 1912), and a phase of the history of Low German hymnology received attention in R. Möllencamp's *Jüngere Ebstorfer Liederhandschrift* (Kiel, 1911). A rather unusual amount of interest in Frisian was manifested, as is shown by the first part of L. Hahn's *Eindrigen der neuhochdeutschen Schriftsprache in Ostfriesland* (Halle, 1911), dealing with the history of the chancery language; by E. König's edition of Johannes Cadovius Muller's *Memoriale linguae Frisicae* (Norden, 1911); and by A. Dunkmann's *Ostfriesisch-plattdeutsches Dichterbuch* (Aurich, 1911), which is prefaced by a history of the Low German language and literature in East Frisia.

ROMANCE. Within the sphere of romance philology in general W. Myer-Lübke's *Romanisches etymologisches Wörterbuch* reached its fifth fascicle, extending as far as *mel*, and L.

Alexander made a study of *Participial Substantives of the -ata Type in the Romance Languages, with Special Reference to French* (New York, 1912).

OLD FRENCH. Here the most important activity was manifested in the editing of texts. H. Sommer's edition of *The Vulgate Version of the Arthurian Romances* reached the third part of *Le Livre du lac* (Washington, 1912), and H. Bublanger's *Altfranzösischer Prosaroman von Lancelot del Lac* was extended to the second part of *Les Enfances Lancelot* and the first of *La doloireuse Garde* (Marburg, 1912). The other principal editions of Old French texts were the following: Krappe, *Christi Leben von seiner Geburt bis zur Geschichte von der Samariterin*, on the basis of Arsenal Manuscript 5204 and Bibliothèque Nationale f. fr. 9588 (Greifswald, 1912); C. Iburg, *Ueber Metrum und Sprache der Dichtungen Nicole de Margival nebst einer kritischen Ausgabe des Ordre d'Armour von Nicole* (Rostok, 1912); F. Reuter, *Die Bataille d'Arleschant des altfranzösischen Prosaromans Guillaume d'Orange* (Halle, 1911); A. Ott, *Das altfranzösische Eutachiusleben (Histoire d'Eutachius) der Pariser Handschrift Nat. Bibl. fr. 1374* (Erlangen, 1912); C. Zipperling, *Das altfranzösische Fabel du Vilain Mire* (Halle, 1912); G. Rosenthal, *Die altfranzösische Version von Alain Chartiers Dialogus familiaris* (Rossleben, 1912); A. Barth, *Le Lai du Conseil; ein Altfranzösisches Minnenedicht* (Zurich, 1912); J. Longon, *Chronique de Morée (1204-1305)* (Paris, 1912); P. Aubry and A. Jeanroy, *Le Chansonier de l'Arsenal*, a phototypic reproduction of Arsenal Manuscript 5198 (Paris, 1912); and A. Langfors, *Huon de Roi, Le Vair Palefroi, avec deux versions de La Male Honte par Huon de Cambrai et par Guillaume* (Paris, 1912); while A. de la Sale wrote *La Petit Jean de Saintré* (London, 1911). More technical problems are discussed in C. Sostmann's *Formenbau des Nomens und Verbums in dem Fragment von Gormond et Isembart* (Kiel, 1912); G. Schads *Die Wortstellung in der Chanson de Guillaume und ihrer Fortsetzung, der Chanson de Rainvart* (Halle, 1912); F. Müller-Marquardt's *Die Sprache der alten Vita Wandregiseli* (Halle, 1912); A. Graf's *Die beiden engeren Fassungen der altfranzösischen Dichtung in achtsilbigen Reimpaaren über Christi Höllenfahrt und Auferstehung* (Greifswald, 1912), and K. Bardenwerfer's *Die Anwendung fremder Sprachen und Mundarten in den französischen Farcen, Sottien, Moralitäten und Sermons joyeux des Mittelalters* (Halle, 1912). Old French dialects are considered in C. de Boer's *Pyrame et Thisbé, texte normand du douzième siècle* (Amsterdam, 1912) and A. Porschkes *Laut- und Formenlehre des Cartulaire de Limoges, verglichen mit der Sprache der Uebersetzung des Johannesetangeliums* (Breslau, 1912).

MODERN FRENCH. A. Tobler published the fifth part of his *Vermischte Beiträge zur französischen Grammatik* (Leipzig, 1912), and J. Sanneg's *Dictionnaire étymologique de la langue française* reached its fifth fascicle (Hanover, 1912). General interest also attaches to E. Winkler's *Doctrine grammaticale française d'après Maupas et Oudin* (Halle, 1912); and grammatical problems were discussed in A. Schardt's *Vollständige hypothetische Satzgefüge mit der Konjunktion si im Französischen* (Göttingen, 1911); P. Fay's *Elliptical Partitive*

Usage in Affirmative Clauses in French Prose of the Fourteenth, Fifteenth and Sixteenth Centuries (Paris, 1912); A. Höring's *Zur Geschichte des Possessivpronomens im Französischen* (Heidelberg, 1912), and J. Schoch's *Perfectum historicum und Perfectum praesens im Französischen von seinen Anfängen bis 1700* (Halle, 1912). The interesting subject of French slang is discussed in the two volumes of L. Sainéan's *Les Sources de l'argot ancien* (Paris, 1912), and in A. Niceforo's *Génie de l'argot, essai sur les langues spéciales, les argots et les parlers magiques* (Paris, 1912).

MODERN FRENCH DIALECTS. Here less has been done than in German dialects. Yet among the dialect texts mention should be made of L. Zéliqzon and G. Thiriot's *Textes patois recueillis en Lorraine* (Metz, 1912); E. Philipon's *La Piedmonteyza, poème en dialecte bressan, par Bernardin Uchard, de Pont-de-Veyle* (Paris, 1911); A. Dubut's *Din la doublo Lou Doublaou Milon, counté patois* (Ribérac, 1911), and P. Delesques's *Poèmes normands. Récits cauchois du pé Malandrin* (Caen, 1912).

Among strictly philological discussions were K. Fester's *Satzphonetik im wallonischen Dialekt Malmédys* (Erlangen, 1911); J. Marichal's *Mundart von Gueuzaine-Weimes* (Bonn, 1912); J. Galliéron's *L'Aire de Clavellus d'après l'Atlas linguistique de la France* (Neuveville, 1912); E. Vey's *Le Dialecte de Saint-Etienne au dix-septième siècle* (Paris, 1911); J. Daniel's *Éléments de grammaire périgourdine* (Périgueux, 1911); R. de Beaucaudrey's *Le Langage normand au début du vingtième siècle. Noté sur place dans le canton de Percy (Manche)* (Paris, 1912); W. Bederlich's *Die lexicographischen Eigentümlichkeiten des Franko-Provenzalischen nach dem Atlas linguistique de la France* (Bonn, 1912).

PROVENÇAL, ITALIAN, SPANISH, CATALAN. In Provençal E. Levy's *Supplementwörterbuch* of that language reached its thirtieth fascicle (Leipzig, 1912), and E. Portal edited an *Antologia provençale* (Milan, 1911). In Italian the most important work was G. Capponi's *Raccolta di proverbi toscani*, based on the older work of Giusti (Florence, 1911). For Spanish A. Martínez Abellán wrote a *Diccionario de ortografía, homología y régimen de la lengua española* (Madrid, 1911); while J. Pujal y Serra was the author of a *Diccionario catalan-castellano y castellano-catalan* (Barcelona, 1911), and A. Rubió y Lluch published in Catalan a series of lectures on Ramon Lull (Barcelona, 1912).

RUMANIAN, RHÆTO-ROMANCE. Two fascicles of the official Rumanian dictionary, the *Dictionarul Limbii Române*, published at Bucharest, appeared, and H. Tiktin's *Rumänisch-deutsches Wörterbuch* issued at Leipzig, reached its nineteenth fascicle. Another work of importance was R. Lovera and A. Jacob's *Grammaire roumaine* (Heidelberg, 1912), and R. Weidelt published *Die Nominalkomposition im Rumänischen*. In Rhto-Romance the most noteworthy production was the fourth volume of C. Decurtin's *Rätoromanische Chrestomathie* (Erlangen, 1911).

CELTIC, SLAVIC, ALBANIAN. In Celtic, besides the two general treatises of T. Rolleston, *Myths and Legends of the Celtic Race* (New York, 1911), and A. Tedeschi, *Ossian l'Homère du nord, en France* (Milan, 1911); E. Ernault

wrote *L'Anisien Vers Breton* (Paris, 1912), although the most important production was O'Connell's *Grammar of Old Irish* (Dublin, 1912). In the Slavic field E. Berneker's *Slavisches etymologisches Wörterbuch*, published at Heidelberg, reached its ninth fascicle, extending to *likü*, and another work of importance was A. Doritsch's *Beiträge zur litauischen Dialektologie* (Tilsit, 1911).

In the outlying field of Albanian N. Jokl's *Studien zur albanesischen Etymologie und Wortbildung* (Vienna, 1911) is by all odds the most important work on this language since 1891.

PHILOLOGY, CLASSICAL. The feature of work in classical philology in 1912, of most interest to the general public, is seen in the translation of Greek and Latin authors; this tendency, exemplified for some years in many ways, e. g., in the Oxford Library of Translations, culminated last year in the appearance of the first volumes of the Loeb Classical Library. The scope and the purposes of this collection of translations of Greek and Latin authors were set forth fully in the last YEAR BOOK. Fifteen volumes have appeared, giving translations of the whole or of parts of the following authors: Greek—Appian, Apollonius Rhodius, Euripides, Philostratus, Sophocles, Theocritus, Bion, and Moschus (the three Greek bucolic poets in the one volume), and the Apostolic Fathers; Latin—Cicero, Propertius, Terence, St. Augustine. In accordance with the general plan of the library, existing translations (e. g., Horace White's of Appian, A. S. Way's of Euripides), have been utilized, but in revised form. The library has attracted much attention; its purpose and general plan have been commended. But one or two of the volumes thus far issued seem to betray haste in translation and printing; it is to be hoped that later volumes will be less open to criticism in these respects. It has been warmly urged, further, that the use of verse translations for the poets will in large measure defeat the purposes of the library.

The project of devising a system of uniform grammatical terminology is still attracting much attention. The American Commission of Fifteen, mentioned in the last YEAR BOOK as considering this difficult problem, hopes to publish a preliminary report in 1913. References may be made to a report of a *Symposium on Uniform Grammatical Terminology*, held at Ann Arbor, in 1911, and described in *The School Review* for November, 1911, and January, 1912. The Oxford University Press has published *A New Latin Grammar*, by E. A. Sonnenschein, "based on the recommendations of the Joint Committee on Grammatical Terminology." For the report of the English Joint Committee see the YEAR BOOK for 1910.

To the teaching of the classics, especially Latin, much attention is constantly given, particularly in England and America. In both these countries a small but earnest group is advocating the "direct method" of teaching Latin: see *The Classical Weekly*, *passim*, in particular VI., 34-37, 42-45, 50-53, 58-62, 70. Books intended to illustrate this method are beginning to pour from the press. The third volume of the *Cyclopedia of Education* edited by Paul Monroe, contains important articles on the teaching of Latin and Greek, by Professors T. D. Goodell and G. Lodge. The book on *The Teaching of Latin and Greek*, by Professor C.

E. Bennett and G. P. Bristol, reached its second edition in 1911.

That the year 1912 was one of extraordinary activity in classical philology, covering a wide field, may be seen by a mere glance at the titles of the articles in the periodicals published in this country, and in Europe. Their contents are entirely too varied and their themes for the most part too special to find record here. As in other years, however, mention will be made of some of the articles which appeared in the two chief repositories of American work in classical philology, *The American Journal of Philology* and *Classical Philology*. In the former journal appeared "Apollonius and Cyzicus," by E. Fitch (an argument that in writing the portion of his *Argonautica* which deals with the Cyzican adventure Apollonius had his eye on a definite locality—one might almost say, wrote with a map before him—so that his account has a higher topographical value than has heretofore been accorded to it); "Phœnix in the Iliad," J. A. Scott; "The Johns Hopkins *Tabulæ Defixionum*," W. S. Fox (an elaborate discussion of certain curse-tablets: the author thinks the curses were written at Rome, shortly before 40 B. C.); "The Sceptical Assault on the Roman Tradition Concerning the Dramatic Satura," C. Knapp; "Horace and Tibullus," B. L. Ullman; "Latin Inscriptions at the Johns Hopkins University: Series VII.," H. L. Wilson; "The Dative with Prepositional Compounds (in Latin)," E. B. Lease; "Submerged *Tabellæ Defixionum*," W. S. Fox; "Lucilius on *ī* and *ei*," E. W. Fay; an elaborate review of various books on Propertius, by B. O. Foster; "Contributions to the Study of Homeric Metre," G. M. Bolling; "Imagination and Will in $\mu\eta$," T. D. Goodell; "Usque Recurrent $\mu\eta$," B. L. Gildersleeve; "On the Use of $\delta\tau\alpha\varsigma$ with Causal Implication," A. C. Pearson, which Professor Gildersleeve considers in the same number in his usual illuminating fashion, in a review of M. P. Nilsson's "Die Causal-sätze im Griechischen bis Aristoteles. I. Die Poesie."

From *Classical Philology* we note "The Position of 'Deferred' Nouns and Adjectives in Epic and Dramatic Verse," H. W. Prescott; "Roman Satire; Its Early Name," J. W. D. Ingersoll; "The Manuscripts of Pliny's Letters," Dora Johnson; "The New Metric," by P. Shorey, a masterly translation of O. Schrader's important discussion, in German, of this theme; "On the Origin of Roman Satire," R. H. Webb; "Recent Homeric Literature," A. Shewan, an admirable survey of the more important books and articles on Homer since 1900; "On Anaximander," W. A. Heidel; "The Tacitean Tiberius: A Study in Historiographic Method," T. S. Jerome; "Patronymics as a Test of the Relative Age of Homeric Books," J. A. Scott; "Notes on Latin Etymologies," F. A. Wood; "The Homeric Augment," A. Shewan, a review of an elaborate paper on this subject by J. A. J. Drewitt, published in *The Classical Quarterly* (1912); "Studies in Greek Noun-Formation: Labial Terminations III.," E. H. Sturtevant; "Satura as a Generic Term," A. L. Wheeler, an answer to the paper by G. L. Hendrickson, "Satura—The Genesis of a Literary Form," mentioned in the last YEAR BOOK; "Evidence in the Areopagus," R. J. Bonner.

As in other years much excellent work has been contributed to both journals in the way of

reviews, especially by Professor Gildersleeve in "Brief Mention," a feature of each issue of *The American Journal of Philology*, and by Professor Paul Shorey, managing editor of *Classical Philology*. In the United States, again, much valuable work appears in the volumes of "studies" published under the auspices of various universities, and in *The Transactions and Proceedings of the American Philological Association* (the leading association of classical scholars). From the forty-second volume of the *Transactions*, published late in 1912, we may mention the following: "The Mind of Herodotus," M. Hutton; "Notes on the Character of Greek and Latin Accent," E. H. Sturtevant; "Latin Mille and Certain Other Numerals," R. G. Kent; "Altars on the Roman Comic Stage," Catharine Saunders. Klusmann's *Bibliotheca Scriptorum Classicorum et Græcorum et Latinorum*, mentioned last year, was advanced by the publication of part 1 of volume 2, giving a conspectus of books and articles on Latin authors (Ablavius to Lygdamus) from 1878 to 1896. Here too should be named *The Year's Work in Classical Studies*, published annually for The Classical Association of England and Wales; the book consists of fifteen to twenty articles, by various scholars, on the work done in the preceding year in various fields of classical philology; volume 6, covering 1911, appeared early in 1912.

In the field of inscriptions we note first useful summaries of the work done in 1910-1911: *Bulletin Annuel d'épigraphie grecque* (3e Année), A. J. Reinach; *Année (L) épigraphique relative à l'antiquité romaine*, published by Leroux (Paris). Important, too, are *Inscriptiones Græcæ*, giving the inscriptions of Delos, published at Berlin, under the direction of the Royal Prussian Academy; *Christian Epigraphy. With a Collection of Ancient Christian Inscriptions, mainly of Roman Origin*, a translation from the Italian of Orazio Marucchi, by J. A. Willis; *Greek Inscriptions from Sardes I.*, by W. H. Buckler and D. M. Robinson, published in *The American Journal of Archaeology*, an elaborate discussion of a long inscription belonging to the end of the fourth century B. C., found in the new excavations at Sardis under the direction of Professor Howard Crosby Butler (see ARCHÆOLOGY, in the YEAR BOOK, for 1910, 1911, 1912). The inscription is most interesting; it is the only extant specimen of a certain type of mortgage; it prescribes the conveyance of the property, in the event of the mortgagor's failure to pay the debt involved in the mortgage. In the course of these excavations many other inscriptions, both Greek and Lydian, have been found; the number of Lydian inscriptions is very large, and it is hoped that one inscription, a bilingual document in Greek and Lydian, may give a clue to the decipherment of the Lydian inscriptions. Volume 2, Fasciculus 1 of the *Corpus Inscriptionum Etruscarum*, by O. A. Danielsson and G. Herbig, must also be noted.

Two works on coins are to be mentioned: *Recueil général des Monnaies grecques d'Asie Mineure*, Volume 1, Fasciculus 4, by E. Babelon and Th. Reinach, a revision and completion of the work by W. H. Waddington; *Numismatique Constantiniennne*, Volume 2, by Jules Maurice, a book that throws much light on both secular and ecclesiastical history; through the study of the coins, reinforced by the documentary au-

thorities, "we can follow the process," says G. Macdonald in *The Classical Review* 26.190, "by which the representative upon earth of Hercules became transformed first into a champion of the solar cult, then into a Christian."

In the field of palaeography striking activity was shown in the reproduction of manuscripts. Of prime interest and importance are three additions, Volumes XV.-XVII., to the great series of photographic reproductions of Greek and Latin manuscripts published by A. W. Sitjhoff, at Leyden. These volumes give, respectively, the "Codex Palatinus" and the "Codex Parisinus" of the *Anthologia Latina*, the "Codex Guelferbytanus Gudianus 224 (olim Neapolitanus)" of Propertius, and the "Codex Heinsianus (Leidensis 118)" of Cicero's *De Natura Deorum*. Important also are *exempla Codicum Graecorum Litteris Minusculis Scriptorum*, Vol. I.; *Odioces Mosquenses*, by G. Ceretelli and S. Sobolevski; *Specimina Codicum Latinorum Vaticanorum*, F. Ehrle and P. Liebaert, a collection of fifty photographs giving good examples of practically all the main styles of handwriting in manuscripts from the fourth to the fifteenth century, especially of early capital and minuscule manuscripts; *Papyrus Grecs (de Lille)*, Volume 2, Fasciculi 2, 3, 4; *Proben aus Griechischen Handschriften und Urkunden*, F. Steffens (Trier); *Griechische Papyri in Museum zu Gießen*, Volume 1, Heft 3, edited by E. Kornemann and P. M. Meyer; *Griechische Papyri der kaiserlichen Universitäts- und Landesbibliothek zu Strassburg im Elsaas*, Volume 1, Heft 3, edited by F. Preisigke; *Oxyrhynchus Papyri*, Part IX., A. S. Hunt.

In the field of religion must be mentioned Mr. Fox's work on the *Tabellæ Defixionum* (see above); *The Thunder-Weapon in Religion and Folklore*, C. Blinkenberg; *Geburt, Hochzeit, und Tod: Beiträge zur vergleichenden Volkskunde*, Ernst Samter (see *Classical Philosophy* 7.124); *Themis. A Study of the Social Origins of Greek Religion*, Jane Harrison (a book to be used with caution; see *Classical Philology* VII., 359). An important book, which gains special interest from the fact that it consists of lectures delivered under the auspices of the American Committee for Lectures on the History of Religions, is *Astrology and Religion Among the Greeks and Romans*, by F. Cumont.

Of the work done in the kindred fields of syntax linguistics, and rhetoric, only a few titles can be mentioned. Brief, but of great value, is Hoffmann's *Geschichte der Griechischen Sprache* (in the Sammlung Götschen). A. Thumb's second edition of his *Handbook of the Modern Greek Vernacular: Grammar, Texts, Glossary* was translated into English by S. Angus. R. Kühner's *Ausführliche Grammatik der lateinischen Sprache* is undergoing revision: Volume I., dealing with "Formen- und Wortlehre," and Part 1 of Volume 2, treating "Satzlehre," appeared in 1912. The new edition is a severe disappointment; the revision has not been careful and thorough-going and the book is far behind the times. Other specimens of syntactical work are *Beiträge zur lateinischen Syntax*, W. A. Baehrens; *Die Nebensätze in den Griechischen Dialektschriften*, E. Hermann; *Case Usage in Livy*. III. *The Accusative*, R. B. Steele; *Grammatica Militans*, P. Cauer, fourth edition. To be named also is *Sophistik und Rhetorik*, H. Gomperz.

In lexicography the most notable event of the

year is the publication of the first fascicle of an *Epitome Thesauri Latini*, compiled by F. Vollmer and E. Bickel; this work is intended to make accessible, in brief and handy form, the substance of the vast collections of material found in the great *Thesaurus Linguae Latinae*. The latter work itself made progress in 1912. A useful *English Greek Lexicon* was published by G. M. Edwards. It will be convenient to note here that Volume 7 of Pauly-Wissowa's *Encyclopädie der Classischen Altertumswissenschaft* (Fornax to Helikeia) appeared in 1912, under the editorship of W. Kroll.

Some books in the field of comparative philology must be named. These are *Elementarbuch der Phonetik*, O. Jespersen; *Grundriss der vergleichenden Grammatik der Indo-Germanischen Sprachen*, second edition (Part 2, Volume 2, which appeared in 1912, treats the inflection of nouns, the stems and inflection of pronouns, and, finally, adjectives, adverbs, and prepositions); *Introduction à l'Étude Comparative des Langues Indo-Européennes*, A. Meillet, third edition ("as an introduction to the comparative study of the historic Indo-European languages without a serious rival"); *Beiträge zur Indo-germanischen Wortforschung*, a monumental work of 1111 quarto pages, the first and larger part of which consists of a collection of etymological articles dealing with all the Indo-Germanic languages. Of importance, too, to classical scholars is Meyer-Lübke's *Romanisches Etymologisches Wörterbuch*; this is to be arranged on virtually the same plan as Körting's *Lateinisch-romanisches Wörterbuch*, and will supersede that work.

More closely connected with classical philology are *Comparative Grammar of the Greek Language* J. Wright; *Untersuchungen über die Natur der griechischen Betonung*, H. Ehrlich (the book combats the recent theory that classical and pre-classical Greek had a stress accent strong enough to affect the vocalism of the language); *Against the Stress Accent in Latin*, R. L. Turner (see *The Classical Review* 26.147); *Studien zur Lateinischen und Griechischen Sprachgeschichte*, Emil Thomas.

In the fields of classical history and Greek and Roman life we may note first revisions of important books: *Aristotle's Constitution of Athens*, edited by J. E. Sandys; *The Romanization of Roman Britain*, F. Haverfield; *C. Iulius Caesar. Sein Leben nach den Quellen kritisch dargestellt*, E. G. Sihler (a revision of the *Annals of Caesar*, noted in the last YEAR BOOK); *Technologie und Terminologie der Gewerbe und Künste bei Griechen und Römern*, Volume I.; *Geschichte der sozialen Frage und des Sozialismus in der antiken Welt*, Volumes 1-2, R. v. Pöhlman. Here, too, may be mentioned the second edition of *Formæ Urbis Romæ Antiquæ*, by H. Kiepert and Ch. Hülsen. New books in this field were: *A History of the Eastern Roman Empire from the Fall of Irene to the Accession of Basil I.* (A. D. 802-867), J. B. Bury; *Prehistoric Thessaly*, A. G. B. Wace and M. S. Thompson; *A Companion to Roman History*, H. Stuart Jones; *Wahrheit und Kunst Geschichtsschreibung und Plagiat im klassischen Altertum*, H. Peter; *Greece and Babylon*, L. R. Farnell; *The Periplus of the Erythræan Sea. Travel and Trade in the Indian Ocean, by a Merchant of the First Century. Translated from the Greek*, W. H. Schoff; *Antike Schlachtfelder*, by

G. Veith (dealing with ancient battles in Africa; the book forms Volume 3, Part 2, of J. Kromayer's well-known work); *Excavations in the Island of Mochlos*, R. B. Seager ("our best source for the beginnings of Bronze Age Culture in Greece"); *Der Hellenismus in Klein Africa*, W. Thieling (see *The Classical Review*, 26.128); *The Outdoor Life in Greek and Roman Poets*, Countess Evelyn Martinengo-Cesaresco; *A Source Book of Ancient History*, G. W. Botsford. Most important is the periodical known as *Klio*; *Beiträge zur alten Geschichte*, edited by C. F. Lehmann-Haupt and E. Kornemann; Volume 12 appeared in 1912. In the field of law we have space only to mention *Problems of the Roman Criminal Law*, 2 volumes, J. L. Strachan-Davidson, intended to supplement Mommsen's *Römische Strafrecht*; *Apulejus von Madaura und das römische Privatrecht*, F. Norden; *Etudes Historiques sur le Droit de Justinien*, P. Collinet; *Das Attische Recht und Rechtsverfahren*, J. H. Lipsius (new edition of Volume 2, second half).

Mention was made above of Professor Shorey's translation of O. Schrader's article on *The New Metric*. In *The Verse of Greek Comedy* Prof. John Williams White champions the (so-called) new metric, taking issue with the received views of Westphal, Schmidt, Christ, etc. A book on a kindred theme is *Aristoxenian Theory of Musical Rhythm*, C. F. Abdy Williams.

Turning to the field of Greek and Latin literature we note first new editions of several books: *Select Epigrams from the Greek Anthology*, J. W. Mackail (third edition); *Plautinische Forschungen*, F. Leo; *The Rise of the Greek Epic*, G. Murray; *Die Griechische und Lateinische Litteratur und Sprache*, by Wilamowitz, Krummacher, etc.; *Einleitung in die Altertumswissenschaft*, by Gercke and Norden; *A Companion to Greek Studies*, edited by L. Whibley. Important additions were made to the Oxford Classical Text Series and to the Teubner Series of Classical texts; the most interesting of the former, perhaps, is that of the text of Isidorus, by W. M. Lindsay, which now for the first time makes that author accessible to everyone. An important annotated edition is that of the *Satires of Horace*, by P. Lejay. Attention must be directed also to *The Vitality of Platonism and Other Essays*, J. Adam; *Platonische Aufsätze*, O. Apelt; *Sprachliche Forschungen zur Chronologie der Platonischen Dialoge*, H. von Arnim; *The Greek Genius and its Meaning to Us*, R. W. Livingstone; *Das Plagiat in der Griechischen Litteratur*, E. Stemplinger; *English Literature and the Classics*, a collection of essays by various English scholars; *Troy. A Study in Homeric Geography*, W. Leaf, in which the author, on the basis of a careful study of the topography of the Troad, concludes that the Iliad describes a real war, at the back of which lay commercial and economic considerations; *Aristotle's Researches in Natural Science*, T. E. Jones; *The Love of Nature among the Romans*, A. Geikie; *Mathematik und Astronomie im klassischen Altertum*, E. Hoppe.

Of special interest, finally, are several volumes by American scholars: *The Classical Papers of Mortimer Lamson Earle*, who died in 1905 (Professor Earle was an expert in text criticism, especially in the Greek dramatists); *Greek Literature*, a collection of ten lectures on various departments of Greek literature delivered in 1911 at Columbia University by as

many American scholars; *Harvard Essays on Classical Subjects*, papers on "Roman Art," "Alciphron," "Plato," "Ovid," "Greek Conceptions of Immortality," etc., by members of the Classical Department of Harvard University; *The Greek Romances in Elizabethan Prose Fiction*, a dissertation by S. L. Wolff; *The Common People of Ancient Rome*, F. F. Abbott. (Halle, 1912).

PHILOSOPHIC SOCIETY, WESTERN. A learned society, founded in 1900. The twelfth annual meeting of the association was held at the University of Chicago, April 5-6, 1912. In pursuance of the plan adopted by the executive committee, the morning and afternoon sessions of the first day were devoted to ethics and the discussion of ethical problems. The special topic of the afternoon was "The Teaching of Ethics." The morning of the second day was given to a joint session with the Western Psychological Association, in which five papers were read and discussed. Officers for 1912 were elected as follows: President, J. E. Boodin; vice-president, V. H. Bode; secretary and treasurer, H. W. Wright.

PHILOSOPHY. NEW TENDENCIES. Characteristic features in recent modern thought are the antagonism to rationalistic monistic systems, mechanistic and idealistic, to the so-called block-universe with its alleged fatalism, and the plea for methods and interpretations that will satisfy both the head and the heart and bring philosophy into closer touch with life. Doubts are raised against the competence of the intellect to reach a satisfactory world-view, and it is proposed either to confine its operations and jurisdiction to the physical world or to conceive it as an instrument in the service of the will, or to judge its truth-value by its utility, or to regard its conclusions as mere conventions, as symbols, or as approximations to truth. Those who do not discourage all attempts at constructing systems of metaphysics find in feeling, belief, immediate experience, or intuition the sources of a surer knowledge than in the discursive understanding, and would substitute pluralism, pragmatism, intuitionism, voluntarism, and theism for the traditional monism, rationalism, and idealistic pantheism. William James and Henri Bergson are the chief figures in this anti-intellectualistic movement which harks back to the Romanticism of the nineteenth century. These antagonistic currents in contemporary philosophy are not moving without resistance from the older intellectualistic conceptions, which refuse to admit the inadequacy of rational thinking either in natural science or in metaphysics; while other schools insist on reconstructing philosophical thought upon a rationalistic and realistic basis. Instead of rejecting natural science as utterly incapable of interpreting reality, some thinkers demand that philosophy employ scientific methods, others that it leave to natural science itself the task of solving the world-riddle, while still others relegate metaphysics to the realm of poetry and religion. The formation of a Positivistic Society in Germany, with the avowed purpose of developing a world-view on a scientific basis, and the coöperation of a small group of realists in the United States for similar ends are symptoms of protest against Romanticism in philosophy. The reader is referred to *The New Realism* by Holt, Marvin, Montague, Perry, Pitkin, and Spaulding. The

Proceedings of the First Monistic Congress (edited by Blossfeldt in coöperation with Ostwald and Riess) likewise gives evidence of a trend towards a universal theory based on natural science. The discord prevailing in the field of contemporary philosophy has suggested the need of some sort of philosophic platform; and the American Philosophical Association at its Christmas meeting, held at Columbia University, debated the question: Is a continuous progress towards unanimity among philosophers on the fundamental philosophical issues desirable and attainable? Ranzoli, *Il linguaggio dei filosofi*, points out the need of coöperation and particularly of a common vocabulary. Further information is given in the articles of Kemp Smith, Pitkin, and K. Schmidt in *J. of Phil.*, IX. 26. However undesirable disagreement may be, it cannot be denied that the conflict between the schools has had many wholesome effects; it has intensified the interest in philosophical study not only among the specialists but in other fields of learning (particularly in natural science and mathematics), as well as among the educated public; it has led to the reconsideration of all the vital problems, especially in the theory of knowledge; and it has made necessary a clearer and less one-sided restatement of the older rationalistic system. See YEAR BOOK of 1911.

LITERATURE OF THE NEW SCHOOLS. English translations of Bergson's *Matter and Memory* and *Introduction to Metaphysics*, a collection of James's *Essays in Radical Empiricism*, and Schiller's *Formal Logic* have appeared during the year. Keyserling's *Metaphysische Wirklichkeit* and Vogel's *La religion de l'évolutionisme* show the influence of Pragmatism and Bergsonism. Among the books discussing modern currents of thoughts and the new thinkers are: Alliotta, *La reazione idealistica contro la scienza*; Ruggiero, *La filosofia contemporanea*; Perry, *Present Philosophical Tendencies* (an extended discussion of this book by Lovejoy in *Journal of Phil.*, IX. 23); Eucken, *Main Currents of Modern Thought* (translation); Flournoy, *La philosophie de W. James* (best account of James's philosophy); Boutroux, *W. James* (French and English); Balsillie, *An Examination of Bergson's Philosophy*; Le Roy, *Une philosophie nouvelle*, H. Bergson; Elliot, *Modern Science and the Illusions of Professor Bergson*; Solomon, *Bergson*; Benda, *Le Bergsonisme*; Gagnebin, *La philosophie de l'intuition*; Wilbois, *Devoir et durée*.

METAPHYSICS. The large number of works published in this field shows a growing interest in ultimate questions. The realists are represented in the persons of B. Russel (*Problems of Philosophy*), Fullerton (*The World we Live in*), and Marvin (*Introduction to Metaphysics*). In his *Sources of Religious Insight* Royce offers an application of his voluntaristic idealism to the problem of religion. Other idealistic systems are presented in the following books: Boutroux, *The Beyond that is Within*; F. J. Schmitt, *Der philosophische Sinn*; Braun, *Grundriss einer Philosophie des Schaffens*; Radulescu-Motru, *Éléments de métaphysique*.

Naturalistic systems (monistic and materialistic) are given by J. G. Vogt, *Der absolute Monismus*; Gilbert, *Neue Energetik*; Bardonnet, *L'univers-organisme*. The mechanical conception of life is upheld by Professor Schäfer in his inaugural address before the British As-

sociation of Science on *The Chemical Creation of Life* and by J. Loeb in his book, *The Mechanical Conception of Life*. The student of metaphysics will find the following helpful: Poincaré, *Leçons sur les hypothèses cosmogoniques*; Hartmann, *Philosophische Grundfragen der Biologie*; Joussain, *Philosophie de la nature*; G. Richter, *Bewegung, die vierte Dimension*; Driesch, *Ordnungslehre*. Le Dantec, *Contre la métaphysique*, opposes all metaphysics as poetry, and claims that we must look for the solution of our problems to natural science, which is wholly impersonal.

LOGIC AND THEORY OF KNOWLEDGE. Ever since the revival of the critical philosophy of Kant during the latter half of the nineteenth century, the theory of knowledge has formed one of the main subjects of study in philosophy, (see YEAR BOOK, 1908), especially among the Germans, who are doing thorough work in this field under the leadership of Cohen and Natorp (the Marburg school), Schuppe, Husserl, Rickert, Meinong, and others. Consult the article on "Kant and the Marburg School," by Natorp in *Kant-Studien*, XVII., 3, and the treatise of Lanz, *Das Problem der Gegenständlichkeit in der modernen Logik*; also the yearly articles by Ewald in the *Philosophical Review* on German Philosophy. It is to be noted, however, that a large part of the year's books has been produced by scholars of other countries and that many of them are valuable contributions. We mention: Hegel, *Doctrine of Formal Logic* (translated by Macran); Bosanquet, *Logic*, second edition, two volumes; Baldwin, *Thoughts and Things*, vol. III.; Coffey, *The Science of Logic*; Mercier, *A New Logic*; Sheffield, *Grammar and Thinking*; *Logik*, by Windelband, Royce, Couturat, Croce, Enriques, Losskij (vol. I. of *Encyclopädie der philosophischen Wissenschaften*); Stadler, *Logik*; Döring, *Grundlinien der Logik*; Frischeisen-Köhler, *Wissenschaft und Wirklichkeit*; Kraft, *Weltbegriff und Erkenntnisbegriff*; Schlesinger, *Geschichte des Symbols*; Gallinger, *Das Problem der objektiven Wirklichkeit*; Ostler, *Die Realität der Aussenwelt*; Lask, *Die Lehre vom Urteil*; Pickler, *Möglichkeit und Widerspruchlosigkeit*; Meyerson, *Identité et réalité*; Padoa, *La logique deductive*; Roberty, *Les concepts de la raison et les lois de l'univers*; Brien, *La méthode générale et scientifique*; Le Bon, *Les opinions et les croyances*; Honigswald, *Die Grundlagen der Mathematik*; Brunschvigg, *Les étapes de la philosophie mathématique*; Bachelier, *Calcul des probabilités*; Carvallo, *Le calcul des probabilités*; Varisco, *Conosci te stesso*; Levi, *Studi logici*; Botti, *L'infinito*.

ETHICS. There is continued interest in the study of ethics, as one might expect from the prominence of moral questions in contemporary public affairs. The large number of books in this field deal not only with basal principles, but with practical social problems, with morality in its relations to economics, law, politics, and education. Attention is also paid to the evolutionary study of moral ideas and practices, but no works of this character have appeared during the year equalling in importance those of Westermarck, Hobhouse, Dewey, and Tufts, which were so favorably received a number of years ago. See YEAR BOOK, 1908.

THEORIES AND SPECIAL PROBLEMS. Wundt, *Ethik*, in four parts (sociological, historical, theoretical, and social), fourth edition; G. E.

Moore, *Ethics* (a clear and forceful discussion of fundamental principles); Vogel, *La religion de l'évolutionisme. Essai d'une synthèse éthique moderne*; Höding, *Principles of Personality*; Bax, *Problems of Men, Mind, and Morals*; Lagrèsille, *Le monde moral*; Steudel, *Alte und neue Tafeln*; Furtmüller, *Psychoanalyse und Ethik* (application of the psychological theories of Adler to ethics); Duprat, *La morale théorique psycho-sociologique*; Sollier, *Morale et moralité*; Novicow, *La morale de l'intérêt* (an ethics based on enlightened self-interest); Bauer, *La conscience collective et la morale*; Bayet, *Le mirage de la vertu*; Horne, *Free Will*; Orelli, *Die philosophische Auffassung des Mittels*; Terrailon, *L'honneur*; Pagano, *L'individuo nel etica e nel diritto*; Witherspoon, *Lectures on Moral Philosophy* (reprint); Jeffs, *Concerning Conscience. Studies in Practical Ethics*.

HISTORY OF ETHICS AND ETHICAL IDEALS. Mitchell, *The Ethics of the Old Testament*; Friedlander, *Rabbinic Philosophy and Ethics*; Benz, *Die Ethik des Apostel Paulus*; Terrailon, *La morale de Geulincx*; Reisner, *Egyptian Conception of Immortality*; Dahlke, *Buddha als Weltanschauung*; Wallis, *Sociological Study of the Bible*; Chatterton-Hill, *Sociological Value of Christianity*; Abbott, *Society and Politics in Ancient Rome*; Macaggi, *Les origines de la déclaration des droits de l'homme de 1789*; Drouilly, *Les problèmes sociaux du temps présent*; Lodge, *Modern Problems*; Verghaegen, *Vingt-cinq années d'action sociale*; H. S. Wells and others, *The Great State*.

SOCIAL PHILOSOPHY. Many of the books mentioned in the preceding section as throwing light on the history of moral progress are of value to students of social philosophy, just as many books placed under this head will prove helpful in the study of the evolution of morals. Urwick, *A Philosophy of Social Progress* (a criticism of sociological methods); Engert, *Teleologie und Kausalität* (a philosophy of history); Duckworth, *Prehistoric Man*; Wundt, *Elemente der Völkerpsychologie*; Dupréel, *Le rapport social*; Pelletier, *Justice sociale*; Palante, *Les antinomies entre l'individu et la société*; Arrat, *Génie individuel et contrainte sociale*. The student of ethics will also be interested in Ellwood's *Sociology in its Psychological Aspects* and McDougall's *Psychology, The Study of Behavior*, as well as in the following books on religion: Stratton, *Psychology of Religious Life*; Leuba, *Psychological Study of Religion*; Hocking, *The Meaning of God in Human Experience*; Watson, *Interpretation of Religious Experience*; Durkheim, *Les formes élémentaires de la vie religieuse*; Cremer, *Le problème religieux dans la philosophie de l'action*; Hügel, *Eternal Life*; Schmidt, *Ursprung der Gottesidee*; Harrison, *Themis: A Study of the Social Origins of Greek Religion*.

PRACTICAL SOCIAL AND LEGAL QUESTIONS. Müller, *Die Keuschheitsideen*; Müller-Lyer, *Die Familie*; Forsyth, *Marriage: Its Ethics and Religion*; Lofthouse, *Ethics and the Family*; Report of the Royal Commission on Divorce and Matrimonial Causes; Haynes, *Divorce Problems of To-day*; Problems in Eugenics (Papers of the First Eugenics Congress); H. Ellis, *Task of Social Hygiene*; Bruguilles, *Le droit et la sociologie*; Castelein, *Droit naturel*; Miceli, *Lezioni di filosofia del diritto*, vol. II., III.; Breuer, *Der Rechtsbegriff auf Grundlage*

der Stammerschen Socialphilosophie; McConnell, *Criminal Responsibility and Social Restraint*.

MORAL EDUCATION. Papers of the Second Moral Education Congress held at The Hague, July, 1912: Paulsen, *Pädagogische Abhandlungen*; Marceron, *La morale par l'Etat*; Dugas, *L'éducation du caractère*; Kerschensteiner, *Charakterbegriff und Charaktererziehung*; Whitehouse, *Problems of Boy-Life*. The Western Philosophical Association devoted one of its meetings to the discussion of the teaching of ethics in colleges; the papers have been published in the *Journal of Philosophy*.

HISTORY OF PHILOSOPHY. Cornford, *From Religion to Philosophy* (an attempt to find the origins of Greek philosophy in primitive religion); Stöckl, *Handbook of the History of Philosophy*, vol. I. (translation); Drews, *Geschichte der Philosophie*; Sortais, *Histoire de la philosophie* (throughout the Renaissance); Boutroux, *Historical Studies in Philosophy*; Brochard, *Études de philosophie ancienne et moderne*; Windelband, *Geschichte der antiken Philosophie*, third edition; Messer, *Geschichte der Philosophie im Altertum und Mittelalter*; de Wulf, *Histoire de la philosophie médiévale*, fourth edition; Brett, *A History of Psychology, Ancient and Patristic*; Baumann, *Neues eu Sokrates, Aristoteles, Euripides*; Apelt, *Platonische Aufsätze*; Wilson, *Aristotelian Studies*; Brentano, *Aristoteles' Lehre vom Ursprung des menschlichen Geistes*; Jones, *Aristotle's Researches in Natural Science*; Jaeger, *Entstehungsgeschichte der Metaphysik des Aristoteles*; Colle, *La métaphysique d'Aristote* (translation and commentary); Husik, *Matter and Form in Aristotle*; Gentile, *Telesio*; Höding, *Brief History of Modern Philosophy*, translated; Seth, *English Philosophers*; Stock, *English Thought for English Thinkers*; Stöcker, *Problem der Methode bei Descartes*; Tönnies, *Hobbes*, second edition; Bellange, *Spinoza et la philosophie moderne*; Maire, *L'œuvre scientifique de B. Pascal* (bibliography); Fabre, *Les pères de la révolution. De Bayle à Condorcet*; David, *Berkeley*; Lewin, *Die Lehre von den Ideen bei Malebranche*; Thomsen, *David Hume*; Lévy-Bruhl, *Préface à Hume*; Kofink, *Lessing's Anschauungen über die Unsterblichkeit*, etc.; Uebele, *Tetens*; Hensel, *Rousseau*, second edition; Meynier, *Rousseau*; Fabre, *Rousseau*; Grand-Carteret, *Rousseau*; Tiersot, *Rousseau*; Liebmann, *Kant und die Epigonen*, second edition; Stadler, *Kant*; Bowne, *Kant and Spencer*; Kuntze, *Die Philosophie Maimons*; Kastil, *Fries' Lehre von der unmittelbaren Erkenntnis*; Wilm, *Philosophy of Schiller*; Rosalewski, *Schiller's Aesthetik*; Kronenberg, *Geschichte des deutschen Idealismus*, vol. II.; Bréhier, *Schelling*; Walzel, *Deutsche Romantik*, second and third edition; Phalén, *Das Erkenntnisproblem und Hegel's Philosophie*; Cross, *The Theology of Schleiermacher*; Armendola, *Maine de Biran*; Saulze, *Le monisme matérialiste en France*; L. Secrétan, *C. Secrétan*; Flügel, *Herbart's Leben und Lehre*, second edition; Seillière, *Schopenhauer*; Parisot, *Spencer*; Schwarze, *Spencer*; Schumann, *Wundt's Lehre vom Willen*; Schlumke, *Bickert's Lehre vom Bewusstsein*; A. H. Stirling, *J. H. Stirling, His Life and Work*; *La Philosophie allemande au XIXe siècle*, by a number of French and Belgian scholars.

DICTIONARIES OF PHILOSOPHY, TRANSLATIONS, ETC. Mauthner's *Wörterbuch der Philosophie* (which has been appearing serially, is now complete in two volumes); M. Schmidt, *Philosophisches Wörterbuch*. Translation of part of Hegel's *Logic* by Macran; translation of Rosmini-Serbati's *Theodicy* in three volumes. Selections from psychological works (translations) in Rand's *Classical Psychologists*. New editions of the works of Kant, Fries, Fichte, Schelling, Hegel, Schleiermacher, Schopenhauer, Lotze, Nietzsche, Avenarius, Spir, and others.

PHIOGEN PROCESS. See METALLURGY.

PHONGAS. See ANTHROPOLOGY.

PHONOLITE. See CHEMISTRY.

PHOSPHATE. The production of phosphate rock in the United States, according to the United States Geological Survey, has increased steadily in the last ten years. The production in 1911 was 3,053,279 long tons, valued at \$11,900,693. In 1910 the output was 2,654,988 tons, valued at \$10,917,000. Since the beginning of phosphate mining in the United States in 1867 162,629,275 tons of phosphate rock have been mined. Florida in 1911 continued to lead in the production, with 2,436,248 long tons. Tennessee was second with 437,370 long tons, and South Carolina third, with 169,156 long tons. The production in the West was small. The exports of phosphate rock during 1911 amounted to 1,246,577 long tons, valued at \$9,235,388. See FERTILIZERS.

PHOSPHORUS MATCHES, WHITE OR YELLOW. See LABOR LEGISLATION, *Accidents and Diseases*.

PHOTO-ELECTRIC EXPERIMENTS. See PHYSICS.

PHYSICS. The progress during the year 1912 has been along much the same lines as in the past two or three years. There has been a certain amount of what might be called routine work in the way of checking up the values of previously determined constants, and in certain lines some decidedly new and interesting work has been done. The most fruitful field of research has been in the domain of radioactivity and discharge through gases. The realm of theoretical physics has received its full share of attention, but from the mathematical nature of these articles it is often almost impossible to give any adequate idea of their content.

GENERAL. The study of extreme conditions has long been one of the most fascinating provinces of the physicist. For a number of years P. W. Bridgman has been investigating the phenomena observed when substances are subjected to high pressures. Of necessity his earlier work consisted largely in perfecting his apparatus and in devising means for measuring his results. During the past year or two he has begun to reap the fruits of this work of preparation, and several very interesting papers have been published from his laboratory. In one of these he discusses the behavior of water and ice when subjected to pressures up to 20,000 atmospheres—approximately 300,000 pounds per square inch. Among the results of this work are the discovery of two new forms of ice in addition to the three already described by Tammann. These results are of great theoretical interest in the light that they throw on the possibility of compressing the molecules themselves rather than the spaces between them. Bridgman has also studied the effects of high pressures—in

some cases as much as 450,000 pounds per square inch—on the collapse of tubes and the breaking strengths of various materials. These results promise to be of great value in certain lines of engineering.

In the 1911 YEAR BOOK, the low temperature investigations of Kamerlingh Onnes were mentioned. This work has been continued in several directions. The paramagnetic properties of a number of substances have been investigated at very low temperatures. The results are important in showing that in all probability there is a region of low temperature in which all substances show marked variations from Curie's law that the paramagnetic susceptibility is inversely proportional to the absolute temperature.

During the year 1901, Sir William Ramsay published several articles dealing with the properties of the rare gases of the atmosphere—neon, krypton, and xenon. He stated that these were probably all monatomic gases, but the difficulty of preparing pure samples in any but the minutest quantities left the matter open to doubt. During the past year he has succeeded in preparing relatively large quantities of these gases in a very pure form. By determining the ratio of the specific heats at constant pressure and at constant volume he has fully confirmed his earlier predictions.

Among the most useful achievements of the year is the work of Dr. Gaede in perfecting a new form of vacuum pump. By applying the principle of the difference in pressure on the two sides of a rotating cylinder, he has succeeded in producing vacua far beyond anything heretofore attained. Moreover, the action of the "molecular air-pump" is very rapid after the preliminary vacuum is established. The perfection of this easy and rapid means of producing the very highest vacua places a new tool at the service of the investigator, and this should prove of great assistance in certain lines of research.

RADIATION QUANTUM. This theory, to which reference was made in the 1910 and 1911 YEAR BOOKS, has continued to be the subject of considerable discussion. Early in the year, papers by Planck and by Poincaré were published, in which mathematical treatments of the theory of black body radiation were given. The relation of the light quantum hypothesis to the photo-electric effect has been discussed by O. W. Richardson. He has called attention to the point that the confirmation by Compton's experiments of his theory of the photo-electric effect does not necessarily carry with it the truth of the light quantum hypothesis.

RELATIVITY THEORY. In the 1911 YEAR BOOK a general outline and résumé of the relativity theory was presented. The work of the past year has in general been along the lines indicated in that discussion. In addition to new applications of the theory, several investigators have devoted themselves to clearing up the relations between the fundamental postulates and assumptions. Among the articles that have appeared along this line, one by Carmichael is worthy of mention. As generally stated, the theory of relativity requires that the mass of a body—viewed as its inertia—with respect to forces acting in the direction of its motion shall be different from its "mass" with respect to forces at right angles to its motion. This has introduced many complica-

tions in certain problems. In a recent paper, Tolman has shown that it is possible to use the "transverse" mass for longitudinal as well as transverse collision. J. D. van der Waals, Jr., by making certain assumptions about the variation of mass with velocity, has shown that the results of the relativity theory may be derived directly from the classical mechanics. The problem of gravitation has received considerable attention from some of the leaders in this line. Abraham and Einstein have each published papers dealing with this question. D. L. Webster has discussed the various theories of gravitation and their relation to the relativity theory. It has generally been considered that acceptance of the relativity principle destroyed all need for or possibility of an ether. It is interesting to note that there have recently appeared several objections to this view. Ehrenfest has shown that Einstein's theory presents difficulties in the way of regarding the ether as superfluous. Helm has gone farther and maintains that only on the relativity principle is a thoroughgoing hypothesis of the ether possible.

RADIOACTIVITY. In the 1911 YEAR BOOK, Rutherford and Geiger's table was reproduced. This gave the order of the products of the three radioactive families and the data concerning their half-value periods and radiations as far as then determined. The work of the past year has filled in one or two of the gaps in this table. From studying the loss of activity of Vesuvian cotunnite, Rossi has concluded that the half-value period of radium D is about 17 years. The work of Geiger and Nuttall—see below—has shown that uranium probably consists of two products, uranium I. and uranium II. Barratt has found that the range of the α particles from thorium A is 5.4 cm. By studying the rate of diffusion of radium A, Eckmann has shown that, while an atom of radium A is originally positively charged, it may become neutral, or even negatively charged in the presence of strong ionization. The coefficient of diffusion of radium A in air was found to be very close to the value for radium emanation as determined by Rutherford. It was also shown that the atomic weight of radium A was approximately the same as that of radium emanation.

In the 1911 YEAR BOOK, the failure of Weiss and Piccard to detect any influence of a strong magnetic field on radioactive transformations was noted. In some recent work by Rutherford and Chadwick, it was observed that a strong magnetic field had no appreciable effect on the γ ray activity of a radium preparation. Rutherford has also shown that the rate of decay of radium emanation is independent of the concentration and that it is the same at the temperature of liquid air as at ordinary temperatures. Russell has attempted to detect some influence of temperature on radioactive disintegration, but his results were entirely negative. All these results are in line with the accepted theory that the radioactive changes occur within the atoms themselves, and are therefore only very slightly susceptible to external influences. The discovery of some method of influencing the rate of radioactive transformations would prove an immense aid in the study of the real nature of the processes.

Barratt and Marsden have continued their

study of the emission of α particles by the various radioactive products. Their results on the branching of thorium B into thorium C₁ and thorium C₂ have been confirmed by some work of Hevesy on the electrochemical behavior of thorium C. Barratt has followed up the work of Geiger and Marsden (see 1911 YEAR BOOK), by determining the relative number and the ranges of the α particles emitted by the disintegration products of thorium. His results may be summarized as follows: thorium emanation emits 100 particles of 5.0 cm. range; thorium A emits 100 particles of 5.4 cm. range; thorium C₁ emits 35 particles of 4.8 cm. range; thorium C₂ emits 65 particles of 8.6 cm. range.

In 1911, Fajans and Makower showed that radium C₂ was not in the direct line of disintegration products of the radium series, but was a sort of side branch. That is, radium C₁ may disintegrate so as to give either radium D or radium C₂. This is similar to the behavior of thorium C₁ noted above. (See also 1911 YEAR BOOK.) The investigation of the transformation of radium B into radium C₁ and of radium C₁ into radium C₂, or radium D, has been continued by Fajans and Makower. Their chief results are as follows: (1) The α rays as well as the greater part of the β rays from radium C belong to radium C₁. (2) The ionization due to the β rays from radium C₂ is too small to be detected in comparison with that due to the β rays from radium C₁. (3) The β rays from radium B can be divided into two parts, one of which has a coefficient of absorption seven times as great as that of the other. This group produces only $1\frac{1}{2}$ per cent. of the total ionization due to radium B. The γ radiation from radium B was studied by Mosley and Makower. They prepared radium B by recoil from radium A (see YEAR BOOKS for 1910 and 1911) and made corrections for the γ radiation from the radium C in equilibrium with radium B. Their results show that radium B gives no *hard* γ rays and that, if radium C₂ emits any γ rays at all, the quantity is too small to be detected by the ordinary methods.

As already noted Geiger and Nuttall have shown that the transformation of uranium into uranium emanation takes place in two steps, each of which is accompanied by the loss of an α particle. Their method consists in plotting the ionization against the ranges of the α particles for uranium, ionium, and polonium, making certain corrections for impurities, leak, etc. It is known that the atoms of ionium and polonium give off one α particle each on disintegrating. The curves for these two were found to be in complete agreement. The curve for uranium, however, while of the same general type as the others, differed from them decidedly in the position of the maximum and the rate of decrease from the maximum. Geiger and Nuttall showed that this curve could be obtained by combining two "pure" curves (such as ionium or polonium) for α particles, whose ranges are 2.9 and 2.5 cm. The value of the range of the α particles from uranium previously given, viz., 2.72 cm., is evidently the mean value for these. According to this theory, uranium I. has a half-value period of 5×10^9 years and emits α particles of range 2.5 cm. (in air at 760 mm. and 15°C.) and is thus transformed into uranium II. This has a half-value period of 2×10^6 years and emits

α particles of range 2.9 cm. These two products should differ in atomic weight by 4, and must be very similar in chemical properties since thus far it has been found impossible to separate them by chemical process. It has been calculated that there is about one milligram of uranium II. in each gram of pure uranium. Geiger and Nuttall have also shown that in the radium, thorium, and actinium series, the logarithm of the range of the α particles is a linear function of the logarithm of the transformation constant. This result has proved to be of considerable theoretical importance. The characteristics of the β rays from the various products of the radium series have been investigated by Danyasz, and by Danyasz and Götz. The method consisted in determining the deflection produced when the rays were subjected to the action of a strong magnetic field. As the deflection for a given field depends upon the velocity, the particles of different speeds are sorted out, thus forming a "magnetic spectrum." In this way Danyasz showed that there were at least 23 groups of β particles whose speed varied from 0.615 to 0.996 times the velocity of light. Von Baeyer, Hahn, and Meitner have made a similar study of the "magnetic spectrum" of the β rays from thorium.

Parallel with the work of experimental investigation, several papers have been published, which develop more or less completely the theory of the effects. Among these are a paper by Darwin, on the absorption and scattering of α rays. He assumed that when α particles pass through matter they exert a force on the electrons according to the inverse square law tending to pull the electrons out of the atoms. From this he developed the relation between the velocity and the distance from the source. The experimentally determined "velocity curves" for a number of substances agree with this relation. These deductions give us a means of estimating the number of electrons in an atom. This was found to lie between the atomic weight and half that number. H. A. Wilson has suggested that the kinetic energy of the α particles may be regarded as a sort of "atomic temperature" determining the internal state of the atom. Its influence on the rate of radioactive decomposition would then be similar to that of temperature on the velocity of chemical reaction. By assuming that the work done by an α particle in escaping from an atom is practically the same in all cases, he developed an equation connecting the rate of transformation with this "atomic temperature." The results of Geiger and Marsden (see 1911 YEAR BOOK) agree with this theory. From the data on helium, Wilson has calculated that the work necessary for the escape of one gram-molecule of electrons in radioactive emission is about 10^8 times as great as that necessary to liberate one gram-molecule of electrons from hot platinum in thermionic emission.

One of the most important of the theoretical contributions is a paper by Rutherford on the origin of the β and γ rays from radioactive substances. The disintegration of each atom of radium B and radium C has been shown to furnish about one β particle. The work of Barkla and Sadler, and their associates (see 1911 YEAR BOOK and below) has shown that under certain conditions each element emits one or more definite types of X-radiation, which

are characteristic of the element. By comparing the data on the absorption of this characteristic X-radiation from bodies of lower atomic weight, Rutherford was led to the conclusion that the penetrating γ radiation from radium C may be regarded as the *characteristic* radiation from that element due to the escape of the β particles. The relationships between the energies of some of the groups of β particles from radium B and radium C, as given by Danyasz (see above) were also considered. Rutherford showed that these could be explained to some extent by the assumption of two definite units of energy, but the phenomena were too complicated to be fully explained with the meagre data at hand. Rutherford's idea of the matter is suggestive. He regards the atom as consisting of a small, central, positively-charged nucleus, surrounded by electrons in motion. There are some reasons for believing that the electrons are in rings rotating in one plane. The instability of the atom, to which radioactive properties are due, would then be of two kinds, though these would not necessarily be independent of each other. Instability of the central nucleus would give rise to the emission of α particles, while instability of the electronic distribution would give rise to β and γ radiation. If we think of a β particle expelled from one of the inner rings, its passage through each of the outer rings might be accompanied by a loss of energy and the production of a particular type of γ rays.

IONIZATION AND GENERAL DISCHARGE IN GASES. The work of Barkla, Sadler, and others on the nature of the secondary X-rays produced when a beam of X-ray falls on a polished metal surface (See 1911 YEAR BOOK) has been continued with very interesting results. Barkla and Collier have shown that there is one "fluorescent" spectrum characteristic of all the elements; the only differences for the different elements being in the absorbability of the radiation. For this radiation from various elements, the absorption curves referred to aluminum seemed to show that the effects in the elements studied were identical. The discovery of this homogeneous secondary X-radiation has been of great assistance in investigations on the nature of the action of the X-rays, since heretofore the radiation from any available source was far from homogeneous. Sadler and Mesham have shown that when a homogeneous beam is scattered by a substance of low atomic weight, it is transformed into a "softer" type of radiation, and that the "harder" the exciting beam, the greater is the intensity of the scattered radiation, and the greater is the change in quality produced by the scattering. Barkla and Simons have studied the ionization due to the homogeneous Röntgen radiation emitted by elements when exposed to ordinary primary Röntgen radiation. (See YEAR BOOKS for 1911 and 1912.) They showed that the ionization produced is not purely an atomic phenomenon, but depends to some extent on the chemical combination of the elements in the gases. Equal absorptions of X-rays or their secondary rays by different gases were not always accompanied by equal ionizations, though in general ionization was found to be roughly proportional to absorption. Similar results were obtained for the absorption of the electronic radiation by different gases. The results point to the

conclusion that the relative ionizations in different gases when Röntgen radiation is totally absorbed are identical with the ionizations produced by electronic and α radiations.

It has long been a matter of speculation whether the X-rays are similar to ultra-violet light of extremely short wave-length or are corpuscular in nature. Recent experiments of Laue at Munich, promise to throw light on this question. A cylindrical beam of X-rays was passed through a crystal of zinc blend on to a photographic plate. Upon development, this showed a pattern similar to that which would be produced by diffraction if the "wave-lengths" of the rays were comparable to the distances between the molecules. Naturally this has provoked a lively discussion, and the advocates of a corpuscular theory have suggested explanations based on reflection. Apparently the question is by no means settled, and we shall probably in the immediate future see much work along this line.

J. J. Thomson has given a theoretical discussion of the process of ionization by moving particles. His assumptions are (1) "Cathode or positive rays when they pass through an atom repel or attract the corpuscles (electrons) in it and thereby give them kinetic energy." (2) "When the energy imparted to a corpuscle (electron) is greater than a certain definite value—the value required to ionize the atom—a corpuscle (electron) escapes from the atom, and a free corpuscle (electron) and a positively charged atom are produced." From these assumptions and various experimental data, Thomson shows that, in the case of cathode rays, the number of ions produced per centimeter should be inversely proportional to the kinetic energy of the moving particle. Glasston's experimental results (1911) confirm this view. From Townsend's calculation of the energy required for ionization, Thomson concludes that the number of electrons per atom is probably not more than two or three times the atomic weight. The recombination of the electrons with the ions would produce a radiation which would ordinarily be "very far" into the ultra-violet. On the assumption that the atoms also contain electrons requiring a much greater force for ionization, Thomson shows that this theory accounts for pulses similar to the X-rays. Since this radiation would owe its character primarily to the properties of the atom which produced it, it would resemble very strongly the homogeneous (characteristic) Röntgen radiation studied by Barkla and his associates. Thomson also shows that this radiation would probably be divided into definite units or "quanta." The actual mechanism of ionization has also been considered by several others, both experimentally and theoretically. Gill and Pidduck have found some very interesting effects in helium. Four years ago these investigators showed that the minimum spark potential was lower in helium than in other gases. The sample used at that time contained various impurities. Their latest results were obtained with very pure helium. They found that in pure helium the minimum spark potential was 156 volts, while the presence of 1 per cent. of impurity increased this to 187 volts. This extremely low spark potential they ascribed to ionization by collision.

The ionization in closed vessels by Röntgen rays and by γ rays has been studied by Eve.

His results show that the ionization produced by these agents is really due to electrons projected with velocities of the order of magnitude of the cathode rays or the β rays of radium C. In the case of Röntgen rays, these electrons come from the gas in the vessel, while in the case of γ rays these electrons come chiefly from the walls of the containing vessel. This was shown by working with electroscopes contained in very thin walled cases. The ionization due to Röntgen rays in the case of iron or zinc vessels with $\frac{1}{2}$ millimeter walls was only about 15 per cent. of the ionization in free air, while that due to γ rays was about 40 per cent. greater than that in free air.

The work of C. T. R. Wilson in photographing the path of an ionizing particle in a gas was mentioned in the 1911 YEAR BOOK. During the past year he has perfected the details of this method and has brought out several new points of decided interest. One of the most noteworthy facts concerns the path of an a particle. This has generally been regarded as a straight line. The photographs in general confirm this, but in many cases an abrupt bend occurs within the last few millimeters of the path. Some plates showed evidence that this was due to the phenomenon of recoil.

Pohl and Pringsheim have continued their investigations on the selective photo-electric effect, mentioned in the 1911 YEAR BOOK. Previous results obtained for rubidium, potassium, and barium agreed exactly with Lindemann's calculated values, but the results of their recent experiments on sodium and lithium show departures of from 12 per cent. to 20 per cent. from the theoretical values. Elster and Geitel have determined the minimum luminous energy necessary for the production of an electronic current in a potassium photo-electric cell. To produce a current of about 10^{-15} amperes per square centimeter, they found that it required approximately 10^{-7} ergs per second per square centimeter.

J. Robinson's work on the photo-electric properties of thin metallic films indicates that for very thin films the velocity of the emitted electrons is greater when produced by emergent than by incident light, while for thicker films the reverse is the case. Robinson has also studied photo-electric fatigue, showing among other things that fatigue occurs when a metal is exposed to ultra-violet light, but that recovery begins as soon as the light is shut off and is completed in a few minutes. He has suggested that Allen's results, which differ from these, were probably due to the presence of occluded gas. The theoretical bearings of the photo-electric effect have been discussed by O. W. Richardson and Compton. The general agreement between Richardson's theory and the experimental results seems to be very good, and the theory fits in well with the theory of other allied effects. Compton has pointed out that the electrons moving between emitting and receiving plates are subject to a force due to the contact difference of potential, as well as to that due to the external field. When corrected for this effect, his results indicate that, under the action of a given beam of ultra-violet light, the different metals give off electrons with practically equal velocities.

In some respects, one of the most interesting and suggestive discoveries of the year is one made by R. W. Wood, incidental to his work

on long heat waves. He found that the electrical conductivity of a thin film of silver, deposited on glass or quartz, was not greatly affected by a number of cross-cuts, providing that these cuts were not more than 0.0003 millimeter in width. The original resistances of the films were about 10 ohms each, and this was increased by the cross-cuts in some cases to only 13 or 15 ohms, while in others it was found to be as great as 300 or 400 ohms. Apparently this variation was due to slight differences in the width of the cuts. When the width of the cross-cuts was increased to about 0.0006 millimeter, the resistance became practically infinite. Other experiments of a different nature seemed to show that this was a real effect. Wood has suggested the novel explanation that this may be due to the "presence of an atmosphere of electrons in the immediate proximity of metallic surfaces." Some recent work by Anderson and Morrison on electric currents in air at ordinary pressure seems to be in harmony with this explanation.

δ RAYS. The production and nature of δ rays—slow moving β particles excited by a beam of α rays—have been studied by several investigators, notable among whom are Norman Campbell and H. A. Bumstead. Campbell's results show that the initial velocity of the δ rays is not as great as has been heretofore supposed, and that it is probably independent of the nature of the material in which the δ rays are excited. The number of δ particles emitted under the influence of a given beam of α rays is independent of the nature of the surface. Campbell seems to favor the view that the ionization produced in a gas by an α particle is an indirect result, the energy of the α particle being primarily expended in some process other than ionization. Pound has shown that the occluded gas at the surface of the plate exerts a large influence on the production of the secondary rays excited when α rays fall on a polished metal surface. In the case of a carbon plate, the production of secondary rays was increased by cooling to liquid air temperature, since this increased the amount of occluded gas.

The experiments of Bumstead and MacGougan indicate that the number of δ particles emitted under given conditions depends upon the speed of the exciting α particles in much the same manner as the number of ions produced in a gas. The fact that the rate of production of δ rays decreases for some time after the establishment of the vacuum was ascribed to the influence of gas absorbed by the walls of the vessel. It was found that polonium and the active deposit of thorium emitted a radiation which consisted of two parts. The primary part was not appreciably affected by an electric field; the secondary part consisted of electrons whose velocity was greater than that of the δ rays and less than that of the β rays. This secondary radiation was also emitted by any metal upon which the α rays were incident. Bumstead and MacGougan found that at least part of the δ rays were due to the action of these secondary rays and their experiments were "not adverse to the view that the whole of the δ ray effect was produced in this way."

THERMIONS. The emission of electrons and positively charged particles from heated metals and oxides has been the subject of investigation for several years. O. W. Richardson and his

students have devoted a great deal of attention to it, and Richardson has developed a formula giving the relation between the temperature and the number of electrons emitted. During the past year, several investigations bearing on this subject have been published. The value of e/m for the positive ions from various salts of barium, strontium, calcium, magnesium, and zinc, has been determined by Davissan. His results indicate that the characteristic positive ions from these salts consist of single atoms of the metals, each of which has lost a single electron. This agrees with Richardson's previous results.

The investigation by Pring and Parker of the ionization produced by hot carbon, indicates that the pressure of the surrounding gas and the impurities in the carbon exert a great influence. Their investigation was carried up to temperatures as great as 2000°C. Their results differ widely from those calculated by Richardson's formula. Their conclusion is that the relatively large currents obtained by previous investigators should be ascribed to an emission of electrons due to a chemical reaction between the hot carbon or its impurities and the surrounding gas, rather than to a direct emission of electrons by the carbon itself. The results of Fredenhagen on the emission of electrons from a hot lime cathode confirm this view. When the cathode was heated in an electric furnace, the emission of electrons was only about 1 per cent. of that found at the same temperature when the cathode was heated by the passage of a current. As the hot lime conducts electrolytically, this would indicate that the emission of electrons was not primarily due to the temperature. It would seem from these rather conflicting results that there is need of considerable investigation along this line, both experimental and theoretical.

LIGHT. In the 1911 YEAR BOOK, reference was made to the work of Wood on "resonance spectra," and some account was given of the results obtained with sodium and iodine vapors. This work has been continued and extended during the past year by Wood and others. Some of the results obtained are very striking. Wood has found that mercury vapor at ordinary temperatures gives this resonance spectrum when illuminated by a beam of ultra-violet light of the same wave length as its so-called absorption line ($\lambda = 2536$). This investigation, of course, was made entirely by photography, the vapor being contained in a quartz tube, which is transparent to ultra-violet light. The results obtained by a study of this effect are in accord with Planck's theory of absorption. It was found that with mercury vapor in a high vacuum, there was no true absorption, but only a scattering of the light. However, when a small quantity of air or other gas was admitted, true absorption occurred, that is, the energy was partially converted into heat. The ratio of the amount of energy scattered to the amount absorbed was found to be a function of the pressure of the gas mixed with the mercury vapor. When the scattered radiation from a directly illuminated tube was allowed to fall on a second quartz tube containing mercury vapor, it was found that the vapor in the second tube gave out an extremely homogeneous radiation, which was called "secondary resonance radiation." In this way a "resonance lamp" was constructed. The light

from this lamp was extremely sensitive to the presence of the mercury vapor in the air, being very easily absorbed by it. A layer of mercury vapor 5 millimeters thick at a pressure corresponding to room temperature—approximately $1/76000$ of an atmosphere—was sufficient to cut down the intensity one-half. In one experiment, a quartz bulb, in which mercury had been heated, was afterwards cleaned with nitric acid and distilled water and then heated almost to redness. Even after this treatment it cast an almost totally black shadow when photographed by the light from the resonance lamp.

A continuation of the work on iodine vapor (see 1911 YEAR BOOK) with a 40-foot spectrograph gave results which are full of suggestion for future work. For example, with the high resolving power of this instrument the absorption spectrum of iodine was found to contain many thousand lines—Wood estimates the number at 50,000. In the region covered by the green line of mercury, $\lambda = 5460.7$, no less than seven distinct lines were found. These were comprised within a difference of wave length of less than 0.4 of an Angström unit. In the red, orange, and yellow parts of the spectrum, the lines were found to be even more closely crowded together. In Wood's previous work, he showed that the resonance spectra of iodine when excited by the mercury arc consisted of three superposed series of lines—one excited by the green line and the other two by the two yellow lines. By using suitable absorbing screens, he has succeeded in separating the effect of the green line from the other two. This spectrum was found to consist of a series of thirty-seven double lines, the differences in frequency being approximately constant, and two lines of the series being missing. This result is somewhat similar to his previous results for sodium vapor, except that in that case it was the differences in wave length which were constant. The series excited by the two yellow lines were somewhat similar, though the relation between the members of the series were so complex that no relation between frequencies or wave lengths was apparent.

While Wood has been the leader in this line of investigation, the researches of Dunoyer on sodium vapor and of Franck and Hertz on iodine vapor have added considerable to our knowledge of these very complicated effects. Franck and Hertz studied the fluorescence of iodine vapor under the influence of polarized light and showed that in the direction perpendicular to the plane of polarization of the exciting light, the intensity of the fluorescence was 16 per cent. smaller than in the plane of polarization. The question whether the radiation from a luminous gas is due primarily to its temperature is one of great importance in the theory of radiation. An equation has been deduced on theoretical grounds giving the width of a spectrum line as a function of the wave length, the absolute temperature, and the mass of the vibrating particle. The width of the spectrum line can be measured by interference methods, and hence the temperature of the radiating particle can be deduced. Using this as the method of attack, Fabry and Buisson studied the spectra of the rare gases—helium, neon, and krypton—when subjected to an alternating current discharge. The discharge tubes were surrounded by a water bath at room temperature, and it was assumed

that the temperature of the gas in the tube was the same as the temperature of the surrounding bath. Measurements were also taken with the tube immersed in liquid air. The results at room temperature agreed with the theoretical results within 1 per cent. The results at liquid air temperature differed from the calculated results by less than 10 per cent., the deviation being such as would result if the temperature of the gas were slightly greater than that of the liquid air. These results are in general accord with the principles of the kinetic theory of gases. They indicate that the mass of the luminous particles is of the same order of magnitude as that of the atoms, and that the temperature of the luminous gas is not very much different from that of its surroundings. Hence the luminosity of the gas cannot be due primarily to high temperature.

Following up this line still further, Fabry and Buisson have made approximate determinations of the temperatures of various sources of light. In the case of the Cooper-Hewitt lamp, the maximum temperature possible was calculated to be 1200°C . This is undoubtedly too high, since the effect of impacts between the luminous particles in this case is certainly not negligible, as is implicitly assumed in the calculations. Experiment also gives a much lower value for this temperature. Hence in this case also the temperature cannot be the sole cause of the radiation. The temperature of the arc between iron electrodes was calculated to be 2400°C . Here the effect of impacts is very slight. This line of attack promises excellent results for the future.

FIGGERIES. See GARBAGE AND REFUSE DISPOSAL.

PITNEY, MAHLON. An American jurist, appointed on February 19, 1912, associate justice of the Supreme Court of the United States. He was born in Morristown, N. J., in 1858, and graduated from Princeton University in 1879. He studied law and was admitted to the bar in 1882, practicing at Morristown, N. J. He was elected to the Fifty-fourth and Fifty-sixth Congresses, 1895-1899, and resigned his seat on January 10, 1899. From that year until 1901 he was a member of the New Jersey Senate and its president in 1901. In 1901 he was appointed associate justice of the Supreme Court of the State and served in this position until 1908, when he was made chancellor for the term expiring 1915. See UNITED STATES, *Federal Judiciary*.

PITTSBURGH, PA. See CITY PLANNING.

PITUITARY GLAND. See SURGERY.

PLAGUE. Bubonic plague made its appearance in the West Indies in 1912, giving rise to some alarm and causing a stiffening of quarantine precautions in the seaports of the United States. Up to August 6, 47 cases had been reported in Porto Rico, 23 of which were fatal. Three cases were also reported from Havana and others from the island of Trinidad. The rat is the main factor in the spread of plague, but other rodents may act as carriers and serve as a reservoir in certain localities, as, for example, the ground squirrel in California and a species of marmot, called tarbagan, in Manchuria. Attention has of late been directed to the mongoose, an animal allied to the rat and squirrel by nature and habits, which swarms in Porto Rico, where it is said

to have been introduced to kill off the rats. It has been proved that this rodent does become infected with the *Bacillus pestis* and that it is a possible if not probable carrier. Since 1904, when the present pandemic began, plague has circled the globe. From south-central China, where it has been endemic for centuries, the disease first invaded Canton, Hong-kong, Amoy, and Macao. It then spread to India, Japan, and Asiatic Turkey; to Russia, Austria, and Portugal in Europe, and to a number of localities in Africa; then in 1899 to Hawaii, New Caledonia, and to various countries in South America; in 1909 to Australia, New Zealand, the Philippines, Germany, Great Britain, and California. By 1911 the plague had invaded those countries having the most extensive maritime commerce. In the western hemisphere, by 1907, plague had been reported in Argentina, Brazil, Chile, Mexico, Panama, Paraguay, Peru, Trinidad, and Uruguay, and in the United States in the States of California and Washington. The cases recently reported in Porto Rico and Cuba are the first known to have occurred in either place during the present pandemic. See VITAL STATISTICS.

PLANTEN, JOHN R. A Dutch public official, consul-general for the Netherlands in New York City, died December 8, 1912. He was born in Amsterdam in 1834 and removed to New York with his parents at the age of ten. He was educated in the public and private schools of New York City and entered the manufacturing firm of his father. In 1874 he was appointed vice-consul of the Netherlands in New York, and in 1883 consul-general. From time to time he had charge of the consular interests of the Grand Duchy of Luxemburg. He acted as chargé d'affaires of the Netherlands at Washington during the absence of the ambassador. He received many honors from foreign countries during his years of service. He was a member of many foreign and American historical societies.

PLATINUM. The entire output of crude platinum in the United States is obtained from placer mines in Oregon and California. These mines also produce gold. The production in the United States increased slightly in 1911. This was due undoubtedly to the higher prices paid for the metal. There were mined in 1911 628 troy ounces, an increase of 238 ounces compared with the output in 1910. The value of the product of 1911 was \$18,137, an average price per ounce of \$28.87. Of the total output California produced 511 troy ounces and Oregon 117.

IMPORTS AND EXPORTS. The total amount of platinum imported into the United States in 1911 was 122,751 troy ounces, valued at \$4,886,207. This includes platinum ore or crude platinum, ingots, bars, sheets and wire, and manufactured products. The total output of crude platinum in the world in 1911 was 314,323 troy ounces. Of this by far the larger quantity came

from Russia, where, it is estimated by the United States Geological Survey, 300,000 troy ounces were produced. In Colombia were produced about 12,000, and small quantities in New South Wales and Canada.

PLATT, ISAAC HULL. An American physician and writer, died August 16, 1912. He was born in Brooklyn, N. Y., in 1853, and was educated at the Brooklyn Polytechnic Institute. He was admitted to the bar in Alabama in 1876. Two years later he studied at Columbia University and was admitted to the New York bar in 1877. He afterwards studied medicine and obtained the degree of M. D. in 1883. From 1886 to 1897 he practiced medicine at Lakewood, N. J., and following the latter date he traveled extensively. He was an ardent advocate of the Baconian authorship of Shakespeare's plays. He wrote *Bacon Cryptograms in Shakespeare, and Other Studies* (1905), and *Walt Whitman*, in "Beacon Biographies Series."

POINCARÉ, JULES HENRI. A French mathematician and physicist, died July 19, 1912. He was born in Nancy in 1854 and studied at the Ecole Polytechnique and in the Ecole des Mines. In 1879 he became an engineer and in the same year received the degree of doctor of science. He was called to Paris in 1881, where, in 1886, he became professor of mathematical physics and the calculus of probabilities in the Faculty of Sciences. After the death of Tisserand in 1896 Poincaré succeeded to the chair of celestial mechanics. In 1887 he became a member of the Academy of Sciences in Paris and after 1893 was a member of the Bureau of longitudes, of which, after 1898, he was president. He obtained the prize awarded by King Oscar of Sweden for a work on the problem of the three bodies in 1889. He carried on some of the most important researches and investigations in the modern history of mathematics. His work included a study of the various laws of the theory of functions and research in the domain of physics. He introduced into mathematics a new class of transcendents, which he named the "Fuchsian functions." He contributed to the theory of non-Euclidean geometry, to the theory of differential equations, and the various branches of higher algebra. His written contributions in mathematical subjects are of great importance. The most important of these are: *Les méthodes des nouvelles de la mécanique céleste* (3 vols., 192-99); *Electricité et optique* (2 vols., 1890-91); *Cours de physique* (13 vols., 1890). He also published important memoirs on mathematics and physics in the leading mathematical journals of France and Germany. He was a cousin of Raymond Poincaré, French premier, and was a member of the French cabinet.

POLAR EXPLORATION. ANTARCTIC. Captain Roald Amundsen reached the South Pole on December 16, 1911. The YEAR BOOK recorded last year the arrival of his party on the *Fram* at the Bay of Whales, an indentation in

the Great Ice Barrier, on January 14, 1911, the landing of the stores, their transportation to the top of the barrier ice, and the building of "Framheim," the house that served as quarters for the expedition. The ship with a crew of 9 men, including Captain Nilsen, then started north, leaving 9 men in the land group. On February 10, Amundsen with 3 men, 18 dogs, and 3 loaded sledges started south to establish the first provision depot. For traveling and for hauling power Amundsen placed his whole trust in skis and Eskimo dogs, and the results justified his choice. Sledging rapidly over a smooth, white snow plain, they reached 80°S. on February 14. They had covered 99 miles, and after caching 1300 pounds of provisions, returned to camp in two days. They left the station again on February 22 to plant supplies as far south as possible. Five days later, the party reached 81°S. parallel, where they left 1150 pounds, and on March 8 reached 82°S., where they left 1375 pounds of food. Before winter began more supplies were added to the first station, or a total of 6700 pounds of advanced provisions in three caches. To insure finding the depots, rows of signs and flags were planted on opposite sides of each of them, extending at right angles across the N-S. route of March and five miles from the caches. It was proven later that the depots could easily be found even in a dense fog. Before the sun disappeared the seals killed weighed 132,000 pounds, an ample supply both for men and dogs.

The winter passed comfortably and all enjoyed the best of health. Experience had shown that the sledges were heavier than need be, and they, and other items of equipment, were reduced in weight. Meteorological observations were taken incessantly. The weather, on the whole, was fine. During the year at the station there were only two moderate storms. It was very cold, however, and the mean annual temperature of 26°C. was perhaps the lowest ever recorded. On October 20 the spring season was so well established that it was deemed safe to begin the southern march. The party numbered 5 men with 52 dogs and 4 sledges. The sledging was fine till 81°S. was passed, when, for nineteen miles, very dangerous crevasses had to be crossed. The supplies were in good condition at the two depots. Beginning at 80°S., a line of 150 snow pillars were erected along the route, as guides on the return, and they served so well that the return was made on exactly the same road. The ice was very even south of 82°, and rapid progress was made. At every unit parallel of advance a supply of provisions was cached. At 83°S., South Victoria Land was seen in the southwest. From day to day, new mountains from 10,000 to 16,000 feet high came into view. On November 11 they saw land directly south, and it was soon evident that a mountain range in about 86°S. and 163°W. crosses South Victoria in an easterly and northeasterly direction. The route had been directly south from headquarters when, on November 17, they left the ice to pursue their journey on the land. This was in 85°7'S. and 165°W.

The ascent to the lofty plateau of the continent was begun between the high peaks of South Victoria Land. This was not difficult till glaciers became the only highway to the south, and their steep and rugged surface offered the most formidable difficulties. Twenty dogs were sometimes required on a single sledge

in spite of the greatly reduced loads. Dogs were killed to eke out the diminishing supplies, and the party was considerably delayed by snow gales. They finally reached the great interior plateau, and found themselves, on December 6, at an elevation of 11,024 feet above the sea. The land now sloped very gently towards the south, the going was good, but there was plenty of time, and the average advance a day was only about 17 miles. On December 15 a round of observations seemed to show that their latitude was 89°55'S. Next day, they moved their tent the remaining 5¼ miles south, and the observations they took in the next 24 hours are now in the hands of the University of Christiania. Amundsen had with him a small tent to be erected at the South Pole. He left the Norwegian flag floating above the tent, named the place "Polheim," and the land enclosing the South Pole, "King Haakon VII. Plateau."

He had covered 863 miles on his journey to the pole, his mean daily marches being fifteen miles. After an absence of ninety-nine days, he reached headquarters again on January 25, 1912, making an average of 22.1 miles a day. He found that two ranges unite in one mighty mountain range in 86°S., which extends in a southeasterly direction. Lieutenant Prestrud and two men reached King Edward VII. Land, but were not able to ascertain its limits. The *Fram*, before returning, made a voyage from Buenos Ayres to Africa and back, and took oceanographical observations at sixty stations.

No news was received from Capt. R. F. Scott's British expedition in Antarctica till March 31, 1912. In the late summer of 1911 he established supply depots for his expedition to the South Pole. Long excursions were also made by members of the scientific staff to the mainland of South Victoria Land. The winter was spent in camp at McMurdo Sound. Scott started south early in November, 1911, for the Pole. The weather was bad and snowstorms frequent. Sledging was so difficult after the party reached Beardmore Glacier (which Shackleton in December, 1908, ascended to the continental plateau), that the explorers could advance only about five miles a day. On January 4, 1912, Lieutenant Evans and some of Scott's sledgemen turned back, leaving the advance expedition at 87°35'S., at an altitude of 9800 feet. Scott had a month's provisions for the advance march, and as he had attained the smooth plateau where travel was easy, he was able to reach the South Pole on January 18, where he found Amundsen's tent and records. On the return journey the whole party perished. (See SCOTT, ROBERT F.) During the second summer season a great deal of research was carried on, and it is expected that the scientific results of this expedition will be especially important.

The Australasian Antarctic Expedition under the leadership of Dr. Douglas Mawson successfully landed on the coast of Wilkes Land early in January, 1912. Dr. Mawson set up his first station at Point Alden, the eastern part of Adelie Land. Meanwhile Captain Davis, master of the *Aurora*, which had taken the party south, proceeded along the coast to the westward. No expedition for seventy-two years, since Wilkes was in these waters, had approached this forbidden land. The vessel skirted the coast, or the barrier ice that fronted parts of it, for about 1200 miles, proving the exist-

ence of Wilkes Land, which since the days of Capt. James Ross had been disputed by some foreign geographers. The voyage of the *Aurora* thus did much to support the theory of there being one continental land mass round about the South Pole. Dr. Mawson had with him, at Point Alden, fourteen men, and expected to spend the Antarctic winter in scientific investigations.

On December 10, 1911, Dr. Filchner, the leader of the German Antarctic Expedition, sailed from South Georgia, intending to take a course due south till he reached the northern edge of the pack ice, which he would then follow to the east till he found an opening to the region of Coats Land. Nothing more was heard from the expedition until just after the close of the year, when it was announced that Filchner had returned with a part of his expedition, had discovered new land which he named "Prince Regent Luitpold Land," and new barrier ice, which is regarded as a sure indication of continental land behind it. He expected to return to the eastern part of the Antarctic next season.

ARCTIC. Mr. V. Stefansson returned from the American Arctic in the fall of 1912. His work there covered the years 1908-1912. His main geographical results were outlined in the *YEAR BOOK* for 1911 (p. 574). His sledge routes covered several thousand miles along the north coast of Alaska and Canada, between Point Barrow and Coronation Gulf, including long journeys along the Barter, MacKenzie, Horton, Dease, and Lower Coppermine Rivers, and a northern trip into the southwestern part of Victoria Island to the middle region of Prince Albert Sound. He and his companion, Dr. R. M. Anderson, made large ethnological and zoological collections. He visited and studied thirteen groups of Eskimos in the region east of Cape Bathurst. One of Stefansson's discoveries was the Horton River, which is probably about 200 miles in length and is 350 to 400 yards wide, over fifty miles from the sea. The Horton empties into the Arctic Ocean between Liverpool and Franklin Bays.

Captain Ejnar Mikkelsen and his companion, Engineer Iversen, were found on the coast of East Greenland by the Norwegian fishing vessel *Sjöblomsten*, and safely returned to Denmark. For more than a year they had lived chiefly upon the game they were able to kill. Mikkelsen accomplished the purpose that took him to East Greenland. He found various records and the diary of Mylius Erichsen, who, with his two companions, Brönlund and Hagen, perished after completing the mapping of the unknown coast of Northeast Greenland.

According to Erichsen's reports, Peary Channel does not extend from Robson Sea to the Greenland Sea, and therefore is not entirely the northern boundary of Greenland.

Mr. Ernest De K. Leffingwell spent the summer in continuing his study of the north coasts of Alaska, and will return there to resume his work next summer.

Dr. M. A. Quervain, a Swiss meteorologist, crossed the inland ice of Greenland from Holstenborg, in West Greenland, to Angmagssalik, on the east coast.

POLIOMYELITIS, EPIDEMIC. INFANTILE PARALYSIS. Important advances in our knowledge of this disease were made in 1912. Several observers had already demonstrated the

virus of poliomyelitis in the nasopharyngeal mucosa and tonsils of monkeys and human beings infected with the disease; but attempts to demonstrate the virus in the secretions of the nasopharynx and intestines had failed until Kling, Wernstedt, and Pettersson presented their work, in which they showed, for the first time, the infectiousness of the secretions of the nasopharynx and intestines of persons who had died of poliomyelitis. At the International Congress of Hygiene and Demography in Washington Pettersson presented a summary of the more recent investigations of Kling, Wernstedt and himself, in which the virus of poliomyelitis was shown for the first time to exist not only in the buccal and intestinal secretions of persons in the acute stage of the disease but convalescents, persons suffering from clinically obscure infections of poliomyelitis, and apparently healthy persons in the immediate vicinity of poliomyelitis patients. Most important was the report by Dr. Pettersson that he and his colleagues had succeeded in demonstrating the virus in the buccal and intestinal secretions of persons who gave no history of recent illness but who had been in intimate contact with other persons in their own families sick with poliomyelitis. "Virus carriers" were found in six families. It was thought that such carriers were common during epidemics of poliomyelitis, probably exceeding the number of persons with clinically recognizable infections. The work of these men would seem almost to justify the conclusion that the infection is disseminated by transfer of the virus directly from person to person, "virus carriers" and abortive cases accounting to a large extent for the spread of the disease.

The possibility that an insect carrier might be implicated in the spread of poliomyelitis has also received considerable attention. Dr. Richardson, of the Massachusetts State board of health, had summarized the investigations of the disease made in that State from 1907 to 1912, in which the evidence was strongly in favor of fly transmission. Impressed with this evidence, Dr. Rosenau, in cooperation with the State board of health, undertook experiments to determine whether the stable fly, *Stomoxys calcitrans*, could transmit poliomyelitis. Dr. Rosenau stated that six out of twelve monkeys exposed daily for several weeks to the bites of large numbers of *Stomoxys*, which were also daily allowed during this time to bite monkeys experimentally infected with poliomyelitis, had developed symptoms of the disease. Sections of the spinal cord from one of the dead monkeys showed lesions characteristic of poliomyelitis, while the cords of the others showed degenerative changes which, in the absence of infiltrative lesions, were not considered sufficiently typical to justify a diagnosis. At present the question remains undecided as to whether the disease is directly contagious, whether a biting fly is a necessary factor in its transmission, or whether it may be conveyed in more than one way. If the stable fly should prove to be the chief or only means of transmitting the disease, its prevention and eradication will be a comparatively easy matter. A campaign of destruction against this species of fly should be much more easily conducted than those which have been waged against the mosquito and other insects which have been shown to be transmitters of disease.

POLITICAL ECONOMY. A considerable number of articles will be found elsewhere treating various problems and movements of economic interest. A general survey of business conditions during the year is given under **FINANCIAL REVIEW**. In the article on **LABOR** will be found references to the various topics treating different aspects of the labor problem. The article on **BANKS AND BANKING**, which includes statistics of all banks in the United States and the proposals for banking reform, is supplemented by articles on the several kinds of banking institutions, **CURRENCY REFORM**, and **AGRICULTURAL CREDIT**. Other articles related to the general subject of economics are **INSURANCE**, **PARCEL POST**, **OLD-AGE PENSIONS**; **PRICES**; **SOCIAL ECONOMICS**, and subjects there referred to; **TARIFF**; **TAXATION**; **TRUSTS**, and **UNITED STATES STEEL CORPORATION**.

AMERICAN ECONOMIC ASSOCIATION. The twenty-fifth annual session of this body was held in Boston, December 27-31. During the year the association increased considerably in membership, a special effort being made to this end by the secretary, Prof. T. N. Carver of Harvard University. The association members met first with the American Sociological Society and the American Statistical Association for the presidential addresses of these bodies, and, on the evening of December 27, with the American Historical Association to hear the address of its president, Theodore Roosevelt. In joint session with the Association for Labor Legislation, the "Theory of the Minimum Wage" was discussed by Henry R. Seager of Columbia, John R. Commons of Wisconsin, and a number of others. The necessity of minimum-wage legislation was well established; it was argued that the administration of such legislation should be placed in the hands of an administrative bureau rather than left to the courts; it was also brought out that minimum-wage legislation is only one phase of the movement for establishing minimum social standards in all aspects of industry, being thus comparable to sanitary legislation and limitation of hours. Prof. Irving Fisher of Yale, in discussing the "Rising Cost of Living," showed that this phenomenon is being experienced everywhere, that it will probably continue for many years, and that the most effective remedy is standardization of the purchasing power of the dollar. For a brief statement of his theory see **PRICES**. Prof. Frank A. Fetter, president of the association, in his address on "Population or Prosperity," developed the idea that unrestrained immigration will inevitably check the advance in the general level of economic welfare. He thought the optimistic theory of population commonly held in the United States should be revised. The subject of "Banking Reform" was discussed by Prof. E. W. Kemmerer of Princeton, Prof. J. H. Hollander of Johns Hopkins, Prof. O. M. W. Sprague of Harvard, and others. Other subjects discussed were "Economic Theory: Theories of Distribution," by Prof. Simon N. Patten of Pennsylvania; "Agricultural Economics: Farm Management," by Prof. H. C. Taylor of Wisconsin, Professor Carver, and others; and finally the "Economics of Governmental Price Legislation," by Prof. J. M. Clark of Amherst, C. W. Wright of Chicago, and others. The 1913 session will be held at Minneapolis.

The Hart Schaffner and Marx Company of

Chicago offer several annual prizes for the best papers on a selected list of economic subjects. In 1912 the first prize of \$1000 was awarded to Albert H. Leake, inspector of technical education for Ontario, Canada, for "Industrial education, its problems, methods and dangers." A second prize of \$500 was awarded to Harry E. Smith, Ph. D., instructor in Cornell University, for "The United States federal internal tax history from 1861 to 1871."

BIBLIOGRAPHY. Below is a classified list of some of the principal works of the year. In addition to these references, lists will be found under **SOCIAL ECONOMICS**, **LABOR**, **SOCIOLOGY**, **TAXATION**, and **WOMEN IN INDUSTRY**.

Layton, *An introduction to the study of prices; with special reference to the history of the nineteenth century*; W. W. Carlile, *Monetary economics*; W. Ashley, *The rise in prices and the cost of living. An inquiry into its extent and causes*; M. Sefourmantelle, *Agricultural credit*; edited by J. Laurence Laughlin, *Banking Reform*.

TRANSPORTATION. J. F. Strombeck, *Freight and Classification*; J. C. Hemmeon, *History of the British post office*; Samuel O. Dunn, *The American Transportation Question*; Charles Lee Raper, *Railway Transportation*.

POLITICAL PLATFORMS. See **PRESIDENTIAL CAMPAIGN**.

POLO. No international matches for the

Challenge Cup were held in 1912, and interest was chiefly centred in the championships decided at Narragansett Pier. Cooperstown won the open championship, defeating the Bryn Mawr team in the final match by 9½ goals to 5½. The winning four included F. S. Von Stade, C. C. Rumsey, C. P. Beadleston and Malcolm Stevenson, and the losing team was made up of Alex Brown, H. W. Harrison, R. E. Strawbridge and C. R. Snowden. The Cooperstown players also captured the junior championship, winning the final match against Piping Rock by 11 to 6½, and were victors in the matches for the Governors' Cups at Cedarhurst, defeating Great Neck's first team by 11 to 8½. The senior championship was won by the Meadow Brook four, which defeated Bryn Mawr 15 to 3½. The Meadow Brooks comprised Foxhall Keene, Lawrence Waterbury, J. M. Waterbury and E. S. Reynal. Harry Payne Whitney, who has been selected as the captain of the American team for the international challenge matches to be held this year, played in only one of the 1912 cup contests. This was in the match for the Westbury challenge cups, in which Meadow Brook defeated Great Neck by 11 to 6½. Playing with Whitney were Harrison Tweed, J. A. Rawlins, A. S. Burden and J. M. Waterbury. The Great Neck four were Lawrence Waterbury, W. R. Grace, Hamilton Hadden and J. G. Milburn, Jr. Much interest was taken in polo in army circles in 1912, and several new clubs joined the national association. The army championship was decided in matches played at Washington.

POOL. See BILLIARDS.

PORTER, JAMES DAVIS. An American public official, formerly governor of Tennessee, died May 18, 1912. He was born in Paris, Tenn., in 1828, and graduated from the University of Nashville in 1846. After studying law he began its practice in 1850. From 1859 to 1861 he was a member of the Tennessee legislature. He served as adjutant-general on the staff of Major-General Cheatham, C. S. A. In 1870 he was a delegate to the Tennessee Constitutional Convention, and in the same year was appointed Judge of the Twelfth Judicial Circuit. He served as governor of Tennessee from 1874 to 1878. For several years after he was president of the Nashville and Chattanooga Railway Company and from 1885 to 1889 was assistant secretary of State. He was appointed minister to Chile in 1893, serving until 1897. From 1901 until the time of his death he was chancellor of the University of Nashville. He was president of the Tennessee Historical Society. He wrote a Confederate military history of Tennessee.

POMPEII. See ARCHAEOLOGY.

PORTLAND CEMENT. See CEMENT.

PORTO RICO. POPULATION. The population of Porto Rico, according to the Thirteenth Census taken in 1910, was 1,118,012, compared with 953,233 in 1900. The chief cities with their population in 1910 are as follows: San Juan, 48,716; Ponce, 25,005; Mayaguez, 16,563; Caguas, 10,354; Arecibo, 9612; and Aguadilla, 6315.

AGRICULTURE. The chief industries of the island are those connected with agriculture. The conditions during the fiscal year 1912 were favorable to these pursuits, and the output of all products was substantially increased. The acreage under cultivation on the island was

largely extended, as has been the case each year in recent years. The scientific study of agriculture, stimulated by federal and private experimental stations, and the board of education, established during the year, all contributed to the improvement of agricultural conditions. See AGRICULTURAL EXPERIMENT STATIONS. Increased production of sugar, which has marked that industry since the removal of the tariff restrictions in 1911, was again marked in 1912. The production in that year was 367,000 tons, compared with 323,000 tons in 1911. The growth of these industries is shown by the fact that in 1901 the exports of sugar were less than 7000 tons. The growth of the tobacco industry is shown by the fact that the output of cigars in 1912 was more than fourteen times greater than in 1901. In the fiscal year 1911-12 the output of cigars reached 281,000,000, an increase of 75,000,000 over the preceding year. Of these, 170,000,000 were consumed in the United States. Less than one-fourth of the tobacco crop is shipped in the leaf, the remainder being shipped in manufactured form. The growing of coffee continues to be an industry of increasing importance in the island. The crop of 1912 was the largest yet produced, and it was sold at profitable prices. The value of the coffee sold abroad during 1911-12 was \$6,754,913. The growing of coffee is being extended throughout the mountains of the island, the soil and climate of which are especially adapted to the successful culture of the highest grades of coffee to be found in the world. The government of Porto Rico has established a commercial agency for the exploitation of Porto Rican coffee in New York City. The shipment of fruit for foreign markets increased in value during the year, amounting to \$2,377,762. Fruits most successfully raised are oranges, pineapples, and grapefruit. These find ready sale in the United States. Fruit-raising in Porto Rico is rapidly becoming one of the principal industries of the Territory. Much attention is being given to the production of coconuts. The value of shipments during 1912 showed a continuation of the gradual increase they have received during recent years, when they reached \$300,000. The industries mentioned comprise the leading agricultural activity of the island.

COMMERCE. The commerce in the fiscal year 1912 between Porto Rican and other points aggregated \$92,631,886, of which \$49,705,413 was exports and \$42,926,473 imports. The imports in 1911 amounted to \$38,786,997 and the exports to \$39,918,367. The total trade with the United States amounted to \$80,297,946, compared with \$69,437,367 in 1911. Sugar was the most valuable of the exports. There were exported in 1912 367,145 tons, valued at \$31,544,063. Next in importance were manufactured and unmanufactured tobacco, the value of which is noted in the paragraph above. Other imports of considerable value included sea island cotton, \$59,342; hides and skins, \$93,243; and molasses, \$700,981. The most important imports were those of rice, \$4,894,747. Other important imports were manufactures of iron and steel, \$4,445,396; cotton and cotton cloths, \$2,933,194; other manufactures of cotton, \$2,642,448; leather \$1,599,047; pork, \$1,346,333.

COMMUNICATIONS. During the year 69 kilometers of highway were completed. The total length of the insular road system was increased

to 1069 kilometers. Road construction during the past two years, a considerable portion of which has been done by convict labor, has averaged in cost \$5500 per kilometer.

HARBORS AND DOCKS. The scarcity of adequate accommodations for vessels in the ports of the island has been a matter of much concern and study ever since the American occupation. Important progress toward the solution of existing defects has been made. A private company has completed a large and commodious dock and warehouse system at San Juan and a franchise was granted during the year to the American Railway Company under which work on another pier has been commenced. The Legislative Assembly in 1912 passed an act creating a harbor for the port of San Juan and authorizing a \$500,000 bond issue to be used in the construction of water-front improvements. A \$300,000 pier of modern type was in course of construction at Ponce at the end of the year. This will provide necessary facilities for handling cargo for many years to come. Plans for improving the port of Arecibo were under consideration during the year, as were improvements required at other ports on the island.

IRRIGATION. Plans for irrigating the dry zone between the foothills and the southern coast, a strip of land approximately forty miles in length and averaging two in width, made great progress as the result of favorable weather conditions in 1912. All the contracts except two have been completed. The canals, syphons, power stations, etc., that form a part of this project were nearing completion at the end of the year.

EDUCATION. The average number of pupils in daily attendance in public schools during 1912 was 114,834, which is approximately 10 per cent. of the total population of the island. The pupils enrolled numbered 160,657, an increase of 15,000 over the enrollment for 1911. Since the plan of universal education was first inaugurated in Porto Rico in 1900, the enrollment has increased from 20,000 to over eight times that number. The educational facilities at present afforded are far from sufficient. It is estimated that there are not less than 350,000 children of school age in Porto Rico and with the present accommodations and number of teachers, not half of them can be reached. The attention of the Department of Education has been concentrated upon so extending the school system as to give some education to the greatest number of children. Much thought is being given at the present time to the character of the instruction given, especially to the importance of gradually including in the course of study, trade or vocational training. There are at present manual training and domestic science courses. Instruction in agriculture is given by means of practical demonstration and work. High schools are maintained at San Juan, Ponce, Mayaguez, and Arecibo. The educational system of the island is completed by the University of Porto Rico, where a college of liberal arts, an agricultural and a training school for teachers are maintained. The total expenditures for school purposes during the fiscal year 1912 was \$980,375 by the insular government, and \$386,434 by the local government.

HEALTH AND SANITATION. A campaign was carried on during 1912 for the reduction of the mosquitoes in San Juan. This was in

charge of Major Noble, who had formerly been engaged in this work in the Panama Canal Zone. As a result of these efforts, San Juan, formerly infested with mosquitoes, was made practically free from this pest, and their number was greatly diminished in the suburbs of the city. Their complete reduction could not be accomplished on account of the absence of sewers, poor surface drainage, and adjacent swamp lands. Mosquito work was also carried on in other municipalities. There was a material decrease in the number of cases of typhoid fever during the year due to the strict enforcement of sanitary rules. The number of deaths from tuberculosis has drawn the attention of the health authorities to the urgent necessity of improving the faulty housing conditions of the various municipalities. The work of the anemia or hookworm service progressed throughout the island during the year. Each health officer maintained a dispensary where persons suffering from this disease are treated and their condition observed. On June 14, 1912, the sanitary authorities of the island learned that an individual having symptoms of bubonic plague had died in San Juan and an immediate investigation was made. The fact of plague was established and prompt and effective measures were immediately adopted to check infection and prevent a general epidemic. The total expenditures of the sanitation service during the year were \$639,029.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions of the island include an insane asylum, an asylum for the blind, a boys' charity school, a girls' charity school, several penitentiaries, and a reform school for boys. There were in the prisons of the island on June 30, 1912, 1585 prisoners.

FINANCE. The receipts of the island from all sources during the fiscal year aggregated \$6,665,348. This was the largest revenue in the history of the island. The disbursements amounted to \$4,880,669.

POLITICS AND GOVERNMENT

The following changes in personnel took place in 1912: Walter H. Pitkin, Jr. was appointed attorney-general April 21, and Allen H. Richardson, treasurer January 25. Foster V. Brown, attorney-general, resigned on April 20, 1912. Edwin Grant Dexter, commissioner of education, resigned June 30, 1912, and Samuel D. Gromer, treasurer, on January 24, 1912.

LEGISLATION. The sixth legislative Assembly of Porto Rico convened in second session on January 8, 1912, in accordance with the law, remaining in session 60 days. As several matters of importance had not been disposed of on March 7 at the close of the regular session, a special session was called and continued until the work of the legislature had been satisfactorily completed on March 14. During this session 85 laws and 19 joint resolutions were enacted. Of special importance are the sanitation law, the law providing for a bureau of labor and the act providing for minority representation in the House of Delegates. The election law was so amended as to insure the secrecy of the ballot, provide for minority representation in the House of Delegates, and correct various minor deficiencies. The bill providing for citizenship for the people of Porto Rico, the bill to substitute the original organic act of Porto Rico, the bill provid-

ing for a substitute judge in the United States district court, and the bill to authorize the exchange of certain insular government property for portions of the federal military reservation, are still awaiting final action in Congress. The most importance of these bills is that providing for citizenship. The people of Porto Rico have waited for more than ten years to be admitted to American citizenship without action by Congress having been taken. The governor in 1912 was George R. Colton.

PORTSMOUTH, ENGLAND. See DOCKS AND HARBORS.

PORTUGAL. A European republic occupying the western coast of the Iberian Peninsula. Capitol, Lisbon.

AREA AND POPULATION. Area of continental Portugal, 88,740 square kilometers; of the Azores, 2388; of the Madeiras, 815—total, 91,943 square kilometers (35,499 square miles). Total population, December 1, 1900, 5,423,132 (Azores, 256,291; Madeiras, 150,574). Population of Lisbon, 356,009; Oporto, 167,955; Braga, 24,202; Funchal (Madeira), 20,844; Ponta Delgada (Azores), 17,620; Portalegre, 11,820.

Primary education is theoretically compulsory, but over 70 per cent. of the population over 6 years of age remain illiterate. All creeds are now tolerated. The law of 1911 for the separation of church and state discarded the Roman Catholic as the national faith.

PRODUCTION. Three-fifths of the population are engaged in agriculture. Of the total area 26.2 per cent. is under crops and pasture, 3.5 per cent. under vineyards, 3.9 per cent. under orchards, 17.3 per cent. under forest, 43.1 per cent. barren or uncultivable. Wine, olive oil, and fruits are produced for export; cattle, sheep, and goats are raised. There are valuable mineral deposits, but little worked. In 1910, 239,745 metric tons of sulphur were mined, 3768 tons of copper precipitate, 17,630 of copper pyrites, 1991 of copper ore, 947 of wolfram, 6 of silver ore, 919 of lead ore, 138 of uranium, 9 of tin ore, 8149 of anthracite, 3360 of iron, and 974 of arsenic.

COMMERCE, ETC. In the table below is given the trade for two years in contos (1000 milreis):

	Imports		Exports	
	1909	1910	1909	1910
Raw materials.....	28,404	30,513	6,866	7,495
Foodstuffs	18,662	16,060	15,462	19,129
Yarns and textiles.....	6,582	7,828	2,177	3,064
Various manufs.....	5,246	5,063	2,098	2,461
Machinery, etc.....	4,694	5,848	149	134
Live animals.....	2,859	3,456	4,142	3,534
Trade	124	148
Total mdse.....	66,607	69,816	30,894	35,727*
Coin and bullion	36	299	905	602
Total	66,643	70,155	31,799	36,329

* Wine, 12,416,000 milreis (1 milrel is equal to \$1.08); cork, 4,518,000; cotton textiles, 2,645,000; fish, 2,424,000; tropical fruits, 1,845,000; copper, 943,000; timber, 909,000; olive oil, 702,000.

Vessels entered (1910), 11,560, of 20,615,688 tons. The merchant marine included (1911) 66 steamers (70,193 tons), and 259 sailing (43,844).

Railways in operation January 1, 1911, 2894 kilometers (state, 1081). Telegraph lines (1907), 9431 kilometers; wires, 21,404.

FINANCE. An English source gives the estimated revenue and expenditure for the year 1911-12 at £15,247,495 and £15,637,625 respectively, as compared with £14,160,775 and £14,699,976 in 1910-11. The regular excess of expenditure over revenue during many years has added to the national debt. Foreign debt, 181,039,200 milreis; internal, 629,215,224, including 82,530,995 floating debt at 6 per cent. A recent decree alters the name of the monetary unit from milreis to escudo. The escudo has the same value as the milreis, but is divided into 100 centavos, whereas the milreis represents 1000 reis. The centavo equals 10 reis.

NAVY. The fleet includes 1 armored coast defense vessel of 3030 tons (the *Vasco da Gama*, remodeled in 1902), 4 cruisers (9410 tons), 6 gunboats of date 1895-1909 (2573), 11 gunboats of date 1874-90 (4300), 1 torpedo gunboat (535), 4 torpedo boats of date 1880-1886 (252)—total, 27 vessels of 22,100 aggregate tons; besides training ships, yachts, etc.

ARMY. The army law passed in 1911 by the National Assembly provided for active, reserve, and territorial forces organized on a militia basis, with every citizen liable for military service from his 16th to 45th year. At 20 years of age there was liability to compulsory service, which in the infantry was made 4 months and for the mountain troops 8 months. In May, 1912, the annual contingent would have been 46,000 men, but lack of barrack accommodations and other facilities, as well as financial conditions, made it necessary to reduce the number to 35,000, and 10,000 were accordingly excluded on a stricter medical examination, the rejected young men paying a fine for inefficiency. The republic was divided into 8 large recruiting areas, each of which support an active division and 2 reserve infantry brigades, as well as a necessary formation for the territorial forces. In 1912 there were 4 divisions of the active army, garrisons at Madeira and the Azores, and the troops of the reserve, while in the colonies an army of about 10,000 was maintained.

GOVERNMENT. The president, elected for four years, is the executive. The legislative power is exercised by a congress composed of a chamber of deputies (164 members) and a senate (71 members). President August 24, 1911-1915, Manoel de Arriaga. The ministry as constituted June 16, 1912, was composed as follows: Dr. Duarte Leite, premier and minister of the interior; Aug. de Vasconcellos, foreign affairs; F. Correia de Lemos, justice; Vicente Ferreira, finance; A. da Costa Ferreira, public works; Col. A. X. Correia Barreto, war; F. Fernandes Costa, marine; J. B. Cerveira Sousa, colonies.

HISTORY

CHURCH AND STATE. The government proceeded vigorously against the hierarchy for its refusal to accept the separation law. The attitude of the higher clergy toward the new government led to the arrest and trial of several bishops, including the Patriarch of Lisbon, two archbishops and six bishops. By the end of February all the higher ecclesiastics except the bishops of Evora and Braganza, had incurred the displeasure of the Republican government, and during that month the archbishops of Portalegre and Braga and the bishop of

Lamego were expelled for two years. Many of the poorer priests accepted at first the stipends offered by the government, but eventually refused them on account of the steady opposition of the clergy generally to accepting state aid from a government that in their view was guilty of gross injustice toward the church. Many of the priests were imprisoned as political offenders. Although the government maintained a legation at the Vatican "to defend national interests," relations with the Holy See were virtually suspended.

CABINET CRISIS. Parliament was in session till July, and passed a large number of measures, including bills for the payment of senators and deputies, for relief of disabled workmen and for the reward of those who had played a prominent part in the late revolution. In consequence of the dissensions between the Democrats under Dr. Costa, and the Unionists under Dr. Comacho, the two party groups that constituted the main support of the cabinet, the government resigned early in June. A coalition cabinet was formed under Dr. Duarte Leite, premier and minister of the interior, with Senhor Vasconcellos as foreign minister.

THE GOVERNMENT AND THE GENERAL STRIKE. A strike at Evora resulted in the closing of the workmen's associations there and of the arrest of a number of strikers. On January 29 the Workmen's Federation of Lisbon declared a general strike and demanded that the workmen's associations at Evora be reopened and the strikers released. At the first show of violence at Lisbon, the government took energetic measures, declaring the city in a state of siege and suspending constitutional guarantees. The streets were placed under the control of the troops and the authorities arrested a large number of disorderly and suspicious characters. Conditions rapidly improved and after a day or two the trouble was pronounced to be at an end. An important debate took place in the first week of March upon a motion of the leader of the Conservative Republicans for general amnesty to the recent strikers and to political prisoners, and to the Royalists under Captain Couceiro, with the exception of the leaders. The premier declared that such an amnesty was at the present time inopportune and the motion was rejected by a vote of 63 to 22. Disturbances arose in May and June over a street railway strike in Lisbon.

THE ROYALISTS. At a conference between the ex-king, Manoel, and Dom Pedro, the pretender, at Dover on January 22, the latter renounced his claim to the throne. At the beginning of May there were signs of a design on the part of the followers of Captain Couceiro to resume their Royalist raids. A small band of Royalists at that time attacked the customs post at Monaco, and after seizing some of the guns, returned to Spanish soil. During June there were continued reports of Royalist activities, and finally in the first week of July the *émigrés* crossed the border in four columns, each about 200 strong, three in the neighborhood of Verin and the fourth near Minho, but they were defeated and driven back. The Monarchists in Portugal did not join the movement as its leaders had expected. The government called out its reserves and according to official accounts the invasion was an utter failure. Captain Couceiro in command of 300 or 400

men continued in camp on the frontier but was held in check by the Republicans.

Early in July another Monarchist outbreak was threatened at Torres Vedras, but was prevented by the prompt action of the authorities, who made many arrests. Many of the Royalists surrendered owing to lack of provisions. In August the Royalist prisoners were tried by court-martial and sent to the Lisbon penitentiary, which was reported to be so unsanitary and so rigidly administered that few who were confined were likely to survive. A large number of suspects arrested and subjected to severe hardship afterwards proved their innocence.

Difficulties with Spain over the Royalist *émigrés* were finally amicably settled in September, Spain agreeing to the expulsion of Royalist leaders from her territory and to certain measures in regard to future conspiracies against the Portuguese government. Despite the frequent assertions of the authorities that conditions were now quiet and satisfactory, there was evidence of serious disturbance in commerce and industry. Recent events had frightened away capital and the moneyed classes were not sufficiently assured of security to return. There was much complaint of slackness of business.

THE NEW PARLIAMENTARY SESSION. Parliament reassembled in November. There was much criticism of the new Republican government for its failure to redeem the promises which it made at the time of the revolution, and many declared that political conditions were no better than under the monarchy, while economic conditions were distinctly worse. Friends of the government retorted that the Royalists and their sympathizers were largely to blame. The new government had been obliged to devote to the repression of disloyal movements energies which it would have applied to carrying out reforms. Among the important measures to come before it was that for electoral reform.

PORTUGUESE EAST AFRICA, or **MOZAMBIQUE.** A Portuguese colony in Africa, covering an area of 293,860 square miles and having 3,120,000 inhabitants. Lorenzo Marques (10,000 inhabitants) is the capital. The trade is divided among the state territories, the Mozambique Company and the Nyassa Company. There are about 300 miles of railway. Budget (1910-11), 5,418,332 milreis revenue and 5,118,832 milreis expenditure. Governor-general (1912) Dr. A. de Magalhães.

PORTUGUESE GUINEA. A Portuguese colony in western Africa. Area, 13,940 square miles; population, 820,000. Bolama is the capital. Trade 1908: 875,155 milreis imports and 492,238 milreis exports. The budget (1910-11) balanced at 309,900 milreis. The islands of Bolama and Bijagoz belong to the colony. Governor (1912), Lieut. C. A. Pereira.

Because of the rising at Cacheo, reported at the end of February, five Portuguese native soldiers were killed. The rising was attributed to the enforced collection of the hut tax.

Acts of brigandage were attempted by the natives of Satary, who rebelled after the garrison had been diminished by sending a number of the troops to Macao, and the government was obliged to take severe measures to restore order.

POSTAL SAVINGS BANKS. The following table from the report of the Comptroller of

the Currency gives the latest statistics of postal savings banks of all countries:

Country	Number of Depositors	Deposits	Average Deposit
Austria ²	2,261,658	\$ 46,317,746	\$ 20.48
Belgium ¹	2,384,511	157,150,474	65.90

POTASH. See FERTILIZERS; and CHEMISTRY, INDUSTRIAL.

POTATOES. While statistics on the potato crop are not so regularly furnished by all countries as are data on cereal production, the yields and the crop conditions reported by the principal potato-growing countries, particularly Russia and Germany, indicated a world's normal crop, which ranges from about 5 to 5½ billion bushels. Yields in parts of Europe were reduced by an unusually cool and wet season, but the injury resulting to the crop from these unfavorable weather conditions was not nearly so great as the damage sustained by the cereal and forage crops. In many sections, particularly in Austria and Ireland, the fields were so wet when the tubers had matured that harvesting was delayed and the percentage of sound tubers as well as the keeping quality was reduced. The best yields in general were secured on light, dry, sandy soils, which were less affected by the rains than the heavier clayey lands. In the United States and Canada the crop contended with late planting on account of unfavorable spring weather, a brief drought in early summer which temporarily checked growth, and with rainy weather during the latter part of the growing season,

especially in many of the Northern States, which furnish a large percentage of the total yield. The total production of Russia, which is generally outranked only by Germany, was 1,398,950,000 bushels, or about 232,625,000 bushels more than in 1911. The Hungarian crop was estimated at 185,369,000 bushels, and the Irish crop at 2,546,700 bushels, as compared with 3,694,850 bushels the year before. The production of England and Wales amounted to 83,762,000 bushels, or about 22,643,000 bushels less than the preceding crop. Official estimates placed the total yield of Prussia at 1,249,000,000 bushels. Canada in 1912 produced 81,343,000 bushels on 472,400 acres, and in 1911 66,023,000 bushels on 459,100 acres.

The total production of the United States in 1912 amounted to 420,647,000 bushels, an excess of 127,910,000 bushels over the short crop of 1911. The yield secured in 1912 is the highest to date, but the total value of the crop was exceeded the year before. The price paid farmers on December 1, 1912, was only 50.5 cents per bushel, as compared with 79.9 cents a year before, and on this basis the two crops had a total value of \$212,550,000 and \$233,778,000, respectively. The average yield per acre, 113.4 bushels, as given by the Department of Agriculture, is also the highest on record and greater by 32.5 bushels than the preceding average acre-yield. The yields reported for the different States ranged from 125,000 bushels for Arizona to 38,160,000 for New York. The States ranking next to New York in production were: Michigan, 36,750,000 bushels; Wisconsin, 34,920,000 bushels; Minnesota, 33,075,000 bushels; Pennsylvania, 28,885,000 bushels, and Ohio, 20,832,000 bushels. In Maine, the Aroostock County crop was reported short by about 25 per cent., but the crop in the central part of the State was about 25 per cent. above normal. In 1912 every State, except Louisiana, reported an increase in yield over 1911. In the nineteen leading potato-growing States about one-third of the crop grown for market in 1911 was in the hands of the producers on January 1, 1912.

POTATO ROT. See BOTANY.

POTTER, LOUIS MCCLELLAN. An American sculptor, died August 29, 1912. He was born in Troy, N. Y., in 1873, and graduated from Trinity College in 1896. He studied painting under Charles N. Flagg and Montague Flagg and afterwards spent four years in Paris in the ateliers of Luc Olivier Merson and Jean Dampt. He decided, however, that modeling and not painting was his peculiar talent. From Paris he went to Tunis, where he made a study of Oriental types, living in the Arab quarter and making friends with Bedouins and negroes. The government of France chose his work to represent Tunisian types at the Paris Exposition. After a year spent in Africa he came to the United States, where he spent two or three years in executing various commissions. He then went to Alaska, where he spent some time studying primitive types. Later he returned to New York. His work shows a great variety of conception. His earlier works were inclined toward realism, but his later works became more symbolic. Among his best-known works are "The Call of the Spirit" and "The Dance of the Wind Gods." He made a bust of Mark Twain, whom he had never seen, and the

result was wonderfully true to life. He designed a memorial to Horace Wells of Connecticut, which was erected in 1909.

PRESBYTERIAN CHURCH IN THE UNITED STATES OF AMERICA. The official title of that branch of the Presbyterian Church popularly known as the Northern Branch in distinction from the Presbyterian Church in the United States (see above). According to statistics gathered by officials of the denomination, the communicants in 1912 numbered 1,380,058. The ministers numbered 9274, the churches, 10,030. For governmental purposes there are 37 synods with 292 presbyteries. There were added to the number of communicants during 1912 79,432. In the Sabbath schools of the denomination were enrolled 1,274,458 pupils. The contributions for all sources during the year amounted to \$25,798,615, divided as follows: Home missions, \$1,818,345; foreign missions, \$1,437,660; education, \$159,055; Sabbath school work, \$190,562; church erection, \$223,598; relief fund, \$186,091; freedmen, \$187,083; colleges, \$465,068; temperance, \$126,131; general assembly, \$173,361; for congregational purposes, \$18,653,574; and for miscellaneous purposes, \$2,178,087. The missionary work of the denomination is under the control of the board of home missions, which has control of the domestic missions, and of the board of foreign missions, which conducts the work in foreign countries. There were in operation during the year 26 foreign missions with 162 stations, 1082 missionaries, 5041 native helpers, 636 fully organized churches, 115,976 communicants, 1707 schools with 55,982 pupils, 155,667 pupils in the Sabbath schools and 167 hospitals and dispensaries in which 463,782 patients were treated. During the year 135,963,274 pages of Christian truth were printed in over twenty languages. The educational work of the denomination is conducted by the board of education. Other important boards are those of publication and Sabbath school work, church erection, relief, ministerial sustentation fund, missions for freedmen, college board, committee on temperance, and committee on vacancy and supply. There is held annually a general assembly. This met in May, 1912, at Louisville, Ky. The most important acts of the assembly were as follows: A synod of Arizona was created; delegates were appointed to the Second Federal Council of Church Coöperation and Union; a synod of New England was created, including the presbyteries of Boston, Connecticut Valley, Newburyport, and Providence, and several important changes in polity were adopted. Among these was a provision giving the presbytery the right to determine for itself whom it will receive into membership. It was decided that it was inexpedient for the presbytery to receive women as candidates for the ministry. It was decided that any presbytery that ordains to the ministry men who deny the teachings of God's word as interpreted by

the standards of the church, is guilty of perjury. Persons having a part in the manufacture and sale of alcoholic stimulants are not to be admitted to the church membership. Perhaps the most interesting action taken by the assembly, from the general point of view, was the adoption of a new catechism called the "Intermediate Catechism." This was the final result of an attempt to qualify and change the old catechism which has been carried on for many years. In 1902 the general assembly approved "A Brief Statement of the Reformed Faith." This was adopted in 1903. The "Intermediate Catechism," approved in 1912 virtually supplants the famous "Shorter Catechism." In the new form all speculative and scholastic teaching is omitted. The first question of the old "Catechism," "What is the chief end of man?" is supplanted by "What do we most need to know?" The thirty-seven questions and answers of the "Shorter Catechism" relating to the Ten Commandments are condensed to three. Room is thereby made for New Testament principles and precepts. Most of the work of the assembly was devoted to denominational interests and enterprises. The sum of \$3,250,000 was asked for 1913. The officers of the general assembly in 1912 were as follows: Moderator, Mark A. Matthews, D. D.; vice-moderator, James Yereance; stated clerk, William Henry Roberts; permanent clerk, William Brown Noble; assistant clerk, James M. Hubbert.

PRESIDENTIAL CAMPAIGN OF 1912.

The presidential campaign of 1912 was, in many of its features, the most extraordinary in the history of the United States. It saw, among other things, the disruption of the Republican party as the result of the candidacy of a former Republican President, who made his campaign for the nomination an attack on the policy of his successor. It was a campaign marked by a bitterness of attack and defense for which comparisons are to be sought only in campaigns early in the history of the nation. It saw, finally, the defeat of the Republican party, as a result of internal dissension, by a Democratic vote which was less than the vote cast in the presidential election of 1908.

Unique interest was also added to the campaign by the inauguration, for the first time, of a system for registering the people's choice, known as the preferential presidential primaries. These were held in a number of States, in some cases as the result of legislative action and in others by direction of the State committees, who were authorized in this course by the Republican national committee, which met in December, 1911, and by the Democratic national committee, which met in January, 1912.

It is impossible, and unnecessary, to relate in detail all the events and episodes which filled this campaign from its actual beginning in January, 1912, to the election on November 5. It is only possible here to set down the more important facts in an attempt to make clear the main causes and results. The Democratic campaign for the nomination did not differ materially from other campaigns, while the Republican campaign differed widely and radically from any other campaign ever carried on by that party. It is inevitable therefore that the greater part of the space in this article should be devoted to a record of the Republican campaign, with an attempt to minimize

as much as possible such elements of it as were merely temporary and superficial.

A detailed discussion of the State campaigns, as distinguished from the national, will be found under the headings of the various States. The details of these are mentioned in this article only in such a way as to produce a consecutive narrative.

The campaign will be discussed under the following sub-divisions: I. PRE-CONVENTION CAMPAIGN. II. THE CONVENTIONS. III. POST-CONVENTION CAMPAIGN. IV. THE ELECTION. V. THE PARTY PLATFORMS.

PRE-CONVENTION CAMPAIGN, REPUBLICAN

REPUBLICAN CANDIDATES. The dawning of the year 1912 found two declared Republican nominees for the presidency. These were President Taft and Senator La Follette. The great question, however, in the public mind was: "Will Mr. Roosevelt be a candidate for a third term?" Upon this hinged a discussion which filled the public press. Mr. Roosevelt's own attitude up to a little before the beginning of the year was non-committal. It was well known that he was being urged by prominent Progressive opponents to President Taft to accept the leadership of the Progressives and to be a candidate for a third term. On the other hand, stood his declaration, made in 1904 and repeated in 1907, that "under no conditions" would he be a candidate for a third term. This was the situation at the beginning of the year.

Senator La Follette's campaign for the nomination for the presidency was begun in 1911. An organization known as the National Progressive Republican League was established early in that year with the avowed purpose of bringing about the nomination of Senator La Follette as the leading representative of Progressive policies. (See also OHIO.) Senator La Follette began the campaign by the delivery of two speeches in Ohio in December, 1911, and he followed these with a speech-making tour which included cities in Michigan, Indiana, and Illinois. There was no doubt, therefore, as to his active candidacy for the nomination. President Taft, too, made it clear that he would be a candidate for the nomination. On January 3, he declared, in a statement made to friends, that nothing but death would keep him out of the fight. Pressure continued to be placed on Mr. Roosevelt to define his position, and, although he would as yet make no formal declaration, it was learned early in February that his supporters were preparing for an active campaign and that George W. Perkins had become one of his most active advisers. It was learned, too, that Ormsby McHarg, who had been conspicuous in previous campaigns as an organizer, was engaged in work in the South for the advancement of Mr. Roosevelt's candidacy. Senator Beveridge of Indiana was known to be another aggressive supporter of and worker for Mr. Roosevelt.

MR. ROOSEVELT'S CANDIDACY. One of the first positive statements as to the probable candidacy of Mr. Roosevelt was contained in an article published about the middle of January in the *Pittsburgh Leader*, the editor of which was A. P. Moore, one of the earliest advocates of Mr.

Roosevelt as a candidate. Mr. Moore asserted that Mr. Roosevelt had bade him tell his readers that he would not desert the Progressive cause and that they would find him fighting side by side with them to the finish.

Mr. Roosevelt's attitude toward his previous declaration in regard to the third term was indicated in an interview published by the *Chicago Evening Post* on January 30. He said:

"I used language which simply stated that I paid heed to the essence and not the form of the wise custom of our forefathers; the essence of course being that the custom applies just as much when my first term was the filling out of the unexpired term of my predecessor as if it had been an elective term, but that on the other hand, it had no application whatever to the candidacy of a man who was not at the time in office whether he had or had not been President before. Men at once began to ask me whether my refusal was held to apply to 1912 or 1916, to which I, of course, responded that it would be preposterous to answer any such question one way or another."

Early in February, Mr. Roosevelt accepted an invitation to address the Ohio constitutional convention on February 22. On February 10, seven governors and delegates from 28 States met at Chicago and formed a permanent organization to advocate his candidacy. Delegates to this meeting favored presidential primaries in all the States. At this meeting a letter was addressed to Mr. Roosevelt, signed by the seven governors. These were the governors of West Virginia, Nebraska, New Hampshire, Wyoming, Michigan, Kansas, and Missouri. This letter urged him to accept the nomination and was as follows:

"We, the undersigned Republican governors, assembled for the purpose of considering what will best insure the continuation of the Republican party as a useful agency of good government, declare it our belief, after a careful investigation of the facts, that a large majority of the Republican voters of the country favor your nomination, and a large majority of the people favor your election, as the next President of the United States.

"We believe that your candidacy will insure success in the next campaign. We believe that you represent, as no other man represents, those principles and policies upon which we must appeal for a majority of the votes of the American people, and which, in our opinion, are necessary for the happiness and prosperity of the country.

"We believe that, in view of this public demand, you should soon declare whether, if the nomination for the presidency come to you unsolicited and unsought, you will accept.

"In submitting this request we are not considering your personal interests. We do not regard it as proper to consider either the interests or the preference of any man as regards the nomination for the presidency. We are expressing our sincere belief and best judgment as to what is demanded of you in the interests of the people as a whole. And we feel that you would be unresponsive to a plain public duty if you should decline to accept the nomination, coming as the voluntary expression of the wishes of a majority of the Republican voters of the United States through the action of their delegates in the next national convention.

"Yours truly,

"William E. Glasscock, Chester H. Aldrich, Robert P. Bass, Joseph M. Carey, Chase S. Osborn, W. R. Stubbs, Herbert S. Hadley."

A few days later Mr. Roosevelt stated that he would, after his address before the Ohio constitutional convention, reply to this letter. Meanwhile an article had appeared in *The Outlook* in which it was explained that Mr. Roosevelt's declaration against a third term meant only a third consecutive term.

THE COLUMBUS SPEECH. On February 22, Mr. Roosevelt made the eagerly awaited address before the Ohio constitutional convention at Columbus, O. It was generally understood that this address would contain the principles upon which his candidacy, now generally assumed, would be based. This assumption proved to be correct and in addition to the principles for which it was well known that Mr. Roosevelt stood, he advanced an entirely new proposal, which included the recall of judicial decisions under certain conditions. A résumé of this address will be found at the end of the section *Pre-Convention Campaign, Republican*.

MR. ROOSEVELT'S CANDIDACY ANNOUNCED. On February 25, Mr. Roosevelt made formal announcement of his candidacy for the nomination to succeed Mr. Taft. This took the form of a reply to the letter of the seven Republican governors, who two weeks previously had asked him to issue a frank statement of his intentions. Mr. Roosevelt's reply in full was as follows:

"Gentlemen—I deeply appreciate your letter, and I realize to the full the heavy responsibility it puts upon me, expressing as it does the carefully considered convictions of the men elected by popular vote to stand as the heads of government in their several States.

"I absolutely agree with you that this matter is not one to be decided with any reference to the personal preferences or interests of any man, but purely from the standpoint of the interests of the people as a whole. I will accept the nomination for President if it is tendered to me, and I will adhere to this decision until the convention has expressed its preference. One of the chief principles for which I have stood and for which I now stand, and which I have always endeavored and always shall endeavor to reduce to action, is the genuine rule of the people; and therefore I hope that so far as possible the people may be given a chance, through direct primaries, to express their preference as to who shall be the nominee of the Republican presidential convention.

"Very truly yours,

"Theodore Roosevelt."

LA FOLLETTE'S CAMPAIGN. Rumors to the effect that Senator La Follette would withdraw his candidacy were denied early in January by the directors of his campaign. He made a series of addresses in Illinois and Indiana in the early part of the month.

In these speeches Senator La Follette applied the fundamental principles of the Progressive movement to the trust question, finance, the tariff, party nominations, conservation, and other political and administrative questions. He declared that the great issue before the American people was the control of their own government, and he asserted that the present Progressive movement represented a conflict as old as the history of man, the fight to maintain human liberty, the rights of the people against the encroachment of a powerful few. He declared that a great power had grown up, strong enough at times to nominate the candidates of both political parties and to rule in the organization of legislative bodies and of committees which form legislation. The purpose of the Progressive movement, he declared, was to destroy this power, restore the popular sovereignty, and so to modify and reform, wherever it was found necessary, the constitution, statutes, courts, and all the details of government, that they may be made to carry out and express the well-formulated judgment and the will of the people. In regulation of the trusts, he asserted that Congress should prohibit

specifically all methods which make unfair competition possible and which operate as unreasonable restraints of trade. He would have a commission created which should investigate and prohibit all such unreasonable restraints of trade as might be discovered, and to this commission he would give power to ascertain the physical value of the property of any corporation, as well as the value which its intangible property, such as good will, would have under conditions of fair competition. As regards the tariff, he approved the Republican principle of protective duties based upon the difference in the cost of production in the United States and competing countries, and he advocated the creation of a permanent non-partisan, scientific tariff commission. He declared his belief that the direct primary for the selection, not only of candidates for local offices, but of delegates to the presidential convention, and a presidential preference primary by which voters may directly express their choice for presidential candidates, were indispensable pieces of machinery for carrying out Progressive principles. He favored also the initiative, referendum, and recall, including the recall of judges. In the later speeches which Senator La Follette made he, to a large extent, reiterated the subject matter of these addresses.

On January 22 he addressed an audience in Carnegie Hall, New York. This was his first appearance in that city. His address followed in general the lines which he had taken in his speeches in the West. He was greeted by a large and enthusiastic audience. Among other speakers of the same evening were Regis Post, former governor of Porto Rico, and Gifford Pinchot. Shortly after his speech in New York, Senator La Follette, as a result of the strain of the campaign, suffered a nervous breakdown which necessitated a rest of several weeks. On the evening of February 2, he delivered an address in Philadelphia in which he made a savage assault upon the "money trust" and followed it with an attack upon newspapers. The character of some of the remarks included in this address indicated to the friends of Senator La Follette that he was suffering under great nervous strain, and following its delivery he retired from active work in the campaign for several weeks. Even before this, however, it was evident that his cause had been losing ground in favor of Mr. Roosevelt.

Although he was for a time compelled to abandon the activities of his campaign, Senator La Follette refused formally to withdraw as a candidate. Many of his supporters, however, including Gifford Pinchot, now became advocates of the candidacy of Mr. Roosevelt, partly on the ground that Mr. La Follette had not the political strength to be a successful candidate and partly on the ground of his physical and mental condition. On February 14, a statement was issued from the headquarters of Senator La Follette in the form of a telegram addressed by the latter to a newspaper in Fargo, S. D., which had inquired whether he had withdrawn from the contest. In this statement Senator La Follette declared that the reports that he had withdrawn were false and that the statements in regard to his health were gross misrepresentations. He asserted that they were the result of a pressure brought to bear to force him from the contest.

As the purpose of Mr. Roosevelt to become a candidate grew clearer, Senator La Follette and his supporters showed signs of bitter disappointment. Senator La Follette's campaign manager issued a statement which included the following: "La Follette became a candidate because Roosevelt urged him to make the race. Then Roosevelt began insidiously and secretly to undermine La Follette's organization. Some people are already realizing that if this is the sort of square deal Roosevelt stands for, they do not want his kind." Senator La Follette continued to repeat his refusal to withdraw as a candidate.

LA FOLLETTE'S PLATFORM. On March 13, Senator La Follette issued at Madison, Wis., a campaign platform, reiterating his belief in the policies for which he stood, including "the adoption of graduated income and inheritance taxes, parcel post, government ownership of express companies, and government operation at cost." He said that he would have a commission created to investigate legal actions on the part of trusts and combinations with power to make a physical valuation of their properties. He favored the creation of a properly empowered tariff commission and opposed the Aldrich currency scheme. He favored also government ownership and operation of the Alaskan railways and coal mines and of an Alaskan steamship line by way of the Pacific ports and Panama to New York. He opposed reciprocity with Canada. He pointed out that during Mr. Roosevelt's term of office as President the total stock and bond issues of combinations and trusts rose from \$3,784,000,000 to \$31,672,000,000, "more than 70 per cent. of which was water."

PRESIDENT TAFT'S CANDIDACY. During these incidents the campaign for President Taft's nomination had been actively begun. In a speech on January 30, at Columbus, O., the President expressed the utmost confidence in the victory of the Republican party in November. He declared there were three reasons why the party should return to power: First, the administration had done reasonably and fairly well and deserved a vote of confidence; second, the administration was progressive, and would put in operation all necessary legislation that is progressive; and third, that the administration was not chasing chimeras and unsettling the foundations of the government. He declared that his administration had been attacked because it enforced the trust laws and thereby "forfeited the support of business." Speeches in a similar vein were made at Akron and other cities in Ohio. In a long address, delivered in Cleveland in February, the President defended his administration at great length.

To conduct his campaign, William B. McKinley of Illinois was chosen on February 8, and headquarters were opened in Washington. Mr. McKinley at once issued a statement that President Taft would have 780 votes in Chicago on the first ballot. Early in February the Colorado State central committee voted by 105 to 10 to send delegates to the convention pledged to Mr. Taft. Delegates pledged to him were also elected in Alaska, in the Eighth Virginia District, and in Florida.

In a speech delivered before the New York Republican Club on Lincoln's birthday, President Taft made a general statement of the policy upon which he proposed to be a candi-

date for renomination. This statement included a severe attack upon attempts of those men who had charged the administration with being affiliated with corrupt influences. He declared that "there are those who look upon the present situation as one full of evil and corruption, and as the tyranny of concentrated wealth." Those people, he affirmed, undertook to pull down the pillars of the temple of freedom and representative government and to reconstruct society upon new principles without any understanding of the constitutional results to be attained. He denounced these men as "political emotionalists and neurotics." He was particularly emphatic in denouncing the recall of judicial officers, which he had declared would bring about conditions similar to those which were prevalent during the French Revolution or during the anarchy of South American republics. He declared that his administration had been steadily progressive in every sense of the word. He admitted that there were faults in the administration of judicial functions, which included tardiness, technicality, and expense involved in procedure, but these defects, he declared, could be removed by means already at hand. He declared that the Republican party "will stand with its face like flint against any constitutional change in it to take away from the high priests, upon whom we depend to administer justice, the independence that they must enjoy of influence, of powerful individuals, or of powerful majorities."

NINE REPUBLICAN GOVERNORS. A statement was issued from the headquarters of the Taft committee in Washington on February 27, to the effect that messages endorsing the administration and assuring the President of their support and confidence had been received from nine Republican governors. These governors were, Eberhart of Minnesota, Hay of Washington, Carroll of Iowa, Penniwill of Delaware, Tener of Pennsylvania, Hooper of Tennessee, Goldsborough of Maryland, Spry of Utah, and Pothier of Rhode Island. Mr. Taft had already been promised the support of Governors Oddie of Nevada and Mead of Vermont.

NATIONAL ROOSEVELT COMMITTEE. Senator Dixon of Montana, on February 29, was chosen to head the executive committee of the national Roosevelt committee. Immediately after his appointment Senator Dixon issued a statement which had been approved at a conference which Mr. Roosevelt attended. In this statement he said: "The lack of positive leadership during the past three years has turned a Republican majority of 60 in the House of Representatives into an adverse Democratic majority of 70; has changed a two-thirds vote in the Senate into a bare political control of that body, and temporarily has lost control of a dozen Republican States of the North and West. The lack of leadership, of statesmanship, has produced a condition of business bewilderment which has halted the prosperity of the whole country. There can be no cure for this industrial stagnation unless we can substitute a policy of progressive and constructive legislation which shall meet modern conditions with modern laws." In the same statement, Mr. Dixon charged that the only hope left to those Republicans who opposed the nomination of Mr. Roosevelt was to control, through the prostitution of Federal patronage, delegates from the South, together with the delegates from some

Eastern States where they are named in conventions largely controlled by political bosses.

PRESIDENT TAFT'S REPLY TO MR. ROOSEVELT. On March 8, the President delivered an address at Toledo which was designed to be to some extent a reply to Mr. Roosevelt's proposals in his Columbus speech. The President severely criticised the proposal for the recall of judicial decisions. He said of it that it was "a remarkable suggestion so contrary to anything in government hitherto proposed that it is hard to give it the serious consideration which it deserves because of its advocates and the conditions under which it was advanced." The President did not refer directly to Mr. Roosevelt, but said of his programme that it lays "the axe at the foot of the tree of well-ordered freedom and subjects the guarantees of life, liberty, and property without remedy to the fitful impulse of a temporary majority." The President, while he welcomed the progress made toward securing greater equality of opportunity, and destroying the undue advantage of special privilege and accumulated capital, urged that human progress should be advanced without recourse to "feverish, uncertain and unstable" votes upon judicial decisions. "Such a proposal," he said, "is without merit or utility and instead of being progressive is reactionary; instead of being in the interest of all the people and of the stability of popular government is sowing the seed of confusion and tyranny." He declared the defects in our judicial decisions are due, not to the corruption of judges, but to faulty procedure and the difficulties which judges have in aiding juries to reach just decisions. He declared that corrupt judges may be impeached and that if the apparatus for impeachment is too cumbersome, it should be simplified.

PREFERENTIAL PRIMARIES. In the early part of March the directors of Mr. Roosevelt's campaign complained of the activity of federal office-holders in behalf of President Taft and challenged Mr. McKinley to support real primary bills and come out for preferential presidential primaries. Mr. McKinley replied that the plan suggested amounted to the recall of conventions. He declared that he favored properly conducted primaries, but that all but seven States had already made provision for holding primaries or conventions and that he did not favor "changes in the rules of the game while the game is in progress."

MR. ROOSEVELT'S NEW YORK ADDRESS. On March 20, Mr. Roosevelt made an important address in New York City. This was awaited with much interest as it was assumed that he would reply to President Taft's speech at Toledo, which in turn was regarded in some measure as an answer to Mr. Roosevelt's speech at Columbus before the Ohio constitutional convention. Mr. Roosevelt, in this address, made an aggressive attack on President Taft and his administration, and in addition amplified, and to some extent modified, his utterances made at Columbus relating to the recall of judicial decisions. An abstract of this address will be found at the end of the section *Pre-Convention Campaign, Republican*.

ADDRESSES BY PRESIDENT TAFT. During the week of March 21, President Taft visited Boston and several towns in New Hampshire. His chief address was made in the State House on election day, when he addressed the legis-

lature on the recall and the presidential primary. He declared that he favored the latter "wherever full and fair notice of the election can be given; wherever adequate election safeguards can be thrown around to protect it; and wherever the constitution of the State permits its being made applicable to the present election." He added that "a voluntary primary outside the law—known from its informal character as a 'soap-box' primary—is worse than none." He affirmed that a primary of this sort opened the way to fraud and violence. The President said further in the course of his speech:

"This is a government based on popular control. We all concede that the operations of election and the operations of government are not perfect . . . and that it is the part of patriotism to remove as far as possible, the obstacles which prevent honest primaries, honest elections and the honest administration of the government in the interest of the people, but the continued iteration and reiteration of the proposition 'let the people rule,' if it has any significance at all and is intended otherwise than to flatter the people, is intended to be a reflection on the government that we have had down to the present time. Now, in spite of all the corruption, in spite of all the machine politics, in spite of every defect in the operation of our government that can be pointed out, I do not hesitate to say that the history of the last one hundred and thirty-five years shows that the people have ruled."

In a speech delivered in Philadelphia on March 30, Mr. Taft said: "Some call themselves Progressives, and there are others just as progressive but who do not say so much about it. I am glad to express my gratification that this surface noise and lecturing does not represent the true sentiment of the people of this country. We are ready for progress on conservative principles. We have not the time to refute all the theories that noisy so-called reformers are advocating without having worked out their half-baked plans. A progressive is one that makes progress in the right direction." He declared that he was in favor of a movement for reform provided that it was "sound and not affected with fads and a disposition to disturb those things which have been useful to us for a hundred years."

NEW YORK PRIMARIES. As time drew near for the first of the elections, interest in the campaign, which up to this time had been centred chiefly in the personality of the two Republican candidates, became concerned more with their respective strength before the voters in the different States. A primary for the election of delegates to the convention was held in New York on March 26. The election was carried on under a new election law which provided new and distracting conditions for voting. Among these were a cumbersome ballot. As a result of the late decision of the court which was passing on the question of the position of the Roosevelt candidates on the ballot, it was found impossible to have the ballots printed early enough before the election to insure each voter a ballot wherewith to vote. As a result, voters in Kings, Queens, and Richmond counties were largely disfranchised, because no ballots were delivered until after the polls were closed. The result of the balloting was, for the Taft delegates, 67, and for the Roosevelt delegates, 7. Mr. Roosevelt was greatly incensed at the result of the balloting in New York, and in a series of speeches, de-

nounced the New York primaries as "an infamy unmatched even by the kindred infamies perpetrated in behalf of President Taft in Indianapolis and Denver."

NORTH DAKOTA. On March 19, the first of the presidential preference primaries was held. This was in North Dakota, where an aggressive campaign had been made by Senator La Follette and no particular attempt had been made to influence the voters for the other candidates. In this election Senator La Follette received 28,600 votes, Mr. Roosevelt, 19,100, and President Taft, 1500.

ILLINOIS, WISCONSIN, PENNSYLVANIA, ETC. The month of April Mr. Roosevelt spent in speechmaking in the Middle West. On April 8 at Ft. Wayne, Ind., he made his first declaration on reciprocity. He declared that he opposed the administration's reciprocity measure without reserve. He had reached this conclusion, he said, after a careful study of the measure, following his first approval of it. While Mr. Roosevelt was engaged in making this series of speeches, several important elections were held. On April 6, presidential preference primaries were held in Wisconsin. In these Senator La Follette received 131,920 votes, and President Taft 47,630. Mr. Roosevelt's name did not appear on the ballots in Wisconsin. On April 9, a presidential preference primary was held in Illinois, which was the first of the great popular victories gained by Mr. Roosevelt over President Taft. In these primaries Mr. Roosevelt received 115,000 more votes than the President. For details of this vote, see ILLINOIS. Regular primaries held earlier in the month gave to Mr. Taft delegates in Nevada, West Virginia, and Kentucky. On April 13 the presidential primary held in Pennsylvania resulted in a victory for Mr. Roosevelt greater even than attained by him in Illinois, as the 76 delegates to the convention were pledged to Mr. Roosevelt. See PENNSYLVANIA.

MR. ROOSEVELT ON POPULAR RIGHTS. During the week of April 20 Mr. Roosevelt made a number of speeches in Nebraska. In the course of his address at Omaha he spoke of two issues in the campaign which he termed the issue between the boss and the people and the issue between the man and the dollar. In the course of his remarks on the second of these issues, he said:

"Some time ago I stated that the creed of the Progressives was that they stood for both the man and the dollar, but that if they had to choose between them they stood for the man rather than the dollar; in other words, that we were for both human rights and property rights, but that in the rare cases where they conflicted we were for human rights. Referring to this statement President Taft said: 'The next time a demagogue mounts the platform and says he is for the man rather than the dollar, ask him what he means by it.' The humorous side of this comes in the fact that Mr. Taft was evidently ignorant of the fact that I was merely quoting Lincoln's letter which he wrote to some Boston correspondent in 1859. 'The demagogue on the platform,' of whom he spoke was Abraham Lincoln! As for what Lincoln meant by it he simply meant that he was for the human right of the slave as against the property right of the master when the two could not be reconciled. In the same way I am for the human right of the overworked girl, or of the crippled workman or workwoman against the so-called property right of the employer. I am for the right of the workman against the factory-owner or mine-owner who runs company-stores; I am for the right of the

legislature to prohibit men, women, and children being huddled like pigs in a tenement-house room as against the property right of the owner of the tenement house, which the Illinois Supreme Court held to override all other considerations in such a case."

MASSACHUSETTS PRIMARY. The presidential primary election in Massachusetts, on April 30, was of peculiar interest as possibly indicating the relative strength of Mr. Roosevelt and President Taft in New England. In the elections in the other States where State primaries had been held efforts were made to explain the results on the ground of local issues. For example, in Illinois the defeat of President Taft was attributed to the feeling against Senator Lorimer, with whom it was alleged President Taft was in sympathy. In Pennsylvania, likewise, it was alleged that hostility toward Senator Penrose on the part of the voters had resulted in the defeat of the party machine. In Massachusetts, however, there were no such local issues. In this campaign Mr. Taft, for the first time, took active part.

The decision of the President to take this action was the result of a series of sharp attacks which had been made upon him by Mr. Roosevelt, and his speech in Boston on April 25 was a reply to these attacks and an aggressive defense of his administration. The address had been carefully considered by the cabinet before its delivery. A few days before, on April 21, Representative Gardner of Massachusetts telegraphed to Mr. Roosevelt a series of charges in which he asserted that the latter had sought to mislead the public in regard to the President's attitude towards Senator Lorimer, and had made favorites of certain financial and industrial interests. He challenged Mr. Roosevelt to produce the report of Commissioner Herbert Knox Smith relating to the Harvester Trust. President Taft dealt with this matter in his address, and also criticised Mr. Roosevelt's attitude on reciprocity, and read certain letters which had been exchanged between them which indicated that Mr. Roosevelt had heartily supported the measure when it was first placed before him by the President. The President also defended himself against the charges made by Mr. Roosevelt and others, that he had been favorable towards Senator Lorimer.

Replying to the charges made by Mr. Roosevelt that he had affiliated himself with Speaker Cannon, the President declared that his predecessor had most earnestly advised him to make agreements with the former speaker. Speaking of the tariff, Mr. Taft asked whether Mr. Roosevelt had ever condemned the Payne tariff revision. The closing paragraph of the President's address showed a deep feeling on account of the attitude of Mr. Roosevelt toward him. After quoting the promise made by the latter in regard to the third term, he said:

"If he had frankly announced that he had changed his mind no one would be disposed to hold him to a promise of that sort merely because he had made it. The promise and his treatment of it only throw an informing light on the value that ought now to be attached to any promise of this kind he may make for the future. There is not the slightest reason if he secures a third term, and the limitation of the Washington, Jefferson, and Jackson tradition is broken down why he should not have as many terms as his life will permit. If he is necessary now to the government why not later? One who so lightly regards consti-

tutional principles, and especially the independence of the judiciary, one who is so naturally impatient of legal restraints and of due legal procedure, and who has so misunderstood what liberty regulated by law is, could not safely be intrusted with successive presidential terms."

The facts relating to the Harvester Trust episode will be found summarized at the end of the section *Pre-Convention Campaign, Republican*.

As a test, the result of the Massachusetts primaries was of little value. While Mr. Taft had a popular majority of 3600 votes, the 8 Roosevelt delegates-at-large were elected as the result of the rejection of many Taft ballots. These were defective because the name of an independent candidate had been added to the list and votes had been cast for 9 instead of 8 delegates. Mr. Roosevelt promptly declined to take advantage of these errors and urged the delegates-at-large to support Mr. Taft.

MARYLAND PRIMARIES. The next State in which presidential primaries were held was Maryland, and both the President and Mr. Roosevelt took an active part. The vote was close, and in the election held on May 6, Mr. Roosevelt received 29,124 votes and President Taft about 26,000. Supporters of Mr. Taft, however, controlled the State convention, but later when it met, they decided to yield to Mr. Roosevelt's delegates on account of the popular majority. (See MARYLAND.) On the day of the election in Maryland, Mr. Roosevelt published a long statement, attacking the President.

OHIO AND NEW JERSEY PRIMARIES. Following the election in Maryland, interest in the campaign was transferred to Ohio in the second week of May. Here both the President and Mr. Roosevelt made a series of speeches. In an address made at Portsmouth, Mr. Taft said: "I am up against the wall. I am being hit below the belt and I am here to fight."

The campaign in this State was bitter in the extreme. Both the President and Mr. Roosevelt in their addresses made sharp attacks. The President asserted that Mr. Roosevelt was an egotist and a demagogue, and Mr. Roosevelt replied with equal acerbity. All the assertions which had been made by the two in other States were repeated with additional emphasis. Certain statements which Mr. Roosevelt made at this time were regarded as indicating his purpose to bolt the nomination of Mr. Taft, for although the former President repeatedly claimed that he, himself, had so many delegates that he was certain to be nominated on the first ballot, he declared that the President was striving to win by fraud and that if he should so win, honest Republicans could no longer respect the action of the convention. He declared that a nomination gained in this way would mean the ruin of the Republican party. On May 20, Mr. Taft published a statement in which he declared that the certainty of Mr. Roosevelt's defeat must be a source of congratulation to all patriotic citizens who could see "the utter wreck he would have made of the party if nominated, and the great danger to which the country would have been exposed if there had been any chance of his election for a third term." He charged that Mr. Roosevelt's contests for delegates would be found without merit and that they had been brought about by sheer premeditation without the slightest reason.

The election in Ohio was not, strictly speaking, a presidential preference primary, because on the Republican ballot there appeared the name of no candidate for presidential nomination. The voters of the Republican party expressed their choice by voting for delegates known to be favorable to one candidate or another. In this election two delegates were chosen from each congressional district. The delegates-at-large were not voted for at this primary but at the State convention. As a result of the voting, Mr. Roosevelt defeated President Taft by more than 20,000 votes, electing 34 of the district delegates. The result of this election was a bitter blow to President Taft because he had expressed the utmost confidence that Ohio, his native State, would give him her delegates. He still expressed himself, however, as confident of the nomination and took part with unabated vigor in the campaign in New Jersey, which followed next. In the election in this State, held on May 16, Mr. Roosevelt carried the State by a plurality of over 13,000, losing only two of the twenty-four counties.

LA FOLLETTE CAMPAIGN FUND. Senator La Follette, who had been active in the campaign in Ohio preceding the presidential primary, published several days before that election a list of contributors to his campaign fund. This list showed that a total of \$53,500 had been contributed, and among those who had given were Gifford Pinchot, Amos R. Pinchot, and William Kent, \$10,000 each, and William Flinn of Pittsburgh, \$1000. These sums were all given in the early part of the senator's canvass and before Mr. Roosevelt announced his candidacy for the presidency. Later all these contributors became supporters of Mr. Roosevelt. During his campaign in Ohio, Senator La Follette declared his belief that a fund of not less than \$1,000,000 had been contributed for Mr. Roosevelt's primary canvass by George W. Perkins of the Harvester Trust, Judge Gary of the Steel Corporation, Daniel R. Hanna of Ohio, and others. He said: "I call upon Colonel Roosevelt to publish a complete list of contributors to his campaign fund before I leave this State. I make affidavit to the accounts of and the donors to my campaign fund. I ask that Colonel Roosevelt be equally frank with the people."

CALIFORNIA AND SOUTH DAKOTA PRIMARIES. New Jersey was the last of the States in which the rival candidates took active part in the campaign previous to the presidential primaries. Two States remained in which primaries were to be held, California and South Dakota. It was generally assumed that Mr. Roosevelt would carry California, where Governor Johnson was one of the most aggressive of the Progressive leaders and where the voters had, wherever opportunities offered, indicated a pronounced Progressive sentiment throughout the State.

Secretary Knox made an address at Los Angeles on May 9, defending the President and attacking Mr. Roosevelt. He characterized the latter as "a man of whims, imperious ambitions, vanities, and mysterious antipathies," and who "would break any rule of his party and his country, and his own solemn word to gain the seat of his friend." Mr. Roosevelt's comment on this assertion was: "I could not expect Senator Penrose's representative in the cabinet to take any other attitude." The an-

ticipation of the Progressives were abundantly realized at the primary held on May 14, when Mr. Roosevelt carried the State by a plurality of over 70,000 votes over Mr. Taft, and by a plurality of over 25,000 over Mr. Taft and Senator La Follette combined. Mr. Taft did not carry a single county in the State. Mr. Roosevelt ran second in only one county, which voted for Senator La Follette by a small margin. The last of the States holding presidential primaries was South Dakota. The vote was taken in this State on June 4. Mr. Roosevelt received over 33,000 votes, Senator La Follette over 18,000, and President Taft about 10,000.

Republican political interest was now transferred from the active campaign in the field to the convention. In the early part of June, the national committee convened and began the preliminary work of preparing the temporary roll of the convention.

ANALYSIS OF REPUBLICAN PRESIDENTIAL PRIMARIES. Below is summarized the popular vote received by each of the three candidates for the Republican nomination in the presidential primaries. These primaries were held in eleven States. The results were as follows:

State	Total Vote	Roose- velt	Taft	LaFol- lette
Illinois	437,090	266,917	127,481	42,692
Maryland	55,133	29,124	26,009
Massachusetts	171,879	83,099	86,722	2,058
Nebraska	76,921	46,795	13,341	16,785
New Jersey	108,795	61,297	44,034	3,464
North Dakota ..	59,66	23,669	1,876	34,123
Ohio	299,741	165,809	118,362	15,570
Oregon	71,914	28,905	20,517	22,491
Pennsylvania ..	492,025	298,962	193,063
South Dakota ..	63,301	35,637	9,843	17,821
Wisconsin	181,496	628	47,514	133,354

The total vote cast in these primaries for each of the candidates was: For Roosevelt, 1,179,405; for Taft, 758,107; for La Follette, 33,423. The total popular vote cast in these presidential primaries was 2,284,163. The total popular vote cast in these States in the presidential election of 1908 was 3,372,173. In these States, with the exception of Oregon, California, and South Dakota, the votes cast in the presidential primary ranged from about 40 to about 75 per cent. of those cast in the presidential election of 1908.

SUMMARY OF THE COLUMBUS SPEECH OF MR. ROOSEVELT. As is noted in another portion of this article, Mr. Roosevelt delivered an address before the Ohio constitutional convention on February 21. As this was one of the most important addresses delivered by Mr. Roosevelt during the year, a summary of its most important features seems advisable.

He began with an assertion of his belief in a pure democracy together with the right of the people to rule. He declared that the battle which was now being waged was against privilege on behalf of the common welfare. After an emphatic statement of his belief in constitutional government, he declared that constitutions must be interpreted and administered so as to fit human rights. He emphatically dissented from the view that it was either wise or necessary to try to devise methods which under the Constitution would automatically prevent the people from deciding for themselves what governmental action they think just and proper. This he said is precisely what is done in every case where the State permits its representatives whether on the bench or in the legislature or in executive office to declare that

it has not the power to right grave social wrongs. He then entered upon a discussion of the struggle between labor and capital and followed this with an exposition of his theories as to the proper manner of controlling "big business," which he declared was responsible for much of the special privilege which has become characteristic of the national life. He emphasized the fact that while the administrative department must play an important part in regulating combinations the legislature and the judiciary have an equally important part. He then turned his attention to the machinery by which these ends are to be achieved. He declared that each community has an absolute right to determine for itself what that machinery shall be, subject only to the fundamental law of the nation as expressed in the Constitution of the United States. He then declared his belief in various methods for improving the machinery of government, including the short ballot, direct nomination by the people, direct preferential primaries, election of United States senators by direct vote, the initiative and referendum, and with qualifications, the recall. Thus far Mr. Roosevelt had only recited his well-known opinions on these topics. His next recommendation, however, was for the most part unanticipated both by his friends and his opponents. This was his advocacy of the recall, under certain conditions, of judicial decisions. After speaking of the caution which should be employed in recalling judges, he said: "We should hold the judiciary in all respect, but it is both absurd and degrading to make a fetish of a judge or of anyone else." He quoted Abraham Lincoln as to limitation of the proper authority of courts. He then said: "What the Supreme Court of the nation decides to be law binds both the national and the State courts and all the people within the boundaries of the nation, but the decision of a State court upon a constitutional question should be subject to revision by the people of the State. . . . When the Supreme Court of the State declares a given statute unconstitutional because in conflict with the State or national Constitution, its opinion should be subject to revision by the people themselves. Such an opinion ought always to be treated with great respect by the people and unquestionably in the majority of cases would be accepted and followed by them. But actual experience has shown the vital need of the people for reserving to themselves the right to pass upon such opinion. If any considerable number of the people feel that the decision is in defiance of justice, they should be given the right by petition to bring before the voters at some subsequent election, special or otherwise as might be decided, and after the fullest opportunity for deliberation and debate, the question whether or not the judges' interpretation of the Constitution is to be sustained." The remainder of the address was given to an elaboration of this proposal, together with a recital of some decisions of the Supreme Court which he considered oppressive and wrong.

SUMMARY OF THE NEW YORK ADDRESS. The speech delivered in New York City on March 20 contains an elaboration and, to some extent, a modification of Mr. Roosevelt's previous utterances on the recall of judicial decisions. In this speech he also replied with some bitterness to President Taft's comments on the proposals.

He began the address with an affirmation of his belief in the right of the people, expressed in majorities, to rule, but declared that for the last twenty years the government had been not by a majority, but by a minority, composed largely of political leaders. He then followed with a statement of the proposals which the Progressives of the Republican party had formulated for a change of form in the State government. These included the recall of judges and judicial decisions. In answer to criticisms made by President Taft and others upon the latter, he recited certain decisions in which he declared that the courts had set aside the will of the majority of the people. He asserted that these proposals did not anticipate anything in connection with the Supreme Court of the United States or with the federal Constitution; that he was not proposing anything having any connection with ordinary suits, civil or criminal, as

between individuals; that he was not speaking of the recall of judges; that he was proposing merely in a certain class of cases, involving police power, when a State court had set aside as unconstitutional a law passed by the legislature for the general welfare, the validity of the law should be submitted for final determination to a vote of the people taken after due time for consideration. He then replied to the criticism made by President Taft in which the latter had said that the proposal was "utterly without merit or utility, and, instead of being . . . in the interest of all the people and of the stability of popular government, is sowing the seeds of confusion and tyranny." Roosevelt declared this criticism to be really less a criticism of his proposal than a criticism of all popular government. He said: "Mr. Taft's position is the position that has been held since the beginning of our government, although not always so openly held, by a large majority of reputable and honorable men who, down at bottom, distrust popular government, and when they must accept it, accept it with reluctance, and hedge it around with every species of restriction and check and balance, so as to make the power of the people as limited and as ineffective as possible. Mr. Taft fairly defines the issue when he says that our government is and should be a government of all the people by a representative part of the people. This is an excellent and moderate description of an oligarchy. It defines our government as a government of all the people by a few of the people." The remainder of the address was given to further criticisms of the President's comments and especially of the use of Mr. Taft's expression "the fitful impulse of a temporary majority." Mr. Roosevelt declared that if this were true, all presidents, including Mr. Taft, had been elected by "the fitful impulse of a temporary majority," and that the constitutions of the States and the Constitution of the nation with its amendments had been adopted by such an impulse. He declared that the doctrine advocated by Mr. Taft had tended to create a bulwark for privilege, a bulwark unjustly protecting social interests against the rights of the people as a whole. He finally recapitulated his stand in the speech at Columbus and his quotations from William Draper Lewis, dean of the law school of the University of Pennsylvania, in defense of his proposal for the recall of judicial decisions.

THE HARVESTER TRUST EPISODE. This episode, which resulted in some of the most bitter charges and recriminations made in the campaign, first came to the public eye on April 21, when Representative Gardner of Massachusetts telegraphed to Mr. Roosevelt a series of charges in which he asserted, among other things, that the latter had made favorites of certain powerful financial and industrial interests. He challenged Mr. Roosevelt to produce the report of Commissioner Herbert Knox Smith concerning the Harvester Trust. On the following day, Representative Campbell of Kansas, made a speech, in which he asked Mr. Roosevelt to say whether he, while he was President, had sent a note to the Department of Justice, directing the suspension of action against this trust. On April 24, in response to a resolution introduced by Senator Johnston of Alabama, a mass of political correspondence relating to the Harvester Trust was sent to the Senate. From this correspondence it appeared that in August, 1907, Mr. Perkins had called upon President Roosevelt with certain papers and asked that no action against the Harvester Trust be taken before the completion of the investigation then being made by Commissioner Smith. He made the argument that the company had sought to obey the law and to meet the requirements of the government. On August 22, Mr. Roosevelt wrote to Attorney-General Bonaparte referring to the visit of Mr. Perkins and his arguments, and said: "Please do not file the suit until I hear

from you." The trust was not prosecuted under the administration of Mr. Roosevelt. Among other papers sent to the Senate in response to its request was a long letter from Commissioner Smith, dated September 23, 1907, commenting upon the Sherman act and the course taken by the Harvester company. This letter did not favor the prosecution of the company, but pointed with approval to the attitude of the company and other allied corporations toward the government. "It is a practical question," he said, "whether it would be well to throw away now the great influence of the so-called Morgan interests." It was indicated in the context that he had in mind the influence of these corporations in favor of publicity and regulation. Following the appearance of this correspondence in the Senate, Mr. Roosevelt published a statement, in which he said that his note to Mr. Bonaparte had been in accord with his custom in such cases, and pointed out the fact that President Taft had not prosecuted the company. He asserted emphatically that his action had been approved by his entire cabinet, including President Taft, and that the latter had heartily concurred. On April 29, however, the President published a statement saying that he had never heard the matter discussed in the cabinet and that neither Secretary Root nor Secretary Wilson heard any discussion relating to the matter or knew of the commissioner's letter. He also asserted that the dates showed that he (Mr. Taft) had been out of the country at the time when Mr. Roosevelt asserted he had taken part in the cabinet meeting.

The publication of the matter relating to the Harvester trust, and Mr. Roosevelt's criticisms of President Taft, led to a sharp exchange of personalities between the friends of the two. Mr. Taft insisted that he had no knowledge of the action of the former President and Mr. Roosevelt repeated his assertion that it had been approved by Mr. Taft. Among the former members of Mr. Roosevelt's cabinet there was a division of opinion. Mr. Root, former Secretary of State, and Mr. Wilson, Secretary of Agriculture, supported Mr. Taft's contention, while Mr. Bonaparte, former Attorney-General, upheld Mr. Roosevelt, and remarked that Mr. Taft was no longer worthy to hold office. A long statement was published by George W. Perkins, in which he declared that he had contributed large sums in the campaigns of Mr. Bannard for mayor of New York City, Mr. Taft for President, and Mr. Stimson for governor of New York, and that at the end of the national campaign in 1908, he had made good the campaign committee's deficit of \$15,000, which had never been repaid. He urged that his support could not have been less objectionable at that time as he was more closely identified with Mr. Morgan and certain trust interests than he was at the time when his money was given to aid Mr. Roosevelt. He asserted that the publication of the Harvester Trust correspondence was a "scurrilous attack upon Mr. Roosevelt."

He declared that Mr. Taft had not only been present at a cabinet discussion of the Harvester Trust case, but also had repeatedly and emphatically approved the course actually taken in private conversations. He said that it was utterly impossible for Mr. Taft to have

forgotten this and that it was impossible to reconcile his present position with any standard of honorable conduct. He also attacked the President's action in relation to the activities of federal office-holders and said that the President knew well that delegates elected for him in Kentucky, Indiana, New York City, and elsewhere represented barefaced frauds. He said: "He stands guilty of connivance at and condonation of these frauds; he stands guilty of approving and encouraging fraud, which deprives the people of their right to express their will."

PRE-CONVENTION CAMPAIGN, DEMOCRATIC

DEMOCRATIC CANDIDATES. As was indicated in the beginning of this article, the Democratic campaign for the presidential nomination did not differ in essentials from other Democratic campaigns for the presidency. There were, at the beginning of the year, four avowed prominent candidates for the nomination. These were Governor Woodrow Wilson of New Jersey, Champ Clark, Speaker of the House of Representatives, Governor Harmon of Ohio, and Congressman Oscar W. Underwood of Alabama. As the campaign developed other names were mentioned as possible candidates. These included Governor Foss of Massachusetts, Governor Marshall of Indiana, Joseph W. Folk, former governor of Missouri, and Mayor Gaynor of New York City. The chief contest, however, was between Governor Wilson, Mr. Clark, and Governor Harmon, with Governor Harmon throughout the campaign stronger theoretically than practically. Together with Mr. Underwood, Governor Harmon had the disadvantage of having the bitter hostility of Mr. Bryan to contend with. Mr. Bryan denounced them both as conservatives and reactionaries and lost no opportunity of assailing them.

MR. BRYAN'S ATTITUDE. Mr. Bryan at no time throughout the campaign appeared himself as an avowed candidate; indeed, early in January he issued a statement in which he said: "I cannot conceive any condition that could arise which would make me a candidate this year." His influence with the party, however, remained the strongest single element, and it was generally assumed that the candidate whom he openly favored would receive the nomination. That Mr. Bryan was not without opposition in his party, however, was shown in the meeting of the Democratic national committee, early in December, when he was overwhelmingly defeated in two test votes which were forced by himself, one in Alabama and one in Pennsylvania. This vote was taken in an attempt by Mr. Bryan to prevent the filling of vacancies from Alabama and Pennsylvania in the national committee. In the case of Alabama he was defeated by a vote of 34 to 13, and in the case of Pennsylvania, where he attempted to prevent the seating of his ancient foe, James M. Guffey, he was defeated by a vote of 30 to 18. At this meeting of the national committee it was decided that the convention should be held in Baltimore, beginning June 25, 1912. The most important act of the committee, aside from its selection of the convention city, was the passage of a resolution for presidential primaries. This resolution declared that delegates and alternates may, if not otherwise directed by law, be elected directly

if, in the opinion of the respective members, it is deemed desirable and possible. An effort by Mr. Bryan to have the committee pass a resolution declaring for preference primaries without reservation of any kind was defeated. The two leading candidates for the nomination began an active campaign early in January, 1912.

GOVERNOR WILSON'S CANDIDACY. The beginning of 1912 found Governor Wilson an avowed and active candidate for the Democratic nomination. On January 2, Governor Wilson made an address before the National Democratic Club of New York City, on the general question of the tariff. In this speech he attacked the protective policy, asserting that the tariff was "the most critical question of a campaign which must decide the policy of our government, not only in this, but in respect to a score of things which touch the general adjustments of our life." The settlement of the tariff question, he said, could not be avoided or postponed. He declared that the control of prices and the shutting down of competition must be abolished; that protection is a system of favoritism under which the beneficiaries will never be satisfied or the oppressed ever content to submit. He asserted that one bad effect of the system was the encouragement of a system of paternalism, which looked upon the government as an instrument of gain instead of one for the promotion of the well-being of all.

ALLEGED ATTEMPTS TO DISCREDIT GOVERNOR WILSON. Coincident with Governor Wilson's appearance in the political arena as an avowed candidate was the beginning of what his supporters declared to be a conspiracy on the part of his enemies to discredit him. The fight against him in New Jersey was headed by former Senator James Smith, whom he had caused to be defeated for the United States Senate in 1911. A letter written by Governor Wilson in 1905, while he was still president of Princeton University, and addressed to Adrian H. Joline, a lawyer of New York, was published early in January, in which among other things he exclaimed of Mr. Bryan as follows: "Would that we could do something at once dignified and effective to knock Mr. Bryan into a cocked hat." This letter was written shortly after the defeat of Judge Parker for the presidency. As the letter was published at a time when relations between Governor Wilson and Mr. Bryan were especially cordial, it created much comment. Mr. Bryan declared it was of little importance.

Several days after the publication of Governor Wilson's letter relating to Mr. Bryan, came an incident which, for a time, occupied the attention of the public press. For several years the most enthusiastic advocate of Mr. Wilson as a presidential candidate had been *Harper's Weekly*, edited by Colonel George Harvey, and the name of Mr. Wilson had been carried at the head of the editorial pages of this periodical as its choice for the presidency. Suddenly in the middle of January this heading disappeared and rumors at once arose that a disagreement had arisen between Governor Wilson and Colonel Harvey. For a time the latter refused to make any comment or explanation, but after several weeks published a note in which he stated that his advocacy of Governor Wilson's candidacy had ceased as a result

of the latter's assertion that the support of *Harper's Weekly* was injurious to him. This action of Colonel Harvey followed a conference held between him, Governor Wilson, and Colonel H. W. Watterson, editor of the *Louisville Courier-Journal*, and in the details of this conference, which came out several weeks after it had been held, it appeared that Colonel Harvey asked Governor Wilson the direct question whether he believed the support of *Harper's Weekly* was doing him injury, and Governor Wilson to this frankly replied that he thought it was. The affair naturally created much comment, which was increased by the publication of a long statement by Colonel Watterson, in which he attacked Governor Wilson and charged him with ingratitude and discourtesy. With the consent of both Governor Wilson and Mr. Harvey an exchange of letters relating to the controversy was published. These letters showed that while Colonel Harvey had been hurt by the episode, there was no feeling of hostility between the two men.

The basis of the objection of Governor Wilson to the support of *Harper's Weekly* appears to have been the opinion, more or less general, especially in the western part of the country, that *Harper's Weekly* is the organ of, and is largely supported by, the large financial interests of the country. The supporters of Governor Wilson in this controversy claimed that his action in severing his relations with Colonel Harvey and Colonel Watterson was the result of an attempt made by them to seek large financial support for his candidacy from Thomas F. Ryan, and that Governor Wilson refused to have "tainted money" used in the furtherance of his cause. It was denied by Colonel Harvey that he had made any effort to secure money from Mr. Ryan, but Colonel Watterson made a practical admission that he had attempted to do so.

OTHER CANDIDATES. Governor Harmon had made several addresses in January, including one at St. Louis and one in Chicago. In the former city he declared that economy and tariff revision would be the issues of the campaign. He asserted that the prospects for Democratic success were bright and that there were no indications of party disunion. He declared at Chicago that the present tariff law "sticks out like a sore thumb." Early in February, Joseph W. Folk, former governor of Missouri, withdrew as an active Democratic candidate for the nomination and asked his friends to support Champ Clark.

GOVERNOR WILSON'S CAMPAIGN. Governor Wilson, on February, 1912, opened his speaking campaign by an address in Chicago. With the chief candidates in the field the campaign proceeded quietly, and as compared with the Republican campaign attracted little attention. In the primaries held in the different States, Mr. Clark carried the States of New Hampshire, Vermont, Massachusetts, Maryland, Virginia, Kentucky, Illinois, one-half of Wisconsin, Iowa, Kansas, Nebraska, Montana, Wyoming, Colorado, New Mexico, Washington, Idaho, Arizona, Nevada, and California. Governor Wilson carried the primaries in New Jersey, in which there was really no contest as the other candidates refused to have their names appear on the ballots, three-quarters of Pennsylvania, North Carolina, South Carolina, one-half of Wisconsin, Minnesota, one-half of Oklahoma,

Texas, Utah, one-half of Louisiana, and Oregon. Representative Underwood carried the pri- of Georgia, Florida, Alabama, and Mississippi. The votes of other States were either given to "favorite sons" or had no choice. Details of the votes in these States will be found in the political history under those States.

NATIONAL CONVENTION, REPUBLICAN

MEETING OF THE NATIONAL COMMITTEE. The meeting of the Republican national committee which precedes the assembling of the convention by about a week has been in previous elections little more than a formality. The functions of the committee are chiefly to select presiding officers of the convention and to decide disputed contests for delegates. The meeting of the committee on June 6, 1912, was, however, anticipated with the greatest interest. On their decision as to delegates in dispute depended, to a large extent, the majority of either of the candidates in the convention, for although the decisions of the committee are passed upon by the committee on credentials after the convention has formally organized, such action is hardly more than a formality, for the decisions of the national committee usually stand without change.

TEMPORARY CHAIRMAN. Prior to its formal convening the committee had offered the temporary chairmanship of the convention to Senator Root. This appointment was at once opposed by Mr. Roosevelt on the ground that he was too conservative in type and too thoroughly identified with the policies of President Taft. The candidate of the Progressives was Senator Clapp of Minnesota. Several days later, however, the opposition of Mr. Roosevelt was withdrawn. In a statement he said that he had been advised by delegates that the matter was of little importance. After a conference held with George W. Perkins, Gifford Pinchot, and others, however, Mr. Roosevelt published, on June 3, a long statement, in which he declared that Senator Root should be opposed by every Progressive. In this statement he declared that Senator Root "stands as the representative of the men and the policies of reaction. He is put forward by the bosses and the representatives of special privileges." Thus the first contest of the strength of the convention was destined to come in the selection of the temporary chairman.

ORGANIZATION OF THE COMMITTEE. It was decided that the rules for decisions of disputed delegates should be the same as those of the meeting of the committee in 1908. On June 3, President Taft sent a letter to the committee in which he asked that the sessions should be open to the public, and although this was contrary to precedent, it was decided that the hearings should be public. Representatives of the five press associations of the United States were admitted. Friends of Mr. Roosevelt on the committee offered an amendment for the admission of about 200 additional reporters, but this was lost by a vote of 13 to 9. The chairman of the committee was Victor Rosewater of Nebraska, and the chief spokesman for Mr. Roosevelt was Senator William E. Borah of Idaho. Each side was allowed counsel. Charles Dick, former United States senator of Ohio, was the leading counsel for the Taft delegates whose seats were disputed, and

Ormsby McHarg acted in a similar capacity for the Roosevelt delegates who claimed seats in the convention.

By the rules under which the national committee did its work in 1908, votes were taken *viva voce*, and a roll call could not be had except at the request of twenty members. At the first session of the committee, Senator Borah submitted an amendment whereby a roll call could be had at the request of eight members of the committee. Senator Borah supported his amendment in an aggressive speech, but the amendment was defeated by a large majority.

DISPUTED SEATS. There were in dispute about 260 seats. Most of these were in the South and concerned chiefly the negro delegates from the southern States. There were, however, important contests in several of the northern States, including Indiana, California, and Washington. The States were taken in alphabetical order, but the contests in Arizona and California were postponed for a week on account of the impossibility of the persons interested arriving in Chicago before that date. The contests in Alabama were the first heard. In this State there were contests in the first, second, fifth, sixth, and ninth districts. In all but the ninth district, however, the contests were trivial and were decided in favor of the Taft delegates by a unanimous vote of the committee. In this contest the committee divided by a vote of 38 to 15 in favor of the Taft delegates. This was the first decisive trial of strength. This action of the committee was bitterly opposed by the Roosevelt members and was denounced by Senator Dixon as "a cold-blooded, premeditated theft." Mr. Roosevelt, in a statement made on the following day said that he had expected only two delegates from Alabama.

On the second day of the hearing of these contests, 48 cases were decided and these were all in favor of seating the Taft delegates. The only test case was the fifth Arkansas district, in which by a vote of 42 to 10 the Taft delegates were seated. This test vote came on a compromise motion to admit the Taft and Roosevelt delegates with half a vote each. Mr. Roosevelt, on June 8, issued an appeal, which followed a denunciation of the action of the national committee in unseating his two delegates in the ninth Alabama district. He declared that a nomination obtained by a vote of delegates seated in utter defiance of justice, as were those two Alabama delegates, was worthless to the man obtaining it.

All the contests from the State of Georgia were decided in favor of delegates for President Taft. The 12 contested delegates from Indiana, including four delegates-at-large, were given to President Taft. A bitter struggle was anticipated in these Indiana cases, but on the question of seating the delegates-at-large every member of the national committee voted in favor of seating the Taft delegates. Taft delegates also were seated from the first district and from the third district. In the fourth district the Roosevelt contestants withdrew. The only contest from Indiana on which a test vote was taken was in the thirteenth district, and in this instance the Taft delegates were seated by a vote of 36 to 13. The cases for the Roosevelt delegates of California were presented by Francis J. Heney, who conducted

them with such aggressiveness that he was in frequent difficulties with the members of the committee. On June 10 it was finally decided that all of the 26 delegates from California except two in the fourth contest district, should be placed upon the temporary roll. During the progress of these contests Mr. Roosevelt had issued statements attacking the action of the committee, and he declared in an editorial in *The Outlook* that in many cases the Taft delegates to the convention "represented absolutely nothing but fraud as vulgar as brazen and as cynically open as any ever committed by the Tweed régime in New York forty odd years ago." This editorial also contained a bitter attack upon the methods of electing the national committee and indirectly upon President Taft as willing to benefit by dishonest practices in the seating of his delegates.

On June 11, 18 contests from Kentucky were heard by the committee and 17 Taft delegates and one Roosevelt delegate were seated. The Roosevelt delegate was from the eleventh Congress district where the two Roosevelt delegates were the regular delegates, while the two Taft delegates were contested. The committee voted to split the delegates between the Taft and Roosevelt factions on the ground that while the Roosevelt supporters controlled the Congress district convention, they violated the rule of the Republican party in organizing a convention. Colonel Roosevelt issued another statement in which he said: "The question at Chicago becomes clearer with every vote of the national committee. It is simply whether the people have the right to nominate whomever they wish for the highest office in their gift, or whether, by deliberate theft and fraud, certain machine leaders, acting in the interest of special privilege, are to be permitted to deprive people of this right." He made further attack upon the "bosses," who, he claimed, were unscrupulously setting themselves to bring about the renomination of President Taft.

On June 12, the committee disposed of the contests in Arizona, California, Louisiana, Michigan, and part of Mississippi. All of these contests, involving forty seats were decided in favor of Taft delegates. The only roll call in these contests was in that of the fourth California district. The Taft delegates were seated by a vote of 37 to 16. In the course of these contests Mr. Heney read a note from Governor Johnson of California, in which the latter refused to appear before the committee on the ground that he would not submit to "a trial of a title of property by the thief who steals it." On June 13, the committee gave to Mr. Taft 11 Congress district delegates in Mississippi, and 6 district delegates in Missouri. To Colonel Roosevelt were given one district delegate in Mississippi, four delegates-at-large and four Congress delegates in Missouri, and four Congress district delegates in North Carolina.

On June 15, Mr. Roosevelt arrived in Chicago to take active lead in his own campaign for the nomination. He was greeted with the greatest enthusiasm, and on his arrival at a hotel addressed the people from the balcony on the text "It is a naked fight against theft and the thieves will not win." On the same day the national committee finished the contests, giving 26 in Texas, 20 in Virginia, 14 in Washington, and 2 in the District of Columbia to

President Taft; and 4 in Texas, and 2 in North Carolina to Mr. Roosevelt.

COLORED DELEGATES. It was evident at this time that the balance of power in the convention rested in the hands of the colored delegates from the South. The results of the contests before the national committee gave Mr. Taft 555 votes, or enough for the nomination if these votes could be held. The withdrawal of 60 or 70 colored delegates from his support to that of Mr. Roosevelt would prevent the President's nomination. The strongest possible effort was, therefore, made by the Taft leaders to hold the negro votes, while the Roosevelt leaders were no less aggressive in their efforts to win them away from President Taft. Rumors of attempts to corrupt delegates were frequently made, but were not substantiated. The completed work of the national committee gave to Mr. Taft 234 disputed delegates and to Colonel Roosevelt 20. On the completion of its work the committee adjourned to pass out of existence. A new committee is chosen by each convention.

CONDITIONS PRECEDING THE CONVENTION. On the eve of the convention, President Taft had on paper seven more delegates than enough to nominate. He lost five delegates from Mississippi, and seven from Georgia withdrew from his support, as did Timothy L. Woodruff of Brooklyn. Four New York delegates previously counted for him declared that they would vote for Justice Hughes and two Taft delegates in Illinois declared for Robert T. Lincoln. Colonel Roosevelt on paper was 61 votes short of a plurality. There were 540 votes necessary for a choice and on the eve of the convention an unofficial poll of the delegates resulted as follows: William H. Taft, 547; Theodore Roosevelt, 479; Robert M. La Follette, 36; Albert B. Cummins, 10; Charles E. Hughes, 4; and Robert T. Lincoln, 2; total, 1078.

MR. ROOSEVELT'S ATTITUDE. Mr. Roosevelt spent the hours prior to the convention in conference with his leaders. Rumors had arisen that he would bolt the convention if he did not receive the nomination, but these were denied by him. He issued a statement in which he called attention to the difference in composition between the delegates who would vote for him and those who would vote for Mr. Taft. He said: "Of Mr. Taft's delegates, over half come from Territories and from States that have never cast a Republican electoral vote since the days of reconstruction. Among these the only delegates really for Mr. Taft are those who are controlled by the use of federal patronage in his interest. Over half of the remainder are boss-picked delegates from northern States where there have been no open primaries. Contrast this with the votes of the delegates who are for me. Thirty-three States cast electoral votes for me in 1904. Of these thirty-three States at the recent primaries, I carried twenty-one, Senator La Follette two, Senator Cummins divided one with Mr. Taft, and nine went in whole or in part to Mr. Taft." He reiterated his claim that his failure to receive the nomination would be the result of fraud and theft on the part of the national committee. On the night of June 17, Mr. Roosevelt made an address in the Auditorium Theatre. In this he denounced the Republican national committee as thieves and robbers, and demanded that the temporary roll call

of the convention made by the committee should be smashed at the outset. He declared that the contesting delegates seated by the committee should not be allowed to vote on anything until after the uncontested delegates in the convention had passed upon their credentials. He also said that it was the duty of the convention to refuse to sanction the choice of the committee for temporary chairman, no matter who he might be and without regard to his past services and reputation. He again attacked President Taft as a tool of the "bosses" and declared that they had won for him all the delegates that he had.

OPENING OF THE CONVENTION. The convention was called to order by William Hayward, secretary of the national committee, who read the official call for the election of delegates. Governor Hadley of Missouri was floor manager for the Roosevelt delegates, and James E. Watson of Indiana, former member of the House of Representatives, acted in the same capacity for the Taft delegates.

CONTEST ON THE TEMPORARY ROLL. The first effort of the Roosevelt faction in the person of Governor Hadley was to prevent the seating of the delegates on the temporary roll of the convention, and on the conclusion of the reading of the temporary roll by Secretary Hayward, Governor Hadley rose to a point of order. He inquired as to whether the national committee had prepared a list of delegates and alternates claiming seats in the convention and had placed this in the hands of its secretary for the consideration of the convention as a temporary roll. Mr. Watson thereupon made a point of order that prior to the organization of the convention no business of any character could be done. Victor Rosewater, presiding officer and temporary chairman of the national committee, replied that Governor Hadley's point of order was not well taken unless he could present good reasons in opposition. Governor Hadley thereupon addressed the convention on the point of order. He moved that the list of delegates prepared by the national committee and placed in the hands of the secretary known as the temporary roll be amended in the following particulars: That the names of certain delegates should be removed from the temporary roll and another list substituted and that the temporary roll when thus amended be considered the temporary roll of the convention for the consideration of its business. This motion in effect provided that the contested delegates should not be allowed to take part in the business of the convention until action of the convention had been taken upon them.

Mr. Watson, at the conclusion of Governor Hadley's remarks, renewed his point of order that no business could be done by the convention until it had organized. Each side was then given 20 minutes for a discussion of the question. Mr. Hadley first addressed the convention. He asserted that the question presented was: Whether the national committee of the Republican party has the absolute power to prepare a list of delegates or temporary roll, which can be changed by the convention only through the representative of the committee on credentials and the acceptance or rejection of that report of that committee, or whether the list of delegates prepared by the national committee is in the nature of a recom-

mendation of those upon that list, that they shall adopt it as the basis of the organization of the convention. He asserted that if the former contention were true a political oligarchy was the result. He quoted precedents in support of his contention that the national committee had no absolute power to select delegates. He reviewed the work of the committee and asserted that while some of the charges made against its rulings might not be true, others unquestionably were true. He said: "We contend that this convention should not proceed to the transaction of any business until it either disproves the charges of fraud and dishonesty that have been made against this roll of delegates or until it sustains that charge and purges the roll of this convention of the names that 15 high-minded and honorable men have stated do not belong there at all."

Governor Hadley was followed by J. Franklin Fort, former governor of New Jersey, who supported his contention. Representative Seno E. Payne of New York defended the action of the committee in a brief speech, and Mr. Watson then spoke at greater length. He stated that his contention was that at that time, and until after the convention had been regularly organized under the customary preliminary procedure, no business was in order because there was no convention, no presiding officer, and no person duly accredited to whom an appeal could be made. He declared that the national committee was not a part of the national convention, but that since 1868 it had always made the roll of the convention because there must be some authoritative body which shall prepare the temporary roll of the convention; otherwise chaos would result. He said that the national chairman, because of his position as national chairman, had simply called the convention to order and had no further power. He declared that if Governor Hadley's amendment prevailed the convention would then proceed to take up every contested case before it had been organized, and that it would not be necessary to have a committee on credentials in the convention for the purpose of determining these questions. He appealed to the convention, in the name of orderly procedure and precedent, to sustain the ruling of the chairman. He then moved to lay Governor Hadley's appeal on the table. Mr. Rosewater then after citing precedents made his ruling. He declared that until the convention had organized under its temporary presiding officer it was simply an assembly of individuals gathered under the rule to hold a convention. That in such bodies it had been the rule that the delegates in accordance with the general preliminary law, as laid down in Cushing's *Manual*, should first effect a temporary and then a permanent chairman, and that the first business of the convention was to appoint a committee to receive the credentials of the delegates in the proper way. After citing the duties of this committee, he said: "It is not within the powers of this assemblage to pass upon the credentials and they are not in any sense before it, but they are in the custody of the secretary of the national committee where the rules require them to be lodged." He said that any proposition like an investigation of the credentials was out of order before the organization of the convention. He thereupon sustained Mr.

Watson's point of order and held that the motion of Governor Hadley to amend the roll was out of order. Governor Hadley appealed from the decision of the chair, and on motion of Mr. Watson, the appeal was laid on the table.

Mr. Rosewater then said: "I have the honor to present the name of the Hon. Elihu Root, a delegate from the State of New York, as temporary chairman of this convention and invite other nominations." Henry F. Cochems of Wisconsin nominated, as the candidate of the Roosevelt faction, Governor Francis E. McGovern of Wisconsin. The nomination of Senator Root was seconded by Job E. Hedges of New York, and that of Governor McGovern by Governor Hadley of Missouri and Governor Johnson of California.

VOTE FOR TEMPORARY CHAIRMAN. The vote on the temporary chairmanship was the first actual test of the strength of the convention. It resulted in Mr. Root receiving 558 votes, and Governor McGovern, 502. W. S. Lauder of North Dakota received 9 votes from the Wisconsin delegation, Walter S. Houser of Wisconsin, 3, and Senator Gronna of North Dakota, 1.

SENATOR ROOT'S ADDRESS. Senator Root in his address as temporary chairman defended the administration of President Taft while he stood for affirmative, constructive policies for the betterment and progress of the country. He declared that the President had carried out faithfully all the policies of President Roosevelt. He outlined the position of the Republican party on the tariff and noted its accomplishment under President Taft, praised the work of the tariff board, and contrasted the policy of the Democratic party in regard to the tariff, which he said would result in business disaster. He praised the proposed system for currency reform, and the income tax amendment, dwelt upon the successful trust prosecutions carried on by President Taft's government, reviewed legislation on employers' liability, and for the improvement of labor, and laid stress upon great reforms which had been made in economy in the public service as the result of a commission on economy and efficiency appointed by the President. He emphasized the growing efficiency of the navy and contrasted the action of the Democratic and Republican parties in Congress on the question of new battleships. He reviewed the foreign relations of the United States and pointed out the great increase of commerce under the Republican administration. The portion of his address which excited the most interest was that concerned with the discussion of the more radical policies advocated by President Roosevelt. This he treated in a general way as follows: "We will maintain the power and honor of the nation, but we will observe those limitations which the Constitution sets up for the preservation of local self-government. This country is so large and the conditions of life are so varied that it would be intolerable to have the local and domestic affairs of our home communities, which involve no national rights, controlled by majorities made up in other States thousands of miles away or by the officials of a central government." He declared that however wise, able and patriotic a Congress or government might be, if things should be done by them by usurping the powers confided to another department or another officer, the door would be open for the destruction of liberty. He quoted the pledge given to the American people by the last Republican national convention: "The Republican party will uphold at all times the authority and integrity of the courts, State and federal, and will ever insist that their powers to enforce their process and to protect life, liberty, and prosperity shall be preserved inviolate." "We must," he said, "be true to that pledge, for in no other way can our country keep itself within the straight and narrow path prescribed by the principles of right conduct embodied in our Constitution."

ATTEMPT TO BAR CONTESTED DELEGATES. The second day of the convention, June 19, was given

over almost entirely to an attempt on the part of the Roosevelt followers to bar from the convention the contested delegates who had been seated by the national committee. Again Governor Hadley of Missouri led the fight in behalf of Mr. Roosevelt, while James E. Watson of Indiana directed the struggle on the part of the Taft adherents. Shortly after the convention had been called to order by Senator Root, Governor Hadley introduced a resolution which substituted the roll of the Roosevelt delegates for that prepared by the members of the national committee. Mr. Watson thereupon moved to amend by referring the resolution to the committee on credentials, when it had been appointed. To this amendment, Governor Deneen of Illinois offered an amendment that no delegate whose seat was contested should have voice in the proceedings of the committee on credentials or should have a vote on the floor of the convention in determining the merits of the contestants. Mr. Watson moved to lay Governor Deneen's motion on the table, and it was on this motion that the storm raged throughout the day. The contested seats numbered 78, and included delegates-at-large from Arizona, Michigan, Texas, and Washington, and delegates from the Congress districts in Alabama, Arkansas, California, Indiana, Kentucky, Oklahoma, Tennessee, Texas, and Washington. It was obvious that upon the decision rendered in regard to those delegates depended the nomination. For the uncontested delegates pledged to President Taft and Mr. Roosevelt were so evenly numbered that the votes of those contested delegates were sufficient to determine the result.

An agreement was reached whereby Governor Hadley and Mr. Watson each were to have an hour in which to present the respective cases. Governor Hadley spoke first. His address contained a severe criticism of the decisions of the national committee and also of the decision of the chairman of the convention, made on the previous day, whereby his motion to substitute the Roosevelt delegates for the temporary roll prepared by the national committee, was declared out of order by the chairman. He read the list of members of the national committee who had signed a report to the effect that the contested delegates were not entitled to sit in the convention. These names were those of William E. Borah of Idaho, George A. Knight of California, John G. Capers of South Carolina, C. E. Loose of Utah, T. C. DuPont of Delaware, Cecil A. Lyon of Texas, Sidney Bieber of the District of Columbia, Thomas Thorson of South Dakota, Pearl Wight of Louisiana, M. C. Mundy of Tennessee, and A. R. Burnham of Kentucky. He then reviewed the California and Texas cases.

Governor Hadley's address was delivered with great eloquence and spirit, and at its close there broke out a remarkable demonstration for him which lasted for forty minutes. Many of the Taft men joined in the personal tribute which was paid to him. From this time on Governor Hadley was frequently mentioned as a possible compromise candidate for President or Vice-President. Following Governor Hadley, W. T. Dovell of Seattle, Wash., argued the Washington contests in opposition to Governor Hadley's motion. Mr. Dovell was the contesting Taft delegate-at-large. He contended that the Taft

delegates were elected regularly and no questions were ever raised as to their regularity. The Roosevelt delegates, he said, were elected at a mass meeting. Henry J. Allen of Kansas then spoke in support of Governor Hadley's motion. He summed up the cases for the Roosevelt delegates in Washington and the fifth district of Missouri. James Hemenway of Indiana then spoke against the motion. The Indiana contests he said were paper contests made only as a pretext for appealing to the convention. There then followed George L. Record of New Jersey, who spoke in support of Governor Hadley's motion, explaining the details of the contests in Arizona and Indiana. Judge Robert E. Morrison of Arizona defended the action of the national committee in regard to Arizona, and Thomas H. Devine, chairman of the committee on credentials, spoke in opposition to Governor Hadley's motion. He dealt especially with the Texas case.

After several other delegates had spoken for and against the motion, James E. Watson of Indiana made the chief argument in opposition to it. He insisted that the contests before the national committee had been fairly and impartially heard, and declared that the convention was not in a condition to judge upon the merits of the contests, because in the case of many of them, not one word of evidence had been heard. Mr. Watson concluded his speech by moving that the whole matter be referred to the committee on credentials when appointed, and Governor Deneen, as noted above, moved to amend this by adding that no man should be allowed to have a vote in the selection of that committee whose seat was to be affected by the contests taken before it, or should be allowed to vote on the report. This motion Mr. Watson moved to lay on the table, and on this the only vote of the day was taken. It resulted in 556 votes in support of Mr. Watson's motion and 510 votes against it, four delegates not voting. This concluded the active work of the convention for the day.

MEETING OF THE COMMITTEE ON CREDENTIALS. As soon as the convention adjourned, the committee on credentials, which was to pass upon the contests already decided by the national committee, went into session. On this committee the Taft members numbered 33 and the Roosevelt, 19. The Roosevelt States represented were California, Idaho, Illinois, Kansas, Maine, Maryland, Minnesota, Missouri, Nebraska, New Jersey, North Carolina, Ohio, Oklahoma, Oregon, Pennsylvania, South Dakota, West Virginia and Wisconsin. After a session of several hours the Roosevelt members of the committee left and refused to take part further in the deliberations on the ground that the committee had passed a resolution limiting the hearing in all contests to five minutes each, with ten minutes permitted for arguments in general contests. Later, however, on the advice of Mr. Roosevelt, these bolting members of the committee returned and took part in the hearing of the contests.

THE QUESTION OF BOLTING. In the meantime the question most discussed was whether or not Mr. Roosevelt's followers would bolt the convention, following an adverse report of the committee on credentials. A conference was held at which were present Colonel Roosevelt, William Flinn of Pennsylvania, James R. Garfield, Amos Pinchot, Governor Johnson, Gov-

ernor Stubbs of Kansas, Governor Hadley, Senator Borah, and former Governor Fort of New Jersey. The proposition to bolt hinged on the seating of 72 delegates from California, Arkansas, Washington, Arizona, Oklahoma, Texas, Alabama, Kentucky, Michigan, Indiana, and Tennessee. It was contended that that number of seats had been taken by the Republican national committee from Roosevelt and given to Taft. It was practically decided at this conference that if the Roosevelt followers were defeated in their fight in the convention to seat their contested delegates there should be a bolt following the report of the committee on credentials, if it were unfavorable. Senator Borah, Governor Hadley, and several other prominent Roosevelt supporters opposed the idea of bolting the convention and refused to enter into any such plan. The Roosevelt delegates from several States voted not to follow Colonel Roosevelt in a bolt from the convention. Among these were 20 of the 46 delegates of Missouri. Governor Hadley, addressing this delegation, said: "We came here to vote for Roosevelt, not to leave the Republican party for any third party movement. We are instructed for Roosevelt, but we are not instructed to bolt the Republican party." Representatives from Kansas, Michigan, Massachusetts, Illinois, and other States took action similar to that of Missouri. The Illinois Roosevelt delegates, by a vote of 30 to 2, decided not to follow Colonel Roosevelt in any bolt or in any movement looking to a superseding convention. Governor Deneen of Illinois said, "This decision does not mean that we are abandoning Colonel Roosevelt. We have been instructed by the Republicans of Illinois to support the former President for the presidential nomination. It is obvious that he can win that nomination only in a Republican convention."

STATEMENT BY MR. ROOSEVELT. The committee on credentials passed upon the disputed cases in Alabama, Arizona, and Arkansas, and upheld the action of the national committee. It became obvious to Mr. Roosevelt that the national committee's action in the other contests would be adverse, and on June 20, he gave up hope of being nominated in the regular Republican convention. He issued a long statement in which he said that he would accept a nomination from the "honestly elected majority of the Republican convention, or a nomination made by such Progressives as may stand together and formulate a progressive platform." He said:

"The time has come when I feel that I must make certain statements, not merely to honestly elected members of the Republican convention, but to the rank and file of the Republican party and to the honest people of the entire nation."

He then reviewed the course of the pre-nomination campaign, pointing out his successes in the States in which primaries had been held, declaring that in those States he had obtained six delegates to Mr. Taft's one. He said:

"Mr. Taft's strength as indicated by the two roll calls already taken, consisted chiefly (aside from the ninety stolen delegates) of nearly the solid delegations from the Territories and from the Southern States in which there is no general Republican party, and of Northern States, like New York, where the people had no chance to express themselves at primaries, and where the delegates were controlled by the bosses. In spite

of these odds against me I obtained a clear majority of all the delegates elected to the convention. In my campaign I again and again stated that if the people decided against me I would have nothing to say, but if they decided for me and the politicians then robbed me of the victory I would not silently and tamely acquiesce. It was evident that my opponents, with Mr. Taft's encouragement, intended to beat me by foul means if they could not do so by fair means."

He then criticised the action of the national committee in making up the temporary roll call and declared that it showed a cynical contempt of the most ordinary rules of decency in unseating ninety fairly elected Roosevelt delegates and substituting for them ninety Taft delegates who in the convention represented nothing whatever but successful fraud. He declared that the votes taken in the convention by which Mr. Root was elected temporary chairman, and Governor Deneen's motion was rejected, were due to the votes of those ninety fraudulent delegates.

After further criticising the action of the convention as constituted he said:

"I decline any longer to be bound by any action it may take. I decline to regard as binding any nomination it may make. I do not regard successful fraud and deliberate political theft as constituting a title to party regularity, or a claim to the support of any honest man of any party. I hope that the honestly elected majority will at once insist on the purging of the roll in its entirety and not piecemeal by the convention. If this is not accomplished I hope the honestly elected delegates will decline all further connection with a convention whose action is now determined and has hitherto been determined by a majority which is made a majority only by the action of the fraudulent delegates whom the convention has refused to strike from the rolls. . . . If the honestly elected majority of the convention choose to proceed with business and nominate me as a candidate of the general Republican party, I shall accept. If some among them fear to take such a stand and the remainder choose to inaugurate a movement to nominate me for the presidency as a Progressive on a progressive platform, and if in such event the general feeling among Progressives favors my being nominated, I shall accept."

DECISIONS BY THE CREDENTIALS COMMITTEE. As no work could be transacted by the convention until after the report of the committee on credentials, there was no business of importance transacted on the third day, June 20. The committee on resolutions was busy preparing its draft of a platform, but interest centred about the work of the committee on credentials. Hearings were held on the Ninth Alabama District contest and on the contests in Arizona. In each instance the committee endorsed the action of the national committee in seating the Taft delegates, in the Alabama case by a vote of 34 to 13, and in the Arizona case by a vote of 33 to 15. When the Fourth California District was reached, no one appeared for the Roosevelt delegates, and the Taft delegates were accordingly seated. The action of the national committee in the case of the twelve delegates from Florida was not opposed by Roosevelt representatives and they, too, were seated.

The most notable occurrence on this day in the convention was the demonstration in favor of Mr. Roosevelt, which lasted forty minutes.

VOTE ON CREDENTIALS COMMITTEE REPORT. On the third day of the convention, June 21, occurred the first test on the part of the convention as a whole as to whether or not it would support the action of the national committee and the committee on credentials in regard to disputed delegates. The work of the committee on credentials was so delayed on account of the exhaustive hearings of the cases

that at the end of the first day of these deliberations it had reached only the disputed cases in Alabama, Arizona, Arkansas, and California. In these, as is noted above, the action of the committee had followed that of the national committee, and these delegates had been given to President Taft. Ordinarily the work of the convention is delayed until the committee on credentials reports in full, but as there was no prospect of the conclusion of the committee's report for several days, Senator Root insisted that reports be made on cases already settled, and that the convention be permitted to vote on these. The majority and minority reports were therefore prepared on the Ninth Alabama District contest, the first in alphabetical order. The majority report upheld the national committee giving the delegates to President Taft. The minority report protested against the seating of the two Taft delegates. Governor Hadley, leader of the Roosevelt forces, then moved that the tentative minority report be substituted for the majority report. This was in the nature of a prepared statement, and was read by R. R. McCormick of Illinois. Following the reading of this statement, Governor Hadley read the following resolution:

"Resolved, That in the vote upon the adoption of the minority report of the committee on credentials, the delegates nominated in the list attached hereto, and whose names are upon the temporary roll of this convention and whose seats are contested, shall not vote upon the report until the right of any contestant named therein to a seat in this convention shall be determined in his favor by a majority vote of the uncontested delegates to this convention."

The list to which this resolution referred contained the names of 72 delegates, whose seats in the convention were protested by 14 members of the national committee. James W. Wadsworth, Jr., of New York, objected to Governor Hadley's resolution on the ground that it was identical in substance with Governor Deneen's amendment to Governor Hadley's resolution of July 18, which had been defeated in the convention by a vote of 564 to 510. By the defeat of Governor Deneen's amendment the convention had refused to permit the contestants to vote in the convention on their own contests, but gave them the right to vote on all other contests. Mr. Watson then moved that Governor Hadley's resolution be laid on the table and this was seconded. Senator Root, however, decided to permit Governor Hadley's resolution to go to a vote. It was defeated by a vote of 569 to 499, ten delegates not voting. Thus this resolution was defeated by six more votes than Governor Deneen's on the previous occasion. The convention then voted to lay the minority report of the Alabama cases on the table by a vote of 605 to 464. This was the first vote taken by the convention on the contested cases, and it showed a substantial majority for the Taft delegates. In this vote eight Roosevelt delegates from Idaho voted for the Taft delegates, as did also 25 Wisconsin delegates accredited to La Follette. The convention then adopted the majority report. In the Arizona contest the Taft delegates were seated by a vote of 564 to 497, seventeen not voting. In the contest for the delegates in the Fifth Arkansas Congress district there was no roll call, the majority report seating the Taft men being adopted by a *viva voce* vote. The California contest, which came

next in alphabetical order, resulted in a sharp struggle. The minority report of the committee on credentials protested against the "tyrannical overthrow of the will of the people of California as expressed by a plurality of 77,000 at the presidential preferential primary." Twenty minutes were given for discussion on each side.

Francis J. Heney argued in favor of the adoption of the minority report. He declared that the question involved was the right of a sovereign State to say how its delegates should be elected. His address, which was aggressive, was interrupted by expressions of disapproval on the part of the Taft delegates. Sereno E. Payne of New York supported the action of the majority of the committee. He declared that the sole question was whether the law of the State of California should control the law of the Republican national convention. He said that the convention of 1880 had settled that question forever in formulating the rule that congressional districts should be represented by delegates elected by the district.

James E. Watson of Indiana also favored the majority report. The debate was closed by Governor Johnson of California. He said that the question was, Shall the people rule? "Four years from now," he said in conclusion, "you will find the people in every State selecting delegates, and selecting them just as California has done. If he leaves no other heritage than that all the people have the right to rule in this nation, that will be a priceless privilege to Theodore Roosevelt."

The result of the roll call on the California contests was on the adoption of the majority report, ayes, 542; noes, 529. This was the closest vote taken on any contest. The Taft contested delegates were seated from Georgia, Indiana, Kentucky, and Louisiana. In the case of Georgia the four delegates-at-large were seated by unanimous vote, and in the other cases the vote was *viva voce*, roll calls not being deemed necessary. On the conclusion of the Louisiana cases the convention adjourned for the day.

The result of the votes of the convention on the contested cases made it evident to the leaders of the Roosevelt forces that they had no chance of controlling the convention or of nominating their candidate. The plan of bolting the convention following the first unfavorable action of the delegates on the report of the committee on credentials, was abandoned, although some of the aggressive supporters of Mr. Roosevelt still favored such action. This decision resulted largely from the refusal of important State delegations pledged to Mr. Roosevelt before the convention, to follow him in a bolt. While the convention was voting upon contested delegates, Mr. Roosevelt remained quietly in his hotel holding occasional conferences with his leaders.

Much favorable sentiment developed during this day of the convention in favor of Governor Hadley of Missouri for Vice-President. Governor Hadley had made an excellent impression upon the conservative delegates by his self-restrained attitude in the face of a difficult situation, and it was felt that he would materially strengthen the ticket if he were nominated as Vice-President.

PRESIDENT TAFT'S NOMINATION ASSURED. On Saturday, June 22, the last day of the conven-

tion, the renomination of President Taft was practically assured. The convention met and passed upon the remaining contested delegates, and the Taft delegates were seated. These included contests in Mississippi, Washington, and Texas, and in all cases the majority report of the committee on credentials, which upheld the decisions of the national committee, was supported by a majority of the delegates. Majority and minority reports were presented in the cases of Washington and Texas. The acceptance of these reports concluded the permanent organization of the convention. Action had been completed on all disputed cases at 2:45 in the afternoon. The committee on permanent organization then reported, nominating Senator Root as permanent chairman. This was received and adopted by the convention amid cheers from the Taft delegates. Senator Root then asked the unanimous consent for some remarks from Henry J. Allen of Texas, who had succeeded Governor Hadley as the representative of Mr. Roosevelt in the convention. Mr. Allen read the following statement from Mr. Roosevelt:

FINAL STATEMENT OF MR. ROOSEVELT. "A clear majority of the delegates honestly elected to this convention were chosen by the people to nominate me. Under the direction and with the encouragement of Mr. Taft the majority of the national committee by the so-called 'steam roller' methods and with scandalous disregard of every principle of elementary honesty and decency stole eighty or ninety delegates, putting on the temporary call a sufficient number of fraudulent delegates to defeat the legally expressed will of the people and to substitute a dishonest for an honest majority.

"The convention has now declined to purge the roll of the fraudulent delegates placed thereon by the defunct national committee and the majority which thus endorsed fraud was made a majority only because it included the fraudulent delegates themselves, who all sat as judges on one another's cases. If these fraudulent votes had not thus been cast and counted the convention would have been purged of their presence. This action makes the convention in no proper sense any longer a Republican convention representing the real Republican party. Therefore I hope the men elected as Roosevelt delegates will now decline to vote on any matter before the convention. I do not release any delegate from his honorable obligation to vote for me if he votes at all; but under the actual conditions I hope that he will not vote at all.

"The convention as now composed has no claim to represent the voters of the Republican party. It represents nothing but successful fraud in overriding the will of the rank and file of the party. Any man nominated by the convention as now constituted will be merely the beneficiary of this successful fraud; it would be deeply discreditable to any man to accept the convention's nomination under these circumstances, and any man thus accepting it would have no claim to the support of any Republican on party grounds and would have forfeited the right to ask the support of any honest man of any party on moral grounds."

Following the reading of this statement Mr. Allen addressed the delegates, bitterly attacking the action of the national committee and declaring that the Roosevelt delegates felt that they could no longer share in the responsibility for the acts of the convention. He concluded as follows:

"We do not bolt, we merely insist that you, not we, are making the record and we refuse to be bound by it. We have pleaded with you ten days, we have fought with you five days for a square deal; we fight no more, we plead no longer, we shall sit in silent protest, and the people who sent us here shall judge us."

VOTE ON THE PLATFORMS. Following the remarks of Mr. Allen the regular programme of the convention was resumed. First came the report of the committee on rules. This was temporarily laid on the table. Charles W. Fairbanks of Indiana then read the platform prepared by the majority of the committee on resolutions. Senator Owen of Wisconsin read the platform prepared by Senator La Follette containing the latter's well-known doctrines. On motion of Mr. Fairbanks the La Follette platform was laid on the table. William Barnes of New York then demanded a roll call upon the platform prepared by the majority of the committee. When California was reached in the roll of States, Governor Johnson rose and said, "California declines to vote." This was greeted with cheers from the Roosevelt delegates. Senator Root ordered the California delegates to be polled, but there was no answer to the names called until the names of the two contested Taft delegates were read. They voted aye. The delegates from Maine refused to vote. The Roosevelt delegates refusing to vote were the following: Alabama, 2; California, 24; Illinois, 9; Indiana, 7; Kansas, 18; Maine, 12; Maryland, 6; Massachusetts, 14; Michigan, 8; Minnesota, 24; Mississippi, 3; Nebraska, 16; New Jersey, 28; New York, 5; North Carolina, 12; Ohio, 34; Oklahoma, 15; Oregon, 2; Pennsylvania, 63; South Carolina, 3; South Dakota, 10; Tennessee, 1; Texas, 8; Vermont, 2; Virginia, 1; West Virginia, 16; Wisconsin, 26. The number of delegates who did not vote on the resolution was 343, with 16 absent. Those voting for the resolution numbered 666.

NOMINATION OF CANDIDATES. On the completion of this vote the next business in order was the nomination of candidates for President. The States were called in their alphabetical order, and no nominations were made until Ohio was reached. Warren G. Harding then nominated President Taft in a speech which, after reviewing President Taft's record and deprecating the movement against his renomination, concluded as follows:

"I present to you to-day a leader who is a composite of the virtues of all those deservedly enshrined in our party pantheon—William Howard Taft—as wise and patient as Abraham Lincoln, as modest and dauntless as U. S. Grant, as temperate and peace-loving as Rutherford B. Hayes, as patriotic and intellectual as James A. Garfield, as courtly and generous as Chester A. Arthur, as learned in the law as Benjamin Harrison, as sympathetic and brave as William McKinley, and as progressive as his predecessor, with a moral stamina, breadth of view, and sturdy manhood all his own.

At the first mention of President Taft's name in Mr. Harding's address there was a demonstration lasting twenty minutes. His nomination was seconded by John Wanamaker of Pennsylvania and Dr. Nicholas Murray Butler of New York. Senator La Follette was nominated by Michael B. Oelrichs of Wisconsin and was seconded by Robert M. Pollock of North Dakota. There were no other nominations. On the roll call which followed the formal nomination, the same scenes were enacted as accompanied the roll calls on the platform. California delegates again refused to vote, and their example was followed by delegates from other States which had been pledged to Mr. Roosevelt. Idaho gave 7 votes to Senator Cummins of Iowa, who had not been placed in nomina-

tion. Ten delegates from Iowa also voted for Senator Cummins. When the turn of Massachusetts was reached a poll was demanded when the Roosevelt men refused to vote. Senator Root called for the alternates amid cries of protest. One of the Massachusetts delegates, rising, said, "Massachusetts is a law-abiding State and refuses to have its vote stolen." Senator Root replied: "If any delegate sent to this convention from the State of Massachusetts refuses to perform his duty as a delegate, his alternate will be called and will have an opportunity to do it." This was the first case in which the alternates had been called upon to vote when the regular delegates had refused to do so. Protest was made and Senator Root explained his action on the ground that the vote had been challenged, so that it was necessary to call an individual roll. The protesting delegate from Massachusetts appealed from the decision of the chair and defied the convention to make him vote for any man. By calling the alternates in the Massachusetts delegation, Mr. Taft received a gain of two votes. The delegates from Minnesota refused to vote, as did the Roosevelt delegates in the Missouri delegation. The Nebraska delegates did not vote, and all but two of the delegates from New Jersey refused. These voted for Mr. Roosevelt. The New York delegates cast 76 votes for President Taft and 8 for Mr. Roosevelt, 6 not voting. Thirty-four Roosevelt men from Ohio refused to vote. Pennsylvania gave 2 votes to Charles E. Hughes, 2 for Roosevelt, 9 for Taft, and 62 not voting. The South Dakota delegation cast 5 votes for La Follette and 5 for Roosevelt. The President was nominated when Washington was reached. This State gave him the 540 necessary for nomination. The West Virginia delegates refused to vote.

NOMINATION OF TAFT AND SHERMAN. The result of the balloting was announced at 9:35 P. M. It was as follows: Taft, 561; not voting, 344; Roosevelt, 107; Hughes, 2; Cummins, 17; La Follette, 41; absent, 6. Senator Root then made the following announcement: "William Howard Taft, having received a majority of the votes, is declared to be renominated for the presidency of the United States. There was no motion to make the nomination unanimous, which was unprecedented in a Republican convention. Mr. Root then called for nomination for Vice-President. On the call for candidates, Alabama yielded to New York, and Representative J. Van Vechten Olcott presented the name of Vice-President Sherman for renomination. There were no other nominations. The balloting for Vice-President resulted as follows: James S. Sherman, 597; Herbert S. Hadley, 14; Howard Gillette, 1; Senator William E. Borah, 21; Charles G. Merriam, 20; Albert J. Beveridge, 2; present, but not voting, 352; absent, 71. A resolution giving the national committee power to fill all vacancies and to declare the seat of any member vacant who it may be decided does not support the ticket, was adopted. The convention adjourned at 10:30 P. M.

The balloting for President Taft by States is shown in the table in the next column.

La Follette received 41 votes in North and South Dakota and Wisconsin. Roosevelt received 107 votes from Illinois, Indiana, Kentucky, Maryland, Michigan, Nebraska, New Jersey, New York, North Carolina, Oklahoma, Oregon, South Dakota, and Tennessee. Charles

	Taft	Not Voting

Total	561	344

E. Hughes polled 2 votes in Pennsylvania. Cummins received 17 votes in Iowa and Idaho. Six delegates were absent.

PROGRESSIVE NOMINATING CONVENTION. Directly after the adjournment of the convention the Roosevelt delegates assembled at Orchestra Hall and organized an informal nominating convention. The convention was called to order by Governor Johnson of California. All the leaders of the Roosevelt forces attended. In his opening remarks Governor Johnson outlined the purpose of the assemblage as follows: "We, the delegates from all parts of the United States, representing a majority of legally elected delegates to the Republican convention, propose to do here and now what we were prevented from doing there." He declared further that the meeting had been called to give to Theodore Roosevelt the nomination of which he had been robbed. This was the first indication that such a purpose was intended, and it was greeted with great outbursts of cheers. Following Governor Johnson's address, Senator Clapp of Minneapolis offered the following resolution:

"We, delegates and alternates to the Republican convention, representing a clear majority of the voters of the Republican party in the United States, and representing a clear majority of the delegates and alternates legally elected to the convention in meeting assembled, make the following declaration:

"We were delegated by a majority of the Republican voters of our representative districts and States to nominate Theodore Roosevelt in the Republican national convention as the candidate of our party for President and thereby carry out the will of the voters as expressed at the primaries. We have earnestly and conscientiously striven to execute the commission entrusted to us by the party voters. For five days we have been denied justice in the national convention. This result has been accomplished by the action of the now defunct national committee in placing upon the preliminary roll of the convention and thereby seating upon the floor of the convention a sufficient number of fraudulently elected delegates to control the proceedings of the convention.

"These fraudulent delegates once seated have, by concerted action with one another, put themselves upon the permanent roll where they constitute an influence sufficient to control the convention and defeat the will of the party as expressed at the primaries.

"We have exhausted every known means to head off this conspiracy and to prevent this fraud upon the popular will, but without success.

"We were sent to this convention bearing the most specific instructions to place Theodore Roosevelt in nomination as the candidate of our party for President, and we therefore deem it to be our duty to carry out those instructions in the only practicable and feasible way remaining open to us.

"Therefore, be it resolved that we, representing the majority of the voters of the Republican party and of the delegates and alternates legally elected to the national Republican convention, in compliance with our instructions from the party voters, hereby nominate Theodore Roosevelt as the candidate of our party for the office of President of the United States; and we will call upon him to accept such nomination in compliance with the will of the party voters.

"And, be it further resolved, that a committee be appointed by the chair to forthwith notify Colonel Roosevelt of the action here taken and request him to appear before us in this hall as soon as convenient."

The reading of this resolution was followed by another tremendous outburst of cheers and calls for Mr. Roosevelt. He appeared in the hall directly after the nominating resolution had been adopted. In accepting the nomination thus offered to him, he made an address, a part of which was as follows:

ADDRESS OF MR. ROOSEVELT. "Gentlemen—I thank you for your nomination, and in you I recognize the lawfully elected delegates to the Republican convention who represent the overwhelming majority of the voters who took part in the Republican primaries prior to the convention, and who represent the wish of a majority of the lawfully elected members of the convention. I accept the nomination subject to but one condition. This has now become a contest which cannot be settled merely along the old party lines. The principles that are at stake are as broad and as deep as the foundations of our democracy itself. They are in no sense sectional. They should appeal to all honest citizens, East and West, North and South; they should appeal to all right thinking men, whether Republicans or Democrats, without regard to their previous party affiliations. I feel that the time has come when not only all men who believe in progressive principles, but all men who believe in those elementary maxims of public and private morality which must underlie every form of successful free government should join in one movement. Therefore I ask you to go to your several homes, to find out the sentiment of the people at home, and then again to come together, I suggest in mass convention, to nominate for the presidency a progressive candidate on a progressive platform, a candidate and a platform that will enable us to appeal to Northerner and Southerner, Easterner and Westerner, Republican and Democrat alike, in the name of our common American citizenship." He declared that if the sentiment of the progressives was that he make a fight he would do so, if only one State supported him. "The

only condition I impose," he said, "is that you shall feel entirely free when you come together to substitute any other man in my place if you deem it better for the movement, and in such case I will give him my heartiest support." He then attacked the methods of the convention and the national committee and declared that the delegates had been stolen from him by the bosses. He said: "I am in this fight for certain principles and the first and most important of these goes back to Sinai and is embodied in the commandment: 'Thou shalt not steal.'" He concluded as follows: "As for the principles for which I stand I have set them forth fully in the many speeches I have made during the last four months while making an active contest for the nomination which I won and out of which I have been cheated by the men who feared to see the principles reduced to action.

"Fundamentally, these principles are, first, that the people have the right to rule themselves and can do so better than any outsiders can rule them, and second, that it is their due so to rule in a spirit of justice toward every man and every woman within our borders, and to use the government so far as possible as an instrument for obtaining not merely political but industrial justice.

"We do not stand for these principles as mere abstractions any more than we stand for honesty and fair play as mere abstractions. We seek to apply them practically in every relation of life where we have power. We stand for honesty and fair play. We practically apply the commandment, 'Thou shalt not steal,' and we wish to give a square deal to every citizen of the republic so that he may have a chance to show the stuff there is in him, unhelped by privilege and unhampered by privilege for others.

"I hold that we are performing a high duty in inaugurating this movement, for the permanent success of practices such as have obtained in the fraudulent convention that has just closed its sitting would mean the downfall of this republic, and we are performing the most patriotic of duties when we set our faces like flint against such wrong."

Following the address of Mr. Roosevelt the convention adjourned. On the morning of June 23, 300 Roosevelt delegates assembled to inaugurate the formal temporary organization of the new party. Governor Johnson presided, and with him were Medill McCormick, James R. Garfield, and Senator Clapp of Minnesota. An address was made by Governor Johnson, who declared that the Progressives were about to "begin on the road that is to lead to political freedom." On motion of Mr. Garfield, a resolution was passed giving to Governor Johnson the power to select seven men who, after a conference with Mr. Roosevelt, would be able to present to the convention a plan of action and organization that would make it possible to carry on the movement. This motion was carried and Governor Johnson remarked, "Gentlemen, this is the birth of a new party." After addresses by several of the delegates the meeting adjourned. Mr. Roosevelt returned to his home at Oyster Bay on June 25. On his arrival in New York City, in reply to the question as to how he felt, he said that he felt "like a bull moose." From this reply originated the phrase "Bull Moose Party," which was the popular designation of the National Progressive party during the campaign.

NATIONAL CONVENTION, DEMOCRATIC

While the Democratic national convention lacked, to a great extent, the intensity and bitter feeling which characterized the Republican convention, there was no lack of dramatic situations. These were brought about almost entirely by Mr. Bryan, who, although not a candidate himself for the nomination to the presi-

deney, was the dominating figure in the convention, and it was generally believed that the nomination of Governor Wilson was brought about by his tacit but powerful assistance.

There were no important disputed cases of delegates to the convention, and the preliminary work of the national committee was devoted almost entirely to the organization of the convention and the selection of a temporary chairman. Previous to the meeting of the convention one of the leading candidates for the nomination had a sufficient number of votes pledged to him to insure his choice. The rule of Democratic conventions called for a two-thirds vote of the delegates to nominate the candidates for President and Vice-President, and not a plurality or majority vote, as in the case of the Republican convention. This rule complicates the choice of candidates and makes it comparatively easy for the convention to fall into a deadlock which can be broken only when a compromise is made on some one candidate.

MR. BRYAN'S ATTITUDE. As is intimated above, Mr. Bryan had not committed himself prior to the convention to any candidate. He had expressed friendly feeling, however, toward Governor Wilson and Champ Clark, but which of these he preferred was not known. There was a well-marked line of cleavage among the delegates between those who wished to eliminate entirely the influence of Mr. Bryan from the deliberations and those to whom he was still the strongest man in the Democratic party and the logical leader of the Democratic forces in the convention.

FIGHT FOR TEMPORARY CHAIRMAN. The fight between these two elements had its first outbreak in the choice of a temporary chairman. This choice fell upon the committee of arrangements, a sub-committee of the national committee. A majority of this committee, representing the more conservative element of the party selected Judge Alton B. Parker, of New York as temporary chairman. Mr. Bryan, who was at the time in Chicago, reporting the Republican convention for a New York newspaper, in a telegram sent to the members of the committee heartily protested against the selection of Judge Parker, which he said would be nothing short of a crime. He based his objection on the ground that Judge Parker was a conservative and a reactionary and that the choice of him for temporary chairman would stamp the convention as non-progressive and committed to a non-progressive candidate.

Notwithstanding Mr. Bryan's objections the majority of the committee on arrangements insisted on the selection of Judge Parker. On June 22, Mr. Bryan sent from Chicago a telegram to all the Democratic candidates for President except Governor Harmon of Ohio and Congressman Underwood, inviting them to join with him in a fight against the selection for temporary chairman of Alton B. Parker. The candidates thus addressed were Champ Clark, Governor Wilson, Governor Burke of North Dakota, Governor Foss of Massachusetts, Governor Baldwin of Connecticut and Mayor Gaynor of New York City. Governor Wilson replied at once to Mr. Bryan's telegram informing the latter that he was ready to support a progressive candidate for temporary chairman. Mr. Clark was much more guarded in his reply and argued for harmony and against the fight on Judge Parker. This action

of Mr. Bryan was construed by many of the delegates as a move against the candidacy of Speaker Clark, who, it was alleged, had been gradually turning from Mr. Bryan in an effort to capture delegates from so-called conservative ranks and was, in a measure, pledged to the election of Judge Parker as temporary chairman. It was said also that the managers of the Clark campaign had been exacting a pledge from their delegates that they would not vote for Mr. Bryan under any circumstances. It was claimed also that the Clark managers were arranging with Charles F. Murphy of New York, with a view to throwing their votes in support of Judge Parker in exchange for the 90 delegates from New York State. These charges were denied by the Clark managers. Whether any truth was contained in them or not, it was plain that the action of Mr. Bryan in calling for direct opposition to Judge Parker placed Speaker Clark in an embarrassing position, and Mr. Bryan's action was strongly resented by the Clark delegates. The telegram sent by Mr. Bryan read as follows: "I shall be pleased to join you and your friends in opposing his [Judge Parker's] selection by the full committee or by the convention. Kindly answer here."

On June 23 Mr. Bryan arrived in person in Baltimore. He avowed his intention of continuing the fight on Judge Parker and declined to listen to any suggestion that would bring about the latter's election as temporary chairman. Mr. Bryan's candidate for the position was Ollie James of Kentucky. On the same day the Wilson delegates began an aggressive fight against the election of Judge Parker and their friendliness with Mr. Bryan gave color to the belief that Mr. Bryan favored the nomination of Governor Wilson.

On June 24 the Democratic national committee upheld the action of the committee on arrangements and chose Judge Parker as temporary chairman of the convention. Judge Parker received 31 votes against 20 votes cast for Ollie James of Kentucky and 2 votes cast for Senator O'Gorman of New York. Members from fifteen States whose delegations were pledged to Speaker Clark for the presidency voted for Judge Parker, while those from nine States pledged to Mr. Clark, voted for Mr. James. Following the nomination by the committee Mr. Bryan made an attack on Parker in which he declared that the predatory interests were at work as they were in Chicago, and he himself would go into the convention and nominate a progressive to oppose Judge Parker. He said that he himself would be a candidate if no one else were willing to appear in opposition to Judge Parker.

As a result of these conditions the opening of the convention on June 25 was awaited by the delegates with no little anxiety. Mr. Bryan's chief opponent in these preliminary details relating to the temporary chairmanship and indeed throughout the convention, was Charles F. Murphy, who headed and practically controlled the New York delegation. He had thrown the weight of the delegation on the side of Judge Parker's selection. Mr. Bryan bitterly resented this action and his attitude toward the New York delegation throughout the convention was of uncompromising hostility.

OPENING OF THE CONVENTION. The conven-

tion was called to order at 12:21 June 25, by Norman E. Mack, chairman of the national committee. After prayer by Cardinal Gibbons, the list of officers chosen by the national committee, including Alton B. Parker for temporary chairman, was read to the convention. Mention of Mr. Parker's name was greeted with cheers from the New York delegation, but it was poorly received by the others. Mr. Bryan at once raised a point of order. He then placed the name of Senator John W. Kern of Indiana in nomination in opposition to Judge Parker.

SPEECH OF MR. BRYAN. In support of this nomination he delivered a speech. He said:

"I rise to place in nomination for office of temporary chairman of the convention the name of John W. Kern of Indiana, and in thus dissenting from the judgment of our national committee as expressed in recommendations, I recognize that the burden of proof is on me to overthrow the assumption that the committee can say that it represents the wishes of the convention and of the party of the nation."

He declared that the rules drafted and recommended by the committee were not final, and that the convention had the right to accept or reject its action. "If anyone of you ask for my credentials," he said; "if any of you inquire why I, a mere delegate to this convention from one of the sovereign States, ask you to accept it in face of the name they presented, I beg to tell you, if it need to be told, that in three campaigns I have been the champion of the Democratic party's principles and that I have received the votes of 6,000,000 Democrats. If that is not proof of a party's confidence I shall not attempt to furnish proof." He declared that from the day of his first nomination he had fought the enemies of his party, and that he believed himself still worthy of the support of the party.

After detailing the political history and services of Senator Kern, he said: "The delegates to this convention must not presume on the ignorance of those people who did not come because they did not have enough money to become delegates to this convention. And the people now know of the influence that dominated Chicago and made effective there a farce, and they know the same influences are at work here and more brazenly than they were at Chicago." After declaring that he did not impeach the good intent of Judge Parker, he declared that not every man of high character or good intent is a fit man to sound the keynote of a progressive campaign. "I remind you," he said, "that this is not a question where personal ambition or personal compliments are uppermost. We are writing history to-day. We need not deceive ourselves that that which is done in a national convention is done in secret. . . . It seems to me that now when the hour of victory arrives the song of victory should be sung by one whose heart has been in the fight." He declared that John W. Kern was such a man. Mr. Bryan concluded as follows: "Progressive Democracy has been the pillar of fire to lead the people by night. Delegates, I pray that now the dawn has come, you do not rob the people of the right to have it as the cloud to lead by day."

ELECTION OF TEMPORARY CHAIRMAN. As Mr. Bryan took his seat among the delegates, Senator Kern took the speaker's stand. After referring to Judge Parker in complimentary terms, he appealed to him to retire in the interest of harmony and to make place for any one of a number of eminent Democrats, whose selection as temporary chairman would create no friction. He named Senator O'Gorman of New York, Senator Culberson of Texas, Senator Shively of Indiana, Representative Henry D. Clayton of Indiana, Senator Lea of Tennessee, and James E. Campbell of Ohio. It was apparent that Senator Kern was unwilling to take up the fight against Judge Parker and

Mr. Bryan again ascended the speaker's platform. He said:

"I tried to get the committee to agree upon a Progressive, and when it did not agree upon a Progressive I went to the man who received the largest number of votes. I urged Senator-elect James to lead in the fight. He said that conditions were such that he did not feel that he could accept the obligation. Then I went to Senator O'Gorman and urged him to accept this leadership. I stand ready to accept any Progressive, but if no Progressive appears, I shall accept the leadership and you shall accept or reject the advocacy of what we have been fighting for for sixteen years."

Theodore A. Bell of California then spoke in favor of Judge Parker, but such was the uproar in the convention that he was heard by but few delegates. Congressman Fitzgerald of New York endeavored to speak in favor of Judge Parker but the convention would not hear him. The chairman of the convention then closed the debate. Mr. Bryan rose to a point of order, and Senator Lea made a motion to allow each side fifteen minutes. This motion was lost. The chairman then ordered a vote telling the assemblage that there were only two candidates, Alton B. Parker and William J. Bryan. There was great confusion during the voting. The New York delegation cast its 90 votes for Parker and the 67 votes of Pennsylvania were given to Bryan. The votes of most of the other States were split. The vote resulted in 578 for Judge Parker and 506 votes for Mr. Bryan, with six delegates absent. Following the nomination of Judge Parker the convention adjourned until evening, as the temporary chairman was not prepared to make his address until that time.

ADDRESS OF JUDGE PARKER. Judge Parker's address delivered at the evening session was received coolly by the delegates.

He began by alluding to the Republican convention at Chicago and designated it as a brutal brawl. He urged, using Colonel Roosevelt's candidacy as an example, the necessity of limiting the presidential term to one term, and declared that Colonel Roosevelt's lust of power alone had broken the tradition hitherto observed since the beginning of the government. He discussed the high cost of living, attributing it to the tariff statutes and to combinations restraining trade and competition created for the purpose of wringing from the public everything which the tariff statutes make possible. He asserted that the Republican party favored the few at the expense of the many and that protection is purchased from that party by corporations. He declared that the failure of the executive and legislative branches of the government, both federal and State, to protect the people from the special privilege hunters and graft-seekers is deeply rooted in a corrupt alliance between the latter and the leaders of the Republican party. "For their crimes against American citizenship," he said, "the present leaders of the Republican party should be destroyed. For making and keeping the bargain to take care of the tariff-protected interests in consideration of campaign funds, they should be destroyed. For encouraging the creation of combinations to restrain trade and refusing to enforce the law, for a like consideration, they should be destroyed. For the lavish waste of the public funds; for the fraudulent disposition of the people's domain and for their contribution toward the division of the people into classes, they should be destroyed. For the efforts to seize for the executive department the federal governmental powers rightfully belonging to the States, they should be destroyed. And destruction will be theirs this very year if we but do our duty."

On the conclusion of Judge Parker's address the convention adjourned until the following morning.

SECOND DAY OF THE CONVENTION. The morning session of the second day of the convention, June 26, was devoted chiefly to routine matters. The committee on credentials was not ready to present its report and no other business was transacted. Almost the entire time of the session was devoted to hearing addresses by many eminent Democrats. Among those who spoke were Joseph W. Folk, former governor of Missouri, Senator Rayner of Maryland, Henry D. Clayton of Alabama, and Senator Gore of Oklahoma. The convention then adjourned until evening.

The committee on credentials sat during the afternoon on the cases of contested delegates. Of these the most important were the contests from Illinois, which involved the question of regularity of credentials between two sets of delegates. The committee in each case sustained the finding of the national committee when it made up the temporary roll.

THE UNIT RULE. The night session was marked by the return of the progressive element as a dominating power in the convention. The question was on the unit rule applied to delegations which had hitherto been in force in Democratic conventions. The issue involved related to the Ohio convention and the question was as to whether the instruction given by the State convention bound simply the delegates-at-large from Ohio or whether it applied to district delegates who were elected under instructions from their representative districts. Of the 46 delegates from Ohio, 19 elected from congressional districts were chosen under instruction to vote for Governor Wilson. The remainder of the 46 delegates, including the delegates-at-large, were elected as Harmon delegates. The State convention sought to apply the unit rule and vote the entire 46 delegates for Governor Harmon. This effort was resisted and an appeal was made to the national committee, which refused to consider the matter. Newton D. Baker, mayor of Cleveland, who resisted the action of the State convention after the convening of the convention, took up the matter with the committee on rules.

This committee by a vote of 22 to 16 decided that Governor Harmon's friends were right and that the unit rule did apply. The majority and minority reports of this committee were submitted to the convention and on the acceptance of one of these reports came the test vote of the relative strength of the conservative and progressive elements. The majority vote was submitted to the convention by Representative J. Harry Covington of Maryland, a member of the committee on rules, and was defended by E. H. Moore, personal manager in the convention of Governor Harmon's candidacy. It was opposed by Representative Henry of Texas, Senator Williams of Mississippi, and Mayor Baker of Cleveland. The debate continued for two hours and then by a vote of 555½ against 495½ the convention rejected the report of the committee on rules, declaring the unit rule imposed by the Ohio convention did not bind the 19 Wilson delegates and that they were free to vote for Governor Wilson. This vote was regarded as an indication of a development of strength for Woodrow Wilson and the Bryan forces.

ELECTION OF PERMANENT CHAIRMAN. The convention in this session decided almost unani-

mously to defer the adoption of a platform until after the nominees for president were named. This resulted through Mr. Bryan, who, by his efforts carried the motion through the committee on resolutions by a vote of 41 to 11. Ollie James of Kentucky was selected by the committee on organization for the permanent chairmanship. The chairmanship of the committee on resolutions was offered to Mr. Bryan, but he declined on the ground that he wished to have his hands free to conduct any fight that he deemed necessary. The committee on resolutions took up the work of drafting a platform and a tentative draft was presented by the New York delegation. This was drawn by Senator O'Gorman.

REPORT OF CREDENTIALS COMMITTEE. The third day of the convention, June 27, was filled with important and sensational happenings. It was marked by the first test vote which indicated the relative strength of Governor Wilson and Mr. Clark, by an attempt by Mr. Bryan to have August Belmont of New York and Thomas F. Ryan of Virginia, expelled from the convention as delegates, and by the beginning of nominations for presidential candidates. The first business of the day was the submission of the minority report from the committee on credentials in opposition to a majority report brought in by the chairman of the committee. The most important issue turned on the case of the South Dakota delegates. In that State delegates had been instructed for Governor Wilson. The committee on credentials, however, displaced these and substituted delegates for Mr. Clark. There were ten delegates.

The debates on this report were begun by W. A. McCorkle, former governor of West Virginia, who defended the action of the majority of the committee in seating the Clark delegates. The minority report was defended by Senator Lea of Tennessee. Theodore A. Bell of California then attacked the Wilson men and charged them with sharp practices. Mr. Bryan in the course of his speech mentioned the name of Governor Wilson. This was the signal for a great Wilson demonstration. The Wilson delegates paraded about the hall carrying banners and the business of the convention was obliged to suspend. An attempt was made to offer a counter-demonstration in favor of Mr. Clark. This did not succeed. When the convention again came to order, the roll call of the States was ordered on the adoption of the minority report of the credentials committee. There was great surprise when Roger Sullivan, chairman of the Illinois delegation, rose and cast the 58 votes of that delegation in favor of the minority report, or for Governor Wilson's delegates. Charles F. Murphy also voted the 90 delegates from New York for the minority report. The vote of the convention on the minority report was 633½ for and 437 against. The Wilson delegates from South Dakota were therefore seated. These were the only important disputes between the rival delegations decided by the convention.

SPEECH OF MR. JAMES. The chairman of the committee on permanent organization, reported that Ollie James of Kentucky had been nominated for permanent chairman. The nomination was ratified with enthusiasm. Mr. James addressed the convention in a speech which aroused great enthusiasm.

He attacked the record of the Republican party and declared that it was flushed with many victories, imperious as a tyrant, and unheeding of the demands of the people. He declared that its promises in regard to revising the tariff had been broken and contrasted the action of the Democratic house in passing the tariff bills which actually reduced the tariff, and he bitterly arraigned President Taft for vetoing these bills. He declared that the Republican platform adopted at Chicago in regard to the tariff and trust questions was a puzzle absolutely meaningless to the American people. He concluded as follows: "The progressive spirit that sweeps this country now is called by some the principles of the progressives, by others the doctrine of the insurgents; but back yonder when a voice in the western wilderness cried out for them they were called the vagaries of Bryan the dreamer. However much we may differ in national conventions upon minor questions, all just men must admit that the one living American whose name will shine in history, studded by a thousand flaming stars, alongside those of Jefferson and Jackson, is that of William Jennings Bryan of Nebraska."

After the conclusion of Mr. James's address, a motion to proceed to the nomination of a candidate for President was defeated, and the convention took a recess until 8 P. M.

MR. BRYAN'S ATTACK ON BELMONT AND RYAN. The evening session was given over almost entirely to an attempt of Mr. Bryan to unseat August Belmont and Thomas F. Ryan as delegates. As soon as the session had convened Mr. James asked for unanimous consent to Mr. Bryan's reading of a resolution which he had prepared. Mr. Bryan accordingly read the following resolution:

"Resolved, That in this crisis in our party's career and in our country's history this convention sends greeting to the people of the United States and assures them that the party of Jefferson and of Jackson is still the champion of popular government and equality before the law. As a proof of our fidelity to the people we hereby declare ourselves opposed to the nomination of any candidate for President who is a representative of or who is under any obligation to J. Pierpont Morgan, Thomas F. Ryan, August Belmont, or any others of the privilege-hunting or favor-seeking class; be it further

"Resolved, That we demand the withdrawal from this convention of any delegate or delegates constituting or representing the above-named interests."

The greatest confusion followed the introduction of this resolution. The point of order was raised that the resolution be referred to the committee on resolutions, which was overruled. Mr. Bryan then moved that the rules be suspended and that the convention proceed to a consideration of the resolution. He then made an address lasting twenty minutes. He opened with a savage attack on August Belmont, Thomas F. Ryan and Charles F. Murphy. He said:

"There has never been a more brazen, insolent, and impudent effort to control the action of a Democratic convention than has been going on here. I do not intend that the representative of the predatory interests shall dominate this convention and stifle the will of 6,500,000 Democrats.

"The control of the money trust is ruthless. It is time that we gave notice to the people of the country that this convention is not under the thumb of the interests represented by Morgan, Ryan, and Belmont.

"I am not willing that Belmont and Ryan shall come here with counsel and seek to control this convention. No false sense of fairness shall stop me from protecting my party. I cannot speak for you delegates. You must take the responsibility for driving these men from our midst. The time for action has arrived.

"One of these men sits with New York and the other with Virginia. I make you this proposition: If the State of New York will take a poll of its votes and a majority of them—not all, but a majority—and if New York will on roll call, where her delegates can have their names reported and printed, ask for the retention of Mr. Belmont, and if Virginia will on roll call protest against the withdrawal of Mr. Ryan, I will then withdraw the last part on the request of the States in which these gentlemen sit, but I will not withdraw the first part that demands that our record be free from entanglements."

Congressman Flood of Virginia followed Mr. Bryan in a defense of Mr. Ryan. He said: "In the name of the sovereign State of Virginia, I accept the insolent proposition made by the only man in this convention who would dare to make it." This declaration was greeted with cheers and before they had died away, Charles F. Murphy and the leaders of the New York delegation entered the convention. They had been absent during the introduction of the resolution by Mr. Bryan. After several others had spoken for and against the resolution, Mr. Bryan again took the platform. He demanded if New York asked for the withdrawal of the last part of the resolution. The New York delegates answered him by cries of "Withdraw it yourself." Mr. Bryan again asked the question and there was no response. Congressman Flood of Virginia again defended Mr. Ryan, declaring that the latter had offered to withdraw and that the other delegates had refused to accept his withdrawal.

Following Mr. Flood's speech, Mr. Bryan arose and modified his resolution. He said that he would withdraw the last part of the resolution so that nobody could hide behind it, but that the delegates would have a chance on roll call to show what they thought of the first part. Lewis Nixon of the New York delegation said that the New York delegates did not ask for the withdrawal of any part of the resolution and made a point of order that part of the resolution could not be withdrawn. This was overruled by the chairman. The vote on the motion to suspend the rules and pass the resolution was then taken. This required a two-thirds vote or the votes of 725 of the delegates. The vote was taken amid the greatest confusion. The resolution was carried by 888 in the affirmative and 196 in the negative. The New York delegation voted in favor of the resolution.

The adoption of this resolution, which is unprecedented in national conventions, was conceded to establish Mr. Bryan as the dominant figure of the convention.

NOMINATION FOR PRESIDENT. Following the adoption of the resolution the chairman called for nominations for President.

The vote on the first ballot was as follows: Clark, 440½; Wilson, 324; Underwood, 170½; Harmon, 148; Marshall, 31; Baldwin, 22; Bryan, 1. Twelve ballots were taken on June 28 in an endeavor to break the deadlock between the three leading candidates. On the twelfth ballot the vote stood as follows: Clark, 549; Wilson 354; Underwood, 123; Harmon, 29; Marshall, 29. This was the last ballot of the day and the convention adjourned.

DECLINE OF CLARK STRENGTH. On June 29, the fourth day of the convention, balloting continued throughout the day, but it was interrupted by a bitter attack made by Mr. Bryan upon the New York delegation.

On the fourteen ballots taken during the day, Mr. Clark's strength was reduced from 549 to 463, a loss of 85½ votes. Governor Wilson, on the other hand, gained on the fourteen ballots 53½ votes, increasing from 354 to 407½. The standing on the 26th ballot, the last taken on this day, was as follows: Clark, 463½; Wilson, 407½; Underwood, 112½; Foss, 43; Marshall, 30; Harmon, 29; and Bryan, 1. The impression became general among Democratic leaders that Mr. Clark's chances for the nomination had vanished. He lost strength on practically every ballot during this day. The States of California, Idaho, Kansas, Massachusetts, and Montana, whose delegates were instructed for him, changed to Governor Wilson. Mr. Clark and Governor Wilson were the only two candidates whose nomination was deemed a possibility. Governor Harmon received, for the greater part of the votes, only the 29 votes from his own State. On the 22d ballot these votes were given to Mr. Clark, it is said on the request of Governor Harmon himself. After voting twice for Mr. Clark, the Ohio delegates again returned to Governor Harmon.

MR. BRYAN'S ATTACK ON TAMMANY. The revolt of the States which seceded from Mr. Clark's support was led by Mr. Bryan, who took the platform and announced that as an instructed delegate from Nebraska he could no longer support Mr. Clark, because of the latter's alliance with Charles F. Murphy and Tammany Hall. He added that he would not support any candidate in the convention whose nomination could not be brought about without the support of the 90 delegates from New York, whose votes he declared in effect to be tainted. He declared that as cast under the unit rule they did not represent "the intelligence, the virtue, the democracy, or the patriotism of the 90 men of the delegation." He declared that the votes of the delegates from New York represented the will of Charles F. Murphy, who, he said, represented the influences that dominated the Republican convention at Chicago and were endeavoring to dominate this convention. Mr. Bryan announced that on account of these considerations he would turn from Mr. Clark and would support the second choice of Nebraska, Woodrow Wilson. This announcement was greeted by one of the greatest demonstrations thus far witnessed in the convention.

Mr. Clark on being informed of the charges made by Mr. Bryan that he had affiliated himself with the interests in the hope of obtaining the presidential nomination, wrote a letter to Senator William J. Stone, who had charge of his interests in Baltimore, in which he denied the charges and made a sharp attack on Mr. Bryan. He said:

"It would be unbecoming to one holding my present official position to express the indignation which I feel at these veiled aspersions upon my character. I will say only this, that I am ashamed and humiliated as never before in my life, that one who has known me and my acts for a quarter of a century could find it in his heart to impugn my integrity before thousands of my fellow citizens. As a Democrat, moreover, jealous of my party's reputation and anxious for its success, I regret more than I can tell that political or personal exigencies should have induced such an assault from such a source upon a Democratic Speaker of the House of Representatives." He denied that he knew any of the persons with whom Mr. Bryan declared him to be in affiliation. He declared that his name would remain before the convention, subject to no trade or dicker, until two-thirds of

the delegates should ratify or refuse to ratify the actions of the majority.

MR. BRYAN'S COMPROMISE PROPOSAL. As the deadlock continued throughout July 30, the convention adjourned until the following Monday, July 1. On Sunday Mr. Bryan proposed a compromise candidate, suggesting the names of five men. These were Senator John W. Kern of Indiana, Senator-elect Ollie James of Kentucky, Senator Culberson of Texas, Senator Rayner of Maryland, and Senator O'Gorman of New York. The statement in which this compromise was suggested, contained another denunciation of what he termed the Ryan-Belmont-Murphy combine and he repeated that no candidate must accept the 90 votes of New York in order to obtain the necessary two-thirds. He insisted that the candidate for Vice-President must be equally as trustworthy as the candidate for President, because the Progressives would not be satisfied with only one life between a progressive administration and reactionary control. He also attacked Governor Harmon, and Mr. Underwood, as chief of the reactionaries.

Mr. Bryan's attitude toward Mr. Clark's candidacy aroused the bitterest feeling among the Clark leaders and delegates. For sixteen years Mr. Clark was one of the most loyal and aggressive Bryan men in the Democratic party. He stumped the country in behalf of Mr. Bryan in the three campaigns in which the latter was a candidate and frequently spoke in his defense on the floor of the House. The bitterness which the delegates felt was aggravated by the conviction, resulting from the voting, that Mr. Clark was gradually losing strength, and this they charged chiefly to the attitude taken by Mr. Bryan.

There was bitter feeling, too, in the New York delegation. As a result of Mr. Bryan's attack upon the delegates a conference was held as to whether a reply should be made by some delegate, but it was decided that no answer was called for on the part of the New York delegation.

RENEWAL OF BALLOTING. The voting was continued on July 1, and the convention was in session until 12:30 A. M., July 2. Fifteen ballots were taken on this day and in the balloting Governor Wilson continued throughout the day to add to his strength. On the 27th ballot, the first taken on July 1, Mr. Clark had 469 votes, Governor Wilson, 406½; Mr. Underwood, 112; Governor Harmon, 29; Governor Marshall of Indiana, 30. On the 41st ballot, the last taken, Mr. Clark had 424, Governor Wilson 499½, Mr. Underwood 106, and Governor Harmon 27. Delegates from five States pledged to Mr. Clark in the course of this day's voting voted for Governor Wilson. These included delegates from Indiana, Florida, Michigan, Iowa, and Arizona.

WILSON PASSES CLARK. On the 30th ballot, taken on July 1, Governor Wilson had overtaken and passed Mr. Clark in the race for the nomination and from that ballot until the end of the balloting on this day his vote steadily increased. During the day's voting there was indication of the bitterest feeling toward Mr. Bryan on the part of the Missouri delegation, and he narrowly escaped personal assault from Missouri delegates when he appeared on the floor near them. There were two sessions of the convention on this day. The 90 votes of

2000

New York continued to be thrown steadily for Mr. Clark.

THE NEW YORK DELEGATION ANSWERS MR. BRYAN. A reply was made to the charges made by Mr. Bryan against the New York delegation by John B. Stanchfield, one of the New York delegates. It was one of the most pointed and acrimonious speeches ever heard in a national convention. Mr. Stanchfield characterized Mr. Bryan as "a money-grabbing, selfish, favor-hunting, publicity-seeking marplot." He charged him with double-dealing, with playing Mr. Clark against Governor Wilson and Governor Wilson against Mr. Clark for the sole purpose of bringing about his own nomination through a deadlock convention. Mr. Stanchfield made his speech in explaining his vote for Governor Wilson after a poll from the New York delegation had been demanded. This poll disclosed 9 votes for Wilson, 78 for Clark, and 2 for Underwood. The convention adjourned at 12:30 A. M. until the following day.

The increase of Governor Wilson's strength and the steady falling off of the delegates voting for Mr. Clark made it apparent that it was only a question of time when Mr. Wilson would receive the necessary two-thirds vote required for the choice. The Clark leaders, however, persisted in their claim that Mr. Clark would ultimately be nominated. The opening ballot taken at the reconvening of the convention on July 2, however, made it evident that their claims had no foundation.

STAMPEDE TO GOVERNOR WILSON. On this ballot, the 43d of the convention, a stampede to Governor Wilson began, which ended in his nomination. On this ballot the 58 delegates from Illinois changed from Clark to Wilson, and this was followed quickly by the swing to the latter of West Virginia's delegation of 16, and the 24 votes from Virginia. Other scattered votes were given to Governor Wilson on this ballot, which brought his total to 602, a gain of 108, while Mr. Clark had lost 101 votes, and received a total of 329. After this first ballot the Wilson forces swept everything before them. On the second vote of the day they gained 27 votes, while Mr. Clark lost 23. In the third ballot of the session Governor Wilson gained only 4, while Mr. Clark held his own at 306. He had fallen already, however, far below the 363 necessary to block the nomination under the two-thirds rule. Mr. Clark depended now for his support almost entirely upon the 97 delegates who had been pledged to Mr. Underwood and who continued to vote for him.

The Clark leaders pleaded with Mr. Underwood's managers to stand with them against the movement for Governor Wilson, but Senator Bankhead, the Underwood leader, declined to be a leader to any coalition designed to thwart the will of a large majority of the convention. He therefore took the platform and released the Underwood delegates from their pledges. Senator Stone, the Clark leader, announced that Missouri would stand by Mr. Clark to the end, but that the nominee, whoever he might be, would have Mr. Clark's support. Mayor Fitzgerald of Boston then withdrew the name of Governor Foss, who had received 27 votes from Massachusetts throughout the balloting. John J. Fitzgerald, from New York, then pleaded for harmony and moved that the roll call be dispensed with, and Governor Wilson be nominated by acclama-

tion. Senator Reed of Missouri objected because Missouri wished to vote for Clark to the end.

The name of Governor Harmon was withdrawn and the roll call on the 46th and last ballot was resumed. On this ballot Mr. Clark received only 84 votes, including the 36 votes from Missouri.

NOMINATION OF GOVERNOR WILSON. Governor Wilson received 990; Governor Harmon 12, and 2 were absent. Only 726 votes were necessary for a choice. Senator Stone immediately moved that the nomination be made unanimous by acclamation. This was carried with cheers, and at 3:33 o'clock the nomination of Governor Wilson was announced amid great uproar. The convention then took a recess until nine o'clock in the evening for the purpose of preparing nominations for Vice-President. The following table shows the total number of votes received by each of the principal candidates on each ballot:

No. of Ballot	Clark	Wilson	Underwood	Harmon
a First	440½	324	117½	148
a Second	446½	339½	111½	141

the convention in its last session at 9 P. M., Governor Marshall was unanimously nominated. After the reading of the platform, which had been prepared largely under the direction of Mr. Bryan, the convention adjourned.

The success of the effort to bring about the nomination of Governor Wilson who, at the opening of the convention, had far fewer votes pledged to him than had Mr. Clark, was due largely to the skillful management of those who had charge of his campaign. These included, first of all, William F. McCombs, the chairman of the committee which conducted the preliminary campaign; Josephus Daniels, head of the publicity department; Senator Gore of Oklahoma, and others. Mr. McCombs had been advocating and working for the nomination of Governor Wilson for two years prior to the actual beginning of the campaign. He was a newcomer in politics and previous to the active candidacy of Governor Wilson had not been heard of outside his own immediate circle of friends.

NATIONAL CONVENTION, PROGRESSIVE

CALL FOR THE CONVENTION. The call for a convention to form the proposed new party was issued on July 8 and the date set for the con-

vention was August 5. The signers of the call represented 40 States and it was addressed to "the people of the United States without regard to past political differences." Among those whose names were attached to the call were James R. Garfield of Ohio, William Flinn and Gifford Pinchot of Pennsylvania, Cecil Lyon of Texas, Senator Poindexter of Washington, Governor Carey of Wyoming, Judge Lindsey of Colorado, Medill McCormick of Illinois, Henry J. Allen of Kansas, Charles J. Bonaparte of Maryland, Matthew Hale of Massachusetts, Senator Dixon of Montana, Everett Colby, George L. Record, and former Governor Fort of New Jersey; Governor Johnson of California, Leslie Coombs of Kentucky, Governor Vessey of South Dakota, and William A. Prendergast, Oscar S. Straus, and Timothy L. Woodruff of New York. The call appealed to those who "realize that the power of the crooked political bosses and of the privileged classes behind them is so strong in the old party organizations that no helpful movement in the general interest of the country can come out of either; to those who believe in the right and capacity of the people to rule, and to those who believe that government by the few has become government by the sordid influences that control the few; that only through the proposed movement can legislation demanded by modern evolution be obtained, and that the commandment "Thou shalt not steal" applies to politics as well as to business.

ORGANIZATION OF THE CONVENTION—NEGRO DELEGATES. In response to this call, about 2000 delegates assembled at Chicago on August 5. A provisional national committee, including a committeeman from each State, had previously been appointed. Its only important action prior to the convening of the convention was its refusal to seat negro delegates from certain southern States. This was in accordance with a declaration made several days before by Mr. Roosevelt in a letter written to Julian Harris, in which he outlined his attitude toward negro delegates. These delegates were excluded on the ground that they came from States which had never cast a Republican vote and had never elected a colored man to office, and that the delegates from southern States sent to previous Republican conventions had reflected discredit upon the Republican party and upon the race itself. Delegates from northern States regularly elected in State conventions were admitted as delegates to the convention. The action of the Progressive committee was severely criticised, but its action was upheld by the committee on credentials. Mr. Roosevelt in an address made before the convention (see below) defended his attitude toward these delegates from the southern States.

OPENING OF THE CONVENTION. The convention met in its first session on August 5. Including delegates, there were present in the Auditorium nearly 15,000 people. It was in many respects the most remarkable political assemblage ever gathered together. Its dominant feature was an enthusiasm which at times resembled religious zeal. This appearance of a religious gathering was increased by the singing of hymns and a general devotional attitude on the part of the delegates. Another conspicuous feature was the presence of many women delegates, including Jane Addams and other well-known advocates of woman suffrage.

The convention was called to order by Senator Dixon of Montana. He made a short address, in which he told those assembled that they were about to erect a new milestone in the political history of the United States. The call of the provisional committee of the party was then read by the secretary, Oscar King Davis. When the names of the signers of the call were read each State delegation rose and cheered. Among the names were some of the best-known leaders of the Progressive party, including Governor Johnson of California, Judge Ben D. Lindsey of Colorado, and James R. Garfield of Ohio.

SENATOR BEVERIDGE MADE TEMPORARY CHAIRMAN. Albert J. Beveridge, formerly United States senator from Indiana and the Progressive candidate for governor of that State, had been selected for temporary chairman. His address is generally conceded to be one of the most notable pieces of oratory ever delivered in a national convention. He said in part:

"We stand for an undivided nation. . . . We stand for social brotherhood as against savage individualism. . . . We stand for representative government that represents the people. . . . We Progressives believe in this rule of the people. . . . Who knows the people's needs so well as the people themselves? Who so wise to solve their own problems? To-day these problems concern the living of the people. . . . We have more than enough to supply every human being beneath the flag. . . . Hunger should never walk in these thinly peopled gardens of plenty. . . . We mean to remedy these conditions. . . . To make human living easier, to free the hands of honest business, to make trade and commerce sound and healthy, to protect womanhood, save childhood, and restore the dignity of manhood—these are the tasks we must do. . . . The Progressive party believes that the Constitution is a living thing, growing with the people's growth. . . . permitting the people to meet all their needs as conditions change. . . . The first words of the Constitution are, 'We, the people,' and they declare that the Constitution's purpose is to form a more perfect union and to promote the general welfare. To do just that is the very heart of the Progressive cause."

Senator Beveridge's address was received with the greatest enthusiasm by the delegates and the spectators and on its conclusion the convention adjourned until noon of the next day. The interim was devoted to the settlement of three questions of importance.

PROCEEDINGS OF PROVISIONAL COMMITTEE. One of these questions concerned the status of certain of the delegates from the South, referred to above. In issuing the call for delegates, the provisional chairman for Florida had, it appeared, led two groups, one white and the other colored, to believe that each was authorized to hold a State convention and choose delegates. The provisional national committee before whom the conflicting claims were presented declared that neither convention was authoritative and that both could be excluded. The case was appealed to the credentials committee of the convention. Another dispute arose as to the delegates sent from Mississippi. In that State the call for the State convention used the term "white." In protest some negroes assembled and chose two of their race to act as delegates. The provisional national committee decided that the negro meeting was without any authority, and that, therefore, although the use of the term "white" was not authorized or approved, there was no ground for sustaining the contest.

The second question pertained to the platform. This was the problem of formulating the Pro-

gressive faith in a document which would be short, specific, and comprehensive. Among those who labored on this platform were Dean Lewis of the Law School of the University of Pennsylvania, chairman of the committee; Professor Kirchwey, of Columbia University; Gifford Pinchot; William Allen White, of Kansas, and Herbert Knox Smith.

The third question related to the rules of the convention. It was desired to avoid the evils created by the rules hitherto observed in Republican conventions, and the task was to avoid these evils and not create others as serious. The reports of these committees were later unanimously accepted by the convention with the exception of the modification of one of the rules. This change referred to the name of the party. The rule as reported designated the party as a Progressive party. The modification provided that in those States where the law made it necessary or desirable that a different name be used, the name chosen would be recognized as official.

MR. ROOSEVELT'S ADDRESS. On the second day of the convention Mr. Roosevelt, by invitation, addressed the delegates. Before he was permitted to begin, however, a demonstration occurred which lasted precisely one hour. Mr. Roosevelt's address he designated as his "confession of faith." It consumed an hour and a half in delivery and was about 20,000 words in length. Although most of the questions considered in this address had been previously discussed by Mr. Roosevelt, it was generally considered to be one of the greatest speeches delivered by him during his political career. The address dealt primarily with the "right of the people to rule," which consisted, Mr. Roosevelt pointed out, in preserving a check on every branch of public service, including the courts.

He declared that his aim was "to control business and not to strangle it." This control, he emphasized, should be through national, not State, channels. He urged "social and industrial justice to wage-earners," and promised that if elected he would institute an immediate investigation of conditions with a view to obtaining minimum-wage standards.

Among other things, he favored the revival of the country life commission and the creation of a new commission to deal with the tariff question. He also proposed an inquiry into the high cost of living. Referring to the currency, he advocated reform that would be free from manipulation by "Wall Street or the large interests." It is impossible to undertake a complete summary of this address, which may be considered the platform of the National Progressive party. Note will be made, however, of Mr. Roosevelt's utterances on the questions most in dispute. On the tariff he said: "I believe in a protective tariff, but I believe in it as a principle, approached from the standpoint of the interests of the whole people and not as a bundle of preferences to be given to favored individuals. . . . It is not merely the tariff that should be revised, but the method of tariff-making and of tariff administration. Whenever an industry is to be protected it should be on the theory that such protection will serve to keep up the wages and the standard of living of the wage-worker in that industry with full regard for the interest of the consumer. . . . The practice of undertaking a general revision of all the schedules at one time, and of securing information as to conditions in the different industries and as to rates of duties desired chiefly from those engaged in the industries, who themselves benefit directly from the rates they propose, has been demonstrated to be not only iniquitous but futile. The first step should be the creation of a permanent commission of non-partisan experts whose business shall be to study scientifically all phases of tariff-making and of tariff effects. This commission should

be large enough to cover all the different and widely varying branches of American industry.

It should examine into the wages and conditions of labor and life of the workmen in any industry. . . . This commission would be wholly different from the present unsatisfactory tariff board which was created under a provision of law which failed to give it the powers indispensable if it was to do the work it should do." On the question of trusts, he said: "Our aim is to control business and not to strangle it—and, above all, not to continue a policy of make-believe strangle toward big concerns that do evil, and constant menace toward both big and little concerns that do well. . . . It is utterly hopeless to attempt to control the trusts merely by the anti-trust law, or by any law the same in principle, no matter what the modifications may be in detail. . . . What is needed is the application to all industrial concerns and all co-operating interests engaged in interstate commerce in which there is either monopoly or control of the market of the principles on which we have gone in regulating transportation concerns engaged in such commerce.

The anti-trust law should be kept on the statute books and strengthened so as to make it genuinely and thoroughly effective against every big concern tending to monopoly or guilty of anti-social practices. At the same time, a national industrial commission should be created which should have complete power to regulate and control all the great industrial concerns engaged in interstate business—which practically means all of them in this country. This commission should exercise over these industrial concerns like powers to those exercised over the railways by the Interstate Commerce Commission and over the national banks by the Comptroller of the Currency, and additional powers if found necessary."

A considerable portion of this address was devoted to an exposition of Mr. Roosevelt's creed on the right of the people to rule, and it included also a sharp attack on the machines of both parties. He re-stated in effect his views as to the relation of the courts to the people. He declared that he did not question the general honesty of the courts and pointed out that his purpose was not to impugn the courts, but to emancipate them from a position where they stand in the way of social justice, and to emancipate the people in an orderly way. Mr. Roosevelt's general attitude toward the courts will be found in abstracts of his speeches in Columbus, Ohio, and New York City, noted above. He spoke briefly on the importance of conservation and upon the development of Alaska. He declared his belief in a strong navy and in the fortification of the Panama Canal. He concluded as follows:

"Now, friends, this is my confession of faith. I have made it rather long because I wish you to know just what my deepest convictions are on the great questions of to-day, so that if you choose to make me your standard-bearer in the fight you shall make your choice understanding exactly how I feel—and if after hearing me you think you ought to choose someone else, I shall loyally abide by your choice."

At the conclusion of this, his main address, Mr. Roosevelt, in response to questions asked from the floor by delegates, made a supplemental speech in which he discussed the question of the negro delegates to the convention. He said:

"As soon as the Progressive party was formed I at once set about, as many other men in different States did, securing from the northern States themselves an ample recognition of the colored man in these States, so that as a matter of fact there is in this convention a representation from the Republican States of colored men such as there never has been before anything like in any convention in the country. . . . I propose to take toward the southern States the exact attitude that we have taken to West Vir-

ginia and Maryland. And I believe that in adopting that action we shall naturally and spontaneously see from those southern States a repetition of the conditions in West Virginia and Maryland, so that in future Progressive national conventions you will see colored delegates come from the South Atlantic and Gulf States precisely as they now come from West Virginia and from Maryland. . . . Now, I have taken the action which, as far as I am able to judge my own soul, I believe with all my heart is the only action that offers any chance to the black man in the South, to the white man in the South, and which offers a better chance to the black man in the North, which has already given to the black man in the North a better chance than he ever had before. And if I had advocated the following of any other action I should have been in the position of insincerely advocating for purposes of temporary political advantage a course of action which has been followed for forty-five years in the Republican party."

RESOLUTION OF CREDENTIALS COMMITTEE. The committee on credentials ratified the decision of the provisional national committee on the contests of the southern negro delegates. The committee appointed reported the following resolution, which was unanimously adopted by the convention:

"Resolved, That we recognize the constitutional and inherent right of each and every State to determine the qualifications and manner of election of its delegates to the national convention to nominate a President and Vice-President.

"Resolved, further, That the certificate of election of the State official authorized to issue the same in States having laws on the subject, the certification of election by the highest governing body of the party in the State, shall be the conclusive evidence of the right of the delegates named therein to seats in the national convention."

NOMINATION OF CANDIDATES. Previous to the convening of the session of the third and last day, Hiram W. Johnson, governor of California, had been selected as candidate for Vice-President. Other names considered were those of John M. Parker of Louisiana and Judge Ben B. Lindsey of Colorado. When the convention met, the nominating speeches for President and Vice-President were at once begun. William A. Prendergast of New York presented the name of Mr. Roosevelt. This was followed by cheering which lasted half an hour. Among those who seconded the nomination was Jane Addams. After alleging her belief in the platform of the Progressive party, she said: "I second the nomination of Theodore Roosevelt because he is one of the few men in our public life who has been responsive to modern movement. Because of that, because the programme will require a leader of invincible courage, of open mind, of democratic sympathies, one endowed with power to interpret the common man and to identify himself with the common lot, I heartily second the nomination." General Horatio C. King seconded the nomination in behalf of the old soldiers, and among others who spoke were General McDowell, chairman of the Tennessee delegation; Colonel Lloyd, a former Confederate soldier, and Henry J. Allen, of Kansas. The platform was then read by Dean William Draper Lewis of the Law School of the University of Pennsylvania and was adopted on the motion of Governor Carey of Wyoming. The rules were then suspended and Theodore Roosevelt was nominated by acclamation. Governor Johnson was then nominated for Vice-President by Judge M. Parker of Louisiana. The nomination was seconded by Judge Lindsey. He moved that the nomination be made

unanimous. A committee of notification was at once appointed and Mr. Roosevelt and Governor Johnson made brief speeches of acceptance. The convention then adjourned.

OTHER CONVENTIONS. The national convention of the Socialist party was held at Indianapolis on May 12. The report of the national secretary showed that the membership of the party in the early part of 1912, as shown by the average dues received, was 125,823, but that a great many voters who were not in active affiliation with the Socialist party were in sympathy with its political propaganda was shown by the vote received by Mr. Debs in the election of November 5. Mr. Debs received over 900,000 votes, as will be noted in the table given in the section *Elections* in this article. Eugene V. Debs was again nominated for President and Emil Seidel for Vice-President. About 300 delegates attended the convention, of which Morris Hillquit was elected chairman. The platform adopted by the convention will be found in the section *Party Platforms*.

The national convention of the Prohibition party was held at Atlantic City, N. J., on July 10-11. The platform adopted will be found in the section *Party Platforms*. Eugene W. Chafin of Arizona was nominated for President and Aaron S. Watkins of Ohio for Vice-President.

The Socialist Labor party nominated for President Arthur E. Reimer and for Vice-President August Gillhaus. The chief articles in the platform of the party are the abolition of the wage system and the establishment of industrial self-government of the workers for the workers by the workers. The total vote received by the candidates for this party will be found in the section *Elections* in this article.

POST-CONVENTION CAMPAIGN, REPUBLICAN

The Republican campaign following the nominating convention was slow in starting and was throughout lacking in enthusiasm. In spite of the professed confidence of President Taft in his reelection, the general impression prevailed not only at large but among the Republican leaders themselves that the President's chances for reelection in the face of a divided party were small. The President took little active part in the campaign. He made several addresses, reference to which is made below, but for the most part he contented himself with interviews and with public letters.

ORGANIZATION OF THE CAMPAIGN. Charles D. Hilles, private secretary to the President, was, at the latter's request, appointed chairman of the national committee, with active charge of the campaign. Senator Penrose of Pennsylvania, Senator Crane of Massachusetts, and Senator Smoot of Utah assisted Mr. Hilles in the prosecution of the work of the committee. George R. Sheldon was appointed national treasurer.

ATTITUDE OF REPUBLICAN LEADERS. The result of the nominating convention, and especially the mooted question of the disputed election cases, and the establishment of the third party, resulted in the defection of many of the well-known leaders of the Republican party in the various States to the Progressive party. In those States in which the popular vote was cast in large majorities for Mr. Roosevelt in the preferential primaries most of the political leaders became identified with the Progressives. Several, however, who had been prominent in their advocacy of Mr. Roosevelt's nomination

at Chicago declined to join the third party movement. These included Governor Hadley of Missouri (see *MISSOURI*), Governor Deneen of Illinois (see *ILLINOIS*), and Senator Cummins of Iowa. The attitude of Senator Cummins toward the third party is noted below.

PRESIDENT TAFT'S SPEECH OF ACCEPTANCE. On August 1 the President was formally notified of his nomination. The ceremonies took place in the East Room of the White House and were accompanied with little formality. The address of notification was delivered by Senator Root. In this he declared that there was no just ground for impeaching the honesty and good faith of the decision by which that convention was constituted and that both the making up of the roll of delegates and the rights accorded to persons on that roll were in accord with "the rules of law governing the party and founded upon justice and common sense." Speaking directly to the President, he said: "Your title to the nomination is as clear and unimpeachable as the title of any candidate of any party since political conventions began." In response to this speech of notification the President delivered a long address, which may be summarized as follows:

He began by stating that the issue presented to the Republican national convention made a crisis in the life of that party. He said: "A faction sought to force the party to violate a valuable and time-honored national tradition by entrusting the power of the presidency for more than two terms to one man, and that man one whose recently avowed political views would have committed the party to radical proposals involving dangerous changes in our present constitutional form of representative government and our independent judiciary." He then summarized the legislative enactments for which the Republican party had been responsible during recent administrations. These included the pure food law, employers' liability law, establishment of a federal mining bureau, the creation of a children's bureau, passage of a white slave act, railroad legislation, parcel post, and conservation.

Referring to the popular unrest which characterized the times, he spoke as follows: "In the work of arousing the people to the danger that threatened our civilization from the abuses of concentrated wealth and the power it was likely to exercise, the public imagination was wrought upon and a reign of sensational journalism and unjust and unprincipled muck-raking has followed in which much injustice has been done to honest men. Demagogues have seized the opportunity offered to inflame the public mind and have sought to turn the peculiar conditions to their advantage. . . . In the ultimate analysis, I fear the equal opportunity which is sought by many of those who proclaim the coming of so-called social justice involves a forced division of property, and that means socialism." Referring directly to Mr. Roosevelt and Governor Wilson, he said: "I do not say that the two gentlemen who now lead, the one the Democratic party and the other the former Republicans who have left their party, in their attacks upon existing conditions and in their attempt to satisfy the popular unrest by promises of remedies are consciously embracing socialism. The truth is that they do not offer any definite legislation or policy by which the happy conditions they promise are to be brought about; but if their promises mean anything they lead directly toward the appropriation of what belongs to one by another. The truth is, my friends, both those who have left the Republican party under the inspiration of their present leader and our old opponents, the Democrats, under their candidate, are going in a direction they do not definitely know and toward an end they cannot definitely describe, but with one chief and clear object, and that is, of acquiring power for their party by popular support through the promise of a change for the better. What they clamor for is a change. They ask for a change in the government so that the government may be restored to the people, as if this had not been a people's government since

the beginning of the Constitution. I have the fullest sympathy with every reform in governmental and election machinery which shall facilitate the expression of the popular will, such as the short ballot and the reduction in the number of elective offices to make it possible. But these gentlemen propose to reform the government, whose present defects, if any, are due to the failure of the people to devote as much time as is necessary to their political duties, by requiring a political activity by the people three times that which thus far the people have been willing to assume; and thus their remedies instead of exciting the people to further interest and activity in the government will tire them into such an indifference as still further to remand control of public affairs to a minority."

After attacking Mr. Roosevelt's plan for the recall of judges and the provision in the Democratic platform forbidding the use of the writ of injunction, he declared that the Republican party stood for none of these innovations. "The Republican party," he said, "stands for the Constitution as it is, with such amendments adopted according to its provisions as new conditions thoroughly understood may require. We believe that it has stood the test of time, and that there have been disclosed no really serious defects in its operation." The President followed with a review of the work of his administration. He called attention to his efforts to bring about greater economy and efficiency in government offices, referred to the Panama Canal, reviewed foreign relations, declared for a steady increase in the navy and deplored the ill-advised policy proposed by the Democratic party of holding before the Philippine people independence as a prospect of the immediate future. He then defended the action of the Republican party on the tariff, declaring that the Payne-Aldrich bill had vindicated itself, as was shown by increased revenues and the restoration of prosperity. He declared that the policy of the Democratic party toward our great protected industries would postpone the coming of prosperity and tend to cause a recurrence of the hard times which the country suffered in the decade between 1890 and 1897.

The President denied that the high cost of living could be attributed in any degree to the Payne-Aldrich tariff law. He then discussed the anti-trust law. He defended the dissolution of the American Tobacco Company and the Standard Oil Company. He concluded as follows: "May we not hope that the great majority of voters will be able to distinguish between the substance of performance and the fustian of promise; that they may be able to see that those who would deliberately stir up discontent and create hostility toward those who are conducting legitimate business enterprises, and who represent the business progress of the country, are sowing dragons' teeth? Who are the people? They are not alone the unfortunate and the weak; they are the weak and the strong, the poor and the rich, and the many who are neither, the wage-earner and the capitalist, the farmer and the professional man, the merchant and the manufacturer, the storekeeper and the clerk, the railroad manager and the employee—they all make up the people and they all contribute to the running of the government and they have not any of them given into the hands of anyone the mandate to speak for them as peculiarly the people's representative. Especially does not he represent them who, assuming that the people are only the discontented, would stir them up against the remainder of those whose government alike this is? So may we not expect in the issues which are now before us that the ballots cast in November shall show a pre-vailing majority in favor of sound progress, great prosperity upon a protective basis and under true constitutional and representative rule by the people?"

Mr. Sherman was officially notified of his nomination as Vice-President at Utica, N. Y., on August 21. The most important address made by Mr. Taft during the campaign was at Columbus, O., on August 29. This was chiefly a defense of his action on the tariff bills passed by Congress.

VERMONT AND MAINE. Elections in Vermont and Maine early in September gave the first

indication of the possible result on November 5. The vote in Vermont indicated that the Republican party had been practically cut in two. The election in Maine was not conclusive because the Progressives and Republicans had united in the support of State officers against the Democratic party. See MAINE and VERMONT.

DECISION OF SENATOR CUMMINS. Early in September, Senator Cummins of Iowa, who had up to that time adhered to the Republican presidential candidates, declared that he would not vote for President Taft. He issued a statement explaining his attitude, of which the following is a part:

"The renomination of President Taft was opposed by an overwhelming majority of the Republicans throughout the country simply because in his administration he had not done nor said the things which the great body of the people believed he should have done and said. . . . The reason the Republicans were so largely against the renomination of Mr. Taft was their profound conviction that he is not a Progressive, and does not believe, in a proper sense, that the people should rule the country. . . . Theodore Roosevelt was the manifest choice of the great number of Republicans who expressed a choice for president. He is appealing to the moral and progressive forces of the people and I expect to vote for him; but it must be understood that I will do so protesting against organization of a new party, and dissenting with some of the doctrines of his platform. My vote for him will indicate that I believe he desires to promote the common welfare, but will not indicate that I look upon the new party as a wise or enduring movement in public affairs."

REORGANIZATION OF THE NATIONAL COMMITTEE. On September 18 four members of the Republican national committee who favored Colonel Roosevelt for President were expelled from the committee and three others who were in favor of Mr. Roosevelt were allowed to resign. In each case the accusation was disloyalty to the party and President Taft. The four committeemen ousted were Russ Avery of California, Borden D. Whiting of New Jersey, Richmond Pearson of North Carolina, and William S. Edwards of West Virginia. The three whose resignations were accepted were G. C. Priestly of Oklahoma, Walter F. Brown of Ohio, and J. A. Casewell of Minnesota. This action was taken at a meeting of the committee held in New York City. The places thus made vacant were filled by committeemen favorable to President Taft.

STATEMENT OF THE PRESIDENT. In the latter part of September President Taft issued a long statement treating the issues of the campaign. He defended the protective tariff, while calling for revision to keep prices from being exorbitant. He opposed the third party plan for trust regulation, discussed the monetary problem, the Nicaraguan situation, the recall, immigration, etc. He declared that suffrage for women was an issue to be decided by the States. In an address delivered at Beverley on September 28 he attacked the Democratic tariff programme and the third party, which he declared to have split off from the Republican party, "not for any one principle, or indeed for any principle at all, but merely to gratify personal ambition and vengeance." He attacked the Progressive platform as a "crazy quilt" and stated that the movement would collapse if its standard bearer should be removed. He declared that there was not the slightest chance for the success of the third party.

DEATH OF MR. SHERMAN. Vice-President

Sherman died suddenly at Utica, N. Y., on October 30. He had been ill for several years. No effort was made to fill his place on the Republican ticket.

The last few weeks of the campaign were marked with an increase of confidence among the Republican leaders, and President Taft just prior to the election issued a statement asserting his confidence that he would be elected.

POST-CONVENTION CAMPAIGN, PROGRESSIVE

ORGANIZATION. The Progressive party lost no time in effecting its organization after the nomination of Mr. Roosevelt on August 7. Senator Dixon remained in charge of the campaign as chairman of the national committee. In general the organization of the new party was based on that of the regular Republican party, with State, congressional, and county committees. Elon H. Hooker of New York was made national treasurer and general appeals for funds were circulated throughout the country.

BEGINNING OF THE CAMPAIGN. On August 16 Mr. Roosevelt began a series of campaign speeches at Providence, R. I. In these addresses he attacked the bosses and denounced both the old parties. In the course of remarks upon the tariff he referred to reports that the present schedule relating to cotton goods had been written by Senator Lippitt of Rhode Island, a cotton manufacturer. In the course of these remarks he said:

"If the Democratic platform were carried out in good faith the factories would have to close altogether, for that proposal is to prevent Mr. Lippitt from prospering by the simple process of preventing everyone from prospering. The Republican proposal is only to give prosperity to the Mr. Lippitts and then to let it trickle down according as they may condescend to permit such trickling. Our proposal is to keep the factories open, to see that the Mr. Lippitts receive full justice, and to see also that they do justice as well as get it; that they do justice to the wage workers whom they employ and to the customers whom they serve, and make their own profits only as an incident of thus rendering service to the advantage of the public as a whole."

Mr. Roosevelt made four speeches in Boston. In these he referred particularly to the tariff paragraph of the platform of the Progressive party. He declared that Mr. Perkins and Mr. Flinn had come to him declaring that they desired to support a movement for improving the relations of capital and labor in order that the country might be a good place for their children.

ATTACKS BY SENATOR LA FOLLETTE. In the early part of July, before the Progressive convention, Senator La Follette published a long article in which he severely attacked Mr. Roosevelt. He declared that the latter at Chicago was backed by money derived from the stock-watering operations of the Steel Trust and the Harvester Trust, and that previous to the convention the money obtained from these trusts had been spent in organizing fake contests as to nearly 200 delegates in order to control the convention and secure Roosevelt's nomination. He declared that Mr. Roosevelt had the power, had he so wished to have nominated a real Progressive, such as Governor Hadley of Missouri, but, he added, "He would have no one but himself. He was there to force his own nomination or to smash the convention. He was not there

to preserve the integrity of the Republican party and make it an instrument for the promotion of progressive principles and the restoration of government to the people. He gagged his followers in the convention without putting on record any facts upon which the public could base a definite and intelligent judgment regarding the validity of Taft's nomination. He submitted no suggestions as to a platform of progressive principles. He clamored loudly for purging the convention roll of tainted delegates without purging his own candidacy of his tainted contests and his tainted trust support. He offered no reason for a third party except his own overmastering craving for a third term."

Senator La Follette continued his attacks on Mr. Roosevelt throughout the campaign. In *La Follette's Magazine* he made repeated accusations against Mr. Roosevelt, in which he charged him with double dealing in his relations with trusts and in connection with his candidacy for the presidency. In the Senate on August 17 he announced his allegiance to the Republican party and again bitterly attacked Mr. Roosevelt. He declared that during the latter's administrations the trusts were increased from 140 to 1020. Mr. Roosevelt treated these attacks as the outcome of personal feeling against him on the part of Senator La Follette.

MR. ROOSEVELT'S SPEECHES. Mr. Roosevelt took part in the campaign in Vermont and on September 2 started west for a month's tour of the Pacific Coast and the Western States.

On September 9 he addressed 5000 women voters in Spokane, Wash. He announced that he had become a suffragist through association with women who had advocated woman suffrage. A number of regular Republican speakers, including John N. Harlan of Chicago, J. Adam Bede, former congressman from Minnesota, and others, followed Mr. Roosevelt through Idaho, Utah, Nevada, California, and Colorado, seeking to counteract the effect of his speeches in those States.

On September 17, at Tucson, Ariz., Mr. Roosevelt announced that if reelected President he would make Washington a model city for other municipalities to copy. He declared that if elected he would call an extra session of Congress "to be devoted exclusively to putting into federal law every provision recommended in the plank dealing with social and industrial justice." At Denver on October 17 he declared for the recall of Presidents for misconduct or inefficiency. "Third term talk which refers to a nonconsecutive terms is an utter absurdity," he said.

Early in October, after his return from the West, he made a tour through the South, including the States of Missouri, Oklahoma, Arkansas, Louisiana, and Georgia. In Atlanta on September 28 he charged Governor Wilson with making misstatements as to his position on the question of trusts. After this tour he went directly to New York.

In his addresses and interviews during this period Mr. Roosevelt showed that he felt keenly the assertions of Governor Wilson as to his attitude on trusts, tariff, and other matters.

CONTROVERSY WITH GOVERNOR DENEEN. He engaged in a controversy with Governor Deneen of Illinois. The latter who, as noted above, had refused to join the third party movement and had come out in support of President Taft

in Ohio, asserted that Mr. Roosevelt's attitude toward the stolen contests was largely insincere. He declared that Mr. Roosevelt had told him (Governor Deneen) that there were only thirty-four serious contests in the Chicago convention. Mr. Roosevelt denounced this assertion as an absolute falsehood and attacked Governor Deneen for double dealing in the Chicago convention.

SHOOTING OF MR. ROOSEVELT. On October 14, while he was on his way to deliver an address, Mr. Roosevelt was shot in front of his hotel in Milwaukee by one John Schrank, who was well known in certain circles in New York City and was believed to be mentally unbalanced. Mr. Roosevelt had just entered his automobile and was bowing in response to the cheers of the people around him when the bullet, fired at close range, struck him in the breast. Elbert H. Martin, one of Mr. Roosevelt's stenographers, who was with him, seized Schrank and prevented him from firing a second shot. In spite of the efforts of those about him to have him go at once to a hospital, Mr. Roosevelt insisted on proceeding to the hall in which the address was to have been delivered. He was able to appear on the platform, and when he announced that he had narrowly escaped assassination and displayed sheets of manuscript through which the bullet had penetrated, there was wild excitement. Mr. Roosevelt succeeded in delivering the greater part of the address which he had intended to make. Following this he was taken to the Mercy Hospital in Chicago, where he remained until October 21, when he was taken to his home in New York, fully recovered.

This deplorable incident halted the campaign for a time. Governor Wilson, who was the only active opponent to Mr. Roosevelt, decided to cancel his campaign engagements as far as possible, and did so. Mr. Bryan, who was campaigning for Governor Wilson in Indiana, declared that, while he had the greatest sympathy for Mr. Roosevelt, personal feeling should not determine the conduct of a great campaign. With this statement Mr. Roosevelt agreed.

CONTINUATION OF THE CAMPAIGN. The principal engagements made by Mr. Roosevelt were now filled by Albert J. Beveridge, Progressive candidate for governor of Indiana and former senator from that State. Governor Johnson of California transferred his campaign activities from the Western to the Eastern States and became in a measure the spokesman of Mr. Roosevelt. On October 30 Mr. Roosevelt was so far recovered as to be able to address a great meeting in Madison Square Garden in New York. A great demonstration of cheering took place at this meeting. He appeared also at a second meeting a few days later. In each of these meetings he made addresses which constituted his final message to the Progressives before election. He declared that even though the party might be defeated, it had won a moral victory. Just before the election Senator Dixon issued a statement in which he expressed his conviction that Mr. Roosevelt would be elected.

POST-CONVENTION CAMPAIGN, DEMOCRATIC

ORGANIZATION. At the suggestion of Governor Wilson a system for carrying on the Democratic campaign was devised which in many ways differed from the procedure which

had marked previous campaigns. Instead of the usual custom of having the campaign conducted by the national committee as a whole, with its chairman and secretary as actual directors, a board of directors as an ordinary corporation was formed, with William F. McCombs as chairman. A directorate was created, half of whom were members of the national committee. On all questions except those on which the candidate had a pronounced opinion a majority vote of the committee was final. There were no subcommittees to divide authority or responsibility. At a meeting of the national committee in Chicago on July 15 this plan was adopted. Joseph E. Davies of Wisconsin was appointed secretary, and Rolla Wells, formerly mayor of St. Louis, treasurer. Other members of this directing committee were Senator O'Gorman of New York, Senator Gore of Oklahoma, Congressman Albert S. Burleson of Texas, Congressman Robert S. Hudspeth of New Jersey, Josephus Daniels of North Carolina, Congressman A. Mitchell Palmer of Pennsylvania, and William G. McAdoo of New York.

GOVERNOR WILSON'S SPEECH OF ACCEPTANCE. The official notification to Governor Wilson of his nomination was made at Sea Girt, N. J., on August 7. The address of notification was made by Ollie M. James of Kentucky. Mr. Wilson, after expressing his appreciation of the nomination and declaring that he accepted it with a deep sense of its unusual significance, made an address which may be summarized as follows:

He declared that the nation was awakened and had become impatient of partisan make-believe, and that it was never more susceptible to unselfish appeals and to the high arguments of sincere justice. He said that the country stood face to face not with questions of party or with contest for office, but with great questions of right and of justice. "The forces of nature," he said, "are asserting themselves against every form of special privilege and private control, and are seeking bigger things than they have ever heretofore achieved. They are sweeping away what is unrighteous in order to vindicate once more the essential rights of human life." "There are," he said, "two great things to do. One is to set up the rule of justice and of right in such matters as the tariff, the regulation of the trusts and the prevention of monopoly, the adaptation of our banking and currency laws to the various uses to which our people must put them, the treatment of those who do the daily labor in our factories and mines and throughout all our great industrial and commercial undertakings, and the political life of the people of the Philippines, for whom we hold governmental power in trust, for their service, not our own. The other, the additional duty, is the great task of protecting our people and our resources and of keeping open to the whole people the doors of opportunity through which they must, generation by generation, pass if they are to make conquests of their fortunes in health, freedom, in peace, and in contentment." Speaking then of the tariff, he said: "The tariff question as dealt with in our time, at any rate, has not been business. It has been politics. Tariff schedules have been made up for the purpose of keeping as large a number as possible of the rich and influential manufacturers of the country in good humor with the Republican party, which desired their constant financial support. The tariff has become a system of favors, which the phraseology of the schedule was often deliberately contrived to conceal. Our own clear conviction as Democrats is that in the last analysis the only safe and legitimate object of tariff duties, as of taxes of every other kind, is to raise revenue for the support of the government. We denounce the Payne-Aldrich tariff act as the most conspicuous example ever afforded the country of the special favors and monopolistic advantages which the leaders of the Republican party have so often

FOUR MEN PROMINENT IN THE PROGRESSIVE CAMPAIGN, 1912

1000000

shown themselves willing to extend to those to whom they looked for campaign contributions. . . . There should be an immediate revision and it should be downward, unhesitatingly and steadily downward. It should begin with the schedules which have been most obviously used to kill competition and to raise prices in the United States, arbitrarily and without regard to the prices pertaining elsewhere in the markets of the world; and it should, before it is finished or intermitted, be extended to every item in every schedule which affords any opportunity for monopoly, for special advantage to limited groups of beneficiaries, or for subsidized control of any kind in the markets or the enterprises of the country; until special favors of every sort shall have been absolutely withdrawn and every part of our laws of taxation shall have been transformed from a system of governmental patronage into a system of just and reasonable charges which shall fall where they will create the least burden. When we shall have done that, we can fix questions of revenue and of business adjustment in a new spirit and with clear minds." Referring to the Republican claim of prosperity throughout the country, he declared that although wages had increased the majority of the people were poorer, and that while the nation had grown immensely rich and was growing richer, the majority of the people continued to grow poorer, even though wages were slowly increasing. He said that prices were not fixed by the competition of the market or by the law of supply and demand, but by private arrangements, and that the high cost of living is arranged by private understanding. He then passed to a consideration of the trusts. After declaring that the period of infant industries had passed, he said: "I am not one of those who think that competition can be established by law against the drift of a world-wide economic tendency. Neither am I one of those who believe that business done upon a great scale by a single organization—call it corporation or what you will—is necessarily dangerous to the liberties, even the economic liberties, of a great people like our own, full of intelligence and of indomitable energy. I am not afraid of anything that is normal. I dare say that we shall never return to the old order of individual competition, and that the organization of business upon a great scale of co-operation is, up to a certain point, both normal and inevitable. . . . Big business is not dangerous because it is big, but because its bigness is an unwholesome inflation created by privileges and exemptions which it ought not to enjoy." He said that the general terms of the anti-trust law, forbidding combinations in restraint of trade, had apparently proved ineffectual, inasmuch as under its ban trusts have grown up very luxuriantly and have established virtual monopolies without serious let or hindrance. He said that the problem and the difficulty were much greater than were provided for by existing laws. In addition to great trusts and combinations, there are, he asserted, vast confederacies of banks, railways, express companies, insurance companies, manufacturing corporations, mining corporations, power and development companies, all bound together by the fact that the ownership of their stock and the members of their boards of directors are controlled and determined by comparatively small and closely interrelated groups of persons who could control both credit and enterprise. The existence of such combinations, he declared, gives rise to the suspicion of a "money trust," a concentration of the control of credit which may at any time become infinitely dangerous to free enterprise. He declared that means must be devised to prevent this, and that laws must be passed to safeguard the welfare of the working people, who are the backbone of the nation. He followed this with the declaration that the Philippines are held merely in trust for the people who live in them and that it is our duty as trustees to make whatever arrangement of government will be most serviceable to their freedom and development. He dwelt upon the necessity of husbanding natural resources and the development of merchant marine for carrying American goods. He pointed out the provision of the Democratic platform relating to the duty of the government in promoting agricultural, industrial, and vocational education in every way possible within its constitutional powers. No other platform, he said, had given this intimate vision of the party's duty. Concluding, he said:

"What is our cause? The people's cause. That is easy to say, but what does it mean? The common as against any particular interest whatever? Yes, but that, too, needs translation into acts and policies. We represent the desire to set up an unentangled government, a government that cannot be used for private purposes, either in the field of business or in the field of politics; a government that will not tolerate the use of a great organization of a great party to serve the personal aims and ambitions of any individual, and that will not permit legislation to be employed to further any private interest. . . . I could not have accepted a nomination which left me bound to any man or group of men. No man can be just who is not free; and no man who has to show favors ought to undertake the solemn responsibility of government in any rank or post whatever, least of all in the supreme post of President of the United States. . . . Should I be intrusted with the great office of President I would seek counsel wherever it could be had upon free terms. I know the temper of the great convention which nominated me; I know the temper of the country that lay back of that convention and spoke through it. I heed with deep thankfulness the message you bring me from it. I feel that I am surrounded by men whose principles and ambitions are those of true servants of the people. I thank God and will take courage."

GOVERNOR WILSON'S CAMPAIGN. Governor Wilson began his campaign in the middle of August, and on August 15 addressed 2500 farmers of New Jersey. His remarks were devoted largely to the tariff. He declared that the present tariff was one of the greatest impositions upon the farmer that had ever been devised. He charged that the President's veto of the steel tariff bill had affected the cost of the farmers' tools. He said that business enterprises should stand on their own bottoms and not be propped by taxes which all were compelled to pay. He spoke of the protective tariff as a great dam running around all our coasts. He said:

"I would prefer to call it the restrictive tariff. I would prefer to call it the tariff that holds us back. I should prefer to call it the tariff that hems us in, the tariff that chokes us, the tariff that smother us, because the great unhatched energy of America is now waiting for a field greater than America itself in which to prove that Americans can take care of themselves. . . . You people own a big house, but you have let the other fellow live in it. It is time to turn him out. What I modestly suggest is that you proceed to break into your own house and live in it. The tenants who have lived in it a long time have been making you pay the rent instead of paying rent to you. You have paid the money that enabled them to live in your own home and dominate your own premises. Turn them out."

He spoke to an assemblage of farmers in Pennsylvania in the same month. In this address he attacked the tariff and defended the tariff bills which had been vetoed by President Taft. In response to criticisms which had been made on portions of his writings in relation to immigration, he expressed himself as in favor of "as liberal unrestricted immigration as any man with common sense and with love for America could desire," but was opposed to immigration stimulated in an unnatural way.

NEW JERSEY PRIMARY. The New Jersey primary held on September 24 was noted with interest throughout the country on account of the candidacy of former Senator James Smith of the United States Senate as a Democrat. Mr. Smith was strongly opposed by Governor Wilson, whose controversy with him in the autumn of 1910 resulted in the defeat of Mr. Smith and the election of Senator Martine, who

had received a majority of votes in the senatorial primary held in 1910. A notable feature of the primary was the small total of the votes cast. The Democratic primary vote on the preferential ballot for United States senator was less than 30 per cent. of the vote cast for Woodrow Wilson as governor in 1910. In spite of the smallness of the vote, however, the defeat of Mr. Smith was emphatic. His opponent, William Hughes, was nominated by a plurality of about 25,000 in a total vote of about 76,000. Other details of the election will be found in the article NEW JERSEY. In the same week a primary election was held in Massachusetts, and, as in the case of New Jersey, there was a marked falling off from that cast at the previous primary election. The total primary vote was less than half the vote for governor cast in 1911. While it did not differ materially from the vote cast at the preferential primary in April, the Democratic vote rose from about 28,000 in April to about 99,000 in September, while the Republican vote fell from about 172,000 in April to about 97,000 in September. Further details will be found in the article MASSACHUSETTS.

FURTHER SPEECHES OF GOVERNOR WILSON. Governor Wilson made an address on September 9 in New York City. In this he attacked the attitude of both Republican and Progressive platforms toward the tariff. During a visit to Syracuse, N. Y., at the State Fair on September 12, an effort was made by Charles F. Murphy of Tammany Hall to make political capital out of Governor Wilson's presence in company with Governor Dix. Governor Wilson issued a statement announcing that his visit was without political significance. On September 15 he started on a tour of the Western States, including Iowa, South Dakota, Minnesota, Wisconsin, Illinois, and Michigan. The addresses delivered in these States were largely given up to explanations of his attitude on the tariff and the regulation of trusts and to attacks on the positions of Mr. Roosevelt and President Taft on these questions. In Ohio he was greeted by Governor Harmon and with him opened the State campaign in Columbus. In speeches delivered in Minneapolis and Detroit, he attacked the bosses in politics. After his return from this tour an attempt was made by Democratic leaders in New York to identify him with factional disputes in the party. He refused to take sides in this issue. In the early part of October he made another tour in the West. Speaking at Pueblo, Col., on October 7, he attacked Mr. Roosevelt's record in the prosecution of the steel corporation, and made the charge that the latter's campaign had the support of this corporation. His attacks during this tour were directed more emphatically against Mr. Roosevelt than President Taft, and Mr. Roosevelt replied to these sharply.

On Columbus Day, October 12, Governor Wilson made an address in New York City. This was devoted chiefly to the part played in America by Italian immigrants, and was designed to offset criticisms made against his former writings criticising immigration from southern Italy. An address made at Pittsburgh on October 18 was devoted chiefly to an explanation of his attitude on the tariff.

Following the shooting of Mr. Roosevelt, Governor Wilson made few addresses in ac-

cordance with his desire that no advantage be taken of this occurrence. The last address of the campaign was delivered at Madison Square Garden. It was greeted with a remarkable demonstration which lasted over an hour.

MR. BRYAN'S PARTICIPATION IN THE CAMPAIGN. Mr. Bryan took an active part in the campaign for the election of Governor Wilson. His original plan was to follow up Mr. Roosevelt in the various States and answer his assertions and arguments. This, however, was abandoned. His speeches were devoted chiefly to an attack on the third term proposal and Mr. Roosevelt's attitude on the regulation of trusts and the tariff.

THE ELECTION

Detailed results of the election on November 5 are shown in the table on page 577. An analysis of this vote shows many interesting and several surprising facts. The total popular vote of all candidates was 14,045,292. This was hardly more than the total popular vote in the election of 1908, which was 14,888,442, and this in spite of the fact that the population of the country had greatly increased in the four-year period. Even greater significance is seen in the number of votes cast in 1912, when it is noted that according to the Thirteenth Census taken in 1910 the number of males of voting age in the continental United States was 26,999,151. According to these figures, therefore, nearly half the voting population did not vote in the election of 1912.

The votes for President Taft and Mr. Roosevelt showed that the Republican party was divided into two fairly equal parts and that the combined vote of President Taft and Mr. Roosevelt exceeded the vote of Mr. Wilson by 1,410,682. It may also be noted that the vote for Governor Wilson was less than that cast for Mr. Bryan in 1908. Mr. Bryan's vote was 6,328,601. The total vote cast for President Taft in 1908 was 7,811,143, which was greater than the combined vote cast for President Taft and Mr. Roosevelt in 1912. The electoral vote cast for Mr. Wilson, however, was greater than that cast for President Taft in 1908, which was 321. The electoral vote for Governor Wilson in 1912 was 435.

It will be noted from this table that the only States carried by President Taft were Utah and Vermont, with eight electoral votes. Mr. Roosevelt carried the electoral votes of the States of California, Michigan, Minnesota, Pennsylvania, South Dakota, and Washington, with 88 electoral votes. In addition to carrying two States, President Taft ran second in 15 other States. Mr. Roosevelt ran second in 26 States. The contest in several of the States was so close that an official count was required. This was true of California and Idaho. President Taft was defeated in his own State of Ohio, although he received more votes than Mr. Roosevelt.

Governors were elected in 35 States, in 21 of which the Democrats were successful. For details of these elections see the articles on the STATES.

As a result of the election the 63d Congress will be composed of 291 Democrats and 144 Republicans. One of the notable features of the election was the increase in the Socialist vote.

Popular Vote, Wilson over Roosevelt.....	2,174,278
Popular Vote, all others combined, over Wilson.....	2,447,578
Electoral Vote, Wilson over Taft and Roosevelt.....	239
Total Popular Vote, all candidates.....	15,045,292
The above was compiled from the highest vote received by the electors.	

This vote almost doubled in the four years from 1908. The vote for Debs in the latter year was 448,453. The Prohibition vote decreased in 1912. In 1908 it was 241,252. The Socialist Labor vote increased slightly in 1912. In 1908 it was 15,421.

AFTER THE ELECTION. While the Progressive party was defeated in the election, the organization was continued and steps were taken to make it permanent. On November 19 Mr. Roosevelt made an address in New York in which he advised against all combination or fusion with other parties. On December 10 a national conference of members of the party was held in Chicago. At this were present over 1500 persons, representing every State in the Union. Plans were promoted for the national organization and for publicity. National headquarters were established in New York and Washington. A legislative reference bureau was created to be under the direction of experts, and a committee of seven was authorized to visit Europe and study the operation of social laws in European countries.

Leaders of the Republican party took definite

1912—87

steps toward reorganization, and on December 7, Republican governors from twelve States who had been in attendance at the conference of governors, held a consultation in Washington. The principal subject of discussion was the advisability of calling a meeting of the Republican national committee with a view to calling, prior to the congressional campaign in 1914, a national convention of the party for the purpose of agreeing upon a platform upon which both the Progressives and Conservatives could unite.

PARTY PLATFORMS

In the following pages are given in full the platforms of the parties, adopted at their national conventions in 1912:

DEMOCRATIC

We, the representatives of the Democratic party of the United States in national convention assembled, reaffirm our devotion to the principles of Democratic government formulated by Thomas Jefferson and enforced by a long and illustrious line of Democratic Presidents.

Tariff Reform. We declare it to be a fundamental principle of the Democratic party that

the federal government under the Constitution has no right or power to impose or collect tariff duties except for the purpose of revenue, and we demand that the collection of such taxes shall be limited to the necessities of government honestly and economically administered.

The high Republican tariff is the principal cause of the unequal distribution of wealth; it is a system of taxation which makes the rich richer and the poor poorer; under its operations the American farmer and laboring man are the chief sufferers; it raises the cost of the necessities of life to them but does not protect their product or wages. The farmer sells largely in free markets and buys almost entirely in the protected markets. In the most highly protected industries such as cotton and wool, steel and iron, the wages of the laborers are the lowest paid in any of our industries. We denounce the Republican pretense on that subject and assert that American wages are established by competitive conditions and not by the tariff.

We favor the immediate downward revision of the existing high and, in many cases, prohibitive tariff duties, insisting that material reductions be speedily made upon the necessities of life. Articles entering into competition with trust-controlled products and articles of American manufacture which are sold abroad more cheaply than at home should be put upon the free list.

We recognize that our system of tariff taxation is intimately connected with the business of the country and we favor the ultimate attainment of the principles we advocate by legislation that will not injure or destroy legitimate industry.

We denounce the action of President Taft in vetoing the bills to reduce the tariff in the cotton, woolen, metals, and chemical schedules and the farmers' free list bill, all of which were designed to give immediate relief to the masses from the exactions of the trusts.

The Republican party, while promising tariff revision, has shown by its tariff legislation that such revision is not to be in the people's interest, and having been faithless to its pledges of 1908 it should no longer enjoy the confidence of the nation. We appeal to the American people to support us in our demand for a tariff for revenue only.

High Cost of Living. The high cost of living is a serious problem in every American home. The Republican party in its platform attempts to escape from responsibility for present conditions by denying that they are due to a protective tariff. We take issue with them on this subject and charge that excessive prices result in a large measure from the high tariff laws enacted and maintained by the Republican party and from trusts and commercial conspiracies fostered and encouraged by such laws, and we assert that no such substantial relief can be secured for the people until import duties on the necessities of life are materially reduced and these criminal conspiracies broken up.

Anti-Trust Law. A private monopoly is indefensible and intolerable. We therefore favor the vigorous enforcement of the criminal as well as the civil law against trusts and trust officials and demand the enactment of such additional legislation as may be necessary to make it impossible for a private monopoly to exist in the United States.

We favor the declaration by law of the conditions upon which corporations shall be permitted to engage in interstate trade, including among others the prevention of holding companies, of interlocking directorates, of stock watering, of discrimination in price, and the control by any one corporation of so large a proportion of any industry as to make it a menace to competitive conditions.

We condemn the action of the Republican administration in compromising with the Standard Oil Company and the tobacco trust and its failure to invoke the criminal provisions of the anti-trust law against the officers of those corporations after the court had declared that from the undisputed facts in the record they had violated the criminal provisions of the law.

We regret that the Sherman anti-trust law has received a judicial construction depriving it of much of its efficiency and we favor the enactment of legislation which will restore to the statute the strength of which it has been deprived by such interpretation.

Rights of the State. We believe in the preservation and maintenance in their full strength

and integrity of the three co-ordinate branches of the federal government—the executive, the legislative, and the judicial—each keeping within its own bounds and not encroaching upon the just powers of either of the others.

Believing that the most efficient results under our system of government are to be attained by the full exercise by the States of their reserved sovereign powers, we denounce as usurpation the efforts of our opponents to deprive the States of any of the rights reserved to them and to enlarge and magnify by indirection the powers of the federal government.

We insist upon the full exercise of all the powers of government, both State and national, to protect the people from injustice at the hands of those who seek to make the government a private asset in business. There is no twilight zone between the nation and the State in which exploiting interests can take refuge from both. It is as necessary that the federal government shall exercise the powers delegated to it as it is that the States shall exercise the powers reserved to them, but we insist that federal remedies for the regulation of interstate commerce and for the prevention of private monopoly shall be added to and not substituted for State remedies.

Income Tax and Popular Election of Senators. We congratulate the country upon the triumph of two important reforms demanded in the last national platform, namely, the amendment of the federal Constitution authorizing an income tax and the amendment providing for the popular election of senators, and we call upon the people of all the States to rally to the support of the pending propositions and secure their ratification.

We note with gratification the unanimous sentiment in favor of publicity before the election of campaign contributions—a measure demanded in our national platform of 1908 and at that time opposed by the Republican party—and we commend the Democratic House of Representatives for extending the doctrine of publicity to recommendations, verbal and written, upon which presidential appointments are made, to the ownership and control of newspapers and to the expenditures made by and in behalf of those who aspire to presidential nominations, and we point for additional justification for this legislation to the enormous expenditures of money in behalf of the President and his predecessor in the recent contest for the Republican nomination for President.

Presidential Primaries. The movement toward more popular government should be promoted through legislation in each State which will permit the expression of the preference of the electors for national candidates at presidential primaries.

We direct that the national committee incorporate in the call for the next nominating convention a requirement that all expressions of preference for presidential candidates shall be given and the selection of delegates and alternates made through a primary election conducted by the party organization in each State where such expression and election are not provided for by State law. Committeemen who are hereafter to constitute the membership of the Democratic national committee and whose election is not provided for by law shall be chosen in each State at such primary elections, and the service and authority of committeemen, however chosen, shall begin immediately upon the receipt of their credentials respectively.

Campaign Contributions. We pledge the Democratic party to the enactment of a law prohibiting any corporation from contributing to a campaign fund and any individual from contributing any amount above a reasonable maximum.

Term of President. We favor a single presidential term, and to that end urge the adoption of an amendment to the Constitution making the President of the United States ineligible to reelection, and we pledge the candidate of this convention to this principle.

Democratic Congress. At this time, when the Republican party, after a generation of unlimited power in its control of the federal government, is rent into factions, it is opportune to point to the record of accomplishment of the Democratic House of Representatives in the Sixty-second Congress. We indorse its action and we challenge comparison of its record with that of any Congress which has been controlled by our opponents. We call the attention of the

patriotic citizens of our country to its record of efficiency, economy, and constructive legislation.

It has among other achievements revised the rules of the House of Representatives so as to give to the representatives of the American people freedom of speech and of action in advocating, proposing, and perfecting remedial legislation.

It has passed bills for the relief of the people and the development of our country; it has endeavored to revise the tariff taxes downward in the interest of the consuming masses and thus to reduce the high cost of living.

It has proposed an amendment to the federal Constitution providing for the election of United States senators by the direct vote of the people.

It has secured the admission of Arizona and New Mexico as two sovereign States.

It has required the publicity of campaign expenses both before and after election and fixed a limit upon the election expenses of United States senators and representatives.

It has passed a bill to prevent the abuse of the writ of injunction. It has passed a law establishing an eight-hour day for workmen on all national public work.

It has passed a resolution which forced the President to take immediate steps to abrogate the Russian treaty.

And it has passed the great supply bills which lessen waste and extravagance and which reduce the annual expenses of the government by many millions of dollars.

We approve the measure reported by the Democratic leaders in the House of Representatives for the creation of a council of national defense which will determine a definite naval programme with a view to increased efficiency and economy. The party that proclaimed and has always enforced the Monroe Doctrine, and was sponsor for the new navy, will continue faithfully to observe the constitutional requirements to provide and maintain an adequate and well proportioned navy sufficient to defend American policies, protect our citizens and uphold the honor and dignity of the nation.

Republican Extravagance. We denounce the profligate waste of the money wrung from the people by oppressive taxation through the lavish appropriations of recent Republican Congresses, which have kept taxes high and reduced the purchasing power of the people's toil. We demand a return to that simplicity and economy which befit a democratic government, and a reduction in the number of useless offices, the salaries of which drain the substance of the people.

Railroads, Express Companies, Telegraph and Telephone Lines. We favor the efficient supervision and rate regulation of railroads, express companies, telegraph and telephone lines engaged in interstate commerce. To this end we recommend the valuation of railroads, express companies, telegraph and telephone lines by the interstate commerce commission, such valuation to take into consideration the physical value of the property, the original cost, the cost of the production, and any element of the value that will render the valuation fair and just.

We favor such legislation as will effectually prohibit the railroads, express, telegraph, and telephone companies from engaging in business which brings them into competition with their shippers or patrons, also legislation preventing the overissue of stocks and bonds by interstate railroads, express companies, telegraph, and telephone lines, and legislation which will assure such reduction in transportation rates as conditions will permit, care being taken to avoid reductions that would compel a reduction of wages, prevent adequate service, or do injustice to legitimate investments.

Banking Legislation. We oppose the so-called Aldrich bill, or the establishment of a central bank and we believe our country will be largely freed from panics and consequent unemployment and business depression by such a systematic revision of our banking laws as will render temporary relief in localities in which such relief is needed, with protection from control or dominion by what is known as the money trust.

Banks exist for the accommodation of the public and not for the control of business. All legislation on the subject of banking and currency should have for its purpose the securing of these accommodations on terms of absolute security to the public and of complete protection from

the misuse of the power that wealth gives to those who possess it.

We condemn the present methods of depositing government funds in a few favored banks, largely situated in or controlled by Wall Street, in return for political favors, and we pledge our party to provide by law for their deposit by competitive bidding in the banking institutions of the country, national and State, without discrimination as to locality, upon approved securities and subject to call by the government.

Rural Credits. Of equal importance with the question of currency reform is the question of rural credits or agricultural finance. Therefore we recommend that an investigation of agricultural credit societies in foreign countries be made, so that it may be ascertained whether a system of rural credits may be devised suitable to conditions in the United States; and we also favor legislation permitting national banks to loan a reasonable proportion of their funds on real estate security.

We recognize the value of vocational education and urge federal appropriations for such training and extension teaching in agriculture in co-operation with the several States.

Waterways. We renew the declaration in our last platform relating to the conservation of our natural resources and the development of our waterways. The present devastation of the lower Mississippi Valley accentuates the movement for the regulation of river flow by additional bank and levee protection below and the diversion, storage, and control of the flood waters above and their utilization for beneficial purposes in the reclamation of arid and swamp lands and the development of water power, instead of permitting the floods to continue, as heretofore, agents of destruction.

We hold that the control of the Mississippi River is a national problem. The preservation of the depth of its water for the purpose of navigation, the building of levees to maintain the integrity of its channel and the prevention of the overflow of the land and its consequent devastation, resulting in the interruption of interstate commerce, the disorganization of the mail service, and the enormous loss of life and property, impose an obligation which alone can be discharged by the general government.

To maintain an adequate depth of water the entire year and thereby encourage water transportation, is a consummation worthy of legislative attention and presents an issue national in its character. It calls for prompt action on the part of Congress, and the Democratic party pledges itself to the enactment of legislation leading to that end.

We favor the co-operation of the United States and the respective States in plans for the comprehensive treatment of all waterways, with a view of co-ordinating plans for channel improvement, with plans for drainage of swamp and overflowed lands, and to this end we favor the appropriation by the federal government of sufficient funds to make surveys of such lands, to develop plans for draining the same, and to supervise the work of construction.

We favor the adoption of a liberal and comprehensive plan for the development and improvement of our inland waterways, with economy and efficiency, so as to permit their navigation by vessels of standard draught.

Post Roads. We favor national aid to State and local authorities in the construction and maintenance of post roads.

Rights of Labor. We repeat our declarations of the platform of 1908 as follows:

"The courts of justice are the bulwark of our liberties, and we yield to none in our purpose to maintain their dignity. Our party has given to the bench a long line of distinguished justices, who have added to the respect and confidence in which this department must be jealously maintained. We resent the attempt of the Republican party to raise a false issue respecting the judiciary, an unjust reflection upon a great body of our citizens to assume that they lack respect for the courts.

"It is the function of the courts to interpret the laws which the people enact; and if the laws appear to work economic, social, or political injustice it is our duty to change them. The only basis upon which the integrity of our courts can stand is that of unswerving justice and protection of life, personal liberty and property. As judicial processes may be abused we should guard them against abuse.

"Experience has proved the necessity of a modification of the present law relating to injunction, and we reiterate the pledges of our platform of 1896 and 1904 in favor of a measure which passed the United States Senate in 1896 relating to contempt in federal courts and providing for trial by jury in cases of indirect contempt.

"Questions of judicial practice have arisen, especially in connection with industrial disputes. We believe that the parties to all judicial proceedings should be treated with rigid impartiality and that injunctions should not be issued in any case in which an injunction would not issue if no industrial dispute were involved.

"The expanding organization of industry makes it essential that there should be no abridgment of the right of wage-earners and producers to organize for the protection of wages and the improvement of labor conditions to the end that such labor organizations and their members should not be regarded as illegal combinations in restraint of trade.

"We pledge the Democratic party to the enactment of a law creating a department of labor represented separately in the President's cabinet, in which department shall be included the subject of mines and mining."

"We pledge the Democratic party, so far as the federal jurisdiction extends, to an employees' compensation law providing adequate indemnity for injury to body or loss of life.

"Conservation. We believe in the conservation and the development for the use of all the people of the natural resources of the country. Our forests, our sources of water supply, our arable and our mineral lands, our navigable streams, and all other material resources with which our country has been so lavishly endowed constitute the foundation of our national wealth. Such additional legislation as may be necessary to prevent their being wasted or absorbed by special or privileged interests should be enacted and the policy of their conservation should be rigidly adhered to.

"The public domain should be administered and disposed of with due regard to the general welfare. Reservations should be limited to the purposes which they purport to serve and not extended to include land wholly unsuited therefor. The unnecessary withdrawal from sale and settlement of enormous tracts of public land upon which tree growth never existed and cannot be promoted tends only to retard development, create discontent, and bring reproach upon the policy of conservation.

"The public land laws should be administered in a spirit of the broadest liberality toward the settler exhibiting a bona fide purpose to comply therewith to the end that the invitation of this government to the landless should be as attractive as possible, and the plain provisions of the forest reserve act permitting homestead entries to be made within the national forests should not be nullified by administrative regulations which amount to a withdrawal of great areas of the same from settlement.

"Immediate action should be taken by Congress to make available the vast and valuable coal deposits of Alaska under conditions that will be a perfect guaranty against their falling into the hands of monopolizing corporations, associations, or interests.

"We rejoice in the inheritance of mineral resources unequalled in extent, variety, or value and in the development of a mining industry unequalled in its magnitude and importance. We honor the men who in their hazardous toil underground daily risk their lives in extracting and preparing for our use the products of the mine so essential to the industries, the commerce, and the comfort of the people of this country. And we pledge ourselves to the extension of the work of the Bureau of Mines in every way appropriate for national legislation with a view of safeguarding the lives of miners, lessening the waste of essential resources and promoting the economic development of mining, which, along with agriculture, must in the future even more than in the past serve as the very foundation of our national prosperity and welfare and our internal commerce.

"Agriculture. We believe in encouraging the development of a modern system of agriculture and a systematic effort to improve the conditions of trade in farm products so as to benefit both the consumers and producers. And as an efficient means to this end we favor the enactment

by Congress of legislation that will suppress the pernicious practice of gambling in agricultural products by organized exchanges or others.

"Merchant Marine. We believe in fostering by constitutional regulation of commerce the growth of a merchant marine which shall develop and strengthen the commercial ties which bind us to our sister republics of the south, but without additional burdens upon the people and without imposing bounties or subsidies from the public treasury.

"We urge upon Congress the speedy enactment of laws for the greater security of life and property at sea, and we favor the repeal of all laws and the abrogation of so much of our treaties with other nations as provide for the arrest and imprisonment of seamen charged with desertion or with violation of their contract of service. Such laws and treaties are un-American and violate the spirit if not the letter of the Constitution of the United States.

"We favor the exemption from tolls of American ships engaged in coastwise trade passing through the Panama Canal.

"We also favor legislation forbidding the use of the Panama Canal by ships owned or controlled by railroad carriers engaged in transportation competitive with the canal.

"Pure Food and Public Health. We reaffirm our previous declarations advocating the union and strengthening of the various governmental agencies relating to pure foods, quarantine, vital statistics, and human health. Thus united and administered without partiality to or discrimination against any school of medicine or system of healing, they would constitute a single health service, not subordinated to any commercial or financial interests, but devoted exclusively to the conservation of human life and efficiency. Moreover, this health service should co-operate with the health agencies of our various States and cities, without interference with their prerogatives or with the freedom of individuals to employ such medical or hygienic aid as they may see fit.

"Civil Service Law. The law pertaining to the civil service should be honestly and rigidly enforced to the end that merit and ability shall be the standard of appointment and promotion rather than service rendered to a political party; and we favor a reorganization of the civil service, with adequate compensation commensurate with the class of work performed, for all officers and employees; we also favor the extension to all classes of civil service employees of the benefits of the provisions of the employers' liability law.

"We also recognize the right of direct petition to Congress by employees for the redress of grievances.

"Law Reform. We recognize the urgent need of reform in the administration of civil and criminal law in the United States and we recommend the enactment of such legislation and the promotion of such measures as will rid the present legal system of the delays, expense, and uncertainties incident to the system as now administered.

"The Philippines. We reaffirm the position thrice announced by the Democracy in national convention assembled against a policy of imperialism and colonial exploitation in the Philippines or elsewhere. We condemn the experiment in imperialism as an inexcusable blunder which has involved us in enormous expense, brought us weakness instead of strength, and laid our nation open to the charge of abandonment of the fundamental doctrine of self-government. We favor an immediate declaration of the nation's purpose to recognize the independence of the Philippine Islands as soon as a stable government can be established, such independence to be guaranteed by us until the neutralization of the islands can be secured by treaty with other powers. In recognizing the independence of the Philippines our government should retain such land as may be necessary for coaling stations and naval bases.

"Arizona and New Mexico. We welcome Arizona and New Mexico to the sisterhood of States and heartily congratulate them upon their auspicious beginning of great and glorious careers.

"Alaska. We demand for the people of Alaska the full enjoyment of the rights and privileges of a territorial form of government, and we believe that the officials appointed to administer the government of all our Territories and the District of Columbia should be qualified by previous bona fide residence.

The Russian Treaty. We commend the patriotism of the Democratic members of the Senate and House of Representatives which compelled the termination of the Russian treaty of 1832, and we pledge ourselves anew to preserve the sacred rights of American citizenship at home and abroad. No treaty should receive the sanction of our government which does not recognize the equality of all of our citizens, irrespective of race or creed, and which does not expressly guarantee the fundamental right of expatriation.

The constitutional rights of American citizens should protect them on our borders and go with them throughout the world and every American citizen residing or having property in any foreign country is entitled to and must be given the full protection of the United States Government, both for himself and his property.

Parcel Post and Rural Delivery. We favor the establishment of parcel post or post express and also the extension of the rural delivery system as rapidly as practicable.

Panama Canal Exposition. We hereby express our deep interest in the great Panama Canal Exposition to be held in San Francisco in 1915 and favor such encouragement as can be properly given.

Protection of National Uniform. We commend to the several States the adoption of a law making it an offense for the proprietors of places of public amusement and entertainment to discriminate against the uniform of the United States similar to the law passed by Congress applicable to the District of Columbia and the Territories in 1911.

Pensions. We renew the declaration of our last platform relating to a generous pension policy.

Rule of the People. We call attention to the fact that the Democratic party's demand for a return to the rule of the people expressed in the national platform four years ago has now become the accepted doctrine of a large majority of the electors. We again remind the country that only by a larger exercise of the reserved power of the people can they protect themselves from the misuse of delegated power and the usurpation of governmental instrumentalities by special interests. For this reason the national convention insisted on the overthrow of Cannonism and the inauguration of a system by which United States senators could be elected by direct vote. The Democratic party offers itself to the country as an agency through which the complete overthrow and extirpation of corruption, fraud, and machine rule in American politics can be effected.

Conclusion. Our platform is one of principles which we believe to be essential to our national welfare. Our pledges are made to be kept when in office as well as relied upon during the campaign, and we invite the co-operation of all citizens, regardless of party, who believe in maintaining unimpaired the institutions and traditions of our country.

REPUBLICAN

The Republican party, assembled by its representatives in national convention, declares its unchanging faith in government of the people, by the people, for the people. We renew our allegiance to the principles of the Republican party and our devotion to the cause of Republican institutions established by the fathers.

The Tariff. We reaffirm our belief in a protective tariff. The Republican tariff policy has been of the greatest benefit to the country, developing our resources, diversifying our industries, and protecting our workmen against competition with cheaper labor abroad, thus establishing for our wage earners the American standard of living. The protective tariff is so woven into the fabric of our industrial life that we cannot afford to have a tariff that would destroy many industries and throw millions of our people out of employment. The products of the farm and of the mine should receive the same measure of protection.

We hold that the import duties should be high enough while yielding a sufficient revenue to protect adequately American industries and wages.

Some of the existing import duties are too high and should be reduced. Readjustment should be made from time to time to conform to changing conditions and to reduce excessive

rates, but without injury to any American industry. To accomplish this correct information is indispensable. This information can best be obtained by an expert commission, as the large volume of useful facts contained in the recent reports of the tariff board has demonstrated.

The pronounced feature of modern industrial life is its enormous diversification. To apply tariff rates justly to these changing conditions requires closer study and more scientific methods than ever before. The Republican party has shown by its creation of a tariff board its recognition of this situation and its determination to be equal to it. We condemn the Democratic party for its failure either to provide funds for the continuance of this board or to make some other provision for securing the information requisite for intelligent tariff legislation. We protest against the Democratic method of legislating on these vitally important subjects without careful investigation.

We condemn the Democratic tariff bills passed by the House of Representatives of the Sixty-second Congress as sectional, as injurious to the public credit, and as destructive of business enterprise.

Cost of Living. The steady increase in the cost of living has become a matter not only of national but of world-wide concern. The fact that it is not due to the protective tariff system is evidenced by the existence of similar conditions in countries which have a tariff policy different from our own, as well as by the fact that the cost of living has increased while rates of duty have remained stationary or been reduced.

The Republican party will support a prompt scientific inquiry into the causes which are operative both in the United States and elsewhere to increase the cost of living. When the exact facts are known it will take the necessary steps to remove any abuses that may be found to exist in order that the cost of the food, clothing, and shelter of the people may in no way be unduly or artificially increased.

Monopoly and Privilege. The Republican party is opposed to special privilege and to monopoly. It placed upon the statute books the interstate commerce act of 1887 and the important amendments thereto, and the anti-trust act of 1890, and it has consistently and successfully enforced the provisions of these laws. It will take no backward step to permit the re-establishment in any degree of conditions which were intolerable.

Experience makes it plain that the business of the country may be carried on without fear or without distrust and at the same time without resort to practices which are abhorrent to the common sense of justice. The party favors the enactment of legislation supplementary to the existing anti-trust act which will define as criminal offenses those specific acts which uniformly mark attempts to restrain and monopolize, to the end that all who obey the law may have a guide for their action and that those who aim to violate the law may the more surely be punished. The same certainty should be given to the law prohibiting combinations and monopolies that characterizes other provisions of commercial law in order that no part of the field of business may be restricted by monopoly or combination, that business success honorably achieved may not be converted into crime and that the right of every man to acquire commodities, and particularly the necessities of life, in an open market uninfluenced by the manipulation of trust or combination may be preserved.

Campaign Contributions. We favor such additional legislation as may more effectually prohibit corporations from contributing funds, directly or indirectly, to campaigns for the nomination or election of the President, the Vice-President, senators, and representatives in Congress. We heartily approve the recent act of Congress requiring the fullest publicity in regard to all campaign contributions, whether made in connection with primaries, conventions, or elections.

Republican Administration. We challenge successful criticism of the sixteen years of Republican administration under Presidents McKinley, Roosevelt, and Taft. We heartily reaffirm the indorsement of President McKinley contained in the platforms of 1900 and 1904 and that of President Roosevelt contained in the platforms of 1904 and 1908.

We invite the judgment of the American people

ple on the administration of W. H. Taft. The country has prospered and there was peace under his presidency.

We appeal to the American electorate upon the record of the Republican party and upon this declaration of its principles and purposes. We are confident that under the leadership of the candidates here to be nominated our appeal will not be in vain; that the Republican party will meet every just expectation of the people whose servant it is; that under its administration and its laws our nation will continue to advance; that peace and prosperity will abide with the people and that new glory will be added to the great republic.

Republican Accomplishment. The approaching completion of the Panama Canal, the establishment of a bureau of mines, the institution of postal savings banks, the increased provision made in 1912 for the aged and infirm soldiers and sailors of the republic and for their widows, and the vigorous administration of the laws relating to pure food and drugs, all mark the successful progress of Republican administration and are additional evidences of its effectiveness.

The Navy. We believe in the maintenance of an adequate navy for the national defense and we condemn the action of the Democratic House of Representatives in refusing to authorize the construction of additional ships.

Efficiency in Government. We commend the earnest effort of the Republican administration to secure greater economy and increased efficiency in the conduct of government business. Extravagant appropriations and the creation of unnecessary offices are an injustice to the taxpayer and a bad example to the citizen.

Federal Trade Commission. In the enforcement and administration of federal laws governing interstate commerce and enterprises impressed with a public use engaged therein there is much that may be committed to a federal trade commission, thus placing in the hands of an administrative board many of the functions now necessarily exercised by the courts. This will promote promptness in the administration of the law and avoid delays and technicalities incident to court procedure.

Banking and Currency. The Republican party has always stood for a sound currency and for safe banking methods. It is responsible for the resumption of specie payments and for the establishment of the gold standard. It is committed to the progressive development of our banking and currency system. Our banking arrangements to-day need further revision to meet the requirements of current conditions. We need measures which will prevent the recurrence of money panics and financial disturbances and which will promote the prosperity of this country by producing constant employment.

We need better currency facilities for the movement of crops in the West and South. We need banking arrangements under American auspices for the encouragement and better conduct of our foreign trade. In attaining these ends the investments of individual banks, whether organized under national or State charters, must be carefully protected, and our banking and currency system must be safeguarded from any possibility of domination by sectional, financial, or political interests.

It is of great importance to the social and economic welfare of this country that its farmers have facilities for borrowing easily and using the money. It is important that financial machinery be provided to supply the demand of farmers for credit. Therefore we recommend and urge an authoritative investigation of agricultural credit societies and corporations in other countries and the passage of State and federal laws for the establishment and capable supervision of organizations having for their purpose the loaning of funds to farmers.

Rivers and Harbors. We favor a liberal and systematic policy for the improvements of our rivers and harbors. Such improvements should be made upon expert information and after a careful comparison of cost and prospective benefits.

Flood Prevention in Mississippi Valley. The Mississippi River is the nation's drainage ditch. Its flood waters, gathered from thirty-one States and the Dominion of Canada, constitute an overpowering force which breaks the

levees and pours its torrents over many million acres of the richest land in the Union, stopping mails, impeding commerce, and causing great loss of life and property.

These floods are national in scope and the disasters they produce seriously affect the general welfare. The States unaided cannot cope with this giant problem, hence we believe the federal government should assume a fair proportion of the burden of its control so as to prevent the disasters from recurring floods.

Integrity of the Courts. The social and political structure of the United States rests upon the civil liberty of the individual, and for the protection of that liberty the people have wisely, in the national and State constitutions, put definite limitations upon themselves and upon their government officers and agencies. To enforce these limitations, to secure the orderly and coherent exercise of governmental powers, and to protect the rights of even the humblest and least favored individual are the functions of independent courts of justice.

The Republican party reaffirms its intention to uphold at all times the authority and integrity of the courts, both State and federal, and it will ever insist that their power to enforce their process and to protect life, liberty, and property shall be preserved inviolate.

An orderly method is provided under our system of government by which the people may when they choose alter or amend the constitutional provisions which underlie that government. Until these constitutional provisions are so altered or amended in orderly fashion it is the duty of the courts to see to it that when challenged they are enforced.

That the courts, both federal and State, may bear the heavy burden laid upon them, to the complete satisfaction of public opinion, we favor legislation to prevent long delays and the tedious and costly appeals which have so often amounted to a denial of justice in civil cases and to a failure to protect the public at large in criminal cases.

Since the responsibility of the judiciary is so great, the standards of judiciary action must be always and everywhere above suspicion and reproach. While we regard the recall of judges as unnecessary and unwise, we favor such action as may be necessary to simplify the process by which any judge who may be found to be derelict in his duty may be removed from office.

Reclamation. We favor the continuance of the policy of the government with regard to the reclamation of arid lands, and for the encouragement of the speedy settlement and improvement of such lands we favor an amendment to the law that will reasonably extend the time within which the cost of any reclamation project may be repaid by the landowners under it.

Conservation Policy. We rejoice in the success of the distinctive Republican policy of conservation of our national resources for their use by the people without waste and without monopoly. We pledge ourselves to a continuance of such a policy.

We favor such fair and reasonable rules and regulations as will not discourage or interfere with actual bona fide homeseekers, prospectors, and miners in the acquisition of public lands under existing laws.

Merchant Marine. We believe that one of the country's most urgent needs is a revived merchant marine. There should be American ships, and plenty of them, to make use of the great American interoceanic canal now nearing completion.

Safety at Sea. We favor the speedy enactment of laws to provide that seamen shall not be compelled to endure involuntary servitude and that life and property at sea shall be safeguarded.

The Public Health. The Republican party is now, as always, a party of advanced and constructive statesmanship. It is prepared to go forward with the solution of those new questions which social, economic, and political development have brought into the forefront of the nation's interest. It will strive not only in the nation but in the several States to enact the necessary legislation to safeguard the public health, to limit effectively the labor of women and children, and to protect wage earners engaged in dangerous occupations; to enact comprehensive and generous workmen's compensation laws in place of the present wasteful and

unjust system of employers' liability, and in all possible ways to satisfy the just demands of the people for the study and solution of the complex and constantly changing problems of social welfare.

The Civil Service. We reaffirm our adherence to the principles of appointment to public office based on proved fitness and tenure during behavior and efficiency.

The party stands committed to the maintenance, extension, and enforcement of the civil service law, and it favors the passage of legislation empowering the President to extend the competitive service as far as practicable. We favor legislation to make possible the equitable retirement of disabled and superannuated members of the civil service in order that a higher standard of efficiency may be maintained.

We favor the amendment of the federal employees' liability law so as to extend its provision to all government employees as well as to provide a more liberal scale of compensation for injury and death.

Philippines Policy. The Philippines policy of the Republican party has been and is inspired by the belief that our duty toward the Filipino is a national obligation which should remain entirely free from partisan politics.

Arizona and New Mexico. We congratulate the people of Arizona and New Mexico upon the admission of those States, thus merging in the Union in final and enduring form the last remaining portion of our continental territory.

Alaska. We favor a liberal policy toward Alaska to promote the development of the great resources of that district, with such safeguards as will prevent waste and monopoly.

We favor the opening of the coal lands to development through a law leasing the lands on such terms as will invite development and provide fuel for the navy and commerce of the Pacific Ocean.

Protection of American Citizenship. We approve the action taken by the President and the Congress to secure with Russia, as with other countries, a treaty that will recognize the absolute right of expatriation and that will prevent all discrimination of whatever kind between American citizens, whether native born or alien, and regardless of race, religion, or previous political allegiance. The right of asylum is to be neither surrendered nor restricted.

Parcel Post. In the interest of the general public, and particularly of the agricultural or rural communities, we favor legislation looking to the establishment under the proper regulations of a parcel post, the postal rates to be graduated under a zone system in proportion to the length of carriage.

Republican Record. The Republican party looks back upon its record with pride and satisfaction and forward to its new responsibilities with hope and confidence. Its achievements in government constitute the most luminous pages in our history.

Our great advance has been made during the years of its ascendancy in public affairs. It has never been either stationary or reactionary.

It has gone from the fulfillment of one great pledge to the fulfillment of another in response to the public need and to the popular will. We believe in our self-controlled representative democracy, which is a government of laws, not of men, and in which order is the prerequisite of progress. The principles of constitutional government, which make provision for orderly and effective expression of the popular will, for the protection of civil liberty and the rights of men and for the interpretation of the law by an untrammelled and independent judiciary, have proved themselves capable of sustaining the structure of a government which after more than a century of development embraces one hundred millions of people scattered over a wide and diverse territory but bound by common purpose, common ideals and common affection for the Constitution of the United States.

Under the Constitution and the principles vitalized by it, the United States has grown to be one of the great civilized and civilizing powers of the earth. It offers a home and an opportunity to the ambitious and the industrious from other lands. Resting upon a broad basis of a people's confidence and a people's support, and managed by the people themselves, the government of the United States will meet the problems of the future as satisfactorily as it has solved those of the past.

PROGRESSIVE

Declaration of Principles. The conscience of the people, in a time of grave national problems, has called into being a new party, born of the nation's awakened sense of injustice.

We of the Progressive party here dedicate ourselves to the fulfillment of the duty laid upon us by our fathers to maintain that government of the people, by the people, and for the people whose foundations they laid.

We hold, with Thomas Jefferson and Abraham Lincoln, that the people are the masters of their Constitution to fulfill its purposes and to safeguard it from those who, by perversion of its intent, would convert it into an instrument of injustice. In accordance with the needs of each generation, the people must use their sovereign powers to establish and maintain equal opportunity and industrial justice, to secure which this government was founded and without which no republic can endure.

This country belongs to the people who inhabit it. Its resources, its business, its institutions, and its laws should be utilized, maintained, or altered in whatever manner will best promote the general interest. It is time to set the public welfare in the first place.

The Old Parties. Political parties exist to secure responsible government and to execute the will of the people. From these great tasks both the old parties have turned aside. Instead of instruments to promote the general welfare, they have become the tools of corrupt interests, which use them impartially to serve their selfish purposes. Behind the ostensible government sits enthroned an invisible government, owing no allegiance and acknowledging no responsibility to the people. To destroy this invisible government, to dissolve the unholy alliance between corrupt business and corrupt politics, is the first task of the statesmanship of the day.

The deliberate betrayal of its trust by the Republican party, the fatal incapacity of the Democratic party to deal with the new issues of the new time, have compelled the people to forge a new instrument of government through which to give effect to their will in laws and institutions.

Unhampered by tradition, uncorrupted by power, undismayed by the magnitude of the task, the new party offers itself as the instrument of the people to sweep away old abuses, to build a new and nobler commonwealth.

Covenant With the People. This declaration is our covenant with the people, and we hereby bind the party and its candidates in State and nation to the pledges made herein.

Rule of the People. The Progressive party, committed to the principle of government by a self-controlled democracy expressing its will through representatives of the people, pledges itself to secure such alterations in the fundamental law of the several States and of the United States as shall insure the representative character of the government. In particular, the party declares for direct primaries for the nomination of State and national officers, for nationwide preferential primaries for candidates for the presidency, for the direct election of United States senators by the people; and we urge on the States the policy of the short ballot, with responsibility to the people secured by the initiative, referendum, and recall.

Constitution Should Be Easily Amended. The Progressive party, believing that a free people should have the power from time to time to amend their fundamental law so as to adapt it progressively to the changing needs of the people, pledges itself to provide a more easy and expeditious method of amending the federal Constitution.

Nation and State. Up to the limit of the Constitution, and later by amendment of the Constitution, if found necessary, we advocate bringing under effective national jurisdiction those problems which have expanded beyond reach of the individual States.

It is as grotesque as it is intolerable that the several States should by unequal laws in matter of common concern become competing commercial agencies, barter the lives of their children, the health of their women, and the safety and well-being of their working people for the benefit of their financial interests.

The extreme insistence on States' rights by the Democratic party in the Baltimore platform demonstrates anew its inability to understand the

world into which it has survived or to administer the affairs of a union of States which have in all essential respects become one people.

Social and Industrial Reform. The supreme duty of the nation is the conservation of human resources through an enlightened measure of social and industrial justice. We pledge ourselves to work unceasingly in State and nation for:

Effective legislation looking to the prevention of industrial accidents, occupational diseases, overwork, involuntary unemployment, and other injurious effects incident to modern industry.

The fixing of minimum safety and health standards for the various occupations, and the exercise of the public authority of State and nation, including the federal control over interstate commerce and the taxing power, to maintain such standards.

The prohibition of child labor.

Minimum wage standards for working women, to provide a "living scale" in all industrial occupations.

The prohibition of night work for women and the establishment of an eight-hour day for women and young persons.

One day's rest in seven for all wage workers.

The eight-hour day in continuous twenty-four hour industries.

The abolition of the convict contract labor system; substituting a system of prison production for governmental consumption only and the application of prisoners' earnings to the support of their dependent families.

Publicity as to wages, hours and conditions of labor; full reports upon industrial accidents and diseases, and the opening to public inspection of all tallies, weights, measures, and check systems on labor products.

Standards of compensation for death by industrial accident and injury and trade diseases which will transfer the burden of lost earnings from the families of working people to the industry, and thus to the community.

The protection of home life against the hazards of sickness, irregular employment, and old age through the adoption of a system of social insurance adapted to American use.

The development of the creative labor power of America by lifting the last load of illiteracy from American youth, and establishing continuation schools for industrial education under public control and encouraging agricultural education and demonstration in rural schools.

The establishment of industrial research laboratories to put the methods and discoveries of science at the service of American producers.

We favor the organization of the workers, men and women, as a means of protecting their interests and of promoting their progress.

Regulation of Interstate Corporations. We believe that true popular government, justice and prosperity go hand in hand, and, so believing, it is our purpose to secure that large measure of general prosperity which is the fruit of legitimate and honest business, fostered by equal justice and by sound progressive laws.

We demand that the test of true prosperity shall be the benefits conferred thereby on all the citizens, not confined to individuals or classes, and that the test of corporate efficiency shall be the ability better to serve the public; that those who profit by control of business affairs shall justify that profit and that control by sharing with the public the fruits thereof.

We therefore demand a strong national regulation of interstate corporations. The corporation is an essential part of modern business. The concentration of modern business, in some degree, is both inevitable and necessary for national and international business efficiency. But the existing concentration of vast wealth under a corporate system, unguarded and uncontrolled by the nation, has placed in the hands of a few men enormous, secret, irresponsible power over the daily life of the citizen—a power unsufferable in a free government and certain of abuse.

This power has been abused in monopoly of national resources, in stock watering, in unfair competition and unfair privileges, and, finally, in sinister influences on the public agencies of State and nation. We do not fear commercial power, but we insist that it shall be exercised openly, under publicity, supervision, and regulation of the most efficient sort, which will preserve its good while eradicating and preventing its evils.

To that end we urge the establishment of a strong federal administrative commission of high standing, which shall maintain permanent active

supervision over industrial corporations engaged in interstate commerce, or such of them as are of public importance, doing for them what the government now does for the national banks, and what is now done for the railroads by the Interstate Commerce Commission.

Such a commission must enforce the complete publicity of those corporate transactions which are of public interest; must attack unfair competition, false capitalization and special privilege, and by continuous trained watchfulness guard and keep open equally to all the highways of American commerce. Thus the business man will have certain knowledge of the law and will be able to conduct his business easily in conformity therewith, the investor will find security for his capital, dividends will be rendered more certain and the savings of the people will be drawn naturally and safely into the channels of trade.

Under such a system of constructive regulation legitimate business, freed from confusion, uncertainty, and fruitless litigation, will develop normally in response to the energy and enterprise of the American business man.

Commercial Development. The time has come when the federal government should co-operate with manufacturers and producers in extending our foreign commerce. To this end we demand adequate appropriations by Congress and the appointment of diplomatic and consular officers solely with a view to their special fitness and worth, and not in consideration of political expediency.

It is imperative to the welfare of our people that we enlarge and extend our foreign commerce. We are pre-eminently fitted to do this because, as a people, we have developed high skill in the art of manufacturing; our business men are strong executives, strong organizers. In every way possible our federal government should co-operate in this important matter.

Anyone who has had opportunity to study and observe at first hand Germany's course in this respect must realize that their policy of co-operation between government and business has in comparatively few years made them a leading competitor for the commerce of the world. It should be remembered that they are doing this on a national scale and with large units of business, while the Democrats would have us believe that we should do it with small units of business, which would be controlled, not by the national government, but by forty-nine conflicting sovereignties. Such a policy is utterly out of keeping with the progress of the times and gives our great commercial rivals in Europe—hungry for international markets—golden opportunities of which they are rapidly taking advantage.

The Tariff. We believe in a protective tariff which shall equalize conditions of competition between the United States and foreign countries, both for the farmer and the manufacturer, and which shall maintain for labor an adequate standard of living. Primarily the benefit of any tariff should be disclosed in the pay envelope of the laborer. We declare that no industry deserves protection which is unfair to labor or which is operating in violation of federal law. We believe that the presumption is always in favor of the consuming public.

We demand tariff revision because the present tariff is unjust to the people of the United States. Fair dealing toward the people requires an immediate downward revision of those schedules wherein duties are shown to be unjust and excessive.

We pledge ourselves to the establishment of a non-partisan scientific tariff commission, reporting both to the President and to either branch of Congress, which shall report, first, as to the costs of production, efficiency of labor, capitalization, industrial organization and efficiency, and the general competitive position in this country and abroad of industries seeking protection from Congress. Second, as to the revenue-producing power of the tariff and its relation to the resources of government; and, thirdly, as to the effect of the tariff on prices, operations of middlemen, and on the purchasing power of the consumer.

We believe that this commission should have plenary power to elicit information, and for this purpose to prescribe a uniform system of accounting for the great protected industries. The work of the commission should not prevent the immediate adoption of acts reducing these schedules generally recognized as excessive.

We condemn the Payne-Aldrich bill as unjust to the people. The Republican organization is in the hands of those who have broken, and cannot again be trusted to keep, the promise of necessary downward revision. The Democratic party is committed to the destruction of the protective system through a tariff for revenue only—a policy which would inevitably produce widespread industrial and commercial disaster.

Reciprocity With Canada. We demand the immediate repeal of the Canadian reciprocity act.

High Cost of Living. The high cost of living is due partly to world-wide and partly to local causes; partly to natural and partly to artificial causes. The measures proposed in this platform on various subjects, such as the tariff, the trusts, and conservation, will of themselves remove the artificial causes. There will remain other elements, such as the tendency to leave the country for the city, waste, extravagance, bad systems of taxation, poor methods of raising crops, and bad business methods in marketing crops. To remedy these conditions requires the fullest information and, based on this information, effective government supervision and control to remove all the artificial causes. We pledge ourselves to such full and immediate inquiry and to immediate action to deal with every need such inquiry discloses.

Improvement of the Currency. We believe there exists imperative need for prompt legislation for the improvement of our national currency system. We believe the present method of issuing notes through private agencies is harmful and unscientific. The issue of currency is fundamentally a government function and the system should have as basic principles soundness and elasticity. The control should be lodged with the government and should be protected from domination or manipulation by Wall Street or any special interests.

We are opposed to the so-called Aldrich currency bill because its provisions would place our currency and credit system in private hands, not subject to effective public control.

Conservation of Natural Resources. The natural resources of the nation must be promptly developed and generously used to supply the people's needs, but we cannot safely allow them to be wasted, exploited, monopolized, or controlled against the general good. We heartily favor the policy of conservation and we pledge our party to protect the national forests without hindering their legitimate use for the benefit of all the people. Agricultural lands in the national forests are, and should remain, open to the genuine settler. Conservation will not retard legitimate development. The honest settler must receive his patent promptly without hindrance, rules, or delays.

We believe that the remaining forests, coal and oil lands, water powers, and other natural resources still in State or national control (except agricultural lands) are more likely to be wisely conserved and utilized for the general welfare if held in the public hands.

In order that consumers and producers, managers and workmen, now and hereafter, need not pay toll to private monopolies of power and raw material, we demand that such resources shall be retained by the State or nation and opened to immediate use under laws which will encourage development and make to the people a moderate return for benefits conferred.

In particular we pledge our party to require reasonable compensation to the public for water power rights hereafter granted by the public. We pledge legislation to lease the public grazing lands under equitable provisions now pending which will increase the production of food for the people and thoroughly safeguard the rights of the actual homesteaders. Natural resources whose conservation is necessary for the national welfare should be owned and controlled by the nation.

Waterways. The rivers of the United States are the natural arteries of this continent. We demand that they shall be opened to traffic as indispensable parts of a great nation-wide system of transportation in which the Panama Canal will be the central link, thus enabling the whole interior of the United States to share with the Atlantic and Pacific seaboard in the benefit derived from the canal.

It is a national obligation to develop our rivers, and especially the Mississippi and its tributaries, without delay, under a comprehensive general plan covering each river system, from its source to its mouth, designed to secure its highest use-

fulness for navigation, irrigation, domestic supply, water power and the prevention of floods. We pledge our party to the immediate preparation of such a plan, which should be made and carried out in close and friendly co-operation between the nation, the State, and the cities affected.

Under such a plan the destructive floods of the Mississippi and other streams, which represent a vast and needless loss to the nation, would be controlled by forest conservation and water storage at the headwaters, and by levees below, land sufficient to support millions of people would be reclaimed from the deserts and swamps, water power enough to transform the industrial standing of whole States would be developed, adequate water terminals would be provided, transportation would revive, and the railroads would be compelled to co-operate as freely with the boat lines as with each other.

The equipment, organization, and experience acquired in constructing the Panama Canal soon will be available for the Lakes-to-the-Gulf deep waterway and other portions of this great work, and should be utilized by the nation in co-operation with the various States, at the lowest net cost to the people.

Panama Canal. The Panama Canal, built and paid for by the American people, must be used primarily for their benefit. We demand that the canal shall be so operated as to break the transportation monopoly now held and misused by the transcontinental railroads by maintaining sea competition with them; that ships directly or indirectly owned or controlled by American railroad corporations shall not be permitted to use the canal, and that American ships engaged in coastwise trade shall pay no tolls.

The Progressive party will favor legislation having for its aim the development of friendship and commerce between the United States and Latin-American nations.

Alaska. The coal and other natural resources of Alaska should be opened to development at once. They are owned by the people of the United States and are safe from monopoly, waste or destruction only while so owned. We demand that they shall neither be sold nor given away except under the homestead law, but while held in government ownership shall be opened to use promptly upon liberal terms requiring immediate development.

Thus the benefit of cheap fuel will accrue to the government of the United States and to the people of Alaska and the Pacific Coast; the settlement of extensive agricultural lands will be hastened; the extermination of the salmon will be prevented, and the just and wise development of Alaskan resources will take the place of private extortion or monopoly.

We demand also that extortion or monopoly in transportation shall be prevented by the prompt acquisition, construction, or improvement by the government of such railroads, harbor, and other facilities for transportation as the welfare of the people may demand.

We promise the people of the Territory of Alaska the same measure of local self-government that was given to other American Territories, and that federal officials appointed there shall be qualified by previous bona fide residence in the Territory.

Woman Suffrage. The Progressive party, believing that no people can justly claim to be a true democracy which denies political rights on account of sex, pledges itself to the task of securing equal suffrage to men and women alike.

Corrupt Election Practices. We pledge our party to legislation that will compel strict limitation of all campaign contributions and expenditures, and detailed publicity of both before as well as after primaries and elections.

Publicity and Public Service. We pledge our party to legislation compelling the registration of lobbyists; publicity of committee hearings, except on foreign affairs, and recording of all votes in committee; and forbidding federal appointees from holding office in State or national political organizations or taking part as officers or delegates in political conventions for the nomination of elective State or national officials.

Popular Review of Judicial Decisions. The Progressive party demands such restriction of the power of the courts as shall leave to the people the ultimate authority to determine fundamental questions of social welfare and public policy. To secure this end, it pledges itself to provide:

First—That when an act passed under the po-

lice power of the State is held unconstitutional under the State constitution by the courts, the people, after an ample interval for deliberation, shall have an opportunity to vote on the question whether they desire the act to become law, notwithstanding such decision.

Second.—That every decision of the highest Appellate Court of a State declaring an act of the legislature unconstitutional on the ground of its violation of the federal Constitution shall be subject to the same review by the Supreme Court of the United States as is now accorded to decisions sustaining such legislation.

Administration of Justice. The Progressive party, in order to secure to the people a better administration of justice, and by that means to bring about a more general respect for the law and the courts, pledges itself to work unceasingly for the reform of legal procedure and judicial methods.

We believe that the issuance of injunctions in cases arising out of labor disputes should be prohibited when such injunctions would not apply when no labor disputes existed.

We also believe that a person cited for contempt in labor disputes, except when such contempt was committed in the actual presence of the court or so near thereto as to interfere with the proper administration of justice, should have a right to trial by jury.

A Department of Labor. We pledge our party to establish a department of labor, with a seat in the cabinet, and with wide jurisdiction over matters affecting the conditions of labor and living.

Country Life. The development and prosperity of country life are as important to the people who live in the cities as they are to the farmers. Increase of prosperity on the farm will favorably affect the cost of living and promote the interests of all who dwell in the country and all who depend upon its products for clothing, shelter, and food.

We pledge our party to foster the development of agricultural credit and co-operation, the teaching of agriculture in schools, agricultural college extension, the use of mechanical power on the farm and to re-establish the country life commission, thus directly promoting the welfare of the farmers and bringing the benefits of better farming, better business, and better living within their reach.

National Health Service. We favor the union of all the existing agencies of the federal government dealing with the public health into a single national health service, without discrimination against or for any one set of therapeutic methods, school of medicine, or school of healing, with such additional powers as may be necessary to enable it to perform efficiently such duties in the protection of the public from preventable disease as may be properly undertaken by the federal authorities, including the executing of existing laws regarding pure food; quarantine and cognate subjects; the promotion of appropriate action for the improvement of vital statistics and the extension of the registration area of such statistics, and co-operation with the health activities of the various States and cities of the nation.

Patents. We pledge ourselves to the enactment of a patent law which will make it impossible for patents to be suppressed or used against the public welfare in the interest of injurious monopolies.

Interstate Commerce Commission. We pledge our party to secure to the Interstate Commerce Commission the power to value the physical property of railroads. In order that the power of the commission to protect the people may not be impaired or destroyed, we demand the abolition of the Commerce Court.

Good Roads. We recognize the vital importance of good roads, and we pledge our party to foster their extension in every proper way, and we favor the early construction of national highways. We also favor the extension of the rural free delivery service.

Inheritance and Income Tax. We believe in a graduated inheritance tax as a national means of equalizing the obligations of holders of property to government, and we hereby pledge our party to enact such a federal law as will tax large inheritances, returning to the States an equitable percentage of all amounts collected. We favor the ratification of the pending amendment to the Constitution giving the government power to levy an income tax.

Peace and National Defense. The Progressive

party deplores the survival in our civilization of the barbaric system of warfare among nations, with its enormous waste of resources even in time of peace, and the consequent impoverishment of the life of the toiling masses. We pledge the party to use its best endeavors to substitute judicial and other peaceful means of settling international differences.

We favor an international agreement for the limitation of naval forces. Pending such an agreement, and as the best means of preserving peace, we pledge ourselves to maintain for the present the policy of building two battleships a year.

Protection of American Citizens Abroad. We pledge our party to protect the rights of American citizenship at home and abroad. No treaty should receive the sanction of our government which discriminates between American citizens because of birthplace, race or religion, or that does not recognize the absolute right of expatriation.

Immigration. Through the establishment of industrial standards we propose to secure to the able-bodied immigrant and to his native fellow workers a larger share of American opportunity.

We denounce the fatal policy of indifference and neglect which has left our enormous immigrant population to become the prey of chance and cupidity. We favor governmental action to encourage the distribution of immigrants away from the congested cities, to rigidly supervise all private agencies dealing with them, and to promote their assimilation, education, and advancement.

Pensions. We pledge ourselves to a wise and just policy of pensioning American soldiers and sailors and their widows and children by the federal government.

And we approve the policy of the Southern States in granting pensions to the ex-Confederate soldiers and sailors and their widows and children.

Parcel Post. We pledge our party to the immediate creation of a parcel post, with rates proportionate to distance and service.

The Civil Service Law. We condemn the violations of the civil service law under the present administration, including the coercion and assessment of subordinate employees, and the President's refusal to punish such violation after a finding of guilty by his own commission; his distribution of patronage among subservient congressmen, while withholding it from those who refuse support of administration measures; his withdrawal of nominations from the Senate until political support for himself was secured, and his open use of the offices to reward those who voted for his renomination.

To eradicate these abuses we demand not only the enforcement of the civil service act in letter and spirit but also legislation which will bring under the competitive system postmasters, collectors, marshals, and all other non-political officers, as well as the enactment of an equitable retirement law, and we also insist on continuous service during good behavior and efficiency.

Government Business Organization. We pledge our party to readjustment of the business methods of the national government and a proper coordination of the federal bureaus which will increase the economy and efficiency of the government service, prevent duplications, and secure better results to the taxpayers for every dollar expended.

Supervision Over Investments. The people of the United States are swindled out of many millions of dollars every year through worthless investments. The plain people, the wage earners, and the men and women with small savings, have no way of knowing the merit of concerns sending out highly colored prospectuses offering stock for sale, prospectuses that make big returns seem certain and fortunes easily within grasp.

We hold it to be the duty of the government to protect its people from this kind of piracy. We therefore demand wise, carefully thought-out legislation that will give us such governmental supervision over this matter as will furnish to the people of the United States this much needed protection, and we pledge ourselves thereto.

Conclusion. On these principles and on the recognized desirability of uniting the progressive forces of the nation into an organization which shall unequivocally represent the progressive spirit and policy, we appeal for the support of all American citizens, without regard to previous political affiliations.

SOCIALIST

The representatives of the Socialist party in national convention at Indianapolis declare that the capitalist system has outgrown its historical function, and has become utterly incapable of meeting the problems now confronting society. We denounce this outgrown system as incompetent and corrupt and the source of unspeakable misery and suffering to the whole working class.

Under this system the industrial equipment of the nation has passed into the absolute control of a plutocracy which exacts an annual tribute of millions of dollars from the producers. Unafraid of any organized resistance, it stretches out its greedy hands over the still undeveloped resources of the nation—the land, the mines, the forests, and the water powers of every State in the Union.

In spite of the multiplication of labor-saving machines and improved methods in industry which cheapen the cost of production, the share of the producers grows ever less, and the prices of all the necessities of life steadily increase. The boasted prosperity of this nation is for the owning class alone. To the rest it means only greater hardship and misery. The high cost of living is felt in every home. Millions of wage workers have seen the purchasing power of their wages decrease until life has become a desperate battle for mere existence.

Multitudes of unemployed walk the streets of our cities or trudge from State to State awaiting the will of the masters to move the wheels of industry.

The farmers in every State are plundered by the increasing prices exacted for tools and machinery and by extortionate freight rates and storage charges.

Capitalism Denounced. Capitalist concentration is mercilessly crushing the class of small business men and driving its members into the ranks of propertyless wage workers. The overwhelming majority of the people of America are being forced under a yoke of bondage by this soulless industrial despotism.

It is this capitalist system that is responsible for the increasing burden of armaments, the poverty, slums, child labor, most of the insanity, crime and prostitution, and much of the disease that afflicts mankind.

Under this system the working class is exposed to poisonous conditions, to frightful and needless perils to life and limb, is walled around with court decisions, injunctions and unjust laws, and is preyed upon incessantly for the benefit of the controlling oligarchy of wealth. Under it, also, the children of the working class are doomed to ignorance, drudging toil, and darkened lives.

In the face of these evils, so manifest that all thoughtful observers are appalled at them, the legislative representatives of the Republican and Democratic parties remain the faithful servants of the oppressors. Measures designed to secure to the wage earners of this nation as humane and just treatment as is already enjoyed by the wage earners of all other civilized nations have been smothered in committee without debate, and laws ostensibly designed to bring relief to the farmers and general consumers are juggled and transformed into instruments for the exaction of further tribute. The growing unrest under oppression has driven these two old parties to the enactment of a variety of regulative measures, none of which has limited in any appreciable degree the power of the plutocracy, and some of which have been perverted into means for increasing that power. Anti-trust laws, railroad restrictions and regulations, with the prosecutions, indictments and investigations based upon such legislation, have proved to be utterly futile and ridiculous.

Nor has this plutocracy been seriously restrained or even threatened by any Republican or Democratic executive. It has continued to grow in power and insolence alike under the administrations of Cleveland, McKinley, Roosevelt, and Taft.

In addition to this legislative juggling and this executive connivance, the courts of America have sanctioned and strengthened the hold of this plutocracy as the Dred Scott and other decisions strengthened the slave power before the Civil War.

We declare, therefore, that the longer sufferance of these conditions is impossible, and we purpose to end them all. We declare them to be the product of the present system in which

industry is carried on for private greed, instead of for the welfare of society. We declare, furthermore, that for these evils there will be and can be no remedy and no substantial relief except through socialism, under which industry will be carried on for the common good and every worker receive the full social value of the wealth he creates.

Society is divided into warring groups and classes, based upon material interests. Fundamentally, this struggle is a conflict between the two main classes, one of which, the capitalist class, owns the means of production, and the other, the working class, must use these means of production on terms dictated by the owners.

The capitalist class, though few in numbers, absolutely controls the government—legislative, executive, and judicial. This class owns the machinery of gathering and disseminating news through its organized press. It subsidizes seats of learning—the colleges and schools—and even religious and moral agencies. It has also the added prestige which established custom gives to any order or society, right or wrong.

The working class, which includes all those who are forced to work for a living, whether by hand or brain, in shop, mine, or on the soil, vastly outnumbers the capitalist class. Lacking effective organization and class solidarity, this class is unable to enforce its will. Given such class solidarity and effective organization, the workers will have the power to make all laws and control all industry in their own interest.

All political parties are the expression of economic class interests. All other parties than the Socialist party represent one or another group of the ruling capitalist class. Their political conflicts reflect merely superficial rivalries between competing capitalist groups. However they result, these conflicts have no issue of real value to the workers. Whether the Democrats or Republicans win politically, it is the capitalist class that is victorious economically.

Socialism the Expression of the Workers. The Socialist party is the political expression of the economic interests of the workers. Its defeats have been their defeats and its victories their victories. It is a party founded on the science and laws of social development. It proposes that, since all social necessities to-day are socially produced, the means of their production and distribution shall be socially owned and democratically controlled.

In the face of the economic and political aggressions of the capitalist class, the only reliance left the workers is that of their economic organizations and their political power. By the intelligent and class-conscious use of these, they may resist successfully the capitalist class, break the fetters of wage slavery, and fit themselves for the future society, which is to displace the capitalist system. The Socialist party appreciates the full significance of class organization and urges the wage earners, the working farmers, and all other useful workers everywhere to organize for economic and political action, and we pledge ourselves to support the toilers of the fields as well as those in the shops, factories, and mines of the nation in their struggles for economic justice.

In the defeat or victory of the working class party in this new struggle for freedom lies the defeat or triumph of the common people of all economic groups, as well as the failure or the triumph of popular government. Thus the Socialist party is the party of the present-day revolution, which marks the transition from economic individualism to socialism, from wage slavery to free co-operation, from capitalist oligarchy to industrial democracy.

Working Programme. As measures calculated to strengthen the working class in its fight for the realization of its ultimate aim, the Co-operative Commonwealth, and to increase its power of resistance against capitalist oppression, we advocate and pledge ourselves and our elected officers to the following programme:

Collective Ownership. First: The collective ownership and democratic management of railroads, wire and wireless telegraphs and telephones, express service, steamboat lines and all other social means of transportation and communication and of all large-scale industries.

Second: The immediate acquirement by the municipalities, the States or the federal government of all grain elevators, stock yards, storage warehouses, and other distributing agencies,

in order to reduce the present extortionate cost of living.

Third: The extension of the public domain to include mines, quarries, oil wells, forests, and water power.

Fourth: The further conservation and development of natural resources for the use and benefit of all the people:

(a) By scientific forestation and timber protection.

(b) By the reclamation of arid and swamp tracts.

(c) By the storage of flood waters and the utilization of water power.

(d) By the stoppage of the present extravagant waste of the soil and of the products of mines and oil wells.

(e) By the development of highway and waterway systems.

Fifth: The collective ownership of land wherever practicable, and in cases where such ownership is impracticable, the appropriation by taxation of the annual rental value of all land held for speculation or exploitation.

Sixth: The collective ownership and democratic management of the banking and currency system.

Unemployment. The immediate government relief of the unemployed by the extension of all useful public works. All persons employed on such works to be engaged directly by the government under a work day of not more than eight hours and at not less than the prevailing union wages. The government also to establish employment bureaus; to lend money to States and municipalities, without interest, for the purpose of carrying on public works, and to take such other measures within its power as will lessen the widespread misery of the workers caused by the misrule of the capitalist class.

Industrial Demands. The conservation of human resources, particularly of the lives and well-being of the workers and their families:

First: By shortening the work day in keeping with the increased productiveness of machinery.

Second: By securing to every worker a rest period of not less than a day and a half in each week.

Third: By securing a more effective inspection of workshops, factories and mines.

Fourth: By forbidding the employment of children under sixteen years of age.

Fifth: By abolishing the brutal exploitation of convicts under the contract system and prohibiting the sale of goods so produced in competition with other labor.

Sixth: By forbidding the interstate transportation of the products of child labor, of convict labor and of all uninspected factories and mines.

Seventh: By abolishing the profit system in government work, and substituting either the direct hire of labor or the awarding of contracts to co-operative groups of workers.

Eighth: By establishing minimum wage scales.

Ninth: By abolishing official charity and substituting a non-contributory system of old-age pensions, a general system of insurance by the State of all its members against unemployment and invalidism and a system of compulsory insurance by employers of their workers, without cost to the latter, against industrial diseases, accidents, and death.

Political Demands. First: The absolute freedom of press, speech, and assemblage.

Second: The adoption of a graduated income tax, the increase of the rates of the present corporation tax, and the extension of inheritance taxes, graduated in proportion to the value of the estate and to nearness of kin—the proceeds of these taxes to be employed in the socialization of industry.

Third: The gradual reduction of all tariff duties, particularly those on the necessities of life. The government to guarantee the re-employment of wage earners who may be disemployed by reason of changes in tariff schedules.

Fourth: The abolition of the monopoly ownership of patents and the substitution of collective ownership, with direct rewards to inventors by premiums or royalties.

Fifth: Unrestricted and equal suffrage for men and women.

Sixth: The adoption of the initiative, referendum, and recall and of proportional representation, nationally as well as locally.

Seventh: The abolition of the Senate and the veto power of the President.

Eighth: The election of the President and Vice-President by direct vote of the people.

Ninth: The abolition of the power usurped by the Supreme Court of the United States to pass upon the constitutionality of the legislation enacted by Congress. National laws to be repealed only by act of Congress or by a referendum vote of the whole people.

Tenth: The abolition of the present restrictions upon the amendment of the Constitution, so that that instrument may be made amendable by a majority of the voters in a majority of the States.

Eleventh: The granting of the right of suffrage in the District of Columbia with representation in Congress and a democratic form of municipal government for purely local affairs.

Twelfth: The extension of democratic government to all United States territory.

Thirteenth: The enactment of further measures for general education and particularly for vocational education in useful pursuits. The Bureau of Education to be made a department.

Fourteenth: The enactment of further measures for the conservation of health. The creation of an independent Bureau of Health, with such restrictions as will secure full liberty to all schools of practice.

Fifteenth: The separation of the present Bureau of Labor from the Department of Commerce and Labor and its elevation to the rank of a department.

Sixteenth: Abolition of all Federal District Courts and the United States Circuit Courts of Appeals. State courts to have jurisdiction in all cases arising between citizens of the several States and foreign corporations. The election of all judges for short terms.

Seventeenth: The immediate curbing of the power of the courts to issue injunctions.

Eighteenth: The free administration of justice.

Nineteenth: The calling of a convention for the revision of the Constitution of the United States.

Such measures of relief as we may be able to force from capitalism are but a preparation of the workers to seize the whole powers of government, in order that they may thereby lay hold of the whole system of socialized industry and thus come to their rightful inheritance.

PROHIBITION

The Prohibition party of the United States of America in convention at Atlantic City, N. J., July 11, 1912, recognizing God as the source of all governmental authority, makes the following declaration of principles:

The alcoholic drink traffic is wrong, the most serious drain upon the nation's wealth and resources, detrimental to the general welfare, destructive of the inalienable rights of life, liberty, and the pursuit of happiness, and, therefore, all laws taxing or licensing a traffic that produces crime, poverty, and political corruption and spreads disease and death should be repealed. To destroy such a traffic there must be elected to power a political party which will administer the government from the standpoint that the alcoholic drink traffic is a crime and not a business, and we pledge that the manufacture, importation, exportation, transportation, and sale of alcoholic beverages shall be prohibited.

We favor:

The election of United States senators by direct vote of the people.

Presidential terms of six years, and one term only.

Uniform marriage and divorce laws.

The extermination of polygamy and the complete suppression of the traffic in girls.

Suffrage for women upon the same terms as to men.

Court review as to post office and other departmental decisions and orders; the establishment of postal savings banks, the extension of the rural delivery and the establishment of an efficient parcel post, and add the following planks:

The protection of one day in seven as a day of rest.

The absolute protection of the rights of labor without impairment of the rights of capital.

The settlement of all international disputes by arbitration.

The initiative, referendum, and recall.

The tariff is a commercial question and should be fixed on the basis of accurate knowledge secured by a permanent omnipartisan tariff commission with ample powers.

The abolition of child labor in the mines, workshops and factories, with the rigid enforcement of laws now flagrantly violated.

Equitable graduated income and inheritance taxes.

Conservation of our mineral and forest reserves, reclamation of arid and waste lands and we urge that all mineral and timber lands and water powers now owned by the government be held perpetually and leased for revenue purposes.

Clearly defined laws for the regulation and control of corporations transacting an interstate business.

Greater efficiency and economy in government service.

To these fundamental principles the National Prohibition party renews its long allegiance and on these issues invites the co-operation of all citizens to the end that the true object of popular government may be attained; i. e., equal and exact justice to all.

PRESIDENTIAL CAMPAIGN CONTRIBUTIONS. A thorough investigation into the subject of contributions to political campaigns was carried on during the summer and fall of 1912 by a committee of the Senate composed of Senator Clapp of Minnesota, chairman, and Senators Jones of Washington, Oliver of Pennsylvania, Paynter of Kentucky, and Pomerene of Ohio. The investigation resulted from charges of corruption in the campaign of 1904 and the scope of the investigation was originally limited to that campaign. As a result of conditions thereafter developed, as noted below, the scope of the committee was broadened to include also the campaign of 1912. The most important results derived from this investigation as related to the different political parties, are noted herewith.

REPUBLICAN CAMPAIGN CONTRIBUTIONS, 1904. George W. Cortelyou, chairman of the Republican national committee in 1904, testified early in July that all the vouchers and official records relating to Republican contributions in 1904 had been destroyed. From his recollection, however, he testified that the election of President Roosevelt in 1904 cost in round numbers, \$1,900,000 and that the election of President McKinley in 1900 cost twice as much, or \$3,800,000. Mr. Cortelyou testified that he knew of no contributions having been made directly by J. Pierpont Morgan or H. H. Rogers, and that he knew nothing of the contribution of \$280,000 made by E. H. Harriman and others until certain letters were printed in the newspaper controversy which followed the charges made by Mr. Harriman in 1906. He declared that there was not the slightest ground for the charges that he had used the knowledge acquired by him as Secretary of Commerce and Labor to obtain contributions from corporations.

The publication of certain letters in *Hearst's Magazine* in August, 1912, aroused public interest in the investigations of the committee. These letters were alleged to have been written by John D. Archbold of the Standard Oil Company to Senator Penrose of Pennsylvania and others. The first of these letters was published under the heading "Startling Revelations in Standard Oil Letters." It was dated October 13, 1904, and read as follows:

"My Dear Senator:

"In fulfillment of our understanding it gives me pleasure to hand you herewith certificate of

deposit to your favor for \$25,000, and with good wishes, I am,

"Yours truly,

"John D. Archbold."

This letter was marked "personal." Opponents of Senator Penrose, in Pennsylvania, took advantage of the appearance of these and other letters from Mr. Archbold to make an attack upon him. They demanded that he be expelled from the Senate on the ground that he had been the paid agent of the Standard Oil Company for many years. On August 21, Senator Penrose, on the point of privilege, addressed the Senate and undertook to explain the transaction. He admitted that the amount mentioned in Mr. Archbold's letter had been received, but claimed that it was part of a fund of \$125,000 which was contributed by the Standard Oil Company through Mr. Archbold as its agent to the Republican campaign of 1904. He stated that \$100,000 of this amount was given directly to Cornelius N. Bliss, who was at that time treasurer of the national campaign committee, of which the chairman was George B. Cortelyou. Senator Penrose intimated that this gift from the Standard Oil Company was known to President Roosevelt, and that later an additional sum of \$150,000 was asked for from the Standard Oil Company by members of the national committee. The inference to be drawn from Senator Penrose's statement was that the subsequent prosecution of the Standard Oil Company by President Roosevelt's administration was the indirect result of the refusal of that company to give the additional amount asked for. Senator Penrose stated that while Mr. Archbold wished to make this contribution he was overruled by his associates in the Standard Oil Company. He further declared that he, himself, had been present at interviews between Mr. Archbold and Mr. Bliss and that Mr. Bliss had assured Mr. Archbold that President Roosevelt knew about the actual contribution and appreciated it. This statement, he claimed, was the result of the insistence of Mr. Archbold that the President should be personally notified that this sum had been contributed by the Standard Oil Company. On August 22, Senator Penrose continued the explanation of this transaction and made further attacks upon Mr. Roosevelt.

Directly following these charges made by Senator Penrose, Mr. Roosevelt, who was then campaigning in Pennsylvania, denounced the aspersions as false and produced letters written by him in October, 1904, to Mr. Cortelyou insisting that if any money had been received from the Standard Oil Company it must be at once returned. Both Mr. Cortelyou and Mr. Loeb, who was in 1904 Secretary of the Treasury, denied through the newspapers that they knew anything of the alleged gift of \$100,000 by the Standard Oil Company. On August 23 Mr. Archbold appeared before the Senate committee which was investigating campaign fund contributions. His testimony, in all essentials, agreed with statements made by Senator Penrose as to the circumstances of the alleged gift.

Mr. Roosevelt asked the privilege of being allowed to testify directly following Mr. Archbold's appearance before the committee, but as the Senate was on the point of adjourning, and the members of the committee were so scattered, that the chairman was not able to bring them

together, this was found impossible. It was, however, arranged by the Senate that these particular charges should be investigated together with those relating to recent political expenditures, including those of the campaign of 1912, and it was decided that the committee should convene for this investigation on September 30.

Mr. Roosevelt wrote to Senator Clapp a long letter in which he reviewed, in detail, the circumstances covering the period under investigation, denying the charges wholly and making a vigorous assault upon his enemies.

When the committee reassembled on September 30, George R. Sheldon, former treasurer of the Republican national committee, testified that corporations contributed 73½ per cent. of the Republican campaign fund in 1904. Mr. Morgan testified that he had contributed \$100,000, and later had added \$50,000. The latter sum, according to his recollection, was spent wholly or largely in New York as a part of the \$240,000 which was raised by Mr. Harriman a week before the election.

On October 4 Mr. Roosevelt testified before the committee. His testimony, in effect, followed the contents of his letter previously addressed to the committee. He denied that he had asked Mr. Harriman to raise money for the Republican party in 1904. He also denied that he knew until October 3, 1912, that money had been contributed by the Standard Oil Company in 1904, and he declared himself without knowledge of contributions of Messrs. Gould and Morgan. He also made denial of the allegation that Ormsby McHarg had been sent to the South previous to the Republican national convention to purchase delegates to the Republican convention. Mr. McHarg also denied this charge.

Mr. Roosevelt said that he had sent for Messrs. Harriman and Morgan in the fall of 1904, but not to discuss politics. He declared that he knew of the contribution made by Mr. Frick, but did not regard it of especial moment. He said that he did not regard Mr. Morgan's contribution of \$150,000 as of greater consequence than that of \$1 sent to him in 1912 by a veteran of the Soldiers' Home. Mr. Roosevelt was on the stand before the committee for nearly five hours. His testimony is covered chiefly by the summary above. His testimony was corroborated, in certain points, by William Loeb, Jr., his former secretary. Mr. Loeb wrote a letter which he read to Mr. Sheldon, Republican treasurer, on September 21, 1908, advising against certain contributions from Mr. Archbold or Mr. Harriman to President Taft's campaign. The reply made by Mr. Roosevelt to Senator Paynter, who asked him whether, as a "practical" man, he did not think some of the contributions, by corporations, to the campaign fund of 1904 were made with the expectation that the corporations would receive favors, was received with applause. Mr. Roosevelt said: "As a practical man of high ideals, who has always endeavored to put his high ideals in practice, I think any man who would believe that he would get any consideration from making any contribution to me was either a crook or a fool."

On October 18, Elmer Dover, who, in 1904, was secretary of the Republican committee, produced at the investigation a list of the contributors in that year. This list had been

copied from a private memorandum book of Cornelius N. Bliss, at that time treasurer of the Republican national committee, with Mr. Bliss's consent. The total contributions, according to this tabulation, amounted to \$2,280,018. Among the contributors were E. H. Harriman, \$150,000; J. P. Morgan & Co., \$150,000; George J. Gould, \$100,000; Chauncey M. Depew, \$100,000; George W. Perkins, \$160,000; and Whitelaw Reid, \$30,000. One group of contributions, in which there were thirteen names, appeared to have been those collected by Mr. Harriman after his visit to President Roosevelt in 1904.

REPUBLICAN CAMPAIGN CONTRIBUTIONS, 1912. From the investigations carried on by the committee and from reports received in accordance with the law providing for the publicity of campaign contributions, it was shown that the total receipts of the Republican national campaign committee for the campaign of 1912 were \$904,828, and the expenditures, \$900,363. Charles P. Taft of Cincinnati, the half-brother of President Taft, testified before the committee that he had contributed in 1912 about \$372,000. Other contributors were F. L. Leland, who gave \$50,000, Andrew Carnegie, \$35,000, and J. P. Morgan & Co., \$25,000.

DEMOCRATIC CONTRIBUTIONS, 1904. Thomas Taggart, chairman of the Democratic national committee in 1904, testified before the committee in July that the books of the Democratic national committee had been burned, and that he had little recollection of the expenditures. August Belmont stated that, in his judgment, the fund amounted to between \$600,000 and \$700,000. W. F. Sheehan, also a member of the national committee in 1904, testified that approximately \$1,000,000 was contributed for the Democratic campaign of 1904, and that of this sum the national committee itself handled about \$800,000. Thomas F. Ryan testified that he had contributed \$50,000 at the beginning of the campaign, and that within a short time he had added \$50,000, and after the campaign collapsed he contributed \$350,000, a sum sufficient to pay off the debts of the national committee to save the Democratic organization.

DEMOCRATIC CONTRIBUTIONS, 1912. Testimony from several witnesses showed that there had been spent for the nomination of Governor Wilson, \$208,565. Of this sum \$85,500 was contributed by a small group of men who were classmates of Governor Wilson or were trustees of Princeton University. Mr. Ryan testified that he had contributed \$75,000 for the benefit of Governor Harmon in 1912, and about \$35,000 for the fund of Mr. Underwood.

The total receipts of the Democratic national committee in the election of 1912 were \$1,159,446.

PROGRESSIVE PARTY CONTRIBUTIONS. Testimony in regard to the campaign contributions for the carrying on of the Progressive campaign of 1912 was of particular interest, as it showed that the larger part of the sum spent had been contributed by several men prominent in the new party. William Flinn of Pennsylvania testified that \$325,000 had been spent in Pennsylvania and New York county alone previous to the election and that the national organization had spent about \$144,000 more. The sums contributed by different persons to this fund were as follows: William

Flinn, \$144,308; George W. Perkins, \$130,000; Frank A. Munsey, \$33,000, and Dan R. Hanna, \$25,000. The total receipts of the Progressive national committee were \$676,672 and the expenditures, \$666,500.

PRESIDENTIAL PRIMARY ELECTIONS.

See PRESIDENTIAL CAMPAIGN and ELECTORAL REFORM.

PRETO, OURO, Viscount. A Brazilian statesman and writer, died February 22, 1912. He occupied many important offices in Brazil under the last emperor, Dom Pedro. He was for a time minister of finance, but at the time of the war between Brazil and Paraguay in 1864-68 he was minister of marine, and to his services are said to have been largely due the Brazilian victories. When the empire was overthrown by the Republicans, Preto was premier. After the establishment of the republic his loyalty to the dethroned emperor and his heirs prevented him from accepting any of the positions offered to him by the republic. He took up the practice of law and devoted much of his time to writing.

PREVENTION. See PUBLIC CHARITIES.

PRICE, JAMES L. An American jurist, died March 11, 1912. He was born in New Hagerstown, O., in 1840, and was educated in the public and high schools of that city. He was admitted to the bar in 1862 and until 1865 practiced at Carrollton, O., and afterwards at Lima. In 1895 he was appointed judge of the Circuit Court of Ohio, serving until 1901, when he became associate justice of the Supreme Court of the State. In 1908-9 he was chief justice of the court.

PRICES. One of the most universal subjects of discussion in recent years has been the rise of prices or the increased cost of living. This upward movement, which began in 1895 or 1896, continued to the close of 1912 with recessions of greater or less degree at different times. As indicated by Bradstreet's index number, which is the total sum of the wholesale prices of 96 commodities, the price level December 1, 1912, was 9.5462. This compared with 8.9824 on December 1, 1911, an increase of 6.2 per cent.; and reached the highest level in many recent years. It was 8.5 per cent., 4.6 per cent., 16 per cent., 12 per cent., 7 per cent., and 21.8 per cent. above the level on December 1, 1910, 1909, 1908, 1907, 1906, and 1903 respectively. During the year 65 of the 96 commodities advanced in prices, 13 remained unchanged, and 28 declined. Breadstuffs, oils, naval stores, chemicals, and drugs were the groups declining, while livestock, provision, fruits, hides and leather goods, textiles, metals, coal and coke, and building materials increased. The average of the index numbers of the first days of the twelve months of 1912 was 9.1867. The average index numbers of other years were as follows: 1911, 8.7132; 1910, 8.9881; 1909, 8.5153; 1908, 8.0094; 1907, 8.9045; 1906, 8.4176; 1905, 8.0987; 1900, 7.8839; 1896, 5.9124. This indicated a rise of 53 per cent. since 1896. See FINANCIAL REVIEW.

FOREIGN. The rise of prices in foreign countries was not so marked as in the United States, but was universally felt. Statistical inquiries were made in nearly every European country, Japan, and Australia, and revealed everywhere the upward movement. This was very frequently made responsible for the world-wide unrest in both the industrial and political spheres.

Radical labor movements have been noticeable in the last few years in England, Germany, France, Austria, Hungary, Italy, Australia, and America. Food riots have been common in various parts of Europe, leading to governmental action in various ways; the establishment of public fish, meat, and vegetable markets and bakeries; the reduction or temporary relaxation of tariff duties on food products, as in Germany. A report of the merchant elders of Berlin showed that prices of all food products had advanced rapidly since 1901, the advances ranging from 20 to 50 per cent. During the year hundreds of public meetings throughout Germany petitioned for complete or partial suspension of taxes on foodstuffs; the matter was a subject of continuous debates in municipal councils and other public works. The continued rise was held to constitute a danger to the government, as it greatly strengthened the Socialist ranks. In Japan the rising prices were reported to have greatly increased the unrest by aggravating the hardships of the laboring poor; desertions of wife and family had greatly increased, as had also the demands for charitable aid and the amount of crime.

According to the Department of Labor for Canada, the index number of prices for January was 131.4; it rose steadily to 136.9 for June, fell gradually to 132.5 for September, and rose again to 134.3 for November. The London *Economist's* figures began at 2.613 for January; rose continually to 2.746 for July, except for a slight recession for April; fell to 2.722 for August; rose to 2.740 for September; and fell to 2.721 for November. Sauerbeck's index average for 1878-87 was 79; for 1890-99, 66; 1902-11, 74. Its lowest point was that for 1896, when it was 61; it rose to 75 for 1900; fell to 69 for 1903; rose to 80 for 1908; fell to 74 for 1909, and 78 for 1910, but rose to 80 for 1911. Its highest level in recent years was 86.7 for September, 1912, which may be compared with 88 for the year 1880. In general it may be said that there has been a rise of from 45 per cent. to 60 per cent. since 1896, and that it continues unabated, but that the general level is still considerably below the general level of the 70's.

In the Argentine Republic conditions similar to those in the United States were reported. Great stress was laid on increasing extravagance as the most obvious factor. Among the remedies advocated were sanitary housing of the poor in cities at low rents; lowering of the tariff; reservation of land near cities and towns for free farms; encouragement to small farmers; small banks; coöperative stores; and checking the exportation of cereals and meats.

CAUSES. Although a great multiplicity of causes for the increased cost of living is here and there assigned, it has come to be generally conceded that the principal cause is the increased production of gold. In 1890 the world's output of gold was only \$118,000,000; in 1896 it had risen to \$202,000,000; in 1899 to \$396,000,000; in 1906 to \$401,000,000; and since 1909 it has averaged more than \$450,000,000 per year. Fundamentally, prices are but the ratios between the value of gold and the values of other things. Consequently this enormous increase in gold production has cheapened gold relatively so that more gold is needed to buy given quan-

titles of other things. Of the same character is the action of the increase in the facilities for business credit. With the steady improvement in banking methods and an enormous increase in the use of checks, drafts, and other credit instruments, it has become possible to transact a much larger volume of business on the basis of a given quantity of gold than ever before. Undoubtedly also the protective system, as found in the United States and Germany, has the effect of increasing the prices of certain articles. This is also true of trusts and monopolies in some cases. This period of rising prices seems also to have been a period of rising standards of living, attended by demand for a greater variety and higher quality of goods. Among other conditions which might affect one or more particular commodities are the following: Cold storage; trade unions; shorter hours and increased wages of labor; pure food laws; advertising; unreasoning extravagance; military expenditures. When, however, one centres attention on the fact that this is a world-wide phenomenon, he is forced to conclude that the most important causes must be the increased supply of gold and increased use of credit in trade.

INTERNATIONAL COMMISSION. It was the world-wide character of this movement that led to the proposition by Professor Irving Fisher that an international commission be created to inquire into the facts, the causes, the remedies, and the probable future of the rise. This proposal was approved by numerous economists, publicists, and boards of trades in the United States and Europe. It received the hearty endorsement of President Taft, who urged upon Congress the authorization of such a commission. At the close of the year it seemed highly probable that Congress would pass the bill for its creation.

REMEDIES. Naturally, the remedies suggested have been determined by the explanations. Those who have laid stress upon the tariff, or the trusts, or cold storage, or farming methods, have found in a change of these the principal means for reducing the cost of living. Other suggestions included the coöperative movement; the elimination of middlemen; the repeal of the taxes on oleomargarine, and other food taxes; the use of vacant city lots for gardens; the establishment of public municipal markets; increased efficiency in business organization and labor; increased simplicity of living; and currency reforms.

It seemed evident, however, that the only way to effect the general movement was to deal with gold, by whose value the values of all other things are measured. Professor Irving Fisher brought forward a proposal to give the dollar uniform purchasing powers. It has long been understood that the index numbers of prices measure the rise and fall in the purchasing power of the gold dollar, pound, or whatever constitutes the standard of value. By resorting to the old method of a seignorage charge on the coinage of gold the amount of bullion required to make a dollar could be made to vary as much as desired. Professor Fisher therefore proposed that the index number be made to serve as a guide for the amount of the seignorage charge so that, although the legal weight of the gold dollar would vary, its purchasing power would be made as stationary as statistical calculation permitted. Thus any loss in purchasing power as shown by a rising index

number would be offset by virtually putting more gold into the dollar. Such readjustment could be made by a public bureau at intervals, and its operation, in the proposer's claim, would soon become automatic. It was quite clear, however, that such a proposal could not be adopted without international agreement, as any one nation adopting it would suffer inconvenience in its foreign exchanges. Furthermore, the rise in prices is not at the same rate in different countries. It varies also for different commodities and hence the proposal for a stable dollar might, if adopted, bring about serious new disturbances.

HIGHER PRICES AND CROP PRODUCTION. It has been commonly asserted that one of the causes of rising prices of food products was the reduction in the per capita production. That this statement is unfounded was asserted by the Secretary of Agriculture and supported by evidence presented in the *Crop Reporter* for April. It was shown that for fifteen years considerable increases in the prices of agricultural products have occurred in every important country; but that the world's production of staple food products has increased faster than the population. Thus in wheat-growing the average annual increase during the ten years 1900-1909 inclusive was 2.5 per cent. This was due, in part, to increased acreage and in part to a better yield per acre. In corn production the average annual increase was 2.8 per cent; in oats 2.7 per cent; in barley 3.8 per cent; in rye 0.7 per cent; in rice 1.7 per cent; in sugar 4 per cent; in potatoes 3 per cent. During the five years 1905-1909, the flax-seed crop increased 13 per cent; the cotton crop 12 per cent., and tobacco 6 per cent. These eleven articles were said to constitute three-fourths of the acreage and 70 per cent. of the value of all agricultural products. Similarly with reference to meat production, the report showed that in the United States the numbers of cattle, sheep, and swine had increased materially between 1906-1910, some of this increase being attributed to better data. In 26 countries outside of the United States it was estimated that the number of cattle had increased 13 per cent. between 1899 and 1909, the number of sheep 7 per cent., and of swine 11 per cent.

PRIMARY ELECTIONS, PRESIDENTIAL. See **PRESIDENTIAL CAMPAIGN** and **ELECTORAL REFORM.**

PRINCE EDWARD ISLAND. An insular province of the Dominion of Canada. Area, 2184 square miles. Population (census of June 1, 1911), 93,728, as compared with 103,259 in 1901. Charlottetown, the capital, had 11,198 inhabitants (12,080 in 1901). The province is administered by a lieutenant-governor, Benjamin Rogers, appointed June 1, 1910. Premier in 1912, John A. Mathieson. See **CANADA.**

PRINCETON UNIVERSITY. Among the important changes in the faculty during the year were the following: George B. McClellan, formerly mayor of New York City, was appointed for the year professor of economic history, conducting a senior course. Deans Henry B. Fine of the school of science and E. G. Elliot of the college were granted leave of absence for the year, and Prof. W. F. Magie and Prof. Howard McClenahan were elected to fill their respective places. Prof. Archibald A. Bowman, of the University of Glasgow, was elected to

the chair of logic, comprising many of the courses formerly taught by Dr. Hibben. William Franklin Willoughby, formerly assistant director of the United States census, was appointed to the McCormick professorship of jurisprudence, the chair formerly held by Woodrow Wilson. Dr. Edwin Walter Kemmerer, formerly of Cornell University, was appointed professor of economics and finance. Work progressed during the year on the new graduate college, and many of the buildings approached completion.

PRISON POPULATION. See **PENOLOGY.**

PRIVATE BANKS. The report of the Comptroller of the Currency estimated that there were more than 4000 private and brokerage banking houses in the United States. Only 1110 of these furnished reports to the comptroller, of which nearly three-fourths were in the middle western States. From Illinois alone 295 reported, from Indiana 194, from Ohio 149, and from Iowa 107. The aggregate resources of these 1110 private banks were \$196,940,000. Included in this were loans and discounts amounting to \$129,784,000. Their individual deposits were \$152,494,000.

PRIME, EBENEZER SCUDDER. A rear-admiral, retired, of the United States navy, died April 27, 1912. He was born in New York City in 1847 and graduated from the United States Naval Academy in 1863. He served throughout the remainder of the Civil War. In 1874 he was made lieutenant and rose through successive grades until he became rear-admiral in 1905. He was retired in the same year at his own request. He served in the Spanish-American War as lieutenant-commander.

PROBATION ASSOCIATION, NATIONAL. See **PUBLIC CHARITIES.**

PROFERRIN. This is a compound of iron and milk casein containing iron equivalent to about 10 per cent. elementary iron, and phosphorus equivalent to about 0.5 per cent. elementary phosphorus. It is prepared by treating an alkaline solution of casein with a solution of an iron salt and precipitating with acetic acid. Proferrin is a brown powder, almost odorless and tasteless, insoluble in water and dilute acids, slowly soluble in alkalis. Proferrin acts as a ferruginous tonic and as a means of restoring the iron and phosphorus waste of the body. It undergoes very little change in the stomach, but is said to be quickly digested and absorbed in the intestines. Its hematogenous actions resemble those of other organic iron preparations.

PROMOTION OF INSURANCE. See **INSURANCE.**

PROPAESIN. (PROPYL AMINO BENZOATE PARAMIDOBENZOIC ACID PROPYL ESTER). Propaesin, $C_6H_4NH_2COO(C_3H_7)$, 1:4, is the propyl ester of paraminobenzoic acid, $C_6H_4NH_2COOH$, 1:4. It is prepared by esterification of paraminobenzoic acid with propyl alcohol and is a

fine, white or colorless, odorless, nearly tasteless powder, which produces numbness when placed on the tongue. Propaesin is very slightly soluble in water and is not readily wetted by this solvent. It is soluble in alcohol, benzene, chloroform, and ether. Propaesin is a local anæsthetic and analgesic. It is astringent and is said to be practically non-toxic, and to be useful in the treatment of gastralgia, gastric ulcer, and other painful diseases of the mouth, esophagus, and stomach. Externally, it reduces the sensibility of the mucous membranes of the nose, ear, and larynx, and induces local anæsthesia. It is therefore of value in all painful wounds and ulcers of the mucous membranes and of the skin, and for relieving pain in dental operations.

PROTESTANT EPISCOPAL CHURCH.

The communicants in 1912, including those in the United States and foreign missions, numbered 986,021, compared with 963,097. The clergy numbered 5678, and the parishes and missions, 8164. In the Sunday schools of the denomination were 454,495 scholars and 51,138 teachers. The total contributions from all sources for the work of the denomination during 1912 were \$18,802,183. The communicants in the United States proper numbered 970,451. The denomination comprises in the United States 68 dioceses and 28 missionary districts, including those in Alaska and insular possessions. In addition, there are 12 foreign missionary districts. There was contributed for missions, including domestic and foreign missions during the year, \$1,010,944. There were five consecrations to the episcopate during the year and one bishop died, Bishop Charles Chapman Grafton (q. v.) Dr. James H. Van Buren, Missionary Bishop of Porto Rico, and Dr. William M. Brown, Bishop of Arkansas, resigned during the year. Rev. George Biller, Jr., was elected Missionary Bishop of South Dakota, and Rev. Herman Page Missionary Bishop of New Mexico. Mr. Biller accepted, but Dr. Page subsequently resigned. The House of Bishops also elected Rev. Henry St. George Tucker Missionary Bishop of Kyoto, Japan, and Rev. Daniel Trumbull Huntington Missionary Bishop of Wuhu. There was no general convention of the denomination in 1912, as the conventions are triennial and the last was held in Cincinnati, O., in 1910. The Church Congress held its sessions in 1912 in St. Louis. Among the most discussed questions were, "Modern Psychic Phenomena and Demonology"; "The Possibility of Unity in Church Government"; "The Sanctity of Marriage"; "Official Censorship in the Interest of Morals"; "The Good and Evil in Trade Unions"; "Music as an Aid to Religion"; and "Conversion as a Christian Experience." The social work of the church has been actively prosecuted during recent years. The Christian Social Union at its annual meeting in January voted that the joint commission on social service, appointed at the last general convention, made continuation of their work as an organization unnecessary. The general conference on faith and order continued its work during the year. In June a deputation consisting of the Bishop of Chicago, president of the commission, the Bishop of Southern Ohio, chairman of the house of bishops, the Bishop of Vermont, and the Rev. William T. Manning, D. D., visited Great Britain and secured the promise of the appointment of coöperating

commissions by the Church of England in England, by the Episcopal Church of Scotland, and by the Church of Ireland.

PRYOR, SARAH AGNES (RICE). An American writer, died February 15, 1912. She was born in Halifax County, Va., in 1830. In 1848 she married Roger Atkinson Pryor and became one of the most prominent agitators for secession in the South. She was the author of *The Mother of Washington and Her Times* (1903); *Reminiscences of Peace and War* (1904); *Birth of a Nation* (1907); *My Day* (1909), and *The Colonel's Story* (1910). Mrs. Pryor's reminiscences of war times are among the most interesting and valuable of those written by observers of conditions in the South.

PSYCHICAL RESEARCH. To those interested in this field of human inquiry the sudden death of Andrew Lang on July 20 came with no small degree of surprise and sorrow. The *Athenæum* (July 27) says, with reference to this brilliant litterateur, that he "was intensely interested in spiritualism, crystal-gazing, and psychical research generally, and was one of the founders and a past-president of the [British] Psychical Research Society; and no one could tell a ghost-story better." Preceded in the chair by men eminent in their several walks of life, men whose names scientists, philosophers, and statesmen conjure with, he showed for the first time how well a man of high literary ideals and achievements could sympathize with the efforts of those interested in psychic phenomena. The presidential address of his successor, the Rt. Rev. Bishop Carpenter (in *Proceedings of the Society for Psychical Research*, 26), points out the significance of the conception of the self as a growing, dynamic entity, inheriting the experiences of past selves and capable of contributing its share to selves which are to come. To quote, "And may it not be that our present life compared with the future life is an embryonic life? May there not be faculties and powers which are now being formed, whose full significance and value will only be evident when we pass into a life of new conditions?" That, in spite of the clever deceptions practised on the society by mediums, the work of culling the wheat from the chaff goes steadily on, is indicated by the advice: "While being strictly vigilant against fallacious representations of phenomena, vigorous in examining all facts and circumstances brought to notice, it ought to hold a mind open enough to welcome hints and helps from every quarter; it ought to be as stern in rejecting what is irrelevant as it should be keen to perceive the importance which lurks in what is insignificant."

The results obtained from "experiments" have been questioned by able critics. Tuckett (*Bedrock*, 1, p. 18) says that "the Will to Believe has made them [Barrett and Lodge] ready to accept evidence obtained under conditions which they would recognize to be unsound if they had been trained in experimental psychology. Sidgwick (1895) believed the chief work of the Society for Psychical Research has been the exposure of impostors and that their best results were mainly negative." Hill and Lodge (*Bedrock*, 1, pp. 333, 342) maintain, however, that some phenomena, such as telepathy, are entitled to respectful consideration and that there is some virtue in quan-

tity of results over against quality. The subject of "automatisms" or automatic writing, is responsible for considerable discussion. A series of "automatisms" recorded for about a month "seems to have resulted in the production not only of cross-correspondence" between mother and daughter without normal means of communication, "but of statements, subsequently verified, about events [normally] unknown to the automatists." This "experiment" is similar to a case reported in *Piddington's* well-known paper, "A series of concordant automatisms," entitled "the Latin message." In Podmore's last book, *The Newer Spiritualism*, this reported "experiment" fared ill under the destructive criticism of the author, and has led, since that time, to a series of apologetic explanations of "faults in the experimentation," and of the possibility of the subjects actually seeing without consciously noticing" references which later figured in the concordance of "automatic phenomena." Maxwell, in reviewing the "experimental" methods involved in investigating "scripts" of this sort, indicates two sources of error, aside from all prevalent possibility of conscious or unconscious fraud: (1) The difficulty of proving what a medium does not know; and (2) the ascription of "automatic phenomena" to a "supernormal force" when it can very easily be a matter of cryptomnesia, or subconscious memory. That interest in psychical research is not on the wane is manifested by the appearance, in its thirty-fourth edition (85th thousand), of the popular book on hypnotism, spiritism, and mental therapeutics, by Hudson, called *The Law of Psychic Phenomena*.

PSYCHOLOGICAL ASSOCIATION, AMERICAN. See **PSYCHOLOGY**.

PSYCHOLOGY. The tendency which directed psychological investigation toward applied fields of research (cf. *YEAR BOOK*, 1911, p. 590) has steadily continued to make itself felt. A second tendency toward a thorough examination of psychological methods is increasingly manifest, both in America and in Europe. A perusal of the output of the laboratories and of the subjects of discussion at the annual conferences of psychologists in both continents, gives ample evidence of the first tendency, and the theoretical papers that have appeared in a number of psychological journals bear witness to the second. Were these two operating principles, application and self-examination, equipotent in the progress of psychology as a science, the combination would doubtless be of incalculable value to the firmer establishment of the discipline. The appearance of these two tendencies is significant in a dual way: (1) It is indicative of a basic supply of well-established phenomena; and (2) it is symptomatic of a healthy and normal growth of the science. When experimenters have time and inclination to attack problems in applied fields of investigation, it means that they have an adequate kit of psychological tools ready at hand with which to work. Then, if these workmen, operating under slightly different conditions, find their tools not wholly fit, and if, under these circumstances, they carefully examine the tools and the way in which they were in the habit of using them, that is, if they hesitate to use their implements wrongly and take time to think about right methods, then there is assurance that the science is not

over-hasty but normally progressive. So we find, on the one hand, the instilling of a self-conscious factor, a check on a too rapid and too clumsy application of facts and methods, and, on the other, the contribution of interrogations from the field of applied psychology becoming a guide to further examination of the premises, both in the matter of subject and of method, of psychology. Of the twenty-nine theses (an increase of six over last year) presented in connection with the requirements of the Ph. D. degree in our American colleges this year, a little over one-half were on subjects of an applied nature; several of the remainder dealt with the investigation of psychological method—remarkable, even if the number be small, when one remembers that theoretical discussions are usually the product of minds older than that of the average candidate for a doctor's degree, and more adequately trained in psychological perspective.

The American Psychological Association met at Cleveland under the presidency of E. L. Thorndike on December 30, 31, and January 1, in conjunction with affiliated sections of the American Association for the Advancement of Science. The Association of Experimental Psychologists met at Clark University, Worcester, Mass., on April 15-17. By sheer coincidence, the Congress for Experimental Psychology was held at about the same time at Berlin, Germany, on April 16-19. Several new psychological journals have appeared. Among these are *Psiche*, in Italy, under the editorship of Assagioli; *Imago*, edited at Vienna by S. Freud, and devoted to the application of psychoanalysis; and *Fortschritte d. Psychologie u. ihren Anwendung*, edited by K. Marbe, at Würzburg. W. Wundt, the pioneer experimentalist, a knight of the Prussian order *pour le mérite*, celebrated his 80th birthday on August 16, on which occasion he was the recipient of a fund of 7000 marks, presented to him by about 60 of his friends and former students. The obituary of the year is fortunately short: we have to record only the death, on July 16, of Alfred Fouillée, editor and writer of topics related to social psychology.

GENERAL BOOKS AND TREATISES. An unusually large number of general texts and treatises have come from this year's press. The current trend toward a revision of psychological principles appears this year in the large systematic work *Grundzüge der Psychophysikologie* by A. Lehmann of Copenhagen; Lehmann considers theory, explanation, to be the most pressing need in psychology. He points to the rapid advance of physical science under the atomic theory of matter and he declares that mental science stands in want of a corresponding theory of mind. He proposes the doctrine of psychical energy. Mental processes are bound up, so he maintains, with a special form of energy which appears in the transformation within the central nervous system of chemical energy and which is subject to the general laws of energetics. A decade of experimental work has convinced Lehmann that his doctrine is fruitful within psychology, and he proceeds therefore to apply it to the several problems of mind. The volume is divided into four parts: (1) Mind and Body; (2) Psychophysics (analysis into elementary processes); (3) Psychodynamics (neural facilitation and inhibition, and the mental activities);

and (4) Mental Complexes. Less extensive use of the principle of energetics in psychology has been made by other writers. Lehmann himself gave an intimation of its use in his earlier *Elemente der Psychodynamik* (1905). Further evidence of this trend is given in Wirth's new book on *Psychophysik, Darstellung d. Methoden d. experimentellen Psychologie*. There are two subdivisions: (1) Mathematical Methods; (2) Experimental Arrangements. Appearing as part of a text-book on the methods of physiology, it includes all of the methods of experimental psychology, which, however, are woven into a texture colored by the theory of psychometric functions.

Wundt's little elementary text-book, which recently appeared, has now been translated into English by R. Pintner, *An Introduction to Psychology*. The work presents in simple language, without technical detail, much of the material already accessible in the *Outlines*. It begins with the general delineation of consciousness, it proceeds to the description of the elements and of the associative and apperceptive forms of combination, and it closes with the general laws of mental life. The English of the *Introduction* is not always felicitous; but it renders with a fair degree of success the difficult sentences of the original. The translation will help junior students unfamiliar with the larger works toward an understanding of the main principles of Wundt's psychology. A. Kröner, in his *Elemente d. Völkerpsychologie v. W. Wundt*, has, in an independent and simplified way, condensed Wundt's larger work, so that it is now not in the form of a series of scholarly lectures, but in the less attractive guise of a text-book. Ebbinghaus's *Abriß d. Psychologie* has this year passed into its fourth edition. Calkin's *First Book in Psychology* appeared in a third and revised edition in which the author has aimed "to emphasize the essential social nature of the conscious self, to accentuate the fact that the study of the self, as thus conceived, involves a study of behavior, and, finally, to prune the book of expressions which lend themselves to interpretation in terms of an atomistic psychology." On the whole, it still clings very firmly to the notion of the self which James had when he wrote his *Principles of Psychology* (1890). A *System of Psychology*, written by K. Dunlap is designed to give "as consistent a sketch as possible of the general field of normal human psychology." The work lays a good deal of emphasis upon psychological theory. The author extends his theory in a controversial manner in a subsequent article (*Psychol. Rev.*, 19, pp. 415-46), in which he argues in favor of the addition of "relational elements" to the list of simple mental processes. A neurology written partly for the use of students of psychology was published during the year in England (*The Nervous System*, by J. D. Lickley). It contains many good figures and many useful descriptions; but its psychology is, unfortunately, both crude and antiquated. Other systematic text-books are W. Schmied-Kowarzik's *Umriß einer neuen analytischen Psychologie* and S. Radhakrishnan's *Essentials of Psychology*. A book reminiscent in subject and style is G. S. Hall's *The Founders of Modern Psychology*, a collection of lectures recently delivered at Columbia University. The layman who is interested in the scope and the achievements of psychology will profit from the

inspection of J. R. Angell's *Chapters from Modern Psychology*, a series of eight lectures devoted to General, Physiological, Experimental, Individual and Applied, Social and Racial, Animal, and Genetic Psychologies, and the Psychology of the Abnormal. In a compact form, B. Rand has gathered together excerpts from the writings of some of *The Classical Psychologists*, from Anaxagoras to Wundt. This book is similar to collections of the writings of the moralists and the philosophers which have already been prepared by the author. The choices are usually happy as far as material is concerned, although one wonders why Stumpf is included and Ebbinghaus is omitted. Now that Dessior's biographical *Outlines of the History of Psychology* has been translated by Fisher, the psychologist is waiting for the translation of Klemm's *History of Psychology*, a topical presentation of the historical development of the science, promised us by Wilm, to use as a companion volume. Brett has also issued a *History of Psychology; Ancient and Patriotic*.

SENSATION AND PERCEPTION. Vision. Important investigations in vision, somewhat controversial in nature, have been reported from laboratories at Bryn Mawr and Cornell. Ferrée and Rand (*Psychol. Rev.*, 19, pp. 195-239) claim that under proper conditions, especially when the degree of brightness favors color saturation in the after-image, a colored after-image can be sensed in the peripheral field of vision when no color is sensed in the stimulus. Day (*Am. Jour. of Psychol.*, 23, p. 576) claims that these "anomalous" results occur more frequently with colorless than with colored stimuli, but that "previous stimuli were found to influence the hue of succeeding sensations, as well as succeeding after-images." Rand, in a paper on "the effect of changes in the general illumination of the retina upon its sensitivity to color" (*Psychol. Rev.*, 19, pp. 463-90) shows that the color-sensitivity of the retina is influenced by changes in the illumination of the visual field, "particularly when the stimulus is surrounded by a white field," and points out the absolute necessity, in the standardization of comparative results, "of keeping the general illumination of the room constant." "The relative legibility of different faces of printing types" is the title of a paper by Roethlein (*Am. Journal of Psychol.*, 23, pp. 136) which ought to be taken seriously by those engaged in the publishing business. A great many cards of various fonts of type were presented, as in the ordinary legibility tests modified to suit the experiment, and the number of correct readings were tabulated. It was discovered that legibility is, in the main, a product of five factors: The form and size of the letter, the heaviness of the face, the width of the white margin surrounding the letter, the position of the letter in the letter-group, and the shape and size of the adjacent letters. Relatively heavy-faced types are more legible than the light-faced types. For greater ease in reading, the initial position of a letter in a group is the most favorable, the final less, and the intermediate the least favorable. That quality and texture of the paper on which the printed type is presented are much less significant than is generally supposed, and that modification of the "lower case" letters *s*, *z*, *e*, *a*, *x*, and *o* is needed, are conclusions drawn from the results

of this important experiment. The geometrical illusions still claim their share of interest. Tichy finds (*Zeit. f. Psychol.*, 60, pp. 267-79) that the Poggendorff illusion does not depend on binocular vision, freedom or fixity of fixation, knowledge or ignorance of the phenomena, while Valentine (*Brit. Journal of Psychol.*, 5, pp. 8-35) found, on the other hand, that the horizontal-vertical illusion was increased with practice, that it differs for each of the two eyes, and that it reaches its maximum effect at a definite length of line. Rice has compiled a great number of instructive statistics in his *Visual Acuity with Lights of Different Colors and Intensities*.

METHODS. One of the chapters of G. E. Müller's *Zur Analyse d. Gedächtnistätigkeit u. d. Vorstellungsverlaufes* (cf. YEAR BOOK, 1911, p. 591) gave a real impetus to the present theoretical discussion of psychological methods noted elsewhere. The fact that the report of "meaning" was distinguished by two observers in an article by Titchener (*Am. Journal of Psychol.*, 23, pp. 165-82) as logical, non-psychological, and non-introspectible, in contrast to the report of process as a psychological description, called for further delineation of method. This plea was emphasized by Dodge (*Am. Journal of Psychol.*, 23, pp. 214-29), who entered a protest against the limitation of psychological methods to introspection. He claimed that neurological and pathological facts, reports of animal behavior, investigations of mental work and fatigue, should be admitted into the records in addition to introspective data. Titchener, in two consecutive studies of introspection (*Am. Journal of Psychol.*, 23, pp. 427-48; and also pp. 485-508), claims that introspection is the most important of psychological methods and is its own test. Introspection, while it does not furnish a psychological system, "always presupposes the point of view of descriptive psychology, and the introspective methods thus do us the same service in psychologizing that 'observation and experiment' do in natural sciences."

SOCIAL PSYCHOLOGY. Religion. To the large number of books dealing with this phase of psychological study must be added, this year, the comprehensive and important work by J. H. Leuba, entitled *The Psychological Study of Religion, Its Origin, Its Function, and Future*. Religion is viewed by this author as one of the manifestations of human behavior. Having taken his "stand against the opinion that psychology, since the transcendental is beyond its ken, can have nothing to say upon the existence of the God of Christianity," he finds the "origin of the ideas of unseen things from apparitions, feeling of obligation, sleep, trances, motor and sensory abnormalities." "The Gods of religion are inductions from experience." He calls upon anthropology, sociology, psychology, results of questionnaires, and the data of private correspondence, for the facts to support these assertions. Coming at the same time, J. Watson's *The Interpretation of Religious Experiences*, though not a psychological study, adds its share to the data already gathered. It appears in two large volumes, the one "historical," the other "constructive," and comprises the Gifford Lectures for 1910-1912. In the second volume the point is made that psychophysical parallelism, if accepted, leads to agnosticism. That, naturally, is a debatable question, and further-

more, still more naturally, not at all a question for the psychologist but for the philosopher. C. A. Ellwood's recent book on *Sociology in Its Psychological Aspects* bases its claims on a consciousness that "does work, does function, and as such has a survival value in the life process," and in so doing opens itself to all the criticisms that have been urged against this "teleological aspect" of functional psychology. Many other psychological interpretations of religion have appeared, notably in W. E. Hocking's "Mysticism as Seen Through Its Psychology" (*Mind*, 21, pp. 38-61); J. Morse's "The Psychology and Pedagogy of Doubt" (*Journal of Religious Psychol.*, 5, pp. 418-28); and J. B. Pratt's "The Psychology of Religion" (*Journal of Religious Psychol.*, 5, pp. 383-94).

INDIVIDUAL PSYCHOLOGY. Mental Efficiency. Applied psychology very often runs into channels of "mental tests." It is, of course, impossible to cite in a short résumé all the work done in this field this year. In E. B. Huey's *Backward and Feeble-minded Children* a summary of the results obtained is given in a non-technical yet scientific manner calculated to interest the average reader. Seashore (*Journal of Ed. Psychol.*, 3, p. 50), Terman and Childs (*Journal of Ed. Psychol.*, 3, pp. 61-74), and Town (*Psychol. Clinic*, 5, pp. 239-44) deal more specifically with the well-known Binet-Simon tests compiled to give an index of the "mental age" of the subject. There is a plan on foot to revise and extend these tests so that they can be applied to ages beyond 13 and 14 years. Thorndike's "curve of work" (*Psychol. Rev.*, 19, pp. 165-94) attempts to trace the efficiency of various "mental functions." He finds that two hours or less of continuous exercise of a function at maximum efficiency, so far as the worker can make it so, produce a temporary negative effect, curable by rest, of not over 10 per cent.—most functions produce less. There is a 4 per cent. rise near the end of the work when the date of the end is known. Several traditions are overthrown. That an increase in efficiency occurs at first, or a few moments after the efficiency is slackened, is not verified. The "curve of work" does not drop when the work becomes boring, except when the work is intermittent. Less satisfaction in the continuous learning process accounts for the looseness of "bonds" of association. Hollingworth has traced the effects of caffeine on both work and sleep (*Psychol. Rev.*, 19, pp. 66-73, and *Am. Journal of Psychol.*, 23, pp. 89-100). In the first case, work was measured by the "speed and quality of performance in typewriting" Ruskin's *Sesame and Lilies*. Some of his results are: Typewriting was quickened by small doses of caffeine alkaloid (1-3 gr.) and retarded by large doses (4-6 gr.). In general, caffeine produced superior quality of typewriting. In the case of sleep, the results are taken from the reports of observers. He found that small doses of caffeine alkaloid ($\frac{1}{4}$ gr.) do not in general produce sleep disturbances; larger doses (6 gr.) produce marked sleep impairment. Caffeine has its greatest effect on subjects previously or subsequently without food, and it does not depend for its effect on age, sex, or previous habits. Bischoff (*Arch. f. d. gesam. Psychol.*, 22, pp. 423-52) attempted to get correlations between mental and physical efficiency and fatigue. His observers added for ten minutes, with five-minute pauses, on the first day, and

thereafter on twelve mornings without pauses, during which time the physical strength of the hand was tested. Although there were differences in persons, he concludes that practice and confidence lessen fatigue, while there is no relation between practice in psychical work and fatigue of body. Those who are interested in studying this sort of investigation will find further material in B. R. Simpson's *Correlations of Mental Abilities* and C. H. Bean's *The Curve of Forgetting*, both of which were published this year.

ÆSTHETICS. A growing field of investigation is that of the mental response to the beautiful in poetry, music, and painting. Kallen (*Journal of Philos., Psychol., etc.*, 9, pp. 253-65) questions the propriety of examining æsthetic experiences on the ground that there is inevitable distortion of the experience. In his words, "private, concrete, elusive, in itself neither mental nor amental, beauty is the optimal mode of that positive, intrinsic value-relation which binds the mind to its object in such wise that the two are completely and harmoniously adapted to each other in the very act of apprehension." Weld, who studied the effect of music produced by a gramophone on the minds of a number of observers, reports (*Am. Journal of Psychol.*, 23, pp. 245-308) that in addition to well-known physiological effects, such as variation in the distribution of blood-supply, increase in the heart-rate, irregularity or respiration, and muscular reactions, his observers reported images of movement, when the enjoyment was purely "emotional," and auditory images, when the enjoyment was of the "intellectual" type. He groups his observers, as the result of their experiences, into "analytic," "motor," "imaginative," and "emotional." Groos (*Arch. d. gesam. Psychol.*, 22, pp. 401-22) made an analysis of Wagner's *Ring des Nibelungen* and found words denoting both visual and auditory experiences, with a predominance of the visual. While the expressions of vivid colors are surprisingly few in this dramatic poem, over one-half of the visual material pertains to glosses, sheens, and glows. In comparison with Goethe's and Schiller's works, this investigator finds more auditory-vocal material in Wagner. It seems fair to argue that, however much an analytical study of the writings of an author may contribute to the knowledge of the effect produced on the reader, it may not give a correct index of the writer's mental life. Together with other material, gathered when the author is engaged in a non-professional description of his experiences, a study of this kind may be of service. Rignano (*Scientia*, 11, pp. 71-87) claims that affective experiences or inclinations give rise, in their conflict, to attention, and that the choice of memories really depends upon these affective elements. Sartorius (*Psychol. Stud.*, 8, p. 1) in Wundt's laboratory returns to the defense of the classical tridimensional theory of affection, and illustrates his defense with diagrammatical curves of breathing corresponding to the six primary affective experiences. Other interesting studies of these problems are Lee and Anstruther's *Beauty, Ugliness, and Other Studies in Psychological Æsthetics*, and Downey's *The Imaginal Reaction to Poetry, the Affective and the Æsthetic Judgment*.

ANIMAL PSYCHOLOGY. The *Journal of Animal Behavior*, which appeared for the first time last year (YEAR BOOK, 1911, p. 563), has estab-

lished itself as a useful, interesting, and flourishing publication. With the appearance of the fifth *Behavior Monograph* (S. B. Vincent, "The Function of the Vibrissæ in the Behavior of the White Rat"), the first volume of the series is complete; the second volume, soon to be published, will contain as its first number a paper by H. M. Johnson on "Some Sensory Responses in Dogs." Discussion of the general behavior of animals when stimulated, especially by light, still occupies a large place in the literature. S. O. Mast's book, *Light and the Behavior of Organisms* (YEAR BOOK, 1911, p. 563), reviewed last year in the *Journal*, gave a summary of results obtained up to that time. The reviewer, G. H. Parker, could not understand why so little emphasis was laid on the "selection" of a particular orientation of movement, after a number of preliminary trials had been made. The earthworm, for example, "selects," according to this reviewer, a trial in a particular direction, which "through the stimulation of symmetrical points on its body has been found to be most favorable for orientation." The author replies, in this year's *Journal* (p. 209), that "the organism retains a given direction of locomotion not because of continuous action of light, but because it tends to move in a direct course in the absence of external stimuli." He cites instances, such as earthworms and fire-flies following a given direction in darkness after a flash of light has been given. R. M. Yerkes (*Journal*, p. 351) found that earthworms could direct their movements in accordance with associations formed between two or more stimuli. C. H. Turner (*Biological Bulletin*, 23, p. 371) has experimented on the "apparent reversal of the response to light of the roach" and finds that, by applying disagreeable electric shocks to roaches, organisms which prefer the dark, he can train the male species more readily than the female to avoid dark chambers. J. S. Szymanski (*Journal of Animal Behavior*, 2, p. 81) also taught male roaches to avoid the dark by the same "method of punishment." E. G. Boring, in a "Note on the negative reaction under light adaptation in the planarian" (*Journal*, 2, p. 247), concludes that these simple organisms can become "light-adapted on one side during the exposure to directive light" and, consequently, later, when the light is turned off, "turn consistently in the direction from which the light first came." M. F. Washburn and E. Abbott (*Journal*, 2, p. 145) report work done "on the brightness value of red for the light-adapted eye of the rabbit" in which it was found that rabbits can discriminate saturated red paper from gray. F. S. Breed (*Journal*, 2, p. 280) found that chicks depend to a large extent on the difference in the brightness of colored stimuli for their reactions. There is a discussion among entomologists as to whether flowers, which are vividly contrasted in color with respect to the background of leaves, do not attract more bees and other pollen-distributing insects than do flowers of less color-contrast. *Die neue Tierpsychologie*, by G. Bohn, is a German edition of a French prize essay based upon a biological theory of psycho-chemical activities. K. Krall in *Denkende Tiere* gives an interesting account of the performances of the "thinking" horse, Hans, and his successors. A number of other experiments on singing mice, albino rats, wasps,

bloodsucking insects of tropical Africa (v. *Bulletin of Entomological Research*, 3, p. 275), tree-frogs, and may-flies have been performed. All shed light on the degrees of "intelligence" displayed in the lower forms of animal life. The relation of this "intelligence" to human intelligence, as well as the applicability of these experiments to the interpretation of "consciousness," still remains to be worked out.

PSYCHOTHERAPY. Suggestion, as a cure for a certain type of ailment, still occupies the minds of physicians, and a movement is under way to bring psychology into closer touch with medicine. Külpe has described in his *Psychologie u. Medizin* the way that psychology can be of service to the physician. At last year's meeting of the American Psychological Association a conjoint session was held with men professionally interested in therapeutics at which the possibilities of coöperation were considered. The discussion turned upon psychological courses for medical schools. This year Jacoby, a man eminent in medicine, has written a book on *Suggestion and Psychotherapy*. While, in its attempt to reduce some of the data of psychology to simple terms, it discusses them in a crude and antiquated manner, it gives, nevertheless, a coherent account of the way in which the mind works. The author shows the commonness of "suggestion" and its importance in our mental lives. In the second part of the work, he illustrates how, in the hands of a skillful physician, this agent may work wonders in the organism; but he sanely warns the reader not to expect miracles to be wrought. "Suggestive possibilities, however, have distinct limitations, set by the laws of nature. We can produce false concepts and sensory deceptions, with their accompanying sensations, or remove such concepts by awakening contrary conceptions, but we cannot bring about any organic change by means of suggestion (p. 149). . . . But, as we have shown before, psychotherapy can have for its object only the cure of functional diseases and functional symptoms, diseases of the imagination, which, despite their immaterial basis, are perceived as actual diseases" (p. 222). Jones (*Rev. of Neurol. and Psychiat.*, 10, p. 1) includes under the term "suggestion" all conscious and unconscious processes, but confines it later to the transference of an emotional attitude, usually unconscious, to an object, viz., the physician. MacDougall (*Journal of Abnormal Psychol.*, 6, p. 368) traces the development of suggestion from the extreme slavish imitation of the "subjective" individual to "persistent and meaningless opposition to all suggestion," and cites instances of typical reactions for verification of the various grades. The Freudian school (cf. YEAR BOOK, 1911, p. 574) is well represented in this year's literature by its adherents and by its opponents. A number of examples of pictorially symbolic forms experienced in hallucinations, dreams, and ordinary life are given and interpreted by Siberer (*Jahrbuch f. psychoanalytische u. psychopathologische Forschungen*, 3, p. 661), and Bertschinger (*ibid.*, p. 69) shows a variety of symbolic drawings made during hallucination. While many followers of the Freudian school are still to be found, there are indications in places that the system of psychoanalysis needs modification. A paper to this effect by Taylor (*Journal of Abnormal Psychol.*, 6, p. 449) suggests that the "anxiety type" of neurosis can

be cured at a single sitting and without making any "inquiry as to his sexual life, or to his social relations in general." Much attention still centres about the dream consciousness. The second volume of Vold's *Über den Traum* came out this year. Coriat (*Journal of Abnormal Psychol.*, 6, p. 367) says that "dreams take place because the brain is somewhat active; in deep sleep where the brain is completely at rest it is doubtful if dreams occur at all." During the summer of this year, at a meeting of leading physicians of New York City, Freud's character was severely assailed, and the results of his method questioned. In general, however, and especially abroad, his school is still respectfully recognized, and his investigations are considered important contributions to this special field of research.

PUBLIC CHARITIES. One of the most conspicuous features of recent social history is the great expansion of charitable and philanthropic activities. Requests for charitable purposes have been unusually frequent and generous; numerous organizations have come into existence and annual conferences of many bodies are now held. Not only has the scope of charitable and philanthropic activities greatly expanded, but the very purpose and nature of charities are changing. The traditional subjects of poor relief and care of the criminal have been supplemented by attention to the neglected, the delinquent, the defective, the helpless, the aged, the epileptic, the feeble-minded, the tubercular, the vagrant; child life in all its aspects and the labor of women in mills and factories are given earnest and intelligent attention. But most notable is the change of emphasis from relief to prevention. Modern charity aims to become scientific. It would discover the causes of poverty, of misery, of maladjustment in all their forms, and by removing causes stamp out these impediments to social welfare. Both voluntary agencies and public assistance have expanded; there is an increase in public supervision of both State and private activities; and there is an even finer classification of persons dealt with.

The conferences noted below give an intimation of the present problems of charitable agencies. Reference should also be made to CHILD LABOR, CHILDREN'S BUREAU, MINIMUM WAGE, OCCUPATIONAL DISEASES, PENOLOGY, OLD-AGE PENSIONS, SWEATING, WOMEN IN INDUSTRY, WELFARE WORK, WIDOWS' PENSIONS, WORKINGMEN'S INSURANCE, and WORKINGMEN'S COMPENSATION.

NATIONAL CONFERENCE OF CHARITIES AND CORRECTIONS. The thirty-ninth annual session of this conference was held at Cleveland in June. There were more than 2000 registered delegates, besides hundreds of other interested auditors, it being more largely attended than any preceding conference. The subjects of discussion included immigration, with special reference to its distribution and assimilation; sex hygiene, including discussion of sex problems encountered in social work, sex education, venereal diseases in children, international traffic in vice, eugenics, and the relation of the medical profession and hospitals to the hygiene of sex; standards of living and labor, under which was presented a platform of industrial minimums, including a living wage, an eight-hour day, a six-day week, ample provision for health and safety, for housing, for compensation for accidents and diseases of occupation, for old-age and unemploy-

ment insurance, and for the protection of women, children, the unemployed, and the unemployable; children; housing and recreation; medical and social work; courts and prisons; families and neighborhoods; and public supervision and administration.

It was decided to hold the 1913 session at Seattle, Wash. Mr. Frank Tucker of New York was chosen president and Mr. Alexander Johnson of Angola, Ind., was continued as general secretary. The following committees for that conference were named: children; church and social work; distribution and assimilation of immigrants; families and neighborhoods; health and productive power; probation, prisons, and parole; public supervision and administration; relation of commercial organizations to social welfare; and standards of living and labor.

OTHER CONFERENCES. In conjunction with the above national conference there were held at Cleveland ten other charitable and philanthropic conferences. The *Seventh Biennial Conference of Jewish Charities* was devoted primarily to the subject of wife desertion. A bureau organized in 1911 showed that it had located 561 out of 869 deserters reported to it. The subject of Palestinian Charities was also discussed and a plan for pensioning social workers presented. The National Federation of Settlements, Federated Boys' Clubs, National Association of Societies for Organizing Charity, and the Commission on Church and Social Service of the Federal Council of the Churches of Christ in America also held sessions.

The *National Federation of Remedial Loan Associations* held its third annual conference with representatives of sixteen of the twenty-five member societies present. These societies are engaged in a war against the loan shark.

The *National Probation Association* demanded that Congress pass a probation law for the federal courts, emphasized its belief that the juvenile courts and probation officers should coöperate with all constructive agencies in the community; and agreed that special detention homes or shelters for children awaiting trial are desirable. It decided to give greater publicity to its activities and with this in view authorized an assistant secretary. The *American Red Cross* session was devoted to a review of the relief work in connection with the Mississippi River flood and the *Titanic* wreck. A plan whereby more than 3000 graduate nurses have been enrolled under the Red Cross was described; as were also the results of the sale of the Red Cross Christmas stamps.

The *National Association of Public Relief Officials* was devoted to a study of the methods now in vogue in the United States for the relief of poverty by public agencies, the official programme for the prevention of mental defectiveness and insanity, and the present status of the public almshouse.

The *Conference for the Education of Backward, Truant, Delinquent, and Dependent Children* was devoted to the methods and efficiency of institutional vocational training, the opportunities for encouraging the agricultural movement of the country, institutional administration, and the study of individual children both within and outside of institutions.

In addition to the foregoing there are now about thirty State conferences of charities and corrections, at which similar problems are discussed and where the workers of the State re-

ceive inspiration and knowledge. These are important factors in the education of public opinion in their respective States.

The *National Conference of Catholic Charities* met in Washington, D. C., during the last week of September. Some forty papers and addresses were presented dealing with needy families, defective children, the protection of immigrants from those who prey upon them; the visitation, treatment, and relief of the chronic sick; and coöperation. There was formed a federation of Catholic women's charitable societies, representatives being present from all principal cities.

The *American Federation of Catholic Societies* met in Louisville, Ky., the latter part of August. In addition to discussions and resolutions on a great variety of other subjects resolutions were passed urging the abolition of unnecessary Sunday work, and the religious care and humane treatment of prisoners; demanding a living wage, reasonable hours of labor, abolition of child labor, prevention of accidents and their just compensation, proper moral and sanitary provisions in home, shop, mine, and factory; and recommending assistance to handicapped members of society, the immigrant, and the unorganized worker.

The *Southern Sociological Congress* met at Nashville, Tenn., May 7-10, at the call of Governor B. W. Hooper. It was attended by two representatives from each State and the District of Columbia. After lengthy discussion it was determined to effect a permanent organization and to hold annual conferences; whenever possible these will be in conjunction with the national conference. This was not due, however, to the belief that certain problems are peculiar to the Southern States, but rather because of the stimulating effect of such a conference and the much larger attendance of Southern workers made possible. Governor Hooper was made president, and A. J. McKelway and Kate Barnard, vice-presidents. Standing committees on public health, courts, prisons, child welfare, organized charities, the negro problem, and the church and social service, were created. The organization committee drafted a programme containing resolutions for the adoption of modern methods of prison reform; for juvenile courts and reformatories; for uniform laws on marriage, divorce, vital statistics, child labor, and school attendance; for the suppression of prostitution; for proper care of defectives, the blind, the deaf, the insane, the epileptic, and the feeble-minded; for a spirit of helpfulness and equal justice in the solution of the race problem; and for coöperation between the church and all social agencies.

PUMPING MACHINERY. The Humphrey Gas Pump described in the YEAR BOOK for 1910 found wider application during 1912, and the metropolitan water board of London decided to install five of these pumps, four of 40,000 gallons per day capacity and the fifth of 20,000. It was reported that larger units had been de-

signed for the Egyptian government for use in irrigation work at the pumping station at Mex. One of these was to have a capacity of 100,000 gallons per day with a lift of nineteen feet. See also FIRE PROTECTION.

PUNISHMENT OF CRIMINALS. See PENOLOGY.

PURDUE UNIVERSITY. A State institution of higher education at Lafayette, Ind., founded in 1869. The total enrollment in all departments of the university for the year 1911-12 was 2066. This includes the enrollment in the summer school. The faculty numbered 160. There was received a gift from W. C. Smith of Williamsport, Ind., of \$100,000. The annual income, including that for the agricultural experiment station was in 1912, \$578,483. The funds of the university are derived mainly from federal and State appropriations. The productive funds amounted to \$240,000. The library contained 30,800 volumes. President, W. E. Stone.

QUEBEC. A province of the Dominion of Canada. Area, 351,873 square miles. Population (census of June 1, 1911) 2,002,712, as compared with 1,648,898 in 1901. The city of Quebec, the capital, had 78,190 inhabitants (68,840 in 1901). The province is administered by a lieutenant-governor, Sir Francois Lange-lier, who was appointed May 5, 1911, upon the death of Lieut.-Gov. Sir Charles Alphonse Pantaléon Pelletier. Premier in 1912, Sir Lomer Gouin. The area stated above does not include the portion (the former district of Ungava) of the Northwest Territories annexed to Quebec in 1912. See CANADA.

HISTORY. In the general elections the Liberal government secured a large majority. Only seventeen Conservatives were elected as against sixty-four Liberals, the latter having the support of the Nationalists, who resented the Borden government's refusal to create Roman Catholic schools in Keewatin when it was added to Manitoba, its rejection of the Nationalist policy as to naval defense, and its failure to meet the Nationalist demands as to the dismissal of certain public officials. There was, moreover, general satisfaction with the Liberal administration of Quebec under Sir Lomer Gouin.

QUEENSLAND. A state of the Commonwealth of Australia. Area, 670,500 square miles. Population (census of April 3, 1911), 605,813, exclusive of full-blooded aborigines. Brisbane, the capital, had 35,491 inhabitants; with suburbs, 139,480. Governor in 1912, Sir William MacGregor; premier, D. F. Denham. See AUSTRALIA.

HISTORY. The Queensland general elections toward the end of April resulted in a majority of eighteen for the government as against eight in the former Parliament. The issue of the election, according to the government, was that between a parliamentary government and a syn-

dicalism which aimed at a general strike. The Labor party gained in the city of Brisbane, but lost in the country and mining districts. The press interpreted the result as a complete victory over syndicalism. The strike at Brisbane resulted in many acts of violence and in a speech on March 29, the premier, in reviewing the history of the affair, condemned the strike committee for its cruelty and stupidity. He praised the police and law-abiding citizens, however, for restoring order. In June the government introduced a bill providing for secret ballot of persons concerned in a proposed strike and compulsory fortnight's notice before striking.

RABIES. A comparison of the figures obtained by the Public Health and Marine Hospital Service in 1911 with those of 1908 show that rabies is apparently on the increase in the United States. In 1911 cases were reported from 1381 localities, as against 534 in 1908. There were 98 deaths in 1911, as compared with 111 deaths in 1908. This is accounted for probably by the large increase in the number of institutions in which treatment could be obtained and by the fact that victims availed themselves of this treatment. In 1908 there were 23 institutions in the country where antirabic treatment was administered; in 1911 there were at least 42. A number of laboratories supply material for inoculations to practicing physicians. The number of persons known to have taken the treatment in 1908 was about 1500; in 1911 it was 4625. The figures for 1911 show that the period of incubation in 19 out of 65 cases was between 21 and 30 days. Three cases occurred over twelve months after the injury. The average incubation period of all cases, excluding those over one year, was 49.25 days. The main facts brought out in this report are the wider distribution of the infection, its spread to the Pacific Coast, which in 1908 seemed to be free from the disease, and the decreased death rate, owing to better facilities for early treatment and better distribution of the antirabic virus.

RACING. Nearly sixteen hundred trotting meetings were held in the United States and Canada in 1912 in which about 15,000 horses took part and more than \$6,000,000 in purses and stakes was distributed. The Grand Circuit comprised thirteen cities, and there were fifteen weeks of continuous racing. Twenty world's records were broken, some of them of long standing. The biggest winner during the season was W. R. Cox, who gathered in \$54,885 in purses. Others to win large amounts were T. W. Murphy, \$44,338; E. F. Geers, \$41,730; A. McDonald, \$37,226, and A. S. Rodney, \$37,015. The winning trotters of the year were: Baden, with \$35,775 and Esther W., with \$20,520. Joe Patchen II. led the pacers with \$23,450, followed by Knight Onwards, with \$10,495. Baden captured 12 firsts, 1 second, 1 third, and 1 fourth. Joe Patchen II. in thirteen races was first 12 times and second once. T. W. Murphy held first place among the drivers, finishing first 26 times, second 27, third 21, fourth 14, and unplaced 41. W. R. Cox was second, with 25 firsts, and E. F. Geers third, with 19 firsts.

Uhlan, by trotting the fastest mile in the history of light-harness racing, carried off the season's laurels. His time in the open was 1:58, which shattered the record of 1:58½ made by

Lou Dillon in 1903 with a wind shield. Another horse to gain distinction was Airedale, a yearling colt, who lowered the record from 2:19½ to 2:15¼. The world's record for the fastest four-heat race was broken by Dudie Archdale, who clipped an average of half a second for each heat off the former record. Grace won the world's fastest five-heat race by capturing the third, fourth, and fifth heats in a race at Columbus in 2:04¼, 2:08¼, and 2:06¼. The world's trotting team record of 2:07¼, made by The Monk and Equity in 1904, was reduced by Uhlan and Lewis Forest to 2:03¼. Another record to go by the board was in the two-year-old filly class, Nowaday Girl trotting a mile on a half-mile track in 2:16½. The former record was 2:19¼. In pacing, too, several new records were established. Impetuous Palmer paced a mile in 2:05¼, lowering by a quarter of a second the time made by Klatawah in 1898 and equaled by Jim Logan in 1909. Braden Direct reduced the record for four-year-olds from 2:04 to 2:03¼. The old record was established by Online in 1894. Evelyn W. was another pacer to break records. She paced the world's fastest two-heat and five-heat races. Mino Heir and George Gano established a new team record of 2:02, lowering the best previous time made by Hedgewood Boy and Lady Maud C. in 1909 by three-fourths of a second.

RACQUETS AND COURT TENNIS. The national amateur racquet championship tournament was held at Boston in February. In the final round Reginald Fineke, the title-holder, defeated J. Gordon Douglas 15-7, 15-11, 11-15, 9-15, 15-3. Q. A. Shaw and G. R. Fearing won the doubles championship from M. S. Barger and Payne Whitney by default. J. Gordon Douglas captured the gold racquet trophy for the second successive year by defeating H. F. McCormick 15-5, 15-6, 17-15. Charles Williams, who in 1911 had won the world's professional championship, retained his title by defeating George Standing 2-15, 15-9, 15-9, 15-11. The military singles championship was decided at London, A. H. Muir defeating A. C. G. Luther, the title-holder, 14-17, 14-18, 18-15, 15-8, 15-12. E. M. Baerlein, holder of the English singles championship, retired in 1912, and the title passed to B. S. Foster through his defeat of G. G. Kershaw 12-15, 17-14, 15-8, 15-1. The Oxford-Cambridge doubles tournament was won by Cambridge. C. Hutchins won the United States amateur championship at squash racquets by defeating F. B. Smith 15-10, 15-10, 15-18, 17-15. The national squash tennis championship went to Alfred Stillman, 2d, who defeated John W. Prentiss 15-3, 15-10, 15-9, 15-8.

Jay Gould successfully defended his title as amateur court tennis champion by defeating Joshua Crane 6-3, 6-1, 6-0. Gould and W. H. T. Huhn captured the doubles title in a match with G. R. Fearing and Crane 6-4, 5-6, 6-2, 3-6, 6-4.

RADIATION QUANTUM. See PHYSICS.

RADIOACTIVITY. See PHYSICS.

RADIOTHERAPY (RÖNTGEN RAYS). The discussions of these therapeutic agencies were characterized by a somewhat pessimistic tone during 1912. Ravogli enumerated the untoward results reported from treatment by X-ray exposures, which include, beside skin burns and ulcers, the occurrence in many instances of ma-

lignant tumors after the ray had been used for benign affections. Another real danger is that malignant growths, under the influence of radiation, are apt to be stimulated to metastatic activity. In other words, a localized tumor may be "scattered" and set up other growths in various parts of the body, resulting in the early death of the patient.

RADIUM. As to radium, Kronka, at the congress for balneology in Berlin made the statement that this substance had so far not shown any certain success in any single disease. Nevertheless, radium is being largely used, and radio-activity is being discovered in the springs of many watering places needing exploitation. New radium institutes were established in Berlin and Vienna. It cannot be said, however, that any definite advance was made in 1912 in our knowledge of the therapeutic value of this substance.

RAIL FAILURES. See RAILWAY ACCIDENTS.

RAILWAY ACCIDENTS. The question of safety in railway travel throughout the United States was especially prominent in the year 1912 on account of a succession of serious accidents and a general awakening of public opinion and discussion. The winter of 1911-12 had been unusually severe and this was in large part responsible for a number of derailments, due primarily to defects developing in track and roadbed. At the same time the weights carried by the wheels had been increased and high speeds maintained without a proper understanding in all cases of the strength of the track. Accordingly there were wrecks of fast trains on railway lines supposed to be maintained in the best possible manner, with all protection of automatic block signals and other safety devices. Failures of rails under service were conspicuous to a greater degree than ever before, while the human factor became prominent through accidents caused by negligence, carelessness, or disobedience of various railway employees. There were also the usual number of wrecks due to lack of block signals and improper condition of maintenance and operation, but these were not as provocative of the general discussions as those which followed losses of life and injuries on the best equipped and maintained lines. In fact, it was found necessary for the two eighteen-hour trains between New York and Chicago on the New York Central and Pennsylvania lines to lengthen their schedules by two hours, following several accidents to these trains, while in other cases, notably on the New York, New Haven and Hartford Railroad, accidents resulted from undue speed at certain points on the line where the trains were using switches or crossovers at too high a rate of speed. The more serious accidents served to bring before the public more prominently than ever the annual accident report of the Interstate Commerce Commission and to emphasize the great number of casualties that seem to accompany railway operation in the United States. These casualties are given in the accompanying table from the twenty-sixth annual report of the commission, which under the provisions of the law of May 6, 1910, receives a "Monthly report

under oath of all collisions, derailments, or other accidents resulting in injury to persons, equipment, or roadbed arising from the operation of such railroad." This law gives the commission "authority to investigate all collisions, derailments, or other accidents resulting in serious injury to person or to the property of a railroad occurring on the line of any common carrier engaged in interstate or foreign commerce by railroad."

Killed	772	785	773	606

* Damage in thousands of dollars.

The reports of these investigations were to be published, but were not admissible as evidence in any damage suits arising out of an accident. Under this the Interstate Commerce Commission, through its inspectors of safety appliances, made a series of investigations, and

up to September 1, 1912, they had made a critical examination of 81 of the more serious accidents, 49 of which were collisions, 31 derailments, and one a grade-crossing accident. It was found that in the case of the derailments 14 were either directly or indirectly caused by bad track, but that in 5 of these excessive speed in violation of existing speed restrictions had been maintained. In 3 cases investigated track conditions were found obviously unsafe, and in one of these the derailment took place at ordinary speed. Forty-eight of the 49 collisions investigated were caused by mistakes on the part of employees and 33 occurred on roads operated under train-order system. The report made by the inspectors of the commission stated these various accidents in detail and in connection with the condition of track and roadbed. The assistance of James E. Howard, engineer-physicist of the United States National Bureau of Standards, was enlisted and he made a number of tests of rail which indicated conditions of weakness and lack of power to resist the stresses caused by heavy trains moving at high speed.

While these reports were made by the government, and in many cases there were similar investigations by State railway or public service commissions, there was corresponding activity on the part of the railways themselves. The question of rails received much attention, and it was found that there was need of maintaining the most rigorous specifications and insisting that only the best portion of the cast steel ingot should be used in their manufacture. (See METALLURGY.) Speeds were reduced on many lines, and in some cases speed recorders were placed in the cabs of the locomotives. The provision of automatic train stops was also discussed and the satisfactory use of these devices on elevated and subway lines urged in their behalf.

The question of discipline came prominently to the front, as it was found that many rules were disobeyed and that tendencies to overrun signals were developed. Surprise tests were prosecuted with vigor on many lines and the "safety committee" movement, which had been organized in 1910 on the Chicago and Northwestern with the aim of securing the interest and coöperation of the employees, was extended over a large number of lines. This plan involved the formation of representative committees on each division from the various classes of employees who were charged with the duty of investigating accidents and using their influence towards arousing a more general appreciation of the serious effects of carelessness, taking of chances, and disobedience of orders, and in their bringing home to the employees the fact that they were the ones to suffer by loss of life and injuries rather than the stockholders and operating officials. On the Chicago and Northwestern, where this plan had been in operation for almost two years, a great improvement was observed and which involved a striking decrease in the loss of life among employees and passengers, notwithstanding the unfavorable operating conditions. In the winter of 1911-12 large safety rallies were held in Kansas City, Buffalo, Jersey City, and other points and the interest of both officials and employees was genuine and spontaneous. Safety committees by the end of the year had been formed in some railroad companies.

In connection with the question of discipline there was considerable discussion, as it was claimed that the strength of organized labor interfered with the maintenance of satisfactory operating conditions and failed to bring about the elimination of unfit employees. This view was taken by a number of railroad operating men, and also by J. O. Fagan, the railway signal man who had distinguished himself as an author. On the other hand, the railway brotherhoods combated this position, maintaining that they had raised the standard of labor and individual efficiency on American railway lines and that it was largely due to their influence that it was maintained at its present point of efficiency.

It was of interest to note in this connection the effects of government control, as in no single industry in the United States has government interference been as active as in the case of the railways. This has involved many efforts to secure increased safety, such as various safety appliance acts, the hours of service law, the inspection of locomotives law, compulsory reporting of all accidents and provision for their inspection, and other statutes and regulations of the commission having the same end in view. These unquestionably have brought about better conditions in American railroading and have secured a uniformity of practice that has been distinctly beneficial.

Railway safety in the United States can hardly be compared with railway conditions in Europe, as there are fundamental differences which render impossible any just comparison. The railway lines of the United States have an aggregate length of some 240,000 miles, as compared with 200,000 miles for all Europe, and in many cases go through regions thinly settled. This makes much more difficult the task of supervision, and at the same time the country itself, often rugged and mountainous, must be considered. The more concentrated traffic of Europe permits a more stable track and conditions of maintenance, and the comparison may be effected with a system of suburban lines around a great city as contrasted with transcontinental lines where there is much less traffic but greater difficulty in arranging for it. Furthermore, the military training and habits of obedience to law, both on the part of employees and the general public, make for greater safety, as infractions of rules are punished with severity in most cases.

In any comparison of statistics considerable allowance must be made for differences of method of classification and definition, and the accompanying tabular statement for all Europe is compiled from the best official statistics available, but its deficiencies are manifest. It should be noted that any comparison made should be between the collected railway lines of the United States and those of all Europe rather than between separate countries.

That the dereliction of employees producing railway accidents was not confined to the United States was shown by the derailment occurring on the London and North-Western Railway on September 17, in which 15 persons, including both engineer and fireman, were killed and 40 injured, 8 seriously. This accident occurred to a train passing from the fast to the slow line at Ditton Junction, and was caused by the ignorance of the engine-driver, who failed to slacken speed when the signals indicated that the train

TABULAR STATEMENT OF CASUALTIES ON THE RAILWAYS OF EUROPE

Compiled from Official Statistics contained in the Statistical Abstract for the Principal and Other Foreign Countries of Great Britain.

Country	Year	Total Length of Miles	Passengers Killed	Passengers Injured	Employees Killed	Employees Injured	Other Persons Killed	Other Persons Injured	Total Killed	Total Injured
Russia in Europe.....	1908	33,385	198	980	645	2,962	1,866	1,928	2,709	5,870

* Including suicides. † Accidents on State Railways.

was being turned from the fast to the slow line. In the investigation of this accident by the Board of Trade inspectors, it was brought out that there was practically no method of testing an engine-driver's knowledge of the roads over which he is to travel beyond his own assertion over his signature that he knows the section of the line. The danger in the case of extra or casual drivers operating trains was found to be considerable, and indicated a lack of care and forethought on the part of the railway companies whose good management in all matters of operation previously had been studied.

The discharge of an engine-driver for intoxication produced a strike in England during the year and brought up anew the discussion of safety on railways and the discipline required of railway servants.

On May 19 there occurred a wreck at Paris, France, in which 17 people were killed, and on July 31 there was a disaster on the Central Railroad of Brazil, with 100 fatalities. On October 22, 200 persons were killed in a railroad wreck at Smyrna. See BELGIUM.

Possibly, however, the best indication of relative safety is the number of passengers carried one mile to each person killed in a train accident. The figures for 1910 of 119,772,207 passengers carried one mile to one killed in a train accident, and for 1909 of 115,056,611 passengers carried one mile to one killed in a train accident, are perhaps significant in comparison with the figures immediately following, the first being perhaps a fair average for the past twenty years. Now, taking the figures given in the British Statistical Abstract, it is found that in Sweden in 1909 for each passenger killed, 243,943,702 passengers were carried one kilometer (151,489,040 passengers carried one mile); in Holland, 422,929,000 (262,638,909 passengers carried one mile); in Belgium, 395,638,840 (245,548,249 passengers carried one mile); in France, 2,042,835,920 (1,268,601,106 passengers carried one mile to one killed in a train accident); in Switzerland, 173,868,654 (107,972,404 passengers carried one mile), and in Hungary, 183,558,970 (113,990,120 passengers carried one mile) were carried one kilo-

meter to each passenger killed; in Japan on company railways 179,811,266 passengers were carried one mile to each one killed.

RAILWAY ENGINEERS. See ARBITRATION AND CONCILIATION, INDUSTRIAL.

RAILWAYS. In a plea for higher rates at almost the beginning of the campaign, which the railways started in 1907 and which ended in failure in 1911, President Mellen of the New York, New Haven, and Hartford pointed out that there was an economic fallacy somewhere in a demand for a higher price for transportation at a time when the supply had not only overtaken the demand but was rapidly exceeding it. This condition of excess of supply over demand for transportation continued through 1908, 1909, 1910, 1911, and the first half of the calendar year 1912. With an abruptness that is comparable to the rapidity with which business fell off in 1907, business began in 1912 to make demands on the transportation plant of the country in excess of the possible output of this plant. Although even the so-called granger roads have a tonnage, furnished by products of agriculture, amounting to but 25 per cent. of their total tonnage, and revenue derived from this source alone of not over 15 per cent. of their total revenue, nevertheless crop conditions have an effect on railway gross earnings out of all proportion to the importance of the actual tonnage of these products carried. The shoe manufacturer or the piano manufacturer is affected directly by crop conditions, because a part of the added wealth from large crops is spent on his product, but the effect on railways is twofold. The railway gets the revenue both from transporting the articles bought with the added wealth and from transporting the crops themselves. The demand on railway facilities in a season of large crops and resulting activity is correspondingly heavy. During the years since 1907 there have been two powerful forces at work restricting railway expenditure on railway facilities and rolling stock. The decreased gross business and the increased unit price of labor have left smaller net earnings available for improvements, and the system of accounts prescribed by the Interstate Commerce Commission and

in effect since June 30, 1907, has provided for a restriction of the term "expenses" to cover only replacing in kind for maintenance. The traditional inclination of American railroad operating officers is to put back into the property each year in the form of betterments a certain part of net earnings, and in the past many roads have charged these betterments to expenses when they were not evidently improvements which would add earning power. The commission's rules for accounting provide that such expenditures should be charged to capital account, and since this rule was promulgated at a time when retrenchment became necessary, it has been instrumental in causing the abandonment by railroad directors of a policy which has always been considered peculiar to American railroading and synonymous with good business.

The advantages that have accrued to railways through the necessity of cutting down on expenses can hardly be overestimated. Some of the reports of roads for the fiscal year ending June 30, 1912, show astounding increases in operating efficiency. The Baltimore and Ohio showed an increase in its average trainload of revenue freight of over 100 tons, or more than 25 per cent.; the average trainload being 544 tons in 1912. As a corollary of this attempt to reduce expenses is a recognition of the value to railroad companies of the services of competent general officers. The pay of railroad officers has been low, and is low to-day, and although a number of the railroad presidents in the United States have worked up from the ranks, yet the owners—those who have made fortunes from the development of railroads—are not in a great number of cases railroad men. The value and importance of men of the type of Daniel Willard at the head of railroad managements is being more and more recognized, and an important instance of this is the extension of the authority of B. F. Bush, who was made president of the Missouri Pacific in 1911, over the Denver and Rio Grande, the Western Pacific, and other Gould roads; the election of W. J. Harahan as president of the Seaboard Air Line, and the election of C. E. Schaff as president of the Missouri, Kansas and Texas.

Almost at the end of 1912 James J. Hill made an address before the Railway Business Association in which he made a new plea for increased railway rates based on the theory that the railways of this country could not handle the business that this country has to offer with a property worth no more than \$60,000 per mile. The year 1912, therefore, makes, in a way, both a justification for the commission's refusal to grant increases in rates at a time of business depression, which is really a recognition of a general economic principle, and a new starting point in which higher rates will be justified, if they are to be justified at all, upon the principle of supply and demand for transportation. There have been certain tendencies which have crystallized during 1912 that may be either the foundation on which railroad officers base their beliefs that higher rates are necessary, or manifestations of more fundamental facts of which Mr. Hill's speech is simply another manifestation. In 1912 there was less new railroad built than in any one of the past fifteen years. There was more equipment ordered than in any

year since 1906, there was very little permanent financing done, even by the stronger railroad companies, and the only two large independent projects for new railroad building that have been started within the last dozen years both went into the hands of receivers.

RECEIVERSHIPS AND FORECLOSURES. The Denver, Northwestern and Pacific, for which a receiver was appointed, was projected from Denver, Col., to Salt Lake City, Utah, thus paralleling the Union Pacific and the Denver and Rio Grande; in other words, threatening competition with both the Gould interests and the Harriman interests. The route selected is generally understood to be better than that followed by the Denver and Rio Grande, although it involves one very long and very expensive tunnel through the Continental Divide. The project naturally had the enthusiastic support of a great many people in Colorado, and the financial arrangements were made by David H. Moffatt, president of the First National Bank of Denver, Col. Up to 1912, 211 miles of road from Denver west to Steamboat Springs had been built and the company had outstanding \$11,288,609 funded debt and \$10,940,700 stock. Even before Mr. Moffatt's death, which took place in the latter part of 1911, further extension of the road had been stopped and operation was carried on on the most modest scale. Attempts were made to get the financial backing of the State of Colorado. After Mr. Moffatt's death it was found necessary to refinance notes falling due and bearing his personal guarantee. An Eastern banking firm gave some help, already having been interested in the proposal, and an attempt was made to persuade the voters of Colorado to agree that the State should issue bonds to pay for at least part of the cost of the tunnel through the Continental Divide. This proposal was not ratified at the elections in November, 1912, but difficulty in refinancing the short term notes had already led to the appointment of a receiver. Mr. Moffatt was at one time a rich man, but he had not only done his best to finance the building of the Denver, Northwestern, and Pacific through local capital which he, as president of the First National Bank of Denver, was in a remarkably good position to interest, but had largely invested his own fortune in the plan. Regardless of whether or not his original idea had been to force the Harriman or Gould interests to buy him out, he appealed to the local capitalists of Colorado on the ground that not only would the building of this line help to develop Colorado, but that railroad building itself was still a profitable undertaking in which to invest new capital. In this plea he failed.

The Kansas City, Mexico, and Orient, which went into the hands of a receiver in 1912, was projected to run from Kansas City southwest through the United States and Mexico to a port on the Gulf of California. There was a real economic reason for building this road. It not only developed new territory, but it will form a new route when completed that, while it will compete in certain instances with existing roads, will also supply transportation that was not heretofore available. Unlike the Denver, Northwestern, and Pacific, the project was hardly open to even the suspicion that it might have been undertaken to force some other existing railroad company to buy. There is here

the distinction between forcing an existing railroad company to buy new property and making it desirable for them to do so. There are at least four railroad systems which might find the Kansas City, Mexico, and Orient worth buying and developing. E. A. Stilwell very largely raised the money to build the 764 miles of road that had been completed in 1912. A part of it was raised in the United States, entirely from private investors, and a part in Europe. Mr. Stilwell's consistent aim was to keep the road independent and himself in control. Since he was not himself a capitalist—he was a former insurance man—it was necessary that no bank or group of bankers be called on to furnish any large proportion of the money needed to build the road and Mr. Stilwell relied on interesting enough small investors to carry out his project. With 764 miles built, \$21,146,000 outstanding funded debt and about \$25,000,000 stock, the company found itself unable to raise more capital in the way in which the money already invested has been raised. That the project as a railroad undertaking had real merit there can be little doubt. A study of traffic conditions lead almost inevitably to this conclusion, and the personnel of the bondholders' committee, which was formed when the road was put into the hands of a receiver, shows conclusively that Mr. Stilwell was able to interest in his project a very shrewd class of investors. There is, therefore, exemplified in the receivership of this road, even more strikingly than in that of the Denver, Northwestern, and Pacific, the failure of an attempt to interest the small investor in new railroad building regardless of the inherent soundness of the undertaking.

The Père Marquette, with 2331 miles of road, \$63,672,000 of funded debt, and \$26,186,590 stock, was put into the hands of a receiver in 1912. The fact that this receivership took place in 1912 has little or no bearing on contemporary railroad history. The road had a rather top-heavy capitalization. An attempt was made a few years ago to have the Cincinnati, Hamilton, and Dayton take it over, but it proved an impossible burden for this company, and J. P. Morgan and Company, who had control of both roads, sold the Cincinnati, Hamilton, and Dayton to the Baltimore and Ohio, and in 1912 apparently allowed the Père Marquette to fall into a receivership through its own weight. The immediate cause of the receivership was the refusal of the Michigan Railroad Commission to grant authority to the Père Marquette to issue certain new securities. For statistics, see FINANCIAL REVIEW.

CONSTRUCTION IN 1912. The receivership of the Denver, Northwestern, and Pacific and the Kansas City, Mexico, and Orient did not stop new construction on these roads in 1912 simply because new construction had been stopped previously. There was, however, no existing road which was making extension on any very large scale, and this, combined with the fact that railroad companies were not pursuing a policy of building branch lines into new territory, made the record of new construction, which record is compiled each year by the *Railway Age Gazette* from a very thorough canvass of the chief engineers of all roads that are doing new work, one of the smallest for any year during the twenty that this record has been kept. There were 2997 miles of first track

built in 1912, comparing with 3066 miles built in 1911, and 2109 miles built in 1897, the next previous smallest year. In 1895 but 1420 miles of new first track were built, which is the smallest of any year in the record. Last year was a culmination of a period of restriction in new railroad building, but the end of the year saw work begun on a very considerable mileage of new roads and plans made for an even larger mileage. In the beginning of 1913 there were 2500 miles under construction and over 2800 miles additional are definitely projected. In a sense, therefore, the construction situation is analogous to the equipment situation.

CARS AND LOCOMOTIVES ORDERED. Up to 1912 and during the early part of the year the equipment market had been extraordinarily dull. Even with a sudden revival in orders there was a lack of confidence on the part of builders that induced them to take new business on a very narrow margin of possible profit. As the prospect for very large crops became more assured and the adequacy of railroad equipment under present methods of loading and terminal handling became more and more plainly apparent, premiums were offered for immediate delivery and equipment builders began to take business not only on a profitable basis but as rapidly as they could desire. These large orders and the pressure for immediate delivery continued through the entire second half of 1912. The total number of locomotives ordered in 1912 was 4515, comparing with 2850 ordered in 1911 and 5642 ordered in 1906, the next previous year in which as large orders were placed. There were 234,758 freight cars ordered in 1912, comparing with 133,117 ordered in 1911 and 310,315 ordered in 1906. There were 3642 passenger cars ordered in 1912, comparing with 2623 ordered in 1911. The American Railway Association's latest bi-weekly bulletin of freight car surpluses and shortages shows a total surplus for the two weeks ending November 30, 1912, of 26,135 freight cars of all kinds, and a shortage of 62,536. The shortage is a little less and the surplus a little greater than shown for the previous two weeks period, but nevertheless the shortage is greater by over three times than in any corresponding period since 1907. This shortage of equipment is particularly interesting in the light of the fact that the average mileage per car per day for all freight cars varies from about 20 to 25 miles and the average loading per loaded car is between 19 and 21 tons. Among the questions that the *Railway Age Gazette* asked railway presidents and vice-presidents at the end of the year was one as to whether or not they believed a real shortage of equipment existed, and it is a significant fact that there was a wide difference of opinion, even in some cases as between a president and a vice-president on the same road. It is, of course, easier for a railroad officer to say that he needs more equipment than for him to acknowledge that he is not making effective use of the equipment that he has, but not by any means all of the railroad presidents who answered this question took the easier way. And in the explanations why more effective use was not made of equipment the blame was distributed as between shippers' methods of using freight cars as warehouses and congestion at terminals. Two further contributing causes might properly have

been mentioned: The laxity of railroad officers themselves, especially in the case of equipment detained by large shippers, and the opposition to a certain extent, of labor to new methods which have the appearance of getting more work with less expenditure of labor.

WAGE DISPUTES. The enginemen on 52 Eastern roads, totaling about 30,000 employees, made demands for increases in pay and changes in working conditions which, after being refused by railroad managements, were eventually decided by an arbitration board. This board was made up of Daniel Willard, president of the Baltimore and Ohio; P. H. Morrissey, former grand master of the Brotherhood of Railroad Trainmen; Oscar S. Straus, of New York; Charles R. Van Hise, president of the University of Wisconsin; Albert Shaw, editor of the *Review of Reviews*; Frederick N. Judson, of St. Louis, former member of the Hadley Securities Commission, and Otto M. Eidlitz, former president of the Building Trades Association of New York City. The board awarded the enginemen certain increases in rates, stating its belief that the enginemen not only should be paid a fair compensation but that the majority of railroads in the territory affected could afford to pay the enginemen a fair compensation. A minimum wage of \$4.25 for 100 miles or less for enginemen in passenger service, and a minimum of \$4.75 per day of 100 miles or less for enginemen in freight service, was granted, and all rates higher than these minima were contained in effect. As a matter of fact, the award gave the enginemen about the wages paid by the roads paying the highest wages in the territory affected. Even more important than the award of the board in regard to wages were certain recommendations that the board made. They found that the Erdman act, providing for voluntary arbitration of wage disputes, does not adequately protect the rights of the public, and this arbitration board, composed of admittedly able and strong men, suggests the creation of national and State wage commissions which should exercise functions regarding labor engaged at work in public utilities analogous to those now exercised with regard to capital by the public service commissions already in existence. The expressions of railroad presidents in answer to a question about this suggestion of the arbitration board were naturally guarded, some, however, coming out frankly with the opinion that the Interstate Commerce Commission, since it now has power to fix rates, should also have power to pass on questions involving rates of wages. There was a general agreement among railroad men whose opinions have been recorded that the present methods of settling disputes between railroads and their employees are not satisfactory to the public. The Sherman anti-trust law specifically exempts labor combinations in restraint of trade from its provisions, but there was a strong expression of opinion on the part of the board of arbitration that some legislation should be passed which would prevent the possibility of a labor dispute between railroads and their employees resulting in a general tie-up of all industrial activities dependent on railroad transportation.

LEGISLATION. Since the finding of this arbitration board, which was made public in November, there has, of course, not been an opportunity for the introduction of any such legislation as that impliedly recommended. On

the other hand, the more important legislation affecting railroads passed during 1912 had to do with placing further restrictions on the railroad companies in their dealings with their employees. Woodrow Wilson, in his annual message as governor of New Jersey, strongly recommends an act requiring railroads operating in New Jersey to provide trains with "adequate crews." In Massachusetts, however, Governor Foss refused to sanction a full-crew law which, in his opinion, was unjustified. A bill was introduced in Congress in March, 1912, providing for compensation for accident injuries to employees of interstate railroads. The bill was discussed, but never became a law.

LEGAL DECISIONS. Three very important interpretations of the Sherman anti-trust law as applied to railroads were made by the Supreme Court of the United States in 1912. Control of the Southern Pacific by the Union Pacific was found to be an illegal combination in restraint of trade under the meaning of the act. The Terminal Railroad Association of St. Louis and the fourteen railroads entering the city and owning the Terminal Company were found to be a combination in violation of the Sherman law. The present arrangements between anthracite coal carriers and the methods of handling the anthracite coal business were held to be not an unlawful combination or conspiracy in restraint of trade under the meaning of the act. While these three decisions of the Supreme Court contain numerous points in the interpretation of the act on which the court has thrown a good deal of light, they demonstrate one fact quite conclusively, namely, that the court will consider and does consider each case brought before it under the Sherman law as a separate question to be decided purely on the facts in that particular case, and on the facts rather than on the law. (For an account of the Union Pacific and anthracite coal cases see the article *TRUSTS*.) In the St. Louis case, Judge Lurton, who wrote the opinion concurred in by all the justices, specifically pointed out that it was not contended that every terminal company in every city was a violation of the Sherman law, but that the St. Louis topographical conditions made it impossible for any road to reach the city without using the Terminal Company's facilities and under these circumstances the form of the Terminal Company was in violation of the Sherman law.

Passing upon the jurisdiction by the Interstate Commerce Commission, the Supreme Court held that its authority extended to Alaska, the commission having previously itself held that its jurisdiction did not cover Alaska. The Commerce Court in passing on an appeal from a case in which the Interstate Commerce Commission had refused to reduce rates, held that it did not have the power to overrule a negative decision of the commission's. In other cases, however, the Commerce Court held that it was proper for it to receive new evidence not submitted heretofore to the commission. The opinions, however, of the Commerce Court, while legally binding until overruled by the Supreme Court, are of less importance in a review of contemporary railroad history than they would otherwise have been because Congress refused in 1912 to include an appropriation for the expenses and salaries of this court. The practical result of this refusal appears to be the abolishment of this court. The court had not

been popular from the start, and the fact that one of the judges of this court, Judge Archbald, was being tried before the United States Senate on impeachment charges made by the House of Representatives, on the ground that he used his official position as judge to obtain personal favors from railroads who were possible litigants before the Commerce Court, unquestionably had its influence in deciding Congress to permit the abolishment of the court.

INTERSTATE COMMERCE COMMISSION. While the majority of opinions handed down by the commission have continued during the past year to favor rate reductions in certain specific instances and the commission has been very free to use its new power to refuse advances in rates, there has been a growing disposition on the part of railroad officers on the one side and the interstate commerce commissioners on the other to have a greater respect for each other's work. The commission has corrected a great number of petty abuses which the railroads should have corrected for themselves, and railroad officers are more generally recognizing this fact. The most important case that the commission decided during the year was the question brought up in the so-called tap-line cases. The tap lines are short railroads owned or controlled by industrial companies, these industrial companies furnishing the greater part of the business for the short railroads. The commission decided that in a great majority of the cases that it investigated, mainly the industrial roads of lumber companies, the tap line was in reality a plant facility and not a common carrier, and that, therefore, a division of the through rate between the connecting railroads and the tap lines was not legal. The railroads were, therefore, ordered to discontinue making these differences of rates. The commission also decided the case of the differentials to the Atlantic seaboard. This question of differentials has been discussed for years without any particular result, and the commission's decision does not change, apparently, the arrangements that have been in force from time to time. Baltimore and Philadelphia are allowed differentials under New York, while Boston is put on a par with New York.

RAILROAD FINANCING AND DIVIDEND CHANGES. Railroads, as well as other companies and municipal corporations, found it difficult to sell securities bearing a low rate of interest. The Canadian railways continued to find no difficulty in raising large amounts of new capital, but there were comparatively few roads in the United States issuing long term low interest securities. The issue of \$20,000,000 3 year 4½ per cent. notes by the New York Central and Hudson River was typical of the financing done by the stronger companies. It is a noteworthy fact that the Pennsylvania Railroad did no new financing during 1912, although there were \$6,000,000 "Pennsylvania" car trust certificates issued. In January the New York, New Haven, and Hartford issued \$30,000,000 one year 4 per cent. notes, and in December \$40,000,000 one year 5 per cent. notes. Even a company with the strong credit of the Illinois Central found it more advantageous to issue notes than bonds, issuing \$15,000,000 secured 4½ per cent. notes due 1914. There were a number of smaller companies that increased their dividends or paid dividends in 1912 where they had paid no dividends in 1911, and the

only reductions in dividends of any importance were in the case of the New York, Ontario, and Western, which passed its annual 2 per cent. dividend entirely, and the Colorado and Southern, which reduced its dividend from 2 per cent. annually to 1 per cent. annually. On the other hand, the Southern Railway increased its dividends on the preferred stock from 2 per cent. paid in 1911 to an annual rate of 5 per cent., paying 4½ per cent. total in 1912. The Reading Company, the holding company for the Philadelphia and Reading, increased its dividends from an annual rate of 6 per cent. paid in 1911 to 8 per cent. in 1912, and the Buffalo, Rochester, and Pittsburgh increased its dividends from an annual of 5 per cent. in 1911 to 6 per cent. in 1912.

CHANGES IN OWNERSHIP AND CONTROL AND NEW OFFICERS. There were no important changes in the ownership and control of railroads in 1912, except the changes mentioned in connection with the receiverships of the Denver, Northwestern, and Pacific and the Kansas City, Mexico, and Orient. In 1912 James McCrea, who had been president of the Pennsylvania Railroad since the death of A. J. Cassatt in 1907, retired, and Samuel Rea, who had been first vice-president, was elected president. Mr. Rea is, in some senses, more truly a successor to Mr. A. J. Cassatt than to Mr. McCrea. Mr. McCrea was president of the "lines west" before Mr. Cassatt's death, and one of the reasons urged for his election in 1907 was his reputation for conservatism, and during, especially the latter part of his administration, Mr. Rea, who had been a close associate with Mr. Cassatt, shared to a quite considerable extent in the management of the road.

NEW ENGLAND SITUATION. In sharp contrast to a general better feeling between the public and railroad officers is the attack that has been made on Charles S. Mellen and his management of the New York, New Haven, and Hartford. Under Mr. Mellen's management the New Haven had established a monopoly of the transportation facilities in New England, and there was a series of events that happened in 1912 that resulted in a bitter and quite violent attack both in the courts and in the newspapers against the New Haven management. Three serious accidents were followed closely by the announcement that the Grand Trunk had abandoned its extension, which it had been building for three or four months, from a connection with the Central Vermont, its subsidiary, to Providence, R. I. Mr. Mellen and President Chamberlin of the Grand Trunk have been indicted for conspiracy in restraint of trade in this connection. The real foundation for newspaper attacks and the feeling in New England appears to be not that the New Haven is a monopoly but that the railroad company has not furnished what is considered adequate service.

RAILWAY EARNINGS. The trend of railway earnings in 1912 was sharply upwards. The average gross earnings per mile went from about \$930 in January to over \$1300 in October, and while expenses increased to some extent, net earnings per mile per month increased from \$200 in January to about \$475 in October. See also RAILWAY ACCIDENTS.

RANKIN, WILLIAM. An American lawyer, died October 20, 1912. He was born in Elizabeth, N. J., in 1810, and graduated from Wil-

liams College in 1831. After graduation he studied law in the office of William Pennington, once governor of New Jersey. He was admitted to the bar in that State and then removed to Cincinnati, where he entered the law office of William Henry Harrison, former president of the United States. He afterwards went into partnership in Cincinnati with Salmon P. Chase and continued in that association until 1850. Mr. Rankin took great interest in church affairs and held important positions of trust in religious organizations. He was elected treasurer of the Board of Foreign Missions of the Presbyterian Church in 1850, retiring from that office in 1887. He was the oldest living alumnus of Williams College and probably the oldest college graduate in the United States.

RANSDELL, DANIEL MOORE. Sergeant-at-arms of the United States Senate, died November 28, 1912. He was born in Indianapolis in 1842 and was educated at Franklin College. He enlisted in the Civil War in 1862 as private and served until the close of the war. He lost his right arm at the battle of Resaca in 1864. After the war he taught school for one year. He was deputy recorder of Marion County in 1866-67 and city clerk of Indianapolis from 1867 to 1871. After serving in other offices in Indianapolis he was appointed marshal of the District of Columbia in 1889. He served in this position until 1894. In 1900 he was appointed sergeant-at-arms of the United States Senate.

RAPID TRANSIT. NEW YORK SUBWAYS. During 1912 progress was being made in the construction of the various additions to the present subway system of the city of New York and in the development of plans for carrying out the so-called "Dual System" of rapid transit for that city. The legal and financial complications involved naturally were great, and at the end of the year the contracts had not been signed, as various modifications were proposed, and the entire scheme was receiving the public consideration and criticism which its magnitude deserved. This dual system provided for the construction of new subways by the city, or jointly by the city and the contracting companies, the extension to present lines and the third-tracking and extension of the elevated lines and the use of the previously completed Steinway tunnel under the East River between Manhattan and Long Island City. In this manner there would be secured a practical doubling of the existing lines in Greater New York, so that there would be accommodations for some 3,000,000 passengers a year, as compared with 798,281,850 passengers in the year ended June 30, 1911.

The mileage of this dual system is shown by the table in the next column.

While the contracts for construction and operation were most elaborate and, as said before, had not been signed at the end of the year, these provided that the city should furnish a part of the funds necessary for the construction of the various subways, but the money for their equipment, both of subways and elevated roads, as well as for the reconstruction and extension of existing elevated roads, was to be furnished by the companies. The city was to supply funds to the amount of about \$150,000,000, while the Interborough Rapid Transit Company was to contribute \$56,000,000 for con-

For Operation by the Interborough Rapid Transit Company

Grand total—Dual System.....	629.70

struction and \$21,000,000 for equipment for new subways or subway extensions, in addition to paying for the extensions and third-tracking of the elevated railroads. The Brooklyn Rapid Transit Company was to contribute about \$60,000,000 towards the dual system, and of this about \$13,000,000 was to be supplied on account of the construction of city-owned lines, \$21,000,000 for the extension and third-tracking of the existing elevated lines, and about \$26,000,000 for new equipment. The total cost of the new dual system of rapid transit for Greater New York, therefore, would amount to about \$347,000,000. The condition of the contract was the continuous ride, with transfers, for five cents on each company's system, and the operating contracts to run for a period of 49 years, the leases of the original subway entering into the new arrangement. The city was to share in the profits of operation, according to a detailed plan, for apportioning expenses, rentals, net earnings, fixed charges, etc., and a provision was made for the city taking over the lines any time after ten years of operation.

PHYSICAL FEATURES OF THE NEW SUBWAYS. The engineers of the Public Service Commission made many improvements in planning the new subways. All curved platforms were eliminated, and as far as possible sharp curves requiring a decrease in speed. The new subways were to have separate tunnels so that each train would act as a piston, driving the air out as it progressed and causing an incoming of fresh air at the rear. Less waterproofing was to be used, with the aim of reducing the heat, while there was to be an increase in size. The express stations were to be large enough to accommodate 10-car express and 6-car local trains. Reinforced concrete was to be used more extensively in the construction, and for the Lexington Avenue line a double-deck form, with express tracks on a lower level, was to be employed. In the new tunnels in the East River and Harlem River footpaths were to be added in case of accident stalling the train under the river. The engineers further provided for the more ornamental design of the elevated structures to be erected, and as these lines to be built in the outlying districts are usually on broad streets, they will be far from

the disfigurement that many of the older elevated lines in Brooklyn and Manhattan were.

During the year the dual system of subway construction, as prepared by the Public Service Commission and accepted by the Interborough Rapid Transit Company and the Brooklyn Elevated, received the approval of the Board of Estimate and Apportionment, representing the municipal government of the city of New York. In both bodies a minority favored municipal ownership, but the plans in the main received the approval of the majority of the civic organizations and of citizens at large. There were expressions of discontent on the part of certain real estate interests, who believed that their sections were failing to secure adequate treatment, and at the close of the year a political feeling against the signing of the contracts was developing. The entire project, however, seemed to represent the best that could be done to satisfy existing conditions and to provide for the future developments of the city, where transport facilities had been far behind the needs of the hour, not to mention provision for the future.

On December 31, 1912, the city of New York had expended for rapid transit within the city \$87,808,238, of which amount \$55,625,231 had been spent for the existing subways and \$32,183,006 had been paid out under the contracts previously awarded for the construction of the new subways for the dual system, viz., the Lexington Avenue and Centre Street Loop subways in Manhattan and the Fourth Avenue subway in Brooklyn. The total construction work under contract on the subway system on December 31, 1912, was \$71,214,127.

CHICAGO. During the year the Harbor and Subway Commission of the city of Chicago reported in reference to a plan for a system of subways or underground railways for rapid transit which would be municipally owned and would radiate to outlying sections of the city from the business centre. That there was a need of such provisions of accommodations was shown by the fact that the seating capacity of the lines in use in Chicago in 1912 amounted to but 85,000 passengers during the rush hour and the number actually handled aggregated about 160,000, so that double the seating capacity, as advocated by the opponents of the subway project, would do but little to solve the problem which the increase of population, amounting to about 500,000 in ten years, is making serious. The subway lines as designed would give a seating capacity of 180,000 per hour and would cut down by over half the time required by the present surface lines and express trains on the elevated railways. The estimated capital cost of the proposed subway, including equipment, was given at \$13,000,000, and it was figured that the basis of estimated population to be served by the territory through which the subways would pass was such as to afford adequate traffic. The entire project was under discussion during the year, but no decision as to its adoption was reached.

BOSTON. On March 31, 1912, the subway from Park Street, Boston, to Harvard Square, Cambridge, was opened and continued in successful operation throughout the year. Trains were operated over a length of track of 3.2 miles, and running time of eight minutes between Harvard Square and Boston was maintained.

SAN FRANCISCO. The transportation problem of San Francisco attracted attention during 1912 and several reports were made by Bion J. Arnold, engineer, for a rapid transit tunnel under Twin Peaks extending to the region of the city from Market Street. The plan provided for several types of construction which local conditions seemed to require, as well as considerations of cost. It was also proposed that a Mission Street tunnel crosstown tube from Market Street to Golden Gate Park, passing under the southern edge of Buena Vista Park, should be constructed for vehicles and car traffic. Mr. Arnold proposed that such a tunnel be combined with a branch of the rapid transit line just mentioned and that the car lines be run at a lower level beneath the roadway, the tunnel being used by both subway and surface cars. These plans were under consideration at the end of the year.

LONDON. In London the electrification of the East London Railway proceeded during the year and various improvements of the Metropolitan line at Baker-street were under way. The Bakerloo extension to Paddington was also in progress and will have its terminus below the Great-Western Station, which will be reached by an escalator. The Central London extension to Liverpool-street was opened in July and added an important link in the London railway system. At Moorgate Station a subway for foot passengers was opened, connecting the Metropolitan, City and South London, and Great Northern and City railways. The Charing Cross to Hampstead tube was being extended to connect by escalator with the District Railway at the former point, while the latter line had begun a deviation at Earls Court on the same level as the Wimbledon and Ealing trains.

RATIONALISTIC SYSTEM. See PHILOSOPHY.

RAYNER, ISIDOR. United States Senator from Maryland, died November 25, 1912. He was born in Baltimore in 1850, and was educated at the University of Maryland and the University of Virginia. In 1871 he was admitted to the bar. Within two years he had won recognition in that State as a brilliant pleader in law cases. In 1878 he was nominated by the Democrats for the State legislature and was elected. His oratorical powers at once won for him a commanding position in party councils and attracted national attention. He resigned after having served one term and resumed the practice of law. In 1886 he was elected to the State Senate and in the same year to the national House of Representatives. He was reelected to the Fifty-second and Fifty-third Congresses, 1891 and 1895. While in Congress he served as a member of the committee on foreign affairs, the committee on weights and measures, and the commerce committee. His career in the House of Representatives was marked by energetic service and he was considered one of the most useful members of that body. After the completion of his service in Congress he was elected attorney-general of Maryland in 1894. He made a national reputation as counsel for Admiral Schley in the naval inquiry which followed the battle of Santiago. In 1905 he was elected to the United States Senate and at once became one of the most prominent Democratic senators. He early took a stand as one of the

most severe critics of President Roosevelt. He delivered many speeches in which he declared that Roosevelt had usurped powers which belonged to Congress, and had set a precedent which would result in great harm. When Colonel Roosevelt delivered his speech on "The Charter of Democracy" before the Ohio State Constitutional Convention Senator Rayner was one of the first men in public life to attack the doctrines enunciated therein. In a speech delivered in the Senate he declared that Colonel Roosevelt's utterances constituted "the most dangerous doctrine ever brought forward by anyone who has the slightest regard for the stability of our institutions, and whose opinion is entitled to weight and respect." Senator Rayner had a deep and thorough knowledge of the Constitution and was always a quick defender of any alleged encroachments on the part of the executive or legislative branches. He took a strong stand for State rights and in a stirring address delivered on April 23, 1908, denounced the Federal government's encroachments on these rights. He was one of the most eloquent speakers in the Senate and his addresses were always listened to with marked attention. He was chairman of the Indian depredations committee of the Senate, and was a member of the civil service and retrenchment committee, the committee on education and labor, the judiciary committee, committee on foreign relations, and several less important committees.

RED CROSS, AMERICAN NATIONAL. The American Red Cross Society found an abundant field for work in 1912. Its national relief board assisted the needy in the strike of the textile workers of Lawrence, Mass. (see **STRIKES**), rendered aid at two mine disasters, did efficient service in furnishing succor in the Mississippi River floods, took an active part in the relief of the survivors of the *Titanic* disaster, and gave aid to American refugees from Mexico and wounded Mexicans in El Paso, Texas. The most important work was that carried on in connection with the Mississippi River floods. Relief work was begun on April 6. The Red Cross coöperated with the United States army and took charge of the actual organization of camps, their administration and sanitation, the distribution of supplies and later of the breaking up of the camps and the return of the camp population to its homes as the waters subsided. The greater part of the relief work lay in Louisiana and a small part of Mississippi. The expenditures of the Red Cross for this work were approximately \$110,000. For the relief of the *Titanic* survivors a fund of over \$160,000 was contributed to the Red Cross.

The total of all relief funds contributed to the Red Cross for the relief of sufferers in 1912 was approximately \$276,000. This does not include very considerable sums contributed through local relief committees direct and expended in conjunction with the Red Cross fund and in accordance with the Red Cross methods of administration and accounting.

INTERNATIONAL RELIEF WORK. Six foreign fields called for assistance from the American

Red Cross during 1912. Although this was three less than the number in 1911, the funds expended in relief work more than doubled its expenditures in the previous year. In 1911 a total of about \$94,000 was expended, while the expenditures for 1912 amounted to \$244,000. The causes for which it was given in 1912 were the following: The Chinese famine, the Persian relief, relief in Mexico, relief in Turkey, relief in Nicaragua, and relief on account of the Balkan War. For the Chinese famine \$169,000 was contributed to the Red Cross. In Persia over 2000 persons were aided during the period of suffering caused by disturbed governmental conditions and poor harvests. The relief in Mexico was undertaken for the benefit of American citizens and was in response to a request received by the United States through the State Department. For this relief \$3500 was appropriated from the contingent fund. A contribution of \$2000 was made to relieve suffering in Nicaragua caused by the revolutionary outbreak. The total expenditures of the Red Cross on account of the Balkan War in 1912 was \$61,156.

The eighth annual meeting of the society was held on December 12, 1912, in Washington. The officers in 1912 were the following: President, William H. Taft; vice-president, Robert W. De Forest; treasurer, Lee McClung; counselor, William Marshall Bullitt; national director, Ernest E. Bicknell, and secretary, Charles L. Magee. See **BARTON, CLARA.**

REFERENDUM. See **ELECTORAL REFORM, REFORM BUREAU, INTERNATIONAL.** An organization formed to promote all moral reforms in all lands, incorporated in 1896. It grew from a course of lectures on sociology, delivered by Rev. Wilbur F. Crafts, Ph. D., at Princeton University. Among the social evils which the bureau was formed to combat were intemperance, impurity, Sabbath breaking, and gambling. Its work is carried on through legislation, by letters, by lectures, and by literature. Its four fields of work are local, State, national, and international. The most important event in the history of the bureau during the year 1912 was the recognition of the effectiveness of the bureau's Oriental secretary, Rev. E. W. Thwing, in his leadership of the anti-opium crusade and other reforms by Sun Yat Sen and Yuan Shih-kai in China. Dr. Thwing was appointed official adviser of the Opium Commission, and also of the new Bureau of Education, in which he secured the establishment of a department of social service. He has organized branches of the International Reform Bureau in Shanghai with the coöperation of missionaries of many nations and denominations, and in Peking with the coöperation of President Yuan. The second important event was a two months' campaign for prohibition, made by the president of the bureau, Rev. Wilbur F. Crafts, in Maine, in August and September, 1911. He also made a four months' campaign for the enforcement of anti-alcohol educational work in the South, followed by campaigns in New England and the West to promote work by men for boys in "safeguarding adolescence." Dr. Henry N. Pringle was elected assistant superintendent of the bureau. For eleven years he was secretary of the Maine Civic League.

REFORMED CHURCH IN AMERICA (Dutch). A Protestant religious denomination

known until 1867 as the Reformed Protestant Dutch Church of North America. The last general synod of the Reformed Church in America was held in June, 1912, at Grand Rapids, Mich. There are connected with the church 4 particular synods, 35 classes, 681 churches, 739 ministers, 118,664 communicants, 782 Sunday schools with an enrollment of 120,815. Contributed during the year for benevolent objects, \$498,303; congregational, \$1,657,006; total, \$2,155,309. There are connected with the church the foreign missionary board, women's foreign missionary, domestic missionary, women's domestic missionary, board of education, board of publication, two theological seminaries, and several other educational institutions.

The next general synod is to meet at Asbury Park, N. J., June 5, 1913.

The president of the general synod is Rev. William P. Bruce, D. D., of Yonkers, N. Y.; vice-president, Rev. Evert J. Blekkink, D. D., Holland, Mich.; stated clerk, Rev. William H. De Hart, D. D., Plainfield, N. J.; permanent clerk, Rev. Henry Lockwood, East Millstone, N. J.

REFORMED CHURCH IN THE UNITED STATES, GERMAN. This denomination, known also as the German Reformed Church, had in 1912, 300,147 communicants, 1737 churches, and 1200 ministers. The communicants increased in 1912, 2318; the churches decreased 22, and the ministers, 41. The denomination is divided for administrative purposes into eight district synods and 59 classes corresponding to the presbyteries in the Presbyterian bodies. In the Sunday schools are 240,000 scholars, and 25,000 teachers. Mission work is carried on in practically the entire United States and portions of Canada. Foreign missions are also carried on in Japan, and China. The theological institutions are the Eastern Theological Seminary at Lancaster, Pa., and the Central Theological Seminary of the Reformed Church in the United States at Dayton, O. The colleges maintained by the denomination include Franklin and Marshall College and Heidelberg College at Tiffin, O. Colleges for women are maintained at Frederick, Md., and Allentown, Pa.

REFORMED EPISCOPAL CHURCH. This denomination in 1912 had 10,400 communicants, 80 churches, and 94 ministers. There was a gain of 790 communicants over 1911. There are six bishops at the head of the church. Domestic mission work is carried on among colored people in South Carolina and foreign missions are maintained in India. The theological seminary of the denomination is in Philadelphia, and the official organ of church is the *Episcopal Recorder*, published in the same city.

REFORMED PRESBYTERIANS. The general name given to several religious bodies of Presbyterian doctrine, founded by members of the Covenanted or Reformed Presbyterian Church of Scotland. Included in the title are: The Synod of the Reformed Presbyterian Church of North America; the Reformed Presbyterian Church in North America, General Synod; the Reformed Presbyterian Church, Covenanted; and the Reformed Presbyterian Church in the United States and Canada. The Synod of the Reformed Presbyterian Church in North America is the largest of these bodies.

It has about 10,000 communicants, with 100 churches, and 125 ministers. The Reformed Presbyterian Church of North America, General Synod, has about 3700 communicants, 27 churches, and 22 ministers. One American missionary was sent by this body to Northern India in 1912. The next general meeting of the General Synod will be held in Cincinnati, O., on the third Wednesday of May, 1913. The other two bodies are small. The General Synod maintains a theological seminary at Philadelphia and a college at Cedarville, O.

REIBEY, THOMAS. A Tasmanian public official, died February 1912. He was born in 1821 and was educated at Trinity College, Oxford. He was for a time in holy orders, but removed to Tasmania, where he took an active part in politics. He became a member of the Executive Council in 1876 and in 1877-8 was the leader of the Opposition. From 1876 to 1877 he was premier and colonial secretary. He also served as colonial secretary in 1878-9. From 1887 to 1891 he was speaker of the House of Assembly and held office without portfolio in the Braddon government from 1894-99. He was a member of the House of Assembly from 1874 to 1903.

REID, WHITELAW. An American diplomat and editor, died December 16, 1912. He was born near Xenia, O., in 1837. Both his parents were of Scottish blood. As they were poor, a kinsman, Dr. Hugh McMillan, undertook to fit Whitelaw Reid for college, and under his uncle's instruction the youth was so well grounded in Latin that at the age of fifteen he entered Miami University as a sophomore. In 1856 he graduated with scientific honors. He became principal of the graded schools in South Charleston, O., where he taught French, Latin, and the higher mathematics. Through prudent management he was able to save enough money to repay his uncle for the cost of his education and, in addition, to buy a newspaper called the *Xenia News*, thus beginning his journalistic career, for which he had planned in his earliest years. As editor of this paper he attracted the attention of the leaders of the newly formed Republican party in Ohio. He made speeches for Fremont in 1856 and wrote political articles which had much influence. Four years later he advocated the nomination of Abraham Lincoln and was a powerful spokesman in Lincoln's campaign. He soon outgrew the opportunities offered him in Xenia and removed to Cincinnati, where he became city editor of the *Gazette* of that city. At the outbreak of the Civil War he joined the staff of General Morris in West Virginia and later the staff of General Rosecrans. He also acted as war correspondent for the Cincinnati *Gazette*, writing over the nom-de-plume *Agate*. His descriptions of the campaign, particularly the report of the battle of Gettysburg, attracted widespread attention because of their clearness and accuracy. At this time he made the acquaintance of John Hay, then one of President Lincoln's secretaries, and of Edmund Clarence Stedman and William Dean Howells. At the battle of Shiloh he was the only correspondent who witnessed the entire action and his account in ten columns of the Cincinnati *Gazette* was widely copied. Shortly after this, as the result of a disagreement with General Halleck, he ceased to act as war correspondent. In 1862 he became the Washington correspondent

of the Cincinnati *Gazette* and at the same time purchased an interest in that newspaper. With his share of the profits for the first year he laid the foundations of his fortune. His work at Washington attracted the attention of Horace Greeley, who invited him to join the staff of the New York *Tribune*. At this time, however, he declined this offer. In 1865, after a visit to the South, he published *After the War; a Southern Tour*. This was the first of his many contributions to literature. In the following year he made an experiment at cotton planting in the South, but this was a failure. He published another book, entitled *Ohio in the War*, and then returned to journalism as a leader writer on the *Gazette*. He reported the impeachment proceedings against President Johnson and in the same summer accepted a position on the political staff of the New York *Tribune*. His position was that of leading editorial writer, with responsibility only to Mr. Greeley. He wrote many of the editorial leaders throughout the campaign which resulted in the election of General Grant. He was soon advanced to the position of managing editor of the *Tribune*, and in this position retained the affection and confidence of Mr. Greeley. By a bold expenditure of money in 1870 he enabled the *Tribune* to cover thoroughly the Franco-German War and from that time on gradually reorganized and strengthened the entire staff of the paper. In 1872, after the nomination of Greeley for President, Mr. Reid was made editor-in-chief of the *Tribune*, and on the defeat and retirement of Greeley Mr. Reid borrowed enough money to acquire control of the paper. He then devoted his energies to making it profitable, which it had ceased to be during Greeley's political experiments. The circulation and income of the paper increased rapidly and soon he was able to pay back out of the earnings the money which he had borrowed. In 1881 he married a daughter of D. Ogden Mills of California, who had inherited half of the immense estate of her father. President Hayes offered in 1878 to make Mr. Reid minister to Germany. This offer, however, was declined, as was also an offer of the same position by President Garfield. In March, 1889, he was offered and accepted the post of minister to France. Largely through his efforts the French decree prohibiting the importation of American meat was repealed. He also assisted in negotiating reciprocity and extradition treaties between France and the United States. In 1892 he resigned the office and in the summer of that year was nominated for vice-president by the Republican party on the ticket with Benjamin Harrison, with whom he suffered defeat. He was appointed special ambassador to represent the United States at the Queen's Jubilee in London in 1897 and in the following year was a member of the commission which negotiated the treaty of peace with Spain. In 1892 he was special ambassador to represent the President at the coronation of King Edward VII. He became chancellor of the University of the State of New York in 1904 and early in the following year was made American ambassador to Great Britain by President Roosevelt. His great wealth enabled him to entertain lavishly and he became a conspicuous social figure in London, although personally his tastes were of the simplest. He held office during the administration of Presi-

dent Roosevelt and the administration of President Taft. His diplomatic career in London was successful. He was in great demand as an after-dinner speaker and delivered addresses before many learned societies and in different cities of the United Kingdom. He was honored with degrees by several universities in the United States and in foreign countries. King Victor Emanuel of Italy decorated him with the Grand Order of the Crown of Italy. Among his published writings, in addition to those mentioned above, are: *Schools of Journalism* (1870); *Newspaper Tendencies* (1874); *Introduction to English Edition of Thackeray's Memoirs* (1881); *Our New Duties* (1899); *A Continental Union* (1900); *Problems of Expansion* (1900); *The Monroe Doctrine* (1903); *Greatest Fact in Modern History* (1906); *How America Faced its Educational Problem* (1906). He delivered notable addresses on Edmund Burke, Byron, Abraham Lincoln, Thomas Jefferson, and on the Scots and Ulster Scots in America.

RELIGIOUS DENOMINATIONS AND MOVEMENTS. Information in regard to the principal Protestant denominations, the Jews and the Roman Catholics will be found elsewhere in this volume in proper alphabetical order. In the following table, which was compiled by Dr. H. K. Carroll and was printed in the *Christian Advocate*, the membership of the principal denominations is shown for the years 1890 and 1912:

Denominations	Rank in 1912	Com- muni- cants	Rank in 1890	Com- muni- cants
Roman Catholic.....	1	12,888,466	1	6,231,417
Methodist Episcopal..	2	3,293,526	2	2,240,354
Regular Baptist (So.)	3	2,475,609	4	1,280,066

Reformed (German)...	17	300,147	15	204,018
Latter-Day Saints....	18	295,000	21	144,352
Presbyterian (South.)	19	292,845	18	179,721
German Evan. Synod.	20	258,911	17	187,432
Colored Meth. Episc..	21	234,721	24	129,383
Spiritualists	22	200,000	39	45,030
Methodist Protestant.	23	183,318	22	141,989
Greek Orth. (Cath.)	24	175,000	138	100
United Norweg. Luth.	25	159,710	26	119,972
United Presbyterian..	26	139,617	27	94,402
Luth. Synod of Ohio.	27	132,316	33	69,505
Reformed (Dutch)....	28	118,564	28	92,970
Orthodox Friends.....	29	100,568	31	80,655

Certain smaller denominations are not given in this table. Of these the most important are the following: Christian Scientists, communicants, 85,096; Unitarians, 70,542; and Universalists, 51,716. These statistics are for the United States only. The statistics of the Ro-

man Catholic Church are for all baptized persons. It is estimated that about 85 per cent. of the Catholic population of the country are communicants. The returns for the communicants of the Russian Orthodox and other Oriental churches include baptized persons of all ages.

The general movement for closer coöperation between Protestant religious denominations, which has been notable in recent years, continued in 1912. In Canada the Methodists, Presbyterians, and Congregationalists took a long step toward organic unity. In Australia, Anglicans, Methodists, Congregationalists, and Baptists are engaged in friendly negotiations. In Scotland, two of the three branches of the historic Presbyterian Church have come together and in the United States the Presbyterian Church of the North has absorbed the Cumberland Presbyterians and is looking toward a reunion with the Presbyterian Church of the South. The Protestant Episcopal Church has started a movement to bring about a general conference on faith and order and this has been endorsed by the Eastern Orthodox Church and by other influential bodies.

Perhaps the most important agency for giving organized expression to this tendency in the United States is the Federal Council of the Churches of Christ in America. In this council are affiliated all the important Protestant denominations in the United States. The council held a meeting in Chicago in December, 1912, in which great progress towards bringing about coöperation between the religious denominations was made.

THE MEN AND RELIGION FORWARD MOVEMENT. This movement ended its formal work on May 1, 1912, having lasted, as was originally designed, one year. During this time aggressive religious campaigns were carried on in sixty central cities. These were conducted by regular "teams" of workers, who in turn composed a general committee of ninety-seven. The work of the movement at its formal conclusion was handed over to the Young Men's Christian Association, which, through its religious work department continues the work begun by the Men and Religion Forward Movement.

RELIGIOUS EDUCATION. See UNIVERSITIES AND COLLEGES.

RENWICK, EDWARD SABINE. An American inventor and patent expert, died March 20, 1912. He was born in New York City in 1823 and graduated from Columbia University in 1839. He became a civil and mechanical engineer and superintendent of the large iron works at Wilkes-Barre, Pa. He became known as one of the most expert engineers in practice. In 1862 with his brother, Henry B. Renwick, he repaired the *Great Eastern* while afloat, replating a fracture in the bilge 82 feet long and 10 feet in width. This feat other engineers had declared impossible. He invented many machines and mechanical devices. From 1849 until the time of his death he was in practice as an expert on patent cases. He was a member of many learned and scientific societies and was the author of *Practical Invention* (1893).

REORGANIZATION OF THE ARMY. See UNITED STATES, *Army*.

REPUBLICAN NATIONAL CONVENTION. See PRESIDENTIAL CAMPAIGN.

RESERVOIRS. See AQUEDUCTS, DAMS, and IRRIGATION.

RÉUNION, or BOURBON. A French colony; an island in the Indian Ocean, covering 1980 square kilometers (764 square miles), and having (1911), 173,822 inhabitants. St. Paul (7 sq kms.), New Amsterdam (66), and Kerguelen (3414) are administratively attached to Réunion. Saint-Denis (25,689 inhabitants) is the capital. Imports and exports (1910), 18,853,000 and 16,915,000 francs respectively. Railways, 126 kilometers. The 1911 budget balanced at 4,125,000 francs. M. Rodier was governor in 1912.

REUSS. See GERMANY.

REVENUE. See articles on countries and States of the United States.

RHODE ISLAND. POPULATION. According to the Census Bureau statistics, compiled during 1912, out of a total population of 542,610 in 1910, the foreign-born whites numbered 178,025 compared with 133,772 in 1900. Of these foreign-born whites the largest number came from Canada, 34,043; from Ireland, 29,714; from England, 27,818; from Russia, 9767; from Sweden, 7405; from Scotland, 6267, and from Portugal, 6082. The other countries of Europe are represented by smaller numbers. The negroes in the State in 1910 numbered 15,174, and the mulattoes, 3746. In 1890 the negroes numbered 12,302, and the mulattoes, 3081.

AGRICULTURE. The acreage, value, and production of the principal crops in 1911 and 1912 are given in the table below:

	Year	Acreage	Prod. Bu.	Value
Corn	1912	11,000	456,000	\$401,000
	1911	11,000	495,000	470,000
Oats	1912	2,000	57,000	26,000
	1911	2,000	58,000	34,000
Potatoes	1912	5,000	585,000	435,000
	1911	5,000	550,000	583,000
Hay	1912	58,000	a68,000	1,465,000
	1911	61,000	a61,000	1,470,000

a Tons.

MANUFACTURES. The Thirteenth Census included statistics of manufacture in the State. These are for the calendar year 1909. The general results of the census are shown in the following table:

	Number or Amount 1909	1904	P.C. of Inc'se '04-'09
Number of establishments	1,951	1,617	20.7
Persons engaged in manufactures ..	122,641	104,299	17.6
Proprietors & firm members	1,721	1,561	10.3
Salaried employees	7,382	5,420	36.2
Wage earners (average No.)....	113,538	97,318	16.7
Primary horsepower	226,740	182,608	24.2
Capital	\$290,901,000	\$215,901,000	34.7
Expenses	242,264,000	177,649,000	36.4
Services	65,811,000	50,154,000	31.2
Salaries	10,577,000	7,041,000	50.2
Wages	55,234,000	43,113,000	28.1
Materials	158,192,000	112,872,000	40.2
Miscellaneous	18,261,000	14,623,000	24.9
Value of products....	280,344,000	202,110,000	38.7
Value added by manufacture (value of products less cost of materials)....	122,152,000	89,238,000	36.9

It will be seen from this that the manufacturing interests of Rhode Island are most im-

portant. The industry in which the value of the product was largest was that connected with woolen, worsted, and felt goods, and wool hats, \$74,600,000. In these industries were employed 24,924 wage-earners. In industries connected with cotton goods, 28,726 wage-earners were employed and the product was valued at \$50,213,000. In the manufacture of jewelry 9511 wage-earners were employed and the product was valued at \$20,685,000. The value of foundry and machine-shop products was \$20,612,000 and in these industries were employed 10,937 wage-earners. Other industries the value of whose products was more than \$4,000,000, were silverware, plated ware, silk and silk goods, and gold and silver reducing and refining. The total number of persons engaged in manufactures in the State in 1909 was 113,538, of whom 74,549 were male and 38,989 female. Wage-earners employed in the State under 16 years of age numbered 4625, of whom 2315 were female. For the great majority of wage-earners in the State the hours of labor ranged from 54 to 60 a week or from 9 to 10 a day. Providence is the chief manufacturing city of the State, where in 1909 were employed 46,381 wage-earners. The value of the manufacturing industries of the city was \$120,240,584. In Pawtucket were 15,275 wage-earners and in Woonsocket, 20,703.

POLITICS AND GOVERNMENT

The legislature met in 1912 and the important enactments are noted in the paragraph *Legislation* below. There were elections for State officers and for representatives in Congress on November 5. Rhode Island is perhaps the most conservative of the New England States and the Progressives made little headway. On April 24 the Republican convention for the election of delegates to the national convention selected ten delegates and instructed them for President Taft. The delegates to the Democratic national convention were instructed to vote for Woodrow Wilson. The Republican State convention for the nomination of State officers was held on October 9 and Governor Pothier was renominated. The party platform praised the national Republican party, declared President Taft's stand on the tariff question sound, and reviewed with pride the record of the party in the State. Judge LeBaron B. Colt was endorsed for United States senator to succeed George Peabody Wetmore. He was not a candidate for reelection. On the following day the Democratic State convention nominated Theodore Francis Green of Providence. James H. Higgins of Pawtucket, former governor of the State, was declared the candidate of the Democratic party for the United States Senate. The election on November 5 resulted as follows: For President, Wilson received 30,412 votes, Taft, 27,703, Roosevelt, 16,878, Debs, 2049, Chafin, 616, and Reimer, 236. For governor, Pothier, Rep., received 34,133 votes, Green, Dem., 32,725, Humes, Prog., 8457, Fassel, Soc., 1913, White, Pro., 687, and Herrick, Soc. Labor, 241. The legislature is Republican by a majority on joint ballot of 48, thus insuring the election of a Republican senator in 1913.

OTHER EVENTS. The most interesting occurrence, aside from the political events during the year, was the agitation carried on

against the New York, New Haven and Hartford Railroad in connection with the abandonment of the Grand Trunk extension to Providence. (See *RAILWAYS*.) Governor Pothier on November 28 issued a statement attacking the New Haven road and its president, Charles S. Mellen. He declared that the New Haven interests were attempting to stifle competition in New England and more completely in Rhode Island, by keeping the Grand Trunk system from running its line from Palmer to Providence. He declared his intention to use every effort to see that competition was restored. Civic organizations throughout the State, city councils, and boards of trade adopted resolutions condemning the New Haven road and preparations were made to take some legislative action against the alleged railroad monopoly when the legislative session of 1913 convenes.

LEGISLATION. The legislature of 1912 passed several measures of first importance. A general revision of the tax and revenue laws was made, and provision was made for the appointment of a board of tax commissioners. A measure was enacted providing for the dissolution of corporations other than a bank, saving, or trust company organized under the laws of the State under certain circumstances. A public utilities commission was created and its powers and duties prescribed. It has charge of the regulation and control of public utilities. An amendment was made to the factory inspection laws prohibiting the employment of persons under 21 years of age as messengers for a telegraph, telephone, or messenger company before five in the morning or after ten at night. Open air schools were established. Provision was made for the election of senators and representatives by ballot in each town and city at town representative district and voting district meetings. A board of control and supply was established. This is to have charge of the regulation and control of State institutions. An employer's liability act was passed. Under this act it is optional with the employer whether he shall come under its provisions, but if he does not he is deprived of the customary defenses. The law relating to interest and usury was amended, as was the law relating to pharmacy. State aid in providing instruction in manual training or vocational industrial education was authorized. A measure was passed regulating lobbying.

STATE GOVERNMENT. Governor, Aram J. Pothier; Lieutenant-Governor, R. B. Burchard; Secretary of State, J. Frederick Parker; Attorney-General, Herbert A. Rice; Treasurer, Walter A. Read; Adjutant-General, Charles W. Abbott, Jr.; Auditor, Charles C. Gray; Commissioner of Public Schools, Walter E. Ranger; Commissioner of Insurance, Charles C. Gray—all Republicans.

JUDICIARY. Supreme Court: Chief Justice, Edward C. Dubois; Associate Justices, Clark H. Johnson, C. Frank Parkhurst, W. B. Vincent, William H. Sweetland; Clerk of the Court, B. S. Blaisdell—all Republicans.

STATE LEGISLATURE, 1913. Republicans, Senate, 32; House, 61; joint ballot, 93. Democrats, Senate, 6; House, 39; joint ballot, 45. Republican majority, Senate, 26; House, 22; joint ballot, 48.

The representatives in Congress will be found in the section *Congress*, article *UNITED STATES*.

RHODESIA. A country (named for Cecil Rhodes) under the administration of the British South Africa Company; a British protectorate, which is divided into Northern Rhodesia (estimated area, 291,000 square miles; estimated population 1,001,400) and Southern Rhodesia (148,575 square miles, 769,471 inhabitants).

NORTHERN RHODESIA includes the two provinces of Barotseland, or North-Western Rhodesia and North-Eastern Rhodesia. It was constituted a single British sphere in 1911. Le wanika, the native king, resides at Lealui; L. A. Wallace, residing at Livingstone, was administrator of the company in 1912.

SOUTHERN RHODESIA includes the provinces of Mashonaland (European population, 12,543) and Matabeleland (11,039). Chief towns: Salisbury (the capital), with 3479 white inhabitants; Umtali, and Victoria, in Mashonaland; Bulawayo (5200 white inhabitants), Gwelo, and Tuli, in Matabeleland. The country is well adapted to stock-raising and agriculture. Gold has been mined in Rhodesia supposedly from the time of the Phoenicians. From 1890, the date of the occupation by the South Africa Company, to September, 1898, the gold production was 6470 ounces; in 1902 the value of the yield (bullion) was estimated at £687,096; in 1905, £1,449,985; 1908 (fine gold), £2,526,007; 1911, £2,647,896. Coal mined in 1911, 212,529 tons; silver, 187,641 ounces; lead, 639 tons. Diamonds are found. Trade and financial statistics follow:

	1907-8	1908-9	1909-10	1910-11
Imports ...	£1,450,174	£1,818,372	£2,214,014	£2,786,321
Exports ...	2,474,236	2,735,685	3,178,416	3,199,956
Revenue ..	554,209	564,399	620,243	784,908
Expend. ..	543,597	535,150	614,405	684,683

* Trade for calendar, finance for fiscal years.

Sir William Milton was the company's administrator in 1912.

RAILWAYS. The total mileage of the Rhodesian Railway systems (including the Beira line) was, at the end of 1911, 2357. Through connection exists between Cape Town and the Congo border, a total distance of 2149 miles; and between Cape Town and Beira, over 2000 miles. Branches extend to the mining districts and to the burial-place of Cecil Rhodes in the Matopos. There was considerable railway extension in 1912. The branch from Salisbury, built by the Brinkwater Railway Company, which had been finished to the Jumbo mine in December, 1911, was being carried on to Kimberley, whence it was to run to the Shamva mines.

RHODES SCHOLARSHIPS. See **UNIVERSITIES AND COLLEGES.**

RICE. Data on rice production in 1912 were available for only a few countries, and in fact many important rice-producing countries do not collect statistics relating to the crop. British India, which is the leading rice country of the world, yielded in 1912, as estimated, 1,300,000,000 bushels, which is about 20 per cent. below the normal yield. Italy's yield amounted to more than 20,000,000 bushels on an area of about 360,000 acres. The area devoted to the crop in Japan was 7,317,000 acres and the normal annual production is about

330,000,000 bushels. The early rice crop of Siam was almost a complete failure and in parts of the country there was such a dearth of seed grain that the government appropriated money for the introduction of seed paddy. The 1912 rice crop of the United States amounted to 25,054,000 bushels, produced on 722,800 acres, the corresponding figures for 1911 being 22,934,000 and 696,300, respectively. The farm value on December 1, 1912, was 93.5 cents per bushel, and the total value of the crop was estimated by the Department of Agriculture at \$23,423,000, the highest value ever recorded for the crop. Among the ten producing States Louisiana ranked first, with a yield of 11,812,000 bushels, Texas second with 9,429,000 bushels, and Arkansas third with 3,405,000 bushels. South Carolina, which stood fourth, produced only 200,000 bushels, and California, which produced only 6000 bushels in 1911, had a yield of 70,000 bushels and an average acre-yield of 50 bushels in 1912. The average yield per acre was 33.5 bushels in Louisiana, 35.5 bushels in Texas, and 37.5 bushels in Arkansas.

RICE INSTITUTE. See **WILLIAM MARSH RICE INSTITUTE.**

RICHARDS, EUGENE LAMB. An American mathematician and educator, died August 5, 1912. He was born in Brooklyn, N. Y., in 1838 and graduated from Yale College in 1860. He was successively tutor in mathematics, assistant professor, professor, and professor emeritus. He retired from active work in 1906. From 1892 to 1902 he was director of the Yale gymnasium. His published writings include *Plane and Spherical Trigonometry, with Applications* (1879); *Elementary Navigation and Nautical Astronomy* (1902).

RICHARDS, SIR FREDERICK WILLIAM. An English admiral, died September 28, 1912. He was born in 1833 and entered the navy in 1848. He was appointed flag lieutenant in 1859 and in the following year was given command of the sloop, *Vixen*. During 1862-1865 he commanded the *Dart* on the west coast of Africa. In 1866 he was promoted to be captain. Four years later he was given command of the Indian troopship, *Jumna*. On this vessel he served for three years and in 1873 was appointed to command the *Devastation*, the first sea-going turret ship which had been designed without any auxiliary sail-power. He took part in the fighting in South Africa in 1880-1881 and was present at the battle of Gingihlovo and the relief of Eshowe. He was also present at the action of Laing's Nek in 1881. The following year he was promoted to the rank of rear-admiral and for three years served as junior lord of the Admiralty. He then became commander-in-chief of the East Indies, which position he occupied for three years. On his return home he acted on several important naval commissions. In 1888 he was promoted to the rank of vice-admiral and in November, 1890, he was appointed commander-in-chief in China. He held this position until June, 1902, when he was appointed second naval lord of the Admiralty. He succeeded Sir Anthony Hoskins as senior naval lord in 1893 and continued to hold this position until 1899. He had been appointed admiral in 1893, and by special Order in Council was made admiral of the fleet in 1898. He was retained on the active list of the navy until he had reached the age of 70.

In 1904 he received the honorary degree of D. C. L., from Oxford University.

RICHARDS, WILLIAM ALFORD. An American public official, former governor of Wyoming, died July 26, 1912. He was born in Hazel Green, Wis., in 1849 and was educated in the public schools of that town and at Galena, Ill. From 1889 to 1893 he was surveyor-general of Wyoming and was governor of that State from 1895 to 1899. He was assistant commissioner of the general land office from 1889 to 1903 and was commissioner from 1903 to 1907. From 1909 to the time of his death he was commissioner of taxation of the State of Wyoming.

RICHARDSON, MAURICE HOWE. An American surgeon, died July 31, 1912. He was born in Athol, Mass., in 1851 and graduated from Harvard College in 1873. In 1882 he was appointed demonstrator of anatomy in the medical school of Harvard College; in 1883 assistant in surgery; in 1887 assistant professor of anatomy; in 1895 assistant professor of clinical surgery, and in 1903 professor of clinical surgery. From 1907 to the time of his death he was Mosely professor of surgery. In 1886 he was appointed visiting surgeon to the Massachusetts General Hospital and was also consulting surgeon to hospitals in Boston and elsewhere. He was one of the most eminent surgeons in the United States. He contributed to *Park's Surgery by American Authors*, and *Dennis' System of Surgery*.
